Another case in point indicating that it would be to the financial advantage of the Department to provide Government-owned equipment in leased buildings is that of temporary quarters for the main post office in the city of Detroit, Mich., at the present time. The Keyless Lock Co. manufactured and sold outright to the lessor of the temporary quarters in Detroit, provided by the Treasury Department, a steel screen line approximately 300 feet long containing 32 service windows. The cost of all this equipment was taken into the cost of alterations on the building of the successful bidder for temporary quarters, who was given a lease on June 2, 1931, for 157,420 square feet of floor space, at the rate of $65,000 per annum, to run for a period of 18 months, and for as long thereafter as should be required by the Government. It was stated that the cost of the alterations to fit the quarters for the needs of the Government, including all equipment, should be $95,400, which amount was divided into 12 equal parts and added to the rent for the first 12 months of occupancy. Thus it will be noted that the Government actually paid the cost of this equipment in 1 year, and ownership is still actually in the hands of the lessor of the temporary quarters. If the Government manufactured or otherwise owned this equipment, it could be transferred to other post offices as needed, and a substantial saving in cost to the Department would result thereby.

With particular reference to the product of the Keyless Lock Co.'s plant at Indianapolis, it may be stated that it has been a common practice on the part of this concern to restore for further service large quantities of old used equipment which has been repossessed by the company either on account of the nonpayment of rental by termination of a lease with a postmaster or other lessee, or which has turned back to the owner bodily by a postmaster after his office had been furnished with suitable Government-owned equipment.

The process of rehabilitation has been by submerging the steel screen line units in an acid bath to remove every vestige of the former finish; then the dents and other defects in the metal are rolled out by heavy machinery, flanges are straightened and squared, slight rust spots removed, and the equipment is then returned to the finishing room where a new finish is put on, the equipment being subsequently returned to the shipping room apparently ready for new-trade channels. It is not known whether or not any of these rehabilitated units have ever been sold as new equipment, but it is no reflection on the integrity of the Keyless Lock Co. to state that much of it could easily be furnished as new equipment to the average postmaster or other person unfamiliar with such product.

I have on a number of occasions, when visiting this plant on official duty, noted their drying ovens completely filled with this rehabilitated equipment, while other sections of the plant would have large quantities of this made-over equipment on the floors. I distinctly recall that on one occasion when I was officially at this factory one of the foremen directed my particular attention to a long array of screen-line panels standing along the walls of one of the rooms, and he suggested that I go over and look at these units carefully and then come back and let him know what I thought of the equipment. I accordingly went over and looked carefully at a number of these units and then returned to where this foreman was working, and I said to him, "Well, they look pretty nifty", whereupon he said to me, "You will be surprised when I tell you that that particular screen-line equipment has been in constant service for over 15 years."

While on a recent tour of official duty through the West I visited the factory of the George Fensky Co. in San Francisco, Calif., a concern which manufactures post-office equipment of wood, on which occasion Mr. Fensky brought up the question of the Government going to manufacture post-office equipment in the proposed new factory near Reedsville, W.Va., and he voluntarily informed me that he had received a letter from Mr. Baxter, of the Keyless Lock Co., strongly urging him to write letters protesting the proposed action of the Government going into the manufacture of postal equipment, these letters to be addressed to President Roosevelt, Postmaster General Farley, and to Senator HIRAM JOHNSON, of California, and that he had acted accordingly in the matter.

It is well known that Mr. Baxter is the author of many statements protesting violently against the contemplated manufacture by the Government of post-office furniture and screen-line equipment and as a refutation of his repeated claim that such action by the Department would throw hundreds of men out of employment at his factory, there is quoted below an excerpt from a letter written by him to the purchasing agent of the Post Office Department under date of June 9, 1933:

"As you probably know, we (the Keyless Lock Co.) have been receiving practically no business from your office on screen line and furniture during the past year, but we are still going through the formality of making bids."

Mr. Baxter, as well as a number of others through whom he is working violently against the West Virginia project, is on record in print on a number of occasions as stating that if this project goes through it will close his factory down entirely and thus throw out of employment 250 men. In this connection I desire to state that I have been making official trips of inspection to the factory of the Keyless Lock Co. in Indianapolis regularly since July 16, 1931, and never once during that time to my knowledge has Mr. Baxter ever had that number of men employed, and I do not hesitate to say that I do not think he has ever during that period had half that number of men employed in his factory at one time.

It is shown, by careful examination of the files relating to various lease cases in which is involved the furnishing of equipment by the Keyless Lock Co. or the American Post Office Equipment Co., both concerns owned by Mr. Baxter, the Department has for a number of years paid indirectly into the treasuries of these concerns thousands of dollars representing financial returns on the original investment involved in each case from 10 to 500 percent.

The Keyless Lock Co. (and the American Post Office Equipment Co.) have two sources of revenue on rentals of equipment, namely, through rental to lessors of post-office quarters who, in turn, pass the charge along to the Department as additional rent, and through rentals of equipment to postmasters, usually at offices of the third class, who are required to provide their own equipment. Very few postmasters at offices of the third class, upon appointment, are able to purchase outright the equipment necessary to conduct the office. It has been my observation in going over numerous rental cases in the division of post-office quarters that advantage of this circumstance has been taken by the Keyless Lock Co., which, through what might be termed high-pressure salesmanship, has been able to induce many postmasters to sign leases for equipment at excessive rates, considering the value of the equipment; which leases contain the provision that the contract shall remain in force so long as the leases shall continue as postmaster at the office involved.

Several years ago the Department, under authority of Congress, entered into a program of relieving postmasters at offices of the third class of expense in connection with rental of equipment by making leases at these offices with the Government supplying the equipment. After reviewing hundreds of questionnaires received from postmasters in the $1,900 to $2,300 salary grades, a number of cases were selected for investigation by inspectors with a view to making long-term leases with Government-owned equipment. An attempt was made to relieve first those postmasters who were renting equipment at an excessive rate. Consequently, a great many of the leases which were finally entered into and under which the Department supplied the equipment were at offices where the postmasters had signed leases with the Keyless Lock Co. The company endeavored in most cases to force the postmasters to comply with the terms of the leases and to continue to pay the rent on the equipment, even thought it had been removed from the post offices and Government-owned equipment installed in lieu thereof. A number of postmasters in this category wrote the Department for advice relative to what should be done as the result of the demands of the Keyless Lock Co. Inasmuch as the solicitor for the Post Office Department ruled that the lease contract was legal, the Department had no other recourse than to advise the postmaster that the argument was between him and the Keyless Lock Co.

It is known, however, that the Keyless Lock Co. did not endeavor to enforce the contracts in some cases. Instead of trying to force the postmasters to continue to pay the rentals indefinitely, the Keyless Lock Co., in an effort to get as much money as possible from the postmasters, offered to take back the equipment on condition that several months' rental be paid after the equipment was shipped back to the factory at the postmaster's expense.

For instance, the postmaster at Salina, Utah, in a letter to the Department dated April 28, 1932, stated that "the company has told me it will cancel my contract if I will continue to pay the above amount of rent for 6 months after returning the boxes to the home office."

The postmaster at Salina had rented the equipment from the Keyless Lock Co. at the rate of $148.20 per year for 8 years, or a total of $1,185.60. As the result of the investigation by the inspector looking toward making a lease at Salina, with the Department supplying the equipment, the Department purchased all new modern standard equipment from the Keyless Lock Co. for the sum of $1,129.36.

In support of the contention that the lease contracts which the Keyless Lock Co. made with various postmasters were unfair and that the company was quite willing to cancel the agreements rather than to force postmasters to continue paying rentals, it has been ascertained that the Keyless Lock Co., in many cases involving purchase of Government-owned equipment, offered to sell to the Department, at a greatly reduced price, the second-hand equipment which was then being rented to the postmasters.

None of these proposals of the Keyless Lock Co. to sell the second-hand equipment was accepted by the Department inasmuch as the equipment was found in practically all cases to be nonstandard.

Listed below are a number of third-class offices which fall in the class of those just mentioned:

Oldham, S.Dak.: Postmaster rented equipment from the Keyless Lock Co. at $165 per year for 7 years. Department bought new equipment from Morgan Lumber & Manufacturing Co. for $822.76.

St. George, S.C.: Postmaster rented equipment from the Keyless Lock Co. at $171.60 per year for 5 years. Department bought new equipment from the Keyless Lock Co. for $944.30 f.o.b. Indianapolis, Ind.

Pemberville, Ohio: Equipment rented by postmaster from the Keyless Lock Co. at $152.40 per annum for 7 years. Department purchased new equipment from Federal Equipment Co. for $892.

Cumberland, Ky.: Screen line only rented from the Keyless Lock Co. for several years at $273 per annum. Department purchased new equipment from the Keyless Lock Co. for $1,311.33.

Whitesville, W.Va.: Lessor rented equipment from the Keyless Lock Co. at $150 per annum. Department purchased new equipment from Federal Equipment Co. for the net sum of $818.90. The Keyless Lock Co. offered to sell to the Department for $495 the second-hand equipment it was renting to the postmaster for the sum of $150 per year. This proposal was rejected, however, inasmuch as the used equipment was not standard.

Decatur, Miss.: Paid the Keyless Lock Co. $90 per year for 2 sections lockboxes 120–32–8 for 6 years. Department purchased complete equipment for $962.70 (delivered and installed) from Corbin Cabinet Lock Co.

Tinley Park, Ill.: Postmaster paid $264 to the Keyless Lock Co. (per year) for equipment, 2 years. Department purchased equivalent equipment from McLane Manufacturing Co. for $752.40.

Gridley, Ill.: Postmaster paid $142 per year to American Post Office Equipment Co. for equipment for 8 years; value, $1,190. Department purchased new equipment from the Keyless Lock Co. (delivered and installed) for $1,036.33.

Isle, Minn.: Postmaster paid $144 per year rent to the Keyless Lock Co. for equipment, 6 years. Department purchased new equipment from the Keyless Lock Co. (delivered and installed) for $805.49 less 5 percent, 10 days.

Mound City, Kans.: Postmaster rented equipment from the Keyless Lock Co. at $121.20 per year for 2 years. Department purchased equipment from the Keyless Lock Co. (delivered and installed) for $1,023.37 less 5 percent, 10 days.

With reference to the first source of revenue to the Keyless Lock Co. by rental of equipment, mentioned above, namely, the rental of equipment to lessors, it is this business that represents a vast source of income to the Keyless Lock Co.

At Huntington Beach, Calif., under a lease executed for post-office quarters in 1922, equipment was rented by the lessor from the Keyless Lock Co. at a rate of $540 per annum, with the Department paying the lessor $2,400 per annum for the quarters. This lease was extended in 1927 on a month-to-month basis at the same rate and renewed on September 21, 1928, for another 5 years at $1,500 per annum. During the 11 years the lease ran, the Keyless Lock Co. received $5,940 for the rental of the equipment. On June 9 last, the inspector handling the lease case reported that an equipment company on the coast had offered to duplicate the equipment, delivered and installed, for the sum of $2,000. On attempting to make a new lease, the inspector suggested to the lessor that he negotiate with the Keyless Lock Co. for the purpose of securing a reduction in the rental paid for equipment. The company finally agreed to reduce the rent to $22 per month, and the lessor thereupon agreed to renew the lease at $1,000 per year with equipment, or at $800 per year without equipment. It may be stated that subsequently, after readvertising for quarters, the present lessors submitted a new proposal, which was accepted, for rental at $480 per year with the Government supplying the equipment.

At Overton, Tex., the equipment owned by the Keyless Lock Co., valued at approximately $450 by the lease inspector, was rented to the postmaster by the company at the rate of $96 per year. In negotiating the new lease the inspector suggested that the Department take over the second-hand equipment belonging to the Keyless Lock Co., inasmuch as certain Department-owned equipment was also in use at the office and used in conjunction with this privately owned equipment. After advertising in the usual manner, an order was drawn on April 2, 1932, on the Keyless Lock Co. for the second-hand equipment. Notwithstanding this purchase by the Department, the Keyless Lock Co. continued to bill the postmaster for rental, sending him a notice on June 23, 1932, that a payment of $8 would be due July 1; and on or about July 30, 1932, sent him a notice that $16 rental was past due. The postmaster called the matter to the attention of the Department, asking if information he had received from the inspector to the effect that the equipment had been purchased by the Department was correct. The matter was taken up with the Keyless Lock Co. and request made that the billing for rental be discontinued; also, make refund of any rental paid after April 2, 1932. Under date of September 20, 1932, the Keyless Lock Co. acknowledged the errors and stated the amount overpaid had been refunded to the postmaster at Overton, Tex.

At Sinton, Tex., a lease at the rate of $1 per year expired January 31, 1933. Previous to the expiration of the lease the Department was in controversy with the lessor relative to matters of light, heat, etc. The lessor, who rented equipment from the Keyless Lock Co. at the rate of $468 per year, was in arrears to that concern in the amount of approximately $750. A group of business men agreed to assist the lessor in paying the expense of renting equipment, furnishing heat, light, etc., but the individuals who made this agreement failed to carry out their part of the contract, and the lessors lost considerable money in carrying out the lease. When the time came to negotiate a new lease, the lessor was in the position of an unsuitable lessor, but the inspector stated that he believed conditions would be much improved under a new lease at a regular rental.

The most advantageous proposal was that of the owner of the quarters then occupied, and the owner offered quarters either with or without equipment. The Keyless Lock Co., only after the inspector had suggested to the proponent that an effort be made to have the rental reduced, agreed to reduce the rental on the equipment, which was then 10 years old and nonstandard, to $240 per year under a 5-year lease with option to renew for an additional 5 years at the same rate.

The Division of Equipment and Supplies was requested to advise whether second-hand equipment could be furnished for the Sinton office (current legislation prohibits the purchase of new equipment for offices of the third class) but that Division advised that all available equipment had been assigned to other post offices of the third class.

Consequently it was determined that the best interests of all concerned would be served by accepting proposal no. 1 at the rate of $480 per year for the room then occupied with equipment supplied by the lessor. Half of this rental will, in turn, be paid to the Keyless Lock Co., by the lessor, and under the 5-year lease that concern will be paid $1,200 for equipment which it has already rented to the lessor for 10 years and on which it has received approximately $4,500 in rentals.

From the above it can be seen that if the Department were authorized to furnish equipment to post offices of the third class where unusual conditions exist, a direct saving in rentals could be effected many times. If Government-owned equipment had been carried in stock which could have been provided the Sinton post office the cost would be much less than $1,200, which will be paid in rental, and at the expiration of the lease period the Department would still own the equipment.

In connection with this phase of the matter attention is also invited to the fact that many times lease cases are delayed to the point where acceptance of the new proposal is not effected until about the time the old lease expires. If the Department is required to furnish the equipment, it takes from 60 to 120 days to go through the regular routine of advertising, awarding contract, manufacturing, shipment, and installation of the equipment. Many times this involves double rentals or the payment of excessive renewal rates in the old quarters. The point is made that if the Department manufactured its own screen-line equipment, the various items of equipment could be made up in advance and carried in stock ready for immediate shipment, thus effecting considerable saving.

I. P. DAWSON,
Traveling Mechanician.

Mr. McKELLAR. Mr. President, I may say that many Representatives and Senators were perhaps persuaded to vote as they did in reference to this matter by propaganda sent out from what is known as the Keyless Lock Co., of Indianapolis, Ind. The statement I have had printed in the RECORD has to do with that. That company has been enjoying a virtual monopoly for some years in furnishing post-office equiqment, first to the Government, and, secondly, to the several post offices, at such prices that I think any fair-minded man would say, after having read the statement, that such purchases should not be permitted under any circumstances. The Government should not have paid any such prices, nor should the Government make it necessary for the postmasters of the country to pay such prices.

At a later date I will introduce a bill seeking to deal with the question of post-office equipment. The situation ought to be corrected, and the only possible way in which it can be corrected is for the Government to take some such step as is set out in the amendments referred to.

UNCLAIMED DEPOSITS IN NATIONAL BANKS—RECONSIDERATION

Mr. REED. Mr. President, 2 or 3 days ago the Senate agreed to a motion requesting the House to return to the Senate the bill (S. 2359) to provide for the disposition of unclaimed deposits in national banks, which we had passed. The House has now messaged the bill back to the Senate in accordance with our request. Now that the bill is again in the Senate, I ask unanimous consent that the votes by which it was read the third time and passed be reconsidered, and that the measure be placed on the Senate calendar.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

NAVAL CONSTRUCTION

Mr. DILL. Mr. President, yesterday I entered a motion to reconsider the votes by which House bill 6604, the naval construction bill, had been read the third time and passed, because I wanted to have an amendment which I had offered considered and voted on by the Senate.

I have had conferences with the Chairman of the Committee on Naval Affairs of the House of Representatives and the Chairman of the Senate Committee on Naval Affairs as to the purpose I desire to serve, and they have promised to consider the matter, and state they think they can work out a reasonably satisfactory solution of it in the provisions which will be in conference. I do not want to hold up or

delay the bill, and I have every confidence in the ability of the gentlemen to whom I have referred to be fair in the matter, so I withdraw my notice of a motion to reconsider.

The PRESIDING OFFICER. Without objection, the notice is withdrawn.

Mr. TRAMMELL. Mr. President, I move that the Senate insist on its amendments to House bill 6604, ask a conference with the House on the bill and amendments, and that the conferees on the part of the Senate be appointed by the Chair.

The motion was agreed to; and the Presiding Officer appointed Mr. TRAMMELL, Mr. WALSH, Mr. TYDINGS, Mr. HALE, and Mr. METCALF conferees on the part of the Senate.

INCLUSION OF CATTLE AS A BASIC COMMODITY

The Senate resumed the consideration of the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes.

Mr. FESS obtained the floor.

Mr. McNARY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Oregon?

Mr. FESS. I yield.

Mr. McNARY. The Senator from Ohio having yielded, I desire to ask the Senator from Texas as to the parliamentary situation. I understand the pending proposal is the amendment offered by the Senator from Texas to the language found on lines 2 and 3, page 2. Is that correct?

Mr. CONNALLY. The matter immediately pending is the committee amendment, to strike out the word "advance" and then I propose to urge my amendment.

Mr. McNARY. I do not want to delay consideration of the committee amendment, but I want to discuss briefly the proposal of the Senator from Texas.

The PRESIDING OFFICER. Without objection, the committee amendment is agreed to, and the question now is on the amendment offered by the Senator from Texas [Mr. CONNALLY] on lines 2 and 3, page 2.

Mr. O'MAHONEY. Mr. President, I should like very much to propound a question or two to the Senator from Texas with respect to the reasons for the amendment.

Mr. McNARY. Mr. President, I think I shall proceed just briefly, if the Senator from Ohio will permit me.

As I read the House text, the money to be provided out of the Treasury, in the sum of $200,000,000, is to be reimbursed and again covered into the Treasury of the United States through a duly levied processing tax. When the bill reached the Senate committee the word "advance" was stricken out, so it makes a pure grant out of the Treasury in the sum of $200,000,000 to be used in the cattle and dairy industry. Is that the interpretation the Senator from Texas places on the bill?

Mr. CONNALLY. It is not.

Mr. McNARY. What purpose was there in striking out the word "advance"?

Mr. CONNALLY. I was not present in the Senate Committee on Agriculture and Forestry. I assume the Senator from Oregon was there when the Secretary appeared and asked that the word be stricken out.

Mr. McNARY. I was not there.

Mr. CONNALLY. I am sure that it was stricken out for the reason that the effect of this bill is to place cattle under section 12 of the original act. Under section 12 of the original act, subsections (a) and (b), the Secretary is authorized to make use of the appropriation for rental and benefit payments. It does not use the word "advance"; neither does the act use the word "advance" with respect to any other agricultural commodity. It simply treats cattle as it treats all other basic commodities. I assume the word "advance" was stricken out at the request of the Secretary of Agriculture because he did not want to differentiate between cattle and the other commodities.

The Senator from Colorado just called my attention to the proceedings before the committee. If the Senator from Oregon will bear with me, I will refer briefly to the statement of Chester C. Davis, Administrator, Agricultural Adjustment Administration:

> There is one criticism that I have of the form of the bill as it came over from the House. If you will take that bill and turn over to the second page, it says:
>
> "And to make advance rental and/or benefit payments with respect thereto." As you gentlemen know, we have power under the present bill to make advances when they are benefit payments by securing a Treasury advance. I think your committee should take that word "advance" out and just say: "To make rental and benefit payments with respect thereto", for the reason that with that "advance" in there it might raise a question as to whether the practice we now follow is legal or not; whether since you state the advance in connection with cattle it might imply that we have not the power to make the advance with the other commodities.

The legal staff consulted me some days ago and made the same argument, that since they had the power under the general act to make advance payments, if we inserted that word it might imply that as to other commodities it did not have that power.

Mr. McNARY. That is the view I have taken of the language since reading it this afternoon.

Mr. CAREY. Mr. President, it appears to me that possibly the reason they asked for this change was on account of section 9 (a), which provides that wherever benefit payments are made a processing tax must be immediately levied. I cannot see the difference between an advance and a benefit payment. If money is advanced to a farmer on account of his crop, it seems to me it is a benefit payment. That is the way I interpret it.

Mr. McNARY. Mr. President, it is perfectly clear to me that, under section 11, subdivision (b), the Secretary of the Treasury and the Secretary of Agriculture cooperating or collaborating can determine in advance the amount of money that will accumulate from the levying of the processing tax. That is a very simple thing to do, and that is what is done in the case of all the commodities now named in the act. I assume the amendment offered by the Senator from Texas is intended to bring again this language back into the act under subdivision 12, namely, that there will be no gratuity, no grant, no advance, if not reimbursable into the Treasury of the United States, so that cattle will not be favored over any other commodity specified in the bill. Is that the view of the Senator from Texas?

Mr. CONNALLY. I will say to the Senator from Oregon that I tried to make that clear yesterday by saying I was insisting that cattle be not set apart in any particular classification and that they have no benefits under this bill that other agricultural commodities do not obtain.

Mr. McNARY. I was not here yesterday.

Mr. CONNALLY. I feel that is a fair attitude to take, and I feel that it is one that the Secretary of Agriculture approves, and I believe that to do anything else will rouse more antagonism to the bill, and will cause us to lose more than we are losing by reason of retaining the provisions now in the bill.

Mr. McNARY. What does the Senator mean by adding to the act this language?—

> And to support and balance the markets for the dairy- and beef-cattle industry?

Mr. CONNALLY. I will say to the Senator from Oregon that that language was inserted at the suggestion of the Department in order that the Secretary might proceed with arrangements through marketing agreements and whatever other arrangements he is able to work out, toward balancing production and consumption by removal of diseased cattle, getting rid of the old cows and canning them, and things of that kind. That is my understanding of why they desired that language.

Mr. McNARY. Does the Senator expect the Congress later to appropriate the full amount of money authorized in this bill?

Mr. CONNALLY. I hope that it will not be necessary, I will say to the Senator; but I do not know.

Mr. McNARY. What processing tax has the Senator from Texas figured will it be necessary to levy in order to

meet the conditions which he attempts to remedy by this language?

Mr. CONNALLY. I will say quite frankly to the Senator that the Senator from Texas has not in mind any particular processing tax, because he is not sufficiently advised as to the plans to be put into operation.

Mr. McNARY. Does the Senator believe that one is necessary at this time to aid the cattle industry? When the first allotment bill was before the Senate Committee on Agriculture, at which time I was chairman, in the last session of the Hoover administration, the cattlemen of the country were vehement in their opposition to being included in any allotment bill. The late and most beloved Senator from Wyoming, Senator Kendrick, fought it very earnestly and successfully, and cattle were omitted from the bill, upon the theory that the processing tax would have to be paid by the producer of livestock.

I now want to ask the Senator from Texas, who comes from a great cattle-raising section, what is the theory upon which he now proceeds in an effort to amend this bill? Do the cattlemen believe they can afford to absorb the processing tax? When is it to be levied? What is the amount of the tax? What are the facts that caused the Senator today to rise on his feet and advocate the plan which a few months ago was stoutly opposed by the cattle industry of the country? That is all I am asking. It is just a simple inquiry.

Mr. CONNALLY. It will take me some time to reply to that inquiry, if the Senator desires me to make a complete answer.

I ask unanimous consent to insert in the RECORD at this point a list of representative cattle raisers and others who attended the meeting at the Department of Agriculture on January 29, at which this matter was discussed, prior to the introduction of the pending bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

LIST OF PEOPLE PRESENT AT CONFERENCE OF THE DAIRY- AND BEEF-CATTLE PRODUCERS, HELD IN ROOM 1324, NEW HOUSE OFFICE BUILDING, WASHINGTON, D.C., JANUARY 29, 1934

The Honorable Marvin Jones (chairman), Member of Congress from Texas.
The Honorable Henry A. Wallace, the Secretary of Agriculture.
The Honorable Robert D. Carey, Senator from Wyoming.
The Honorable Richard M. Kleberg, Member of Congress from Texas.
The Honorable Otha D. Wearin, Member of Congress from Iowa.
The Honorable Clarence F. Lea, Member of Congress from California.
Mr. W. W. Gaumnitz, Dairy Section, Agricultural Adjustment Administration.
Mr. John B. Shepard, Division of Crop and Livestock Estimates, Bureau of Agricultural Economics, Department of Agriculture.
Mr. W. D. McAfee, Cattle and Sheep Section, Agricultural Adjustment Administration.
Mr. L. M. Merryman, Dairy Section, Agricultural Adjustment Administration.
Mr. C. L. Harlan, Division of Crop and Livestock Estimates, Bureau of Agricultural Economics, Department of Agriculture.
Mr. Paul A. Porter, Division of Information, Agricultural Adjustment Administration.
Mr. DeWitt C. Wing, Division of Information, Agricultural Adjustment Administration.
Mr. Harry Petrie, Cattle and Sheep Section, Agricultural Adjustment Administration.
Mr. Charles E. Collins, president American National Livestock Association, Kit Carson, Colo.
Mr. Charles W. Holman, secretary the National Cooperative Milk Producers' Federation, 1731 I Street, Washington, D.C.
Mr. F. E. Mollin, American National Livestock Association, Denver, Colo.
Mr. Frederic Brenckman, Washington representative, the National Grange, 630 Indiana Avenue NW., Washington, D.C.
Mr. A. M. Loomis, secretary National Dairy Union, 630 Indiana Avenue NW., Washington, D.C.
Mr. Charles A. Ewing, president National Livestock Association, 160 North LaSalle Street, Chicago, Ill.
Mr. Walter P. Stuart, Cedar Bluff, Va. (representing Virginia cattlemen).
Mr. K. W. Hones, Northwest Farmers' Union Dairy Committee, Colfax, Wis.
Mr. J. H. Mercer, secretary Kansas Livestock Association, Topeka, Kans.
Mr. D. M. Hildebrand, president Nebraska Feeders and Breeders Association, Seward, Nebr.
Mr. John A. Simpson, Farmers' Union, Oklahoma City, Okla.
Mr. J. H. Meek, director, division of markets, State department of agriculture, 1030 State Office Building, Richmond, Va.
Mr. A. Sykes, president of the Corn Belt Livestock Association, Iowa.
Mr. F. F. McArthur, president the Central West Livestock Feeders Association, Oakland, Iowa.
Mr. C. F. Humphrey, San Francisco Milk Producers Association, San Francisco, Calif.
Mr. A. L. Crow, Atlanta, Ga.
Mr. W. B. Hutchinson, Albany, Ga.
Mr. J. Elmer Brock, Wyoming Stock Growers Association, Kaycee, Wyo.
Mr. W. B. Mount, Tennessee Beef Cattle Producers Association (city not given).
Mr. C. P. McClaugherty, division of markets, Virginia Department of Agriculture, 1030 State Office Building, Richmond, Va.
Mr. Harold H. Hall, The Dairy Laboratories, 1541 New Jersey Avenue NW., Washington, D.C.
Mr. Manville Kendrick, Wyoming Stock Growers Association, Sheridan, Wyo.
Mr. D. A. Fitzgerald, Brookings Institution, 722 Jackson Place, Washington, D.C.
Mr. J. Blaine Shaum, Central West Live Stock Feeders Association, Tarkio, Mo.
Mr. H. E. Gardner, Central West Live Stock Feeders Association, Oakland, Iowa.
Mr. Frederick H. Walton, Croswell Farm, Forest, Va.
Mr. Ray Brown, U.S. Live Stock Association, Springfield, Ill.
Mr. Doles L. James, manager, agricultural Service, U.S. Chamber of Commerce, Washington, D.C.
Mr. Chester H. Gray, Washington representative, American Farm Bureau Federation, 857 Munsey Building, Washington, D.C.
Mr. Hubbard Russell, 636 I. W. Hellman Building, Los Angeles, Calif.
Mr. Robin Hood, secretary-treasurer National Cooperative Council (city not given).
Mr. W. J. Dearth, National Live Stock Exchange, Omaha, Nebr.
Mr. Thomas B. Glascock, president Eastern Livestock Cooperative Marketing Association, Upperville, Va.
Mr. Walter Page, 350 Madison Avenue, New York, N.Y.
Mr. R. J. Kent, 2 Lafayette Street, New York, N.Y.
Mr. George L. Gray, Albany, Mo.
Mr. Julian L. Bivins, Amarillo, Tex.
Mr. W. T. Coble, Texas and Southwest Cattle Raisers Association, Amarillo, Tex.
Mr. Jerome O. Eddy (city not given), Arizona.
Mr. W. M. Vaughn (observer).
Dr. C. D. Pearce (observer).
Mr. W. A. Wentworth (observer).
Mr. J. B. Garrison, member Farmers' Union Dairy Committee (no city or State given).
Mr. T. R. Pirtle (no city or State given).
Miss Mildred Aaberg (reporter).
(The attendance list is incomplete. The reporter arrived at 2:30 p.m., after the meeting had been in progress for some time, and after the Secretary of Agriculture had given his address.)

Mr. CAREY. Mr. President, the Senator from Texas does not contend, does he, that all the men who attended the meeting approved the processing tax?

Mr. CONNALLY. I desire to read what they did approve. I have in my hand a full report of what transpired at that meeting. On page 22 of the transcript appears the following:

Those favoring endorsing the principle of the measure now pending before the Committee on Agriculture will make it known by saying "aye."
The vote was taken, and the motion carried, there being no dissenting vote.

Here was a unanimous vote by representatives of the cattle and dairy interests at that meeting. I cannot speak for all the cattlemen in the United States, and do not pretend to do so; but their chosen representatives were at that meeting, and they voted unanimously for the principle of this measure.

Mr. CAREY. Mr. President, I was present, I think, when they voted, and I know there were men there who were not in favor of the processing tax. I do not think there was an opposition vote, as the Senator has said, but I know there were men there who were opposed to the processing tax and who were opposed to this bill unless a certain program was worked out in connection with it. The thought was at that time that there should be a meeting of the stockmen and that the stockmen should determine upon a program to submit to the Secretary of Agriculture in connection with the carrying out of the act.

Mr. CONNALLY. Then the attitude of the Senator from Wyoming is, evidently, that he wants the $200,000,000 but he does not want the processing tax?

Mr. CAREY. The Senator has stated my position exactly.

Mr. CONNALLY. Of course, everyone would like to get $200,000,000 out of the Treasury, and then have the industry do nothing to bear its part of the burden or perform its duty. I am not going to stand on the floor of the Senate and ask the Senate to hand out $200,000,000 as a bounty to any industry. If the cattlemen do not want to come in under the Agricultural Adjustment Act, let them stay out; but if they want to come in, let them come in like everyone else comes in.

I am surprised that the Senator from Wyoming would stand upon the floor of the Senate and avow the position which he now asserts, that he wants the Treasury of the United States to hand out $200,000,000 to the cattlemen, and then he does not want the cattlemen to have to pay a processing tax or to do anything except to walk up to the Treasury and sign a receipt. Mr. President, that sort of procedure would bankrupt our Government, and I will not stand here and fight for such a thing.

Mr. FESS. Mr. President, if the Senator from Texas will wait a little while—it will not take me over 10 minutes to finish what I have to say—and then he can take the floor.

Mr. CONNALLY. I thank the Senator from Ohio for his indulgence thus far.

Mr. FESS. Mr. President, just before we went into executive session I was about to quote from a record as to the manner in which the hog program has been carried out. There were two or three things left unsaid that I wanted time to say.

I also wanted to make a general statement as to what this program is costing. The Secretary of Agriculture has stated at different times that he would not want to be committed to any particular figures because they were merely estimates, but that it would probably cost $800,000,000 to carry out the program as it was then in the minds of those who had it in charge. It was thought that the processing tax would be sufficient to take care of the expenditure, and that was the basis on which the processing tax was to be laid. In the language of the Senator from Texas, if there was to be any particular advantage to an industry the cost was not to come out of the Treasury but was, if possible, to be assessed in the form of a processing tax upon the consumer. The danger is that it will be reverted to the producer. No one seems to know whether the one or the other will happen; in fact, the Department is uncertain about it as it has expressed itself through one of its most notable representatives, Mr. Davis, who said:

> As you know, under the law we draw upon the Treasury for an advance against the processing tax to accrue so that temporarily any one account may be overdrawn while the payments are being met. However, we did collect up to December 31 approximately $80,000,000 on account of the cotton-processing tax. It is running right along very nicely, and somewhat in excess of the estimated collection of processing taxes. Therefore, there is every reason to believe that the proceeds from the processing tax will pay all of the cotton-program expense; with the exception of the payments in connection with the cotton-option pool, which are to be met out of a special fund known as the "Bankhead Act fund", which runs to a total under the Bankhead Act, of approximately $60,000,000.

Mr. Davis expressed the philosophy underlying the processing tax, that it is designed to take care of all the extra expense so that the money will not ultimately come out of the Treasury. Now we see that in practical operation that is not proving to be the case. In other words, the Department of Agriculture is asking for appropriations, not directly but through allocations from the P.W.A., of over $800,000,000. That suggestion is in this report which we will consider when we come to the appropriation bill. It is one of the most dangerous movements in connection with the activities of the new deal. In other words, heretofore every appropriation has been itemized, and no appropriation has been made, except in specific terms, providing how the money shall be expended. Here, however, is a request for appropriations—to come from what? From the lump sum that is provided for the P.W.A., the amount to be allocated to the Agriculture Department and to be applied by the A.A.A., with no restraint from the Comptroller General, as must be the case as to all other items of appropriation, and with an avoidance of all requirements that heretofore have been insisted upon as to every dollar that is appropriated being in terms specifically expended for the object for which it was estimated and appropriated. It would seem to be indicated that the processing tax is ultimately to be abandoned, and we will have to look to the Treasury to provide money for the purposes contemplated by the A.A.A. in the form of a subsidy. If we are going to enter upon that policy, let us know it at the outset. It ought not to be camouflaged or covered up in any way, as might be the case, it seems to me, if the requests now being made are rightfully interpreted.

Mr. President, with an expenditure of $800,000,000 out of the Treasury, or out of the processing tax, for the purpose of increasing the price of agricultural commodities, and having spent the money, as we already have done in the case of cotton, as we have done in the case of hogs, and as we are doing in the case of wheat for the purpose of reducing production, yet production has not been reduced, and there has been no increase in prices due to the operations of the A.A.A. There has been an increase in prices, however, due to the devaluation of the dollar to a basis of 50 cents or 60 cents.

I asked the Secretary of the Treasury to give me a report as to prices of commodities so that I might know just in what degree either the A.A.A. or the devaluation of the dollar has reflected or registered an increase of prices. I received this official statement from Mr. Tugwell:

> Cotton, percentage of increase, 74.5.

That is one of the commodities included in the A.A.A.

> Corn—

Another commodity included in the A.A.A.—

> 116.5 percent.
> Oats—

Which is not included in the A.A.A., and not being one of the seven basic commodities, it falls without the limit of assistance from the A.A.A.—

> percentage of increase, 136.1.

Or 20 percent higher than the percentage of increase in the case of corn, which is covered by the A.A.A.

> Barley—

And barley is not covered by the A.A.A., but there has been an increase in the price of that commodity amounting to 126.8 percent.

Wheat is included in the A.A.A., and in the case of that commodity there has been an increase in price of 108.4 percent.

In the case of rye, which is not included in the A.A.A., instead of the increase in price being 108 percent, as in the case of wheat, the increase has been 137 percent, a considerably higher percentage of increase in price than in the case of wheat, which is covered by the A.A.A.

I might go on down the line. Hogs are covered by the A.A.A., but there has been no increase in price. On the contrary, according to these figures, the price is 0.7 of 1 perecent lower. There is a loss also in the case of beef cattle, but they are not covered by the A.A.A.

In the case of milk, which is covered by the A.A.A., there has been an increase in the retail price of 12.2 percent; but, Mr. President, notice what has occurred in the case of wool. Wool is not covered by the A.A.A., and yet the increase in the price of that commodity has been 175 percent. So it appears that the greatest increases of price have been in the case of commodities not receiving assistance from the A.A.A.; in fact, the price of some of the commodities covered by the Agricultural Adjustment Act has actually fallen since the act began to operate.

I desire to make the statement—and I defy contradiction—that, after the expenditure of hundreds of millions of dollars in the inducement to reduce production for the purpose of increasing prices, there has been no increase of prices due to the operation of the Agricultural Adjustment Act.

There has been an increase of prices, it is true, but we anticipated it.

As I said on this floor at the time we were discussing the devaluation of gold, of course, if we cut the measuring unit by 50 percent we do not increase the value of the commodity measured by that unit; we do not increase its value but we increase the price, just as we do not increase the number of yards of cloth purchased when we halve the measuring stick. We may increase the number of units, but the length of the cloth is exactly the same. So I can understand why the Senator from Tennessee read the figures I hold in my hand, which were taken from the Washington Post, and which deal with commodity prices and take the two periods—one before the 50-cent dollar became operative and one after it became operative.

It is a pertinent question, when we see that the price of fertilizer has increased, to ask how much more fertilizer a 50-cent dollar will buy. Perhaps it is better to ask how much less it will buy. How much more machinery will be purchased by the cheap dollar? It is all right when the farmer is selling his products, but it is not all right when the farmer is buying the products of others. The difficulty is that the farmer loses because the price of the commodity he produces has increased less than the price of the products he consumes or purchases from someone else.

The whole program has been a complete flop, a total collapse, and it could not be otherwise. Notice the manner in which the Government dealt with the first hog-buying campaign. As I said a little while ago, the Government purchased 6,600,000 pigs and only 200,000 brood sows. The Government paid for those animals $31,000,000. Pork obtained from the slaughter of those animals aggregated nearly 1,000,000 pounds. In addition to that the A.A.A. obtained about 20,000,000 pounds of grease, the value of which was estimated at about $500,000, and 5,000 tons of fertilizer tankage, which might bring as much as $90,000. It is estimated that storage and other charges bring the total cost of this venture to $35,000,000.

If the estimated value of the grease and fertilizer obtained by the A.A.A. is deducted from this sum, about $34,400,000 remains to represent the value of the meat that was salvaged for the unemployed or thrown into the Mississippi River or otherwise disposed of. In other words, this vat of 100,000,000 pounds of meat, part of which is now going into the homes of the unemployed, has cost the taxpayers a little more than 34 cents a pound. I do not want that to escape the attention of Senators.

Mr. LONG. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. ERICKSON in the chair). Does the Senator from Ohio yield to the Senator from Louisiana?

Mr. FESS. I yield.

Mr. LONG. I think the Senator has probably made a mistake in placing his decimal point. I understand that hogs are now selling for only about 4 cents a pound.

Mr. FESS. That is true.

Mr. LONG. Did not the Senator say this hog meat cost the taxpayers 34 cents a pound?

Mr. FESS. I did.

Mr. LONG. Has not the Senator made a mistake?

Mr. FESS. No; I do not think so.

Mr. LONG. How does that happen?

Mr. FESS. When the purchaser buys it in the general market, the price is about 4 cents a pound. It is 34 cents a pound only when the Government is doing the buying. In other words, this vat of 100,000,000 pounds of meat, part of which is now going into the homes of the unemployed, has cost the taxpayers a little more than 34 cents a pound. Fresh pork could be purchased for less than half that price at retail in the city of Washington at the very moment the Government paid the price I have indicated. The top price for hogs in Chicago at the time was only 4¾ cents a pound.

Mr. President, it is that sort of thing that nauseates every decent person who wants business to be conducted on a business basis. This miserable experience compels the Department, instead of undertaking to process it itself, to buy directly from the packers the meat necessary to supply the unemployed. I commend the Department for changing from the original plan to a plan that does not involve such wicked extravagance as the original plan demonstrated at the time.

Mr. SHIPSTEAD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Minnesota?

Mr. FESS. I yield.

Mr. SHIPSTEAD. Where does the Senator get that information?

Mr. FESS. The information comes from the Department's own statement, and this is a comment from an editorial in the Washington Post. I do not want the Senator from Minnesota to infer that what I am saying is not supported by a statement of the Department itself in a report on the first hog-buying campaign.

Mr. LONG. Mr. President, will the Senator pardon me again?

Mr. FESS. I yield.

Mr. LONG. There seems to be something wrong with that. Did not they get more meat than that out of it and throw some of it away?

Mr. FESS. Yes. Does not the Senator from Louisiana recall that it was suggested that some of it should be thrown into the Mississippi River? The purpose was to reduce production, and it was merely an afterthought to take it and give it to the unemployed. At first they did not know what to do with it except to make it into fertilizer.

Mr. CAREY. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Wyoming?

Mr. FESS. Certainly.

Mr. CAREY. I desire to ask the Senator from Ohio if he has seen an article appearing in the Washington Daily News of yesterday headed "Wallace Denies Destruction of Food and Clothes"? It is an article by the Secretary of Agriculture in which he makes this statement:

> The emergency pig-slaughtering campaign did not destroy food. All the edible products were turned into relief channels. Surplus acres breed nothing but confusion, poverty, and waste.

I should like to ask the Senator, in view of the fact that nearly 6,000,000 pigs were destroyed and were not used for food, if the Secretary is justified in making such a statement as that?

Mr. FESS. I believe not. I want to be most cautious in what I say about anyone who has made an official statement. My acquaintenance with the Secretary of Agriculture is such that it leads me to believe he would not knowingly make a statement that is not supported by the facts. I think he is a very honest and conscientious man and has, I may say, a constructive mind; but he certainly is being misled when he makes the statement that there have been no foodstuffs destroyed.

If we buy a pig weighing 80 pounds and then undertake to slaughter it and get only 14 pounds of food, there is some waste somewhere. That is the report. It may be that the Secretary thinks he has made a correct statement.

Mr. CAREY. The Secretary made the statement in the report which he furnished that pigs weighing 80 pounds or less were not processed for the reason that it was not economical to process them. I believe 80-pound pigs are pretty good food; in fact, much smaller pigs are; but the reason given for not processing them was that the packers could not remove the hair from the pigs with their machines, and therefore they were thrown away.

Mr. FESS. That would be waste, would it not?

Mr. CAREY. I think so.

Mr. FESS. That may be an explanation of the thing about which I am trying to exculpate the Secretary. Whatever be the explanation, there is no justification in times like these, in the interest of reducing production, for the destruction of foodstuffs. That is a wicked thing and it ought not to be permitted under any circumstances.

Before the "new deal" and the "new dealers" ever saw Washington some of us here were engaged in considering

and passing what ultimately became the Clayton law. What was the purpose of the Clayton law? It was to prevent, by the imposition of penalties under a criminal provision, any destruction of any food products in order to keep up prices. That was the purpose of the Clayton Act. It was enacted into law by an overwhelming majority.

Yet here is the Government of the United States doing precisely what we penalized by the passage of the Clayton bill. It is absolutely indefensible, and cannot be justified on any basis whatever.

It is this sort of thing that, it seems to me, will lead the people of our country to demand a cessation of this foolish experimentation, the only excuse for which is, "Well, if it does not succeed, we will quit and admit that it is a failure", as if that were a justification for going on with such a program as this.

As I previously stated, if any article is to be favored, let the cattlemen come in and have the same consideration as others. The thing for us to do, however, is to remove the heavy hand of the Government from business, and let business have a chance to recover. Until we do that, there are going to be gloomy days before us.

Mr. CONNALLY. Mr. President, I should like to have a vote on my amendment.

Mr. VANDENBERG. Mr. President, may I ask the Senator one further question?

Mr. CONNALLY. I yield.

Mr. VANDENBERG. I am keenly concerned about the basic question which the Senator from Oregon [Mr. McNARY] and the Senator from Ohio [Mr. FESS] have been pressing; to wit, the question whether, under the pending proposal as submitted by the Senator, a processing tax will be applied to match the benefits which it is proposed to pay.

If it is not proposed to make uncompensated payments out of the Treasury, why is it necessary to appropriate $200,000,000 in this respect for cattle alone, when the original bill appropriated only $100,000,000 as a revolving fund for all of these other basic commodities?

Mr. CONNALLY. I shall say to the Senator that it is necessary to make an initial appropriation for cattle, just as it was necessary to make an initial appropriation in the case of other agricultural commodities, because the purpose is to begin operations immediately.

Mr. VANDENBERG. I do not think the Senator gets my point.

Mr. CONNALLY. I do. I shall come to that in a minute. We cannot get the money from the processing tax until after the program is in effect and goes along for a considerable period.

Mr. VANDENBERG. That is true.

Mr. CONNALLY. It is necessary to have a revolving fund to start with.

Mr. VANDENBERG. That is true.

Mr. CONNALLY. When the Senator mentions the amount of the appropriation, I should like to remind him that beef and dairy cattle constitute a great proportion of the wealth of the country. It takes lots of money to deal in them. That is why the appropriation is larger.

Mr. VANDENBERG. Would the Senator say that it would take twice as much to finance a cattle campaign as a campaign covering all the wheat, cotton, field corn, hogs, rice, tobacco, and milk, and all their products in the United States?

Mr. CONNALLY. Let me say to the Senator that this is simply an authorization. Congress still has to make the appropriation. It will not all be made at one time. The processing taxes, when collected, go back into the Treasury. Therefore we have to have a rather broad range of authorization, because the processing tax does not go to the Secretary of the Treasury so that he can spend it again. It goes into the Treasury, according to my understanding.

Mr. VANDENBERG. There must have been some basis upon which the $200,000,000 was computed. Why is it that twice as much is necessary for cattle as was contemplated for all the other basic commodities combined?

Mr. CONNALLY. My information is that the cattle and the dairy industries cover more than three times as much acreage as the other industries. I am not prepared to say, however, just what their percentage of money value is as compared to other agricultural commodities.

Mr. McNARY. Mr. President, will the Senator yield to me for just a moment?

The PRESIDING OFFICER. Does the Senator from Texas yield to the Senator from Oregon?

Mr. CONNALLY. Yes.

Mr. McNARY. I think the Senator made a statement which he did not intend to make. The dairy interest is not involved in this bill. The bill takes care of beef cattle and dairy cattle used for beef.

Mr. CONNALLY. That is partially correct. It takes care of all dairy cattle.

Mr. McNARY. The Senator said "the dairy industry."

Mr. CONNALLY. I meant "the dairy-cattle industry."

Mr. McNARY. The gross income from the dairy-cattle industry is smaller than that from cotton, vegetables, fruits, poultry, and dairy products. I think cattle stand about sixth from the top of the list in gross income, though the industry is a large one.

I do not desire to interfere with the Senator's remarks; but, like the Senator from Michigan, the point which I do not understand is this:

The original authorization was $100,000,000 for six distinct basic agricultural commodities mentioned in the original act. So far as I am advised, that has been sufficient to take up the slack between the gathering of the processing tax and the repayment to the Treasury of the amount advanced. That being so, why does the Senator want an authorization for $200,000,000 here for an industry that is far from the top in the matter of gross receipts and returns to the producer?

That is an argument that I do not understand. What is the basis for an authorization of $200,000,000? It occurred to me that $50,000,000 ought to be ample to take care of 1 industry, if $100,000,000 is ample to take care of 6 industries, 3 of which are larger than this 1.

Have I made myself clear?

Mr. CONNALLY. Allow me to say to the Senator that if a small sum were appropriated it probably would be frittered away without securing any substantial results. [Laughter.] That seems to arouse the mirth of some Senators. Here is a great program. We have to start it.

As I have indicated, this money no doubt will be collected finally in the form of processing or other taxes; but why limit it to $50,000,000 when Congress has complete control over the appropriation? This bill merely carries an authorization. We still have to bring out these appropriations; and Senators know—I am sure the Senator from Wyoming knows—that even with the low price of cattle it takes a large volume of money to finance the marketing and the sale and the handling of large herds of beef and dairy cattle. The dairy industry alone wanted $300,000,000, not for the cattle but for the dairy industry itself.

Mr. VANDENBERG. Mr. President, there seems to be uncertainty, as stressed by the Senator from Ohio [Mr. FESS], as to whether, in final fact, it is proposed to reimburse the Treasury for the benefits paid under this cattle section.

The Senator from Texas made a very sturdy statement a few moments ago, with which I heartily concur, and I commend him for making it; namely, that under this bill he seeks no benefit for cattle which does not already exist for the other basic commodities. Yet apparently there are Senators upon the floor who intend to vote for the Senator's bill upon the theory that they can get the benefits without paying any processing tax.

Mr. CONNALLY. And there are Senators on the floor—the Senator from Wyoming, for instance—who are going to vote against the bill because they think there is going to be a processing tax.

Mr. VANDENBERG. The Senator who is now speaking is interested solely in seeing to it that a precedent is not

established for straight bounty payments, because if there are going to be bounty payments on cattle there might just as well also be bounty payments upon Michigan beans, which are equally in difficulty.

Mr. CONNALLY. Let me say to the Senator that I cannot make this matter any clearer than I have undertaken to make it heretofore. If the Senator from Michigan will read the bill, and if other Senators will read the bill, and not draw conclusions from reaching up in the air and picking imaginary things out of the atmosphere, they will see that what the bill does is to put cattle as a basic commodity under section 12 of the original act. If the Senator will read section 12, subsections (a) and (b), he will find that the Secretary can do with cattle only what he does with every other agricultural commodity.

If that is not plain Michigan language, it is as plain as the Senator from Texas can make it.

Mr. VANDENBERG. Mr. President, that is plain Michigan language, and I have read the bill; but the Senator from Texas used some plain Michigan language yesterday also. I quote from page 3816 of the RECORD, where the Senator from Iowa [Mr. MURPHY] says:

> The Senator from Texas has admitted that the tax to be imposed will be paid by the industry.
>
> Mr. CONNALLY. If it is levied.

What did the Senator have in mind when he threw that "if" into yesterday's argument?

Mr. CONNALLY. I shall say to the Senator that I do not know whether a processing tax will be levied or not.

Mr. VANDENBERG. That is what I want to know.

Mr. CONNALLY. Just a moment. The Secretary of Agriculture may not find it necessary to spend any money. He may decide not to levy any tax. I do not know what he is going to do, and I am not going to undertake to speak for him. This bill provides other things than spending money and collecting it in the form of processing taxes. It authorizes the Secretary to make marketing agreements with the producers and with the packers and those engaged in the industry. It is possible that there never will be a processing tax levied; but certainly the Secretary has no broader powers under the pending amendment to the original bill with regard to cattle than he had with regard to all other basic commodities under the original bill, and the Senator from Michigan knows how that has been handled. Senators on the floor now are complaining because he levied a processing tax on hogs.

Mr. VANDENBERG. Senators also know that there is a $100,000,000 deficit today in the receipts from processing taxes as compared with the expenditures.

Mr. CONNALLY. Why, to be sure, because we cannot get all the processing taxes back in a moment. It takes at least a year's period.

Mr. VANDENBERG. May I ask the Senator from Texas, then, if it would be a fair amendment to the answer of yesterday which I have quoted—and I am not seeking to be controversial; I want the facts—that if no processing tax is levied, no benefits will be paid? Would that be a fair interpretation of the Senator's position?

Mr. CONNALLY. I have tried to indicate to the Senator from Michigan that I do not know everything that is in the mind of the Secretary of Agriculture. Here is another thing of which I should like to remind the Senator: Whatever the Senator from Texas has said is in the RECORD, and he stands by it.

On yesterday the Senator from Texas pointed out that the Secretary of Agriculture gave assurance to the committees of Congress that before he adopted any plan—any plan—under this bill, he would call representatives of the cattle industry to meet with him, get their views, try to go along with them, and work out a plan that would be satisfactory. What that plan will be I do not know; and unless I know what that plan will be, I cannot tell the Senator what the probabilities of any particular form of action may be.

Mr. VANDENBERG. Does the Senator construe the original Agricultural Adjustment Act as prohibiting the payment of benefits to basic commodities except as compensating processing taxes are applied?

Mr. CONNALLY. I do not know that the Senator from Texas is prepared to answer that question in great detail. It is contended by many Senators here on the floor that the moment a benefit is given to an industry, the processing tax goes on.

Mr. McNARY. Mr. President, will the Senator yield? I think I can answer that question.

Mr. CONNALLY. I yield.

Mr. McNARY. I think I am sufficiently conversant with the provisions of the act to say emphatically that no benefits can become available unless a processing tax is laid. I think that when the Senator from Texas inserts in subdivision 1 a provision that cattle are to be considered as a basic commodity, and under his amendment to section 12 cattlemen are to be inhibited from getting any benefit unless the processing tax is paid, it will be up to the Secretary of the Treasury to determine whether or not he wants to invoke this bill for the benefit of cattle and levy a processing tax. He may or may not. If he does, the processing tax will have to be paid. If he does not, the cattle situation will not have been at all affected by this bill.

Mr. CONNALLY. Mr. President, let me say that the testimony of Mr. Chester Davis, Agricultural Adjustment Administrator, before the committee, was along the line of the Senator's suggestion, and, as I understand, the testimony of the Secretary of Agriculture was along the same line. What the Senator from Texas said a little while ago was that he did not propose to stand here on the floor of the Senate and ask for any special exception to be made in the case of cattle, and I am not pleading here for a $200,000,000 bounty for cattle which other industries do not receive.

Mr. VANDENBERG. Mr. President, I honor the Senator for his position. There are two things which have emphasized the confusion in my own mind, and I will state the first thing that emphasized the confusion. The Senator has quoted the unanimous approval of a certain group of cattlemen for his pending amendment, and he was good enough to show me a report of the proceedings of the meeting where that endorsement was given. I find that the spokesman from Iowa in the meeting which unanimously endorsed the Senator's amendment made the statement that he was absolutely opposed to a processing tax which would fall back upon the producer. So it seems to me that since this tax, being a livestock tax, will fall back upon the producer, the gentlemen who have been quoted by the Senator as favoring his amendment are doing it on the theory that they will not be taxed with a processing tax. That is the first thing that confuses me.

The second thing that confuses me is that, if the bill does not contemplate any direct grant to the cattle industry, I totally fail to understand why $200,000,000 should be asked by way of a revolving fund for this one industry, when only $100,000,000 was necessary as a revolving fund for all six of the other basic industries of the country.

In the presence of those two contemplations, plus the obvious disagreement which has seemed to exist upon the floor of the Senate itself respecting the effect of this language, I have been challenged again to wonder what the final effect of the situation is.

The Senator from Oregon, who is quite a satisfactory witness to me as respects expert information regarding the Agricultural Adjustment Act, as I understand it, makes the categorical statement—and I wish to be corrected if this is wrong—that if the amendment of the Senator from Texas is adopted there can be no benefit payments to cattlemen, except as there is a compensating processing tax injected into the equation. If that is the situation, the situation is agreeable to me insofar as that phase of the problem is concerned.

Mr. McNARY. Mr. President, will the Senator yield?

Mr. VANDENBERG. I yield.

Mr. McNARY. I am not called upon to construe the provisions of the amendment of the Senator from Texas, but I

know this, from a study of the act as originally passed by the Congress, that no benefits could go to any industry, agricultural in its nature, mentioned in the act, unless charge in like amount, through a processing tax, were made. It is my opinion that when the Senator brings cattle within that category or classification, no benefits can go under the provisions of this bill to the cattlemen, unless there is a corresponding charge made through a processing tax.

Mr. VANDENBERG. Very well.

Mr. CONNALLY. Mr. President——

Mr. VANDENBERG. Just a moment. Then I am perfectly sure that the cattlemen who were quoted as unanimously endorsing the bill are going to be grievously disappointed, and are going to feel that their attitude has not been correctly reflected; and in the face of the statement made by the Senator, I am now totally unable to understand why any $200,000,000 authorization should be necessary, and why it should not be cut to at least $50,000,000 in relationship to the authorization in the original Agricultural Adjustment Act.

Mr. FESS. Mr. President, will the Senator yield?

Mr. VANDENBERG. I yield.

Mr. CONNALLY. I have the floor.

Mr. VANDENBERG. I beg the Senator's pardon.

The PRESIDING OFFICER. Does the Senator from Texas yield; and if so, to whom?

Mr. CONNALLY. Mr. President, I want to submit a few remarks myself in answer to the Senator from Michigan; then I shall yield to the Senator from Ohio.

Permit me to say to the Senator from Michigan that as soon as the Senator from Texas satisfies the Senator from Michigan upon one point, he brings up something else which he thinks is wrong with the bill. He was first worried about the prospect of somebody getting something for nothing. When he finds that is not to occur, he finds an objection about the amount of the appropriation.

Let me read what Mr. Davis said, if the Senator from Michigan is interested in getting an answer to his question. I see the Senator from Michigan in private conversation with the Senator from Ohio [Mr. FESS]. Whenever the Senator from Michigan and the Senator from Ohio go into a huddle there is trouble for somebody. [Laughter.]

I shall read what Mr. Davis, the Agricultural Adjustment Administrator, said before the committee. The Senator from New Mexico [Mr. HATCH] asked him this question:

> I would like to ask one more question about the direct appropriation, Mr. Davis, because my people in New Mexico are very much opposed to the processing tax, and they were under the impression that this bill, making a direct appropriation, might enable the Department to work out some other program aside from the processing tax. That is not correct, though, as I understand your statement?

The Senator from New Mexico [Mr. HATCH] understood Mr. Davis' statement to be along the line of the understanding of the Senator from Oregon. This was the response of Mr. Davis:

> No; it would not be possible to put the beef-cattle industry on a sound basis, in my judgment, without supplementing this appropriation with income from the processing tax.

I am not called upon to construe everything that may be done. Senators are just as capable of reading the original act and construing it as is the Senator from Texas. All in the world this bill will do, as suggested by the Senator from Oregon, will be to put cattle under the general act, and then the Secretary would have the same power with regard to cattle that he has with regard to other commodities, and no more.

The second section provides an appropriation, and authorizes the Secretary to begin operations. If there is anybody who does not understand those two simple things, then the Senator from Texas is powerless to explain anything, because if he cannot make that plain, he cannot make anything plain.

Mr. SHIPSTEAD. Mr. President, will the Senator yield?

Mr. VANDENBERG. Mr. President, may I make an inquiry, just to make one thing plain? Why is $200,000,000 required?

Mr. CONNALLY. The Senator says why $200,000,000? Why a dollar? Why 25 cents?

Mr. VANDENBERG. We had a yardstick in the original adjustment act.

Mr. CONNALLY. If the Senator from Michigan will only listen, he will learn that this bill covers all of the dairy cattle and all of the beef cattle in the United States. Neither of those classes of cattle is sold in the 5-and-10-cent stores. It takes a lot of money to handle operations with large herds of cattle. I do not know why the exact figure of $200,000,000 was fixed; but it is simply an authorization, and Congress does not have to give them a thin dime until it gets ready to appropriate the money.

Mr. President, if the Senator from Michigan is really against the bill, I would be glad to have him say so; but he finds one thing is wrong with it, and we have filled up that hole, then he goes over and has a whispered conversation with the Senator from Ohio [Mr. FESS], who is "agin the Government" all down the line [laughter], and he finds something else wrong with the bill. It is related of the Senator from Ohio [Mr. FESS] that he was once shipwrecked on an island. There was apparently nobody living there, but he finally found a fellow and said, "To whom does this island belong?" The man answered, "It belongs to the Government." The Senator said, "Who is the Government?" The man answered, "I don't know." The Senator from Ohio then said, "Well, I'm agin it, anyway." [Laughter.]

Mr. FESS. O Mr. President, I borrowed that from an Irishman.

Mr. CONNALLY. The Senator borrowed it?

Mr. FESS. Yes.

Mr. CONNALLY. Did the Senator pay back in the 50-cent dollars he has been complaining about all day?

Mr. FESS. I borrowed that from the Senator from Texas.

Mr. CONNALLY. Mr. President, I now yield to the Senator from Minnesota.

Mr. SHIPSTEAD. Mr. President, I just want to ask the Senator a question, because I may have misunderstood him earlier in the afternoon, and I do not want to have a misunderstanding. As I understood the Senator, he said, in a colloquy, that if the processing tax were levied, it would be paid by the industry. Did the Senator mean to say that?

Mr. CONNALLY. Of course. Who is going to pay it? Somebody must pay it. The industry, in a large sense, would bear the expense, of course. I suppose the Senator is inquiring whether the producer or the consumer would pay it?

Mr. SHIPSTEAD. Yes.

Mr. CONNALLY. Who can say? Nobody can say who is going to pay it, whether the producer or the consumer. I tried to discuss that point yesterday. I do not know, and nobody else can know. When a processing tax is put on a commodity the chances are that the producer will bear some of it and the consumer will bear some of it. If the price is lifted the producer can pay part of the tax and still profit by it. I want to be courteous to the Senator; but, frankly, I do not propose to go off into a discussion of things like that, because nobody can determine such questions.

Mr. President, I ask for a vote on my amendment.

Mr. DICKINSON. Mr. President, I think there is some explanation why this item is in the bill to the extent of $200,000,000, and I think all we have to do is to look up the record. Report No. 820 on the agricultural appropriation bill, filed in the House February 20, 1934, contains, on page 3, the following item:

> Appropriations for 1934. * * *
> 5. Agricultural Adjustment Administration: * * *
> Advances (paid from processing taxes), $855,379,811.

The Treasury statement of March 2 contains, on page 2, the following item:

> Comparative analysis of receipts and expenditures. Processing tax on farm products, $203,462,374.14.

In other words, we have here an obligation of the Government of $855,000,000; and we have collected since the

processing tax has been in operation—which includes also all the processing tax that was imposed on stocks in hand and on manufactured goods in storage—only $203,000,000. Against that we have created an obligation of $855,000,000.

As a matter of fact, I think any fair reading of the hearings on this bill shows that it is the purpose, if it can be done, to put this bill through in such a way that the beneficiaries can have $200,000,000, and that it will not be necessary to impose the processing tax at all. There has been a hesitancy on the part of every official who has testified in behalf of this bill to state when the processing tax would be levied. They have said they did not know. So we have this cushion fund of $200,000,000 charged against the general revenues of the Treasury in order to cover this particular period.

In line with what I have just said, I desire to read from the testimony before the Senate committee, on page 9:

Senator MURPHY. How do you propose to recover this $200,000,000?

Mr. DAVIS. We have not gone into that phase of it, Senator. This appears to be an authorization for an outright appropriation. In that respect, that is a good deal like the $100,000,000 in the amendment last year. It was out of any money not otherwise appropriated.

Senator MURPHY. You do intend to impose processing taxes?

Mr. DAVIS. Yes, sir.

Senator MURPHY. You do not know when you will impose them?

Mr. DAVIS. We would have to impose them when the program first begins, and that should be regarded, I think, as a supplement to the income from processing taxes, so that more money can go out to the farmer, rather than substitute the price.

Senator MURPHY. Then the processing tax will be imposed at the very incidence of this program?

Mr. DAVIS. Yes; but it must not be imposed at its full amount. I am inclined to think it would be graduated up and reach its full size when you began to have some effect from it and had a support under the market.

Senator MURPHY. Well, this is a perishable product, beef, and your idea of the effect of that processing tax, I gather from what you said, is that it will act to reduce the amount the producer may receive for cattle?

Mr. DAVIS. I say that the tendency might be in that direction.

I could read the remainder of Mr. Davis' answer, but I do not think it necessary.

The best and most experienced packers—and I desire to compliment some of the packers, as I think they have in many ways done a splendid job in attempting to cooperate with this law—say that, in spite of all they can do, the processing tax has been divided as follows: About 66⅔ percent comes from the price paid to the producer, and about 33⅓ percent comes from the price paid by the consumer for the packers' product. The percentage will vary in one form or another, but as a general rule it will be found that that percentage practically runs uniformly.

As a matter of fact, the real plan of this program and the real plan with regard to the $200,000,000 is to make the money available for exactly the same purpose as in the case of the purchase of hogs, where there was an allocation to the Agricultural Adjustment Administration of some $465,000,000 for which they made no accounting. When the agricultural appropriation bill comes before the Senate, I shall make some remarks along that line. I do not believe the administration can justify the method by which funds have been put in the hands of individuals with no provision for accounting to anybody, and probably in many cases with very little authorization of law.

In order that we may have some understanding as to what has happened with reference to the processing tax on hogs, I have prepared some data——

Mr. FESS. Mr. President——

The PRESIDING OFFICER (Mr. CLARK in the chair). Does the Senator from Iowa yield to the Senator from Ohio?

Mr. DICKINSON. I yield.

Mr. FESS. Before the Senator goes into that matter, permit me to interpose. In corroboration of what the Senator said with respect to Mr. Davis' statement regarding the processing tax, has the Senator examined the hearings in the Committee on Agriculture relative to the tax on hogs?

Mr. DICKINSON. I have to some extent.

Mr. FESS. Will the Senator permit me to read a sentence or two?

Mr. DICKINSON. Yes, indeed.

Mr. FESS. Representative DOXEY said:

That leads to this thought: Should we now place cattle in this act as a basic commodity and should the Congress appropriate $200,000,000 out of Treasury money for the relief of the cattle industry——

Secretary Wallace interposed:

I think, then, it would be possible to get an earlier program under way, in my mind.

Mr. DOXEY. All right. One step further. Should we include cattle as a basic commodity but not make the direct appropriation from the Treasury, which, as you readily understand, is going to be the real vital question, then it would be necessary in order to carry out any program and to finance the matter to have a processing tax on cattle, would it not?

Secretary WALLACE. Well, without the direct appropriation, if you are going to finance a program you would have to have a processing tax on cattle.

Mr. DOXEY. It is your thought that we put it in the bill, and leave it alone and see how the other program works out and if they are included as a basic commodity, provide some fund by direct appropriation from the Treasury, so that you will have that fund; has your Department a definite plan of action? What will happen; or would you just wait for developments in this situation? I mean, you have no definite plan worked out and you are depending on this Congress with reference to any plan on cattle, whether we make cattle a basic commodity under the Agricultural Adjustment Act; is that right?

Secretary WALLACE. Yes. But you can say that the approach would be totally different in case we get the $100,000,000 for beef cattle.

Mr. DOXEY. In case you do not, what would the situation be then?

Secretary WALLACE. That will depend on the cattlemen themselves, and I have no means of judging what they would do. My guess is that they would probably wait until next fall before placing their stamp of approval on a processing tax. In that I may be wrong.

Mr. DOXEY. At any rate, I take it it is your position that it is necessary to have cattle in the act as a basic commodity in order that the cattle situation can be handled by the Agricultural Adjustment Administration; is that correct? That is my construction of your statement.

Secretary WALLACE. Yes; and at any rate we hope that by next fall there will be sufficient reduction in the number of cattle, or feeders, rather, coming to the market and that there will be a sufficient increase in the pay rolls in cities so that these cattle can stand the processing tax, and then you can get to work on a fundamental program which has to do with the number of she and the tubercular reactors.

It seems to me, in the light of the statement of Mr. Davis and Secretary Wallace, that the processing tax is inevitable if cattle are made a basic commodity. However, what they want the $200,000,000 for is a question.

Mr. VANDENBERG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Michigan?

Mr. DICKINSON. I yield.

Mr. VANDENBERG. Did I correctly understand the figures which the Senator read a few moments ago as indicating that there is a $600,000,000 potential deficit in the processing-tax fund?

Mr. DICKINSON. That is correct. I take that from page 3 of the House report made by Representative SANDLIN, item 5, in which it is shown that the appropriations for 1934 that have been allocated to the Agricultural Adjustment Administration for advances amount to $855,739,811; that the Budget estimate for 1935 for exactly the same purpose is $831,022,428; and amount recommended in the House bill for 1935 is $831,022,428, a reduction of $124,000. That is $1,700,000,000 for 2 years.

Mr. CAREY. Mr. President——

The PRESIDING OFFFICER. Does the Senator from Iowa yield to the Senator from Wyoming?

Mr. DICKINSON. I yield if the Senator from Michigan has completed what he had to say.

Mr. VANDENBERG. Mr. President, permit me to ask the Senator from Iowa if he interprets that as the measure of the failure of the processing tax to equal bounties and benefits paid out under the act.

Mr. DICKINSON. That is exactly correct.

Mr. VANDENBERG. Then if the act presumably makes mandatory a processing tax equal to the benefit, the act has

not been administered pursuant to its intent. Is that correct?

Mr. DICKINSON. That is correct. In addition to that, I think there is a showing through the entire proceedings here that there is a hope that the bill will be passed as it has passed the House, so that the Government authorities will have $200,000,000 to play with, and that we will not make it necessary for them to impose a processing tax in order to cover the money into the Treasury.

Mr. VANDENBERG. That is what I am afraid of, and that is what I have been trying to bring out.

Mr. DICKINSON. That is why I believe the bill should be amended so there will be absolutely no question, if they spend this money for benefits, that they will have to impose a processing tax in order to cover it back into the Treasury.

Mr. CAREY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Wyoming?

Mr. DICKINSON. I yield.

Mr. CAREY. Is not the Department permitted to make certain benefit payments? Is it possible that there will not be money to make those payments, or have they all been paid in advance?

Mr. DICKINSON. As a matter of fact, they have allocated from the Public Works Administration $435,000,000, a part of which is being advanced under the provisions of the Agricultural Adjustment Act. They have been using those funds during the past year. There will come a time when they will have to come to Congress and say, "This is our showing. This is what we have been doing. In order to work this out, we have to have further authorization and more money." The Public Works Administration soon will have to come to Congress. They have allocated practically all of their funds.

So there will come a time when they must come and tell us how they have been playing with this big jackpot which we have voted into the hands of one individual to play with as he sees fit. It has not been handled by the one individual but by different individuals. The part relating to agriculture has been under the Agricultural Adjustment Act. In order to supplement those funds they are coming in and asking for a $20,000,000 appropriation, hopeful, I believe, that they will be able to have it without proper legislation attached thereto that in order to spend the money for benefits they must impose a processing tax.

Let me suggest further, with reference to the pig program, that there has been paid out a total of $16,131,095. Missouri received the largest share of any State. This money has been distributed in 41 States. I am glad to see the Senator from Missouri [Mr. CLARK] in the chair as I make this statement. His is the only State that received more than my State of Iowa. We have more pigs in Iowa than there are in Missouri, but the farmers of his State sold more to the Government in Missouri than we did in Iowa. The largest amount of money paid in any State was in Missouri, $3,634,508.82. Iowa received $3,570,484.26, the second largest amount. The third largest is South Dakota, which received $3.481,596.47.

Let me suggest another thing: I understand that in Iowa a preliminary survey shows that regardless of the destruction of the brood sows and pigs there will farrow next spring, in excess of the average farrowing, about 9 to 12 percent, and the other report shows there will be an excess of farrowing of between 20 and 26 percent. In other words, it is exactly the same experience that we have been having in the case of cotton and in the case of fertilizer.

In Iowa I am told they are now selling what is called high-bred seed corn, which is being sold to the very farmer who has signed up that he is going to reduce his acreage. That seed corn is guaranteed to increase the yield from 15 to 20 bushels per acre and sometimes as high as 25 bushels per acre. So that at the same time we are reducing the number of sows to farrow we are increasing the number breeding to farrow next spring. It simply shows that the program is one great big merry-go-round, where one hand undoes what the other one does. The Government is put to an expense of $855,000,000 in benefits.

Mr. President, in order to present this matter a little more fully I have had prepared some data based upon a report that was received in response to a resolution introduced by the Senator from Montana, and I would like permission to insert a brief statement relating to the data as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HOG-PIG BUYING CAMPAIGN

"A substantial increase in the price of hogs", was the end and aim of the Secretary of Agriculture in pig-buying campaign, according to his report to the Senate in response to Senate Resolution No. 123 of January 8, 1934. The program cost the taxpayers about $35,000,000. The result, as I interpret this 75-page response of the Secretary, was to reduce the average price of hogs on the basing market, Chicago, from $4.32, the weekly average price obtaining July 20, 1933, to $3.19, which average weekly price prevailed for the week ending December 16, the week during which 195,535 hogs were marketed at Chicago.

In other words, the prices declined to within 23 cents of the lowest weekly price paid during the last 10 years ($2.95 Dec. 31, 1932). Top price paid for hogs on the Chicago market declined from $5.55, the high attained on October 9, 1933, to $3.25 on December 19 and December 20, 1933. The highest weekly average price reached during the fall of 1933 was $4.75 reached October 14, the price breaking 52 cents during the week following. I quote from Secretary's opinion as to reason for this remarkable break in prices.

PRICE DECLINE FROM OCTOBER 9 TO 17

The decline from October 9 to 17 of about $1 per 100 pounds was not due to the supply situation. Market supplies of hogs during this period averaged not greatly different from those of the first week of the month, and in the latter part of the period they were decreasing. The decline was due in part to a decline in the wholesale price of hog products. Product values declined at a more gradual rate than those of live hogs, however, and packers' gross margins increased.

Although announcement of the processing tax on hogs, to become effective November 5, was not made until October 17, the trade apparently was anticipating the tax a few days prior to the announcement. Hog prices declined 22 cents between October 13 (Friday) and October 16 (Monday), then dropped 30 cents more on October 17, making a total decline of 52 cents. The wholesale value of hog products declined only 12 cents during this period, thus increasing processors' gross margins 40 cents per 100 pounds. The trade apparently was uncertain as to what the rate of the tax would be and as to how to appraise its probable effect. Consequently the first response of the market was a decline in prices, notwithstanding that slaughter supplies were relatively small.

PRICE DECLINE FROM OCTOBER 13 TO NOVEMBER 2

The announcement of the processing tax was made on October 17, which stated that a tax rate of 50 cents per 100 pounds, live weight, would become effective on November 5, and that a tax on floor stocks would be levied on that date at a rate equivalent to the tax rate on live hogs slaughtered. Farmers, as well as processors, apparently were uncertain as to the probable immediate effect of the tax on hog prices, and shipments to market were reduced materially during the 2 weeks beginning October 16. This curtailment in supplies resulted in a sharp rise in wholesale values of hog products. The rise in wholesale value of hog products obtained from 100 pounds of live hog from October 19 to 26 amounted to 59 cents. During this period, however, hog prices declined slightly and processors' gross margins continued to widen.

With the sharp increase in slaughter supplies during the week ended November 3, processors were unable to maintain the higher level of hog-product values and such value declined sharply during the week. Another factor which probably contributed to the decline in product values was that packers apparently were moving an unusually large proportion of their floor stocks into consumption in order to escape the tax on these stocks. The decline in product values from October 27 to November 2 totaled 76 cents. This decline was accompanied by a decline in hog prices of 48 cents.

The Secretary explains the break during week ending November 3 as follows:

"The decline in prices of hogs and hog products during the week ended November 3, however, was also due in part to an increase of 14 percent in slaughter supplies during that week over those of the preceding week."

During this period the packers brought about this increased supply of hogs by increasing their purchases off the market by direct buying of 55,757 hogs week ending November 4; 75,344 hogs week ending November 11; and 92,109 hogs week ending November 18.

The sellers refused to permit the first processing tax of 50 cents to be passed back to the producers, and the deadlock referred to

by the Secretary in footnote[1] took place at Chicago, the packers going to the country for their hogs, thus creating abnormal receipts.

During the 3 weeks ending November 4, 11, and 18 of November 1933 the packers bought direct and shipped into Chicago 223,210 hogs as compared with 120,809 during the corresponding 3 weeks in 1932.

The Secretary explains: "When the processing tax was increased from 50 cents to $1 per 100 pounds, live weight, on December 1, hog-product values continued unchanged, but hog prices declined 23 cents on the 1st day of the month and 13 cents in the 2 days following, making a total decline of 36 cents immediately after an increase of 50 cents in the tax. Inspected slaughter decreased during the first week of December, but it was at a higher level during the 2 following weeks, and during the latter period hog prices declined to the lowest point of the winter. The low point was reached on December 19."

This was the period when hogs reached the average price of $3.18.

After destroying over 270,000,000 pounds of live pigs bought during August and September at a cost of $21,000,000, the Government started buying hogs for emergency relief, purchasing 8 percent of total inspected slaughter in January 1934.

A fair reading of the Secretary's response justifies the statement that a large part of the processing tax has been paid by the hog raiser, with no apparent benefit from higher prices predicted and promised by the Triple A. The stench of rotting pigs dumped near residence communities is dealt with by the Secretary while millions of people out of work could not buy food to eat.

The maximum yield of fertilizer tankage from the slaughter on the dry basis probably would have been between 20 and 25 million pounds, but after operations began it appeared that not all of the material should be saved because of the comparatively high cost of processing with respect to ultimate sale value and because of lack of adequate storage facilities at the principal processing points. After a study of the situation, administration officials decided to dispose of a large part of the product as it came from the rendering vat, and before extra expense had been incurred for drying and storing.

In a letter of instructions dated September 13, processors under contract were authorized and directed to dispose of tankage as follows:

"In consideration of the fact that the market value of dried fertilizer tankage does not offset the cost of processing, it is to be understood that no tankage shall be saved or stored for the account of the Secretary. Instead, tankage is to be disposed of in the most economical and practicable manner, at actual cost of disposal."

Again, on September 27, a letter of instruction authorized and directed the following with regard to tankage disposal:

"1. Should there be available any outlet for undried tankage at a price which partially or wholly offsets or exceeds the cost of removal and destruction, such outlet should be taken advantage of and the Government reimbursed with the net proceeds.

"2. Should there not be any outlet as described in paragraph no. 1, processors may dispose of this tankage free of charge in order to avoid other disposal charges.

"3. If undried tankage cannot be disposed of in either of the above-mentioned manners, and it is necessary to dry the tankage for disposal, this dried tankage (including tankage processed by dry melter process) shall be disposed of in the same manner as specified in paragraph no. 1 or no. 2."

On September 28, paragraph 3, of the letter of instructions dated September 27, was amended by wire to specify that dried tankage in stock or that might be produced, should not be sold or disposed of, except upon approval by the Secretary or his nominees, it being understood that tankage should not be dried except when there was no other practicable means of disposal.

Depending upon their own situation, the processors who handled light pigs used various methods of disposing of the tankage. In all cases it was required that the carcasses be completely rendered, in order that the maximum yield of grease should be obtained. After the grease was drained off, the residue was given to farmers who came to the processing plant; hauled away and dumped in places where such dumping was permissible; burned, buried, or consumed at public incinerators. In the processing of the light pigs for inedible products, the packers were reimbursed only for the cash paid for the live hogs and the initial processing charges for buying, driving, or killing, rendering into grease and fertilizer tankage, plus actual cost of tankage disposal.

Methods of disposal adopted by the processors at various points aroused criticism, especially in instances where the product was dumped at places that eventually became offensive in odor to people living nearby. Handling the tankage in a practical manner proved difficult in some cases. The administration was fully aware of the criticism which was certain to come if immediate disposal was permitted, but, on the other hand, it had to consider the practical facts that processing plants at the principal points did not have adequate facilities for completing the tankage, manufacturing, operating, processing, and placing in storage the large amount of available product, and that in view of the estimated low return value eventually from the finished product, a completion of the processing seemed uneconomical.

The Secretary explains that "The total reduction in tonnage for the 1933–34 marketing season, as a result of this emergency program, is estimated to be between 1,400,000,000 to 1,800,000,000 pounds of hogs, live weight, or between 12 and 16 percent." And that "This reduction can be expected to increase hog prices for the season by 25 to 35 percent, possibly 40 percent, above what they otherwise would be without the plan." The season is over and the price for the week ending February 24 was $4.44, or 12 cents more than week ending July 20, 1933.

The weekly average of cattle and lamb prices at Chicago before, during, and since the great pig-sow buying experiment, in comparison with hog prices for same weeks, follows:

	Average		Average weekly top	
	Hogs	Lambs	Lambs	Cattle
July 20, 1933	4.32	7.67	8.39	7.50
Aug. 5, 1933	4.19	7.37	8.12	7.50
Aug. 12, 1933	4.06	7.76	8.53	7.40
Aug. 19, 1933	3.93	7.46	8.05	7.40
Aug. 26, 1933	3.81	7.08	7.54	7.40
Sept. 2, 1933	3.82	6.86	7.30	7.15
Sept. 9, 1933	3.86	7.03	7.48	7.00
Sept. 16, 1933	4.06	7.18	7.62	7.00
Sept. 23, 1933	4.60	7.16	7.43	7.00
Sept. 30, 1933	4.35	6.86	7.21	7.00
Oct. 7, 1933	4.68	6.74	7.32	6.90
Oct. 14, 1933	4.75	6.93	7.54	6.75
Oct. 21, 1933	4.23	6.51	7.13	6.40
Oct. 28, 1933	4.25	6.74	7.30	6.50

The Secretary devotes much space to the explanation of methods employed to restrict operations of yard traders who had accumulated pigs. I cannot understand why so much effort was expended by the Triple A to prevent yard traders from disposing of pigs owned by them under the plan. If the real reason for the plan was to obtain the slaughter of pigs to prevent them from being fed and thereby increasing market tonnage, why make so much noise about so small a detail.

Consider the crime against the unemployed in the destruction of 270,000,000 pounds of pigs weighing under 80 pounds simply because packers found it inconvenient to scrape the hair from the bodies of those pigs.

The outline indicated that the purchases were to be made by processors authorized under contract and in accordance with usual buying customs under Federal inspection. The plan specified that sows, insofar as practicable, were to be converted into edible products. Carcasses from pigs over 80 pounds in weight also were to be processed into edible products. Pigs weighing 80 pounds or less were to be processed into the inedible products—grease and fertilizer tankage.

It had been pointed out that processing of pigs weighing less than 80 pounds into edible products was impracticable because of the comparatively high-processing cost per unit of cured product. Packing-house equipment, particularly dehairing machinery, is designed for larger and heavier animals and does not work efficiently on small carcasses. Processor representatives stated that supplemental hand-labor operations required for satisfactory processing of light pigs into edible products would bring the total cost of the products well above the cost of purchasing their equivalent in cured pork from packers.

It also had been pointed out that the time required for processing pigs under 80 pounds into edible products, even if considered practicable, would tend seriously to retard the marketing program. This was a consideration of some importance because it seemed certain that as soon as buying started owners of light hogs would sell as rapidly as possible, thus tending to crowd processing establishments to capacity.

I submit there is no greater delicacy than roast pig. Let me remind you of what the immortal Charles Lamb has written in his Dissertation Upon Roast Pig. I quote from that famous essay:

"Of all the delicacies in the whole mundus edibilis, I will maintain it to be the most delicate princeps obsoniorum. * * *

"See him in the dish, his second cradle, how meek he lieth!—wouldst thou have had this innocent grow up to the grossness and indocility which too often accompany maturer swinehood? Ten to one he would have proved a glutton, a sloven, an obstinate, dis-

[1] The Chicago live-hog market was temporarily disturbed between Nov. 8 and 17, due to the failure of buyers and sellers to reach an agreement on prices, and few sales were made during that period. The accumulation of hogs at the market was reduced by purchases for Government account on Nov. 11 and 14 at prices above those offered by slaughterers. The prices shown for this period, therefore, are higher than those actually paid by slaughterers and slightly higher in relation to other markets than during the periods immediately before and after.

agreeable animal—wallowing in all manner of filthy conversation—from these sins he is happily snatched away—

"Ere sin could blight, or sorrow fade,
Death came with timely care—"

Looking further at the report submitted by the Secretary to the Senate I find this statement:

"Based on a net relationship of Chicago hog prices and the total live weight of inspected hog slaughters for the November to May period during the last 13 years, the actual reduction in slaughter supplies of approximately 1,000,000,000 pounds as a result of the emergency program should mean an improvement in the Chicago price of hogs over what they otherwise would be to the extent of approximately $1.80 per hundred pounds for the months November to May 1933–34. It should be kept in mind, however, that the bulk of this benefit will go to farmers in the form of benefit payments for making certain production adjustments rather than in the more familiar form of an equivalent increase in the open-market price of hogs."

Hog raisers are not going to be satisfied with anything but reasonable open-market prices of hogs.

I submit that as a real relief measure the Secretary's report proves that the hog-pig buying campaign was a complete flop.

Purchases and product

	Number of head	Approximate live weight	Approximate total amount paid for live hogs
1. Purchases for edible purposes:			
(a) Pigs (70–80–100 lbs.)	1,083,650	93,816,471	$5,928,177.62
(b) Sows	222,149	79,100,364	3,355,182.28
Subtotal	1,305,799	172,916,835	9,283,359.90
2. Purchases for inedible purposes:			
(a) Light pigs	5,105,067	270,573,305	21,359,742.05
Total (all pigs and sows)	6,410,866	443,490,140	30,643,101.95

	Pounds
3. Yield and processing cost of edible product:	
(a) Pounds dry salt meat produced	100,145,000
(b) Shrinkage in cure	2,614,000
(c) Net yield of meat	97,531,000
(d) Amount of product ordered shipped (as of Jan. 1, 1934)	86,303,674
(e) Remainder available for distribution (subsequent to Jan. 1, 1934)	11,227,326
(f) Amount remaining for distribution (as of Jan. 25, 1934)	1,500,000
4. Yield and processing cost of inedible products:	
(a) Yield of grease	20,868,355
(b) Estimated potential yield of tankage (approximate)	25,000,000
(c) Amount of tankage saved and stored	10,086,000
(d) Total processing cost for inedible purposes (including cost of tankage disposal)	$1,874,000

NOTE.—Figures dealing with the emergency hog-marketing program given herein are subject to revision in all instances. This report is based upon the latest available information, but the final report of the auditors for the Agricultural Adjustment Administration is not yet available. Final figures will not differ greatly from those presented herein.

SCHEDULE OF PRICES

The emergency price schedule, as announced, provided that from 6 to 9½ cents per pound would be paid for pigs, depending on their weight, at the base processing point (Chicago) by the processors under contract. The schedule of prices for the pigs, Chicago basis, was as follows:

Price per 100 pounds

25 to 30 pounds	$9.50
31 to 35 pounds	9.25
36 to 40 pounds	9.00
41 to 45 pounds	8.75
46 to 50 pounds	8.50
51 to 55 pounds	8.25
56 to 60 pounds	8.00
61 to 65 pounds	7.75
66 to 70 pounds	7.50
71 to 75 pounds	7.25
76 to 80 pounds	7.00
81 to 85 pounds	6.75
86 to 90 pounds	6.50
91 to 95 pounds	6.25
96 to 100 pounds	6.00

Pigs were to be purchased under this schedule on basis of average weight per lot with a minimum individual weight of 25 pounds, maximum individual weight of 100 pounds, and maximum range of weight of 30 pounds on individual pigs in each lot. It was specified that premium prices would be paid only for healthy pigs, showing no bad deformities at the time of delivery. Pigs of inferior growth, usually mast fed, and commonly referred to as "range pigs", "razorbacks", and "oilies", were to be paid for at a discount of $3 per hundredweight at any market.

MARKET DIFFERENTIALS

Premium prices to be paid by processors under contract at other markets than Chicago were determined by a market differential schedule prepared by the corn-hog section as follows:

Differential per hundredweight

Chicago	Base
Oklahoma and Texas	—$0.60
Interior points in Iowa and Minnesota	—.40
Interior points in North Dakota, South Dakota, Nebraska, Kansas, and west Missouri	—.50
St. Paul, Sioux City, Sioux Falls, Omaha, Nebraska City, St. Joseph, Kansas City, and other points on the Missouri River	—.40
Interior points in Illinois and Wisconsin	—.20
Indiana, Kentucky, and Tennessee	—.10
Milwaukee, St. Louis, and National Stock Yards, Ill.	—.10
Michigan and Ohio	Base
All Rocky Mountain and Pacific Coast States	—.60
All points east of Ohio and north of Virginia	+.25
Georgia and Florida[1]	—1.00
North Carolina, South Carolina, Virginia, Alabama, Mississippi, and Louisiana[1]	—.50

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Texas [Mr. CONNALLY], which will be stated.

The CHIEF CLERK. On page 2, in lines 2 and 3, it is proposed to strike out the words "to make advance rental and/or benefit payments with respect thereto" and to insert in lieu thereof the following: "to carry out any of the purposes described in subsections (a) and (b) of this section (12) and to support and balance the markets for the dairy- and beef-cattle industries."

The amendment was agreed to.

Mr. BYRD. Mr. President, I have an amendment, which I offer at this time.

The PRESIDING OFFICER. The amendment will be read for the information of the Senate.

The CHIEF CLERK. At the end of the bill insert the following new section:

SEC. 3. (a) Subsection (d) of section 9 of the Agricultural Adjustment Act, as amended, is amended by renumbering paragraph (5) as paragraph (6) and by adding after paragraph (4) a new paragraph, as follows:

"(5) In case of peanuts, the term 'processing' means the cleaning, polishing, grading, shelling, crushing, or other processing thereof."

(b) Section 11 of such act, as amended, is amended by adding after the word "tobacco" a comma and the word "peanuts."

The PRESIDING OFFICER. The question is on the amendment of the Senator from Virginia.

Mr. McNARY. Mr. President, will the Senator from Virginia permit discussion of his amendment to go over until tomorrow? I think it was rather understood between myself and the Senator from Texas [Mr. CONNALLY] that after the disposal of his amendment we would probably recess until tomorrow at 12 o'clock.

Mr. CONNALLY. Mr. President, permit me to inquire whether a unanimous-consent agreement fixing a time to vote on the bill would necessitate a quorum call?

The PRESIDING OFFICER. It would.

Mr. McNARY. I first wanted to know from the Senator from Virginia [Mr. BYRD] if he is willing to postpone consideration of his amendment until we meet tomorrow?

Mr. CONNALLY. I understood that; but I want to suggest to the Senator from Oregon that I am very anxious to get a vote on the bill, and I was going to try to get an agreement to vote on it at a specific hour tomorrow.

Mr. McNARY. I do not think the Senator can get such an agreement. If I were in his place, I would not press a request of that kind at this time.

Mr. McKELLAR. Mr. President, why can we not go on this afternoon? There is a very important appropriation bill which is to come up immediately after we finish with the bill which the Senator from Texas has in charge. It is an emergency matter, the air-mail appropriation bill. I hope we can get a vote on the amendment of the Senator from Virginia this afternoon.

[1] This schedule applied to pigs originating in this area wherever marketed.

Mr. McNARY. We could not have a vote on the bill tonight. That is a request which, it seems to me, the Senator ought not to submit at all. It must go over until tomorrow. The debate is not going to be lengthy. If the Senator from Texas [Mr. CONNALLY] will be patient, in my judgment he will have no difficulty in getting a vote tomorrow afternoon. If the Senator from Tennessee [Mr. McKELLAR] will do likewise, we will reach his appropriation bill very shortly tomorrow.

Mr. McKELLAR. I am very anxious to get a vote on the appropriation bill.

Mr. McNARY. I understand that. I am appealing to the Senator from Virginia [Mr. BYRD] to permit his amendment to go over until tomorrow. Is that satisfactory to the Senator from Virginia?

Mr. BYRD. Mr. President, I have no objection to the consideration of the amendment tomorrow. I do not think it will require much discussion, though; and if the Senator is willing to proceed with the consideration of it this evening I shall be glad to have that done.

Mr. McNARY. I am sure the Senator will desire to make some explanation of the amendment. Some questions will be propounded to him, and I am sure the discussion will continue until late in the evening. It is the desire of many Senators who are present to return to their offices to keep appointments and look after their mail, and other Senators have already left.

Mr. CONNALLY. Would the Senator object to recessing at 5:30, let us say, and letting the Senator from Virginia discuss his amendment now?

Mr. McNARY. I am not in charge of the floor. I am always willing to cooperate.

Mr. CONNALLY. I desire to go along with the Senator from Oregon, but I think it would be well for the Senator from Virginia to discuss his amendment tonight, so that the discussion will appear in the RECORD tomorrow.

Mr. McNARY. I assumed that I was doing the Senator from Virginia a great kindness in not desiring to have him go on at this late hour. I am sure the same kindness would be extended to every Senator here if he could be permitted to go to his office about this time.

Mr. CONNALLY. Very well.

MESSAGE FROM THE HOUSE—ENROLLED BILL AND JOINT RESOLUTION SIGNED

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bill and joint resolution, and they were signed by the Vice President:

S. 1083. An act authorizing adjustment of the claim of the Potomac Electric Power Co., of Washington, D.C.; and

H.J.Res. 290. Joint resolution to provide an appropriation to carry into effect the act entitled "An act to provide for loans to farmers for crop production and harvesting during the year 1934, and for other purposes", approved February 23, 1934.

CONSERVATION OF WILD-LIFE RESOURCES—DUCK STAMP BILL

Mr. McNARY. Mr. President, I desire to call up another matter which will take only a moment.

A few days ago the Senate passed an important amendment to the Migratory Bird Act. A similar bill was passed by the House. It contained a minor amendment. The House bill is on the Senate Calendar. I ask unanimous consent that we may take up the House bill and pass it.

Mr. McKELLAR. May the bill be read?

Mr. McNARY. I spoke to the Senator from Arkansas [Mr. ROBINSON] about the bill, and it is satisfactory to him.

The PRESIDING OFFICER. The Senator from Oregon asks unanimous consent for the present consideration of a bill, the title of which will be read.

The CHIEF CLERK. A bill (H.R. 5632) to supplement and support the Migratory Bird Conservation Act by providing funds for the acquisition of areas for use as migratory-bird sanctuaries, refuges, and breeding grounds, for developing and administering such areas, for the protection of certain migratory birds, for the enforcement of the Migratory Bird Treaty Act and regulations thereunder, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. CONNALLY. Will there be any debate on the bill?

Mr. McNARY. No; not at all.

Mr. TRAMMELL. Mr. President, I think it would be a good idea to have the bill read. Many of us do not know what it is about.

Mr. McNARY. A similar bill passed the Senate a week ago, and the House has passed its own bill with a slight amendment which I can specify.

Mr. TRAMMELL. What is the substance of it?

Mr. McNARY. It is a bill for the conservation of wild life by protecting migratory-bird flights. The House has passed the bill. It exempts persons under 16 from its provisions, and also provides that no license fee shall be charged against the owner of the property. A substantially similar bill passed the Senate. The House bill contains a slight amendment of the provisions of the Senate bill. The House bill is on the Senate Calendar, and I ask that it be taken up and passed at this time. I have spoken to the Senator from Arkansas [Mr. ROBINSON] about the bill, and he said it is satisfactory to him.

Mr. TRAMMELL. The bill does not deal with the requirement of a license; does it? Does it carry with it any license imposition?

Mr. WALCOTT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Connecticut?

Mr. McNARY. I yield to the Senator from Connecticut, the chairman of the special committee.

Mr. WALCOTT. I did not understand the question of the Senator from Florida.

Mr. TRAMMELL. I understand from one of the Senators that the bill does not deal with the question of imposing an additional license tax. I am rather of the impression, generally speaking, that we have already gone almost too far in imposing fees and taxes upon people for hunting privileges in regard to migratory birds. I do not want any measure of that character to go through here. I understand, however, that this bill does not do anything of the kind.

Mr. WALCOTT. I do not think the Senator from Florida understands this bill. It is almost identical with a bill that passed the Senate without opposition a week or 10 days ago. This bill was introduced in the House yesterday or day before and passed without opposition. The two bills are identical, with the two exceptions just indicated by the Senator from Oregon. One of them exempts from the provisions of the bill all persons under 16 years of age. The other exempts the owner of the property from paying the fee of a dollar if he intends to shoot migratory waterfowl on his own property.

The bill is designed to raise a fund for the purchase of sanctuaries and refuges. Ninety percent of the fund is to be used for that purpose and 10 percent for the maintenance of those areas. I may add that Florida is one of the States most affected advantageously by the provisions of the bill.

Bills on this subject have already passed both the Senate and the House. Two slight changes, as I have stated, were incorporated in the House bill. All we are asking is that the House bill be passed at this time, inasmuch as it is a revenue-raising measure. If the House bill shall be passed, that will be the end of it.

Mr. TRAMMELL. Does it relax or does it increase the tax imposition on those who hunt migratory birds?

Mr. WALCOTT. If I understand the question correctly, the bill does not increase the tax; it merely provides for a hunter's license.

Mr. FESS. Mr. President, the Senator asks whether the bill relaxes in some respects the license feature. It does to the extent that it does not require a license of the owner of the property.

Mr. WALCOTT. Precisely.

Mr. TRAMMELL. If that is the case, I have no objection.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That after the expiration of 90 days after the date of enactment of this act no person over 16 years of age shall take any migratory waterfowl unless at the time of such taking he carries on his person an unexpired Federal migratory-bird hunting stamp issued to him in the manner hereinafter provided; except that no such stamp shall be required for the taking of migratory waterfowl by Federal or State institutions or official agencies, for propagation purposes or by the resident owner, tenant, or share cropper of the property or officially designated agencies of the Department of Agriculture for the killing of such waterfowl when found injuring crops or other property, under such restrictions as the Secretary of Agriculture may by regulation prescribe. The Secretary of Agriculture shall, immediately upon the passage of this act, adopt and promulgate such regulations as are pertinent to the protection of private property in the injury of crops. Any person to whom a stamp has been issued under this act shall upon request exhibit such stamp for inspection to any officer or employee of the Department of Agriculture authorized to enforce the provisions of this act or to any officer of any State or any political subdivision thereof authorized to enforce game laws.

SEC. 2. That the stamps required under this act shall be issued, and the fees therefor collected, by the Post Office Department, under regulations prescribed jointly by the Secretary of Agriculture and the Postmaster General: *Provided*, That stamps shall be issued at the post office or post offices of all county seats in the several States, at all post offices in all cities with a population of 2,500 or over, and at such other post offices as said officers may by regulation prescribe. Each such stamp shall, at the time of issuance, be affixed adhesively to the game license issued to the applicant under State law, if the applicant is required to have a State license, or, if the applicant is not required to have a State license, to a certificate furnished for that purpose by the Post Office Department at the time of issuance of such stamp. For each such stamp issued under the provisions of this act there shall be collected by the postmaster the sum of $1. Each such stamp shall expire and be void after the 30th day of June next succeeding its issuance.

SEC. 3. Nothing in this act shall be construed to authorize any person to take any migratory waterfowl otherwise than in accordance with regulations adopted and approved pursuant to any treaty heretofore or hereafter entered into between the United States and any other country for the protection of migratory birds, nor to exempt any person from complying with the game laws of the several States.

SEC. 4. All moneys received for such stamps shall be accounted for by the postmaster and paid into the Treasury of the United States, and shall be reserved and set aside as a special fund to be known as the migratory bird conservation fund, to be administered by the Secretary of Agriculture. All moneys received into such fund are hereby appropriated for the following objects and shall be available therefor until expended:

(a) Not less than 90 percent shall be available for the location, ascertainment, acquisition, administration, maintenance, and development of suitable areas for inviolate migratory-bird sanctuaries, under the provisions of the Migratory Bird Conservation Act, to be expended for such purposes in all respects as moneys appropriated pursuant to the provisions of such act; for the administration, maintenance, and development of other refuges under the administration of the Secretary of Agriculture frequented by migratory game birds; and for such investigations on such refuges and elsewhere in regard to migratory waterfowl as the Secretary of Agriculture may deem essential for the highest utilization of the refuges and for the protection and increase of these birds.

(b) The remainder shall be available for administrative expenses under this act and the Migratory Bird Conservation Act, including reimbursement to the Post Office Department of funds expended in connection with the printing, engraving, and issuance of migratory-bird hunting stamps, and including personal services in the District of Columbia and elsewhere: *Provided*, That the protection of said inviolate migratory-bird sanctuaries shall be, so far as possible, under section 17 of the Migratory Bird Conservation Act, passed February 18, 1929.

(c) The remainder shall be available for administrative expenses under this act, including reimbursement to the Post Office Department of funds expended in connection with the issuance of stamps, and printing and engraving of the same, and for administration expenses under the Migratory Bird Treaty Act and any other act to carry into effect any treaty for the protection of migratory birds, and the Migratory Bird Conservation Act.

SEC. 5. (a) No person shall alter, mutilate, loan, or transfer to another any stamp issued to him pursuant to this act, nor shall any person other than the person to whom such stamp is issued use the same for any purpose.

(b) No person shall imitate or counterfeit any stamp authorized by this act, or any die, plate, or engraving therefor, or make, print, or knowingly use, sell, or have in his possession any such counterfeit, license, die, plate, or engraving.

SEC. 6. For the efficient execution of this act, the judges of the several courts, established under the laws of the United States, United States commissioners, and persons appointed by the Secretary of Agriculture to enforce the provisions of this act, shall have, with respect thereto, like powers and duties as are conferred upon said judges, commissioners, and employees of the Department of Agriculture by the Migratory Bird Treaty Act or any other act to carry into effect any treaty for the protection of migratory birds with respect to that act. Any bird or part thereof taken or possessed contrary to such acts shall, when seized, be disposed of as provided by the Migratory Bird Treaty Act, or acts aforesaid.

SEC. 7. Any person who shall violate any provision of this act or who shall violate or fail to comply with any regulation made pursuant thereto shall be subject to the penalties provided in section 6 of the Migratory Bird Treaty Act.

SEC. 8. The Secretary of Agriculture is authorized to cooperate with the several States and Territories in the enforcement of the provisions of this act.

SEC. 9. (a) Terms defined in the Migratory Bird Treaty Act, or the Migratory Bird Conservation Act, shall, when used in this act, have the meaning assigned to such terms in such acts, respectively.

(b) As used in this act (1) the term "migratory waterfowl" means the species enumerated in paragraph (a) of subdivision 1 of article I of the treaty between the United States and Great Britain for the protection of migratory birds concluded August 16, 1916; (2) the term "State" includes the several States and Territories of the United States and the District of Columbia; and (3) the term "take" means pursue, hunt, shoot, capture, collect, kill, or attempt to pursue, hunt, shoot, capture, collect, or kill.

INCLUSION OF CATTLE AS A BASIC COMMODITY

The Senate resumed the consideration of the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes.

RECESS

Mr. CONNALLY. I move that the Senate take a recess until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. The question is on the motion of the Senator from Texas.

The motion was agreed to; and (at 5 o'clock and 17 minutes p.m.) the Senate took a recess until tomorrow, Thursday, March 8, 1934, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 7 (legislative day of Feb. 28), 1934

GENERAL COUNSEL FOR THE BUREAU OF INTERNAL REVENUE

Robert H. Jackson to be general counsel for the Bureau of Internal Revenue.

COMPTROLLER OF CUSTOMS

Thomas Temple Hoyne to be comptroller of customs in customs collection district no. 39 at Chicago, Ill.

COLLECTOR OF CUSTOMS

William J. O'Brien to be collector of customs for customs collection district no. 9 at Buffalo, N.Y.

POSTMASTERS

COLORADO

George M. Griffin, Brighton.

GEORGIA

Alexander S. Chamlee, Bartow.

ILLINOIS

Perry F. Arnold, Browning.
James M. Allen, Decatur.
Grover C. Norris, Effingham.
George E. Brown, Franklin.
James R. Maher, Hillside.
George E. Kull, Strasburg.
Martha G. Baily, Table Grove.
George A. Larimer, Tuscola.

MASSACHUSETTS

Mary L. McParlin, Sandwich.

NEW JERSEY

William L. Scheuerman, Basking Ridge.
John Netterman, Island Heights.
Eleanor H. White, Plainsboro.

OKLAHOMA

Pauline M. Angevine, Dewey.
Millard H. Wright, Eufaula.
Mary B. Weathers, Grove.
James W. Blye, Hennessey.
Hugh Johnson, Hugo.
Delva E. Grubbs, Jenks.
Hiram Impson, McAlester.
Rex T. Strickland, Madill.

Aloysius W. Fries, Kenosha.
Meridan D. Anderson, Omro.
Grover E. Falck, Seymour.
Louis J. Thompson, Spooner.
John C. Reinke, Stone Lake.
John H. Arent, West De Pere.

WYOMING

Albert E. Holliday, Laramie.

HOUSE OF REPRESENTATIVES

WEDNESDAY, MARCH 7, 1934

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D.D., offered the following prayer:

Our Heavenly Father, the One above all imperfection and above the touch of sin, hallowed be Thy name. We praise Thee that there is always an unwavering light, namely, Thy merciful providence. When faith is dim and hope is low, in the dearth of rest and in the defiles of doubt, at evening time and when the day is far spent, lo, Thou art with us. O continue to look upon us with divine favor; lay Thy hand upon us and bear Thy shadow in our souls. We thank Thee for the rays of the morning promise and for the cloudless sky of assurance. Illuminate our understanding, O Lord God; balance our judgments, season our tempers, and quicken our foresight. Give us pitying hearts that shall sympathize with human woe. May we feel the need of the weary, the pulse of the struggling, and the burden of the homeless. In these stony places of human experience establish Thou our work. In the holy name of Jesus. Amen.

The Journal of the proceedings of yesterday was read and approved.

BUSINESS CONDITIONS

Mr. LUDLOW. Mr. Speaker, last Monday one of our colleagues, the gentleman from Indiana, JAMES I. FARLEY, made a very valuable and informative address on the subject of direct loans to industry. Mr. FARLEY is one of the outstanding business men of our State, a former president of the Auburn Automobile Co., and a wise and safe counselor in business affairs. His speech is a very valuable contribution to the discussion of this important subject, and I ask unanimous consent to have it printed in the CONGRESSIONAL RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. LUDLOW. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement of Hon. JAMES I. FARLEY, of Indiana, before the Subcommittee on Banking and Currency, House of Representatives:

Mr. DISNEY and gentlemen of the committee, I am not a member of this Subcommittee of the Committee on Banking and Currency; I am just here by the grace of the subcommittee this morning, and I would not want to do something unethical so far as my committee is concerned, because there are some gentlemen on this committee whom I respect for their very fine character and splendid judgment and long years of experience in matters of this character. I should like to make it quite clear to you, Mr. Chairman, that what I have to say has nothing whatever to do with the company I was identified with for 20 years. We were fortunately in a very beautiful financial position. We started our business, and early, by economy and careful operation and very moderate salaries, were able always to keep our own position good.

When I thought of some of the things Mr. LUDLOW was talking about this morning, I remembered when we often were approached by the First National Bank in Chicago, where we carried our major account, and urged to borrow money at 1¼ percent per annum, so that, having been connected with an account that had been maintained for years with a rating of Aa–A1, I cannot thoroughly sympathize with business men who are wondering where they are going to get their money.

Our business was just a little different. We came in the time when the automobile was being developed and growing in popular favor. For many years our problem was not one of selling our merchandise, but wholly one of producing it. I want to say to you, that considering some of the hectic times we had in those years back in 1907, and again in 1914, and then in 1920, we might not be in existence as a company today if it had not been for the fact that we were in a position where we had plenty of working capital.

There are some very gigantic institutions in the automobile industry. Our business depended largely upon our being able to get something new in models, some new device making it a more satisfactory piece of machinery to own. Sometimes we made a mistake in getting what the public might demand; and if it had not been that we were in a sufficiently strong cash position at many times to reduce our prices and likewise go out in the open market and buy merchandise at a discount from distressed manufacturers, I do not know what might have happened to us.

So I am not speaking in any sense for that firm, because their cash balance was always sufficient to take care of their business, and they are likewise in that situation today.

However, there are many small industries which are not in that position. I was particularly impressed with the remark made by Mr. Roosevelt in his radio address some weeks ago, in which he said that the future of America depended upon keeping the small communities intact. In other words, instead of having factories in the small towns close and having the laborers migrate to the large cities, it would be much better to keep the small communities intact, to keep the people living in the small towns rather than to let them go into the large cities. I think he was very sincere in that, as in all the other of his pronouncements; but how are you going to keep communities intact if they close the factories?

Last evening I talked with some gentleman very late into the night, two or three of them from Texas, and they were talking over the various problems which they have. There are many manufacturing industries in that State.

In a number of States there are very few manufacturing institutions. Many counties do not have within their borders a single factory. They are agricultural and depend on farming and stock-raising, hence they do not have the need for the same assistance as strictly industrial small communities.

In the State of Indiana I would say off-hand that nearly every county seat and many other towns in the counties have one or more manufacturing plants that are dependent entirely at this time on being able to secure some assistance in order to continue.

I have in mind a little plant in my State employing some 125 to 160 people all the time, every day in the year except holidays. At their peak time they employ about 200 people. They sell their merchandise all over America, and also sell it in various foreign countries.

Take this particular case—when the stock market break came in 1929 they thought this was a temporary setback, that prosperity was soon to return, and they were asked not to reduce wages or lay off employees. Fortunately, during the period of 1930, they enjoyed a fair volume of sales, and while concerns all around were drastically cutting salaries and laying off employees, they did not do it, although the interest of both the employees and the company would have been served better had they done so at that time.

Their company has put up a strong fight to obtain what business they could, but in spite of the most intensive work the past 4 years of their sales volume has gradually dropped down until in the year 1933 it was just half that of 1931. They have been constantly cutting expenses in order to survive. The bank moratorium of 1933 caused many failures among concerns with whom they were dealing. Their loss on bad debts in 1933 was the largest they have experienced in 20 years.

In the crash they were caught with a lot of small accounts, these small merchants with whom they deal being unable to pay. It costs them an unusual amount of money to make these collections, but during this time they have been able to live and are now

in fairly good condition and their plant is intact. There are no mortgages on it, nor is there any bonded indebtedness, but they do need working capital.

They are obtaining working capital through the assistance of financial companies, which, however, charge them excessive interest and commission for their services. You are sufficiently acquainted with business to know that you cannot pay 14 percent on any proposition and make money unless you have a patented process where no one can step in and make the same article and you can fix your own prices. The net result of the two disastrous years of 1932 and 1933 have resulted in a heavy depletion of their working-capital position.

The year 1934 was begun with some improvement in sales, but it is becoming difficult to finance this increased business because they are unable to borrow from the banks as heretofore, to finance their business, and in addition, their own working capital has been depleted, making it very difficult to finance the business. In 1931 this company was able to borrow $120,000 on a straight bank line and it was paid off at the end of the year. In 1932 they were only able to borrow $58,000, and that was paid off at the end of the year. In 1933 one of the banks from which they obtained $38,000 the previous year was closed on February 15, and they had a deposit of $1,500 frozen. In 1933 they were able to borrow a total of only $20,000. Their sales volume in 1931 was $927,000—in 1933 it was $500,000. You can see their borrowings were reduced down to one sixth of that secured in 1931, while their business was reduced only one half.

When the N.R.A. was put into effect on August 1, this company whole-heartedly cooperated and signed the President's reemployment agreement, and they adjusted themselves to the code of their particular industry, which was signed by the President on October 31. However, this increased the pay roll by nearly $1,000 per month. So far, they have found it difficult to sufficiently raise their prices to take care of the increased cost of pay roll and material which they buy. They believe that conditions have somewhat improved, and improvement could be sustained if they were able to finance increased business. With additional working capital this company could right now increase sales at least 25 percent this year and employment from 25 to 33⅓ percent.

They have practically $450,000 of unencumbered assets in plant, equipment, and inventory. Their sales organization is intact. If they could obtain an industrial loan, to be amortized over a period of 5 years, they would be able to go ahead, increase employment, pay higher wages, and make their investment to stockholders more secure and profitable.

In general merchandising, where other people can make what you make, and sell it, if you have to pay that amount of money to obtaining operating capital, you have lost your profit, and it is only a matter of time until the fatal day comes and you cannot earn a profit.

They are unable to obtain this money through banks. The banks do not want to make the loans. They say they are only assisting enterprises that are absolutely necessary. It seems to me this program is the crying need of the hour and the one which will do the most good for the country at the present time—it is also the one that has been the most neglected.

Now, I submit to you gentlemen, is not a business necessary that employs men and women and pays them daily and weekly wages? I say that they are entitled to consideration and that they should have the assistance.

I have been very much impressed with the report from the Manufacturers Association of Indiana. I am confident that large manufacturing institutions, like General Motors, Chrysler, the American Telephone & Telegraph Co., and some other great business institutions of America are adequately financed, and do not need this assistance. They are not asking for this assistance, but I likewise want to say to you that unless you do assist these industries in the smaller units, one of these days, the big fellows will have it altogether, and you will have to pass right through with what you have been through in years gone by. Under this N.R.A. program we have practically eliminated the Sherman anti-trust law. It is gone.

By the way, the biggest victory which large industry, without turning its hand apparently, has ever won, was through the N.R.A., and one of these days these giant industries are bound to put out the little ones scattered throughout the entire length and breadth of the land.

Now, I am amazed to find in this report from the Manufacturers' Association that 92 percent (plus) of men employed in factories are employed in factories employing from 101 down. Practically the biggest phase of the whole thing in the State of Indiana, particularly, is found in this group of men. The table before me lists factories as employing from 1 to 5, 6 to 20, 21 to 50, 51 to 100, and 101 to 250, etc. Then, when you get into the group that is actually employing from 1,001 to 2,501, you have only one half of 1 percent of the total employees in the country working in factories of that size. That is the big question here. If you cannot reach out and help the small industry, what will happen? I know what the banks are saying about this. Recently I wrote to one of the best and most substantial men in my district, asking for his expression upon certain things that I submitted. He came back and said, "I am not in favor of making loans to small industries, because it completely disrupts the functions of the banks." He said, "The banks are supposed to do that." I answered that he was entirely correct; that the banks were supposed to do it, but if they did not do it, what then?

The only way by which we can possibly relieve the situation is to begin lending something to industry. To be sure, it should be advanced on approved securities and should go to good small industries.

I offered in committee an amendment making it possible to make loans direct to industry. I do not want to go out and indiscriminately make loans to everybody. Unquestionably, there are many industries that are in the red, and that are hopelessly in the red. They reached down too far to ever regain their balance. There are many things of that character to be considered, but there are still many thousands of small industries scattered throughout the land that are essential to our general prosperity, and that are entitled to credit.

I was asked this question last night, "Would you turn over the extension of this credit to a certain class of people that were mentioned?" I was asked, "Who would you have to do it?" I have confidence enough in this country to believe that there are many men who are capable of passing on these loans, and of making satisfactory loans at a fair rate of interest.

I have been told further that industry is on fire and that nobody knows how far it will go. My judgment is that it is going too terribly far if we do not step in one of these days and help out.

I know, in line with Congressman LUDLOW'S suggestion, that we have recently appropriated $950,000,000 more to take care of Public Works and Civil Works, to be split up according to the wishes of the administration. Gentlemen, that is just the beginning. If there is anyone who has the slightest idea that we are through with C.W.A., or will be on the 1st of May, he is making a terrible error. As a matter of fact, we are just starting. If we do not get men back to work in the factories, they will finally go into the C.W.A. line. I would rather make a few loans that did not return 100 percent the day they were due to help to bolster up industry at this time than to continue doling out $950,000,000, or any other number of millions of dollars, to keep the C.W.A. running. I believe that if the men just had the opportunity, they would be more in favor of going back to work where they could get their pay checks on Saturday with the feeling that they had actually earned it by doing useful work.

I would not take your time to discuss some of these things, if I did not consider them important. The C.W.A. is not radically wrong. I was for it, I still am for it, and will be for it, or will continue to be for it as long as men are hungry or as long as they need food, shelter, and heat. As long as they are in need, I will be for any program that functions along that particular line; but I want to add that my humble judgment is that we are just wasting at the spigot on those propositions, instead of taking hold of the thing at the right place. We cannot get prosperity back into this country until we bring a large part of the population back into the picture, and let them earn some money in gainful and profitable enterprise.

I should like very much to see something done that would make possible loans direct to industry. I do not mean that you should give it out indiscriminately, or let Tom, Dick, or Harry come in and borrow from this fund. That is not my idea at all. There must be certain regulations set up that they must go through with. In September 1933, when the R.F.C. issued Circular No. 11, I thought the time had come when the importance of this matter was realized. However, 6 months have now elapsed since this supposed program was set up, and from the information I have, practically no loans have been made to industry. It seems to me the time has arrived when the Government should cut out all red tape and make these loans promptly to industries which are basically sound, have sufficient assets, plus a good future outlook and satisfactory past record.

This company and many others qualify in each particular.

As to the question of time, I have been working on some of these propositions for more than 6 months. They tell us down there at the Reconstruction Finance Corporation that the machinery is already set up to do this through loan companies, and through the famous Sheet No. 11 that they sent out that tells how to go about setting up mortgage companies. This has been done, yet we find that no one is getting results. I have never been told, although I asked the question direct on two occasions, how much money we are lending to industry. Mr. Jones said "not very much." It was not very much because they are not in sympathy with doing this, and they will not be in sympathy with it until the Congress of the United States passes an amendto the Reconstruction Finance Corporation Act that will make it possible and obligatory for them to extend loans of this character.

A question was asked by my honorable colleague on my right, Mr. SPENCE, of Kentucky, as to how much would be required. No one knows. However, I contend that it is not essential to do all of it at once. The thing that we should do is to make a start, and then, while we are beginning, find out what will be required.

Mr. DISNEY. Could not a survey be made of the whole country through some such channel as the United States Chamber of Commerce? In that way, could they not make some approximate estimate of how much would be necessary?

Mr. FARLEY. I think a survey should be made. I think that would be very beneficial. The trouble now, Mr. DISNEY, is that the time question enters into it. That is because this has been dragging along for 6 months, and every man who has been connected with a factory knows that they should begin speeding up work about the 1st of January, so as to get ready to ship out during the spring buying season. Many of these factories that ought to have merchandise on their shelves have their shelves practically empty at this time, and they are bound to have a difficult time in taking care of their orders in the future. I think we should make a start on this at some place.

Further, answering the question as to whether we are getting any more relief in Indiana from the P.W.A., I will say we are not. That is not your fault. That is the fault largely of the State of Indiana, because we have in Indiana a $1.50 tax limit. With that limit, our people here in Washington do not feel that the security we can offer, with that $1.50 tax limit, can be accepted. They feel that does not make it possible for them to accept us. The result is that we are getting very little P.W.A. relief in the State of Indiana, in comparison with many other States. However, we are not envious of other States that are getting this relief. They have their own arrangements. All that we want down in Indiana, and all that we request, is the opportunity to establish factories in that land, and to get money enough to finance them.

I thank you very much for the opportunity you gave me to offer these few suggestions.

Mr. LUCE. There was one point that was not touched upon by Mr. LUDLOW when he was speaking of banks, and that is that a considerable part of the credit desired is simply wanted for what you might call a continuing supply of capital. For instance, here is the head of a chain grocery store, whose testimony was most illuminating: Clearly, what he was in need of was a perpetual capital. Now, up to our time, I take it, it was the custom for corporations to secure their capital by subscriptions to stock or by issuing bonds; but in recent years, banks have more and more furnished the money that was previously furnished through stock and bond issues, with the result that today banking restrictions are requiring banks to secure payments on these continuing loans at the time of the renewal of the notes, and that proves to be quite a source of trouble. Now, do you think it would be a proper governmental function for an agency of the Government to undertake to furnish working capital indefinitely?

Mr. FARLEY. I can answer that very easily. In my judgment, I do not think it is a function of the Government to furnish a permanent continuous working capital for industry. In other words, I am not in sympathy at any place with the idea that the Government of the United States should go into the manufacturing business. I do not agree with those who are carrying through this program in West Virginia. I think it is the function of industry to conduct its own operations. I think that this is an emergency matter that should not be extended over 3 years, with possibly a renewal for 2 years. I say that, because some of these things are bound to be washed out before all of this is over. What I am appealing for is assistance now, not a permanent investment, that must go on year after year indefinitely.

Mr. LUDLOW. Mr. FARLEY, I wish to thank you for your excellent contribution. I am quite impressed with what you have said in regard to the Civil Works program. Certainly we are not going to allow men, women, and children to starve in this country, and Congress will continue to pour out whatever funds are necessary to prevent starvation and hunger. Yet, would it not be a great deal better if Congress, instead of pouring out money in that way, should furnish money to industry whereby industry could resume its normal activity and absorb those C.W.A. workers into regular employment on regular industrial pay rolls? That is the question that is presented here.

SHIP SUBSIDIES

Mr. BLAND. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an address made by the Secretary of Commerce over the radio 2 nights ago on the subject of ship subsidy.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. BLAND. Mr. Speaker, pursuant to leave this day granted me, I extend my remarks in the RECORD by publishing a most able address made recently over the radio by Hon. Daniel C. Roper, Secretary of Commerce, on the subject of "Ship Subsidies."

A guiding principle of democratic government in the United States has been and is the welfare and progress of the human element in life. This has not been a haphazard development. It is a definite principle and has grown out of the very essence of democracy. We have a Government founded upon the fully conceived and thoroughly stated proposition that the people are capable of ruling themselves and that the people, as human beings, should be given primary consideration in the objectives and functions of such government.

This philosophy has worked naturally toward higher standards of living, and we pride ourselves as a Nation in believing that human interest in the United States has reached a higher plane of development than in any other country. It is only natural that these concepts and purposes, fulfilled in our high standards of living, should bring us into keen competition with other nations where working and living standards are lower than ours. This condition applies as much to ocean trade and commerce as it does to strictly internal or national aspects of our economic lives. Hence, due to higher standards of living and wage scales, the shipbuilding and ship-repair costs in the United States and ship-operation costs under the American flag are higher than in other countries.

For instance, the construction and operation costs of British ships are nearest to the American scale or average, but shipbuilding costs in American yards are, on the average, considerably higher than British costs. The higher American costs are largely in labor and materials. Any greater efficiency which may be present in the operation of American vessels is not sufficient to offset the lower costs of living in other countries.

As long as we were chiefly an agricultural country, interested primarily in marketing raw materials abroad, it didn't matter so much whether raw materials were transported in American or foreign bottoms. Foreign countries needed these raw materials, and the United States encountered scarcely no competitive problem in selling such raw materials. But, as the United States advanced to its present status of development in manufacturing, our quest for markets abroad was naturally increased and the competition in the sale of manufactured goods became an active and primary consideration. Today, therefore, there exists the necessity of marketing large quantities of manufactured goods in our own shipping bottoms.

As an economic necessity the foreign-trade development of the United States depends largely upon the use of American ships for carrying American goods. It is essential that we maintain an American-flag tonnage on important trade routes, to serve the needs of our commerce, and to safeguard against war and other emergencies which might disturb the normal flow of American commerce.

But it is not alone from the competitive and essential economic standpoint that we must view the development of our merchant marine. The merchant marine is an important and, we may safely say, an indispensable factor in our national defense. Obviously, it is not practicable to maintain within the Navy all the vessels which might be necessary in event of war. To do so would require a huge outlay of taxpayers' money and might tend to encourage unnecessary defense expenditures.

Speaking generally, the same types of ships which are necessary from the commercial standpoint in time of peace are required from the defense standpoint in time of war. Our World War experience is a striking testimony to the value of an adequate and efficient merchant marine and conclusive proof of the handicaps imposed and excessive expenses incurred through the lack of an adequate merchant marine. Upon the entrance of the United States into the World War we had to depend to a great extent upon foreign ships for transport and military purposes and for the import and export of raw materials and manufactured products. Much of this transportation had to be done at an excessive cost to the American Government and also was a severe handicap to naval and military operations.

Thus, from both the commercial and defense standpoints, it would seem that for the economic self-respect, the military self-respect, and the pride of the Nation, an adequate and proper development and maintenance of an American merchant marine is a fundamental necessity.

The practical question in view of these conditions, which early arose and is still before us, is the way in which the labor and other extra cost inequalities, as previously described, can be met or equalized so as to permit the building and sustaining of a requisite merchant marine. An equally important aspect of this question is the necessity of fixing the amount of the subsidy at a point where it will equalize these differentials and stimulate rather than discourage private initiative.

We can readily see that nationality determines the political and economic conditions under which a ship operates. The owner of an American vessel buys his repairs, employs part of his labor, and in some cases all of it, part of his supplies, and frequently the ship itself, in the protected domestic market characterized by the costs incidental to a high living standard. His stock in trade is ship's space, which he sells in an unprotected, competitive world market. Naturally the ship operator looks to the national interest which may be inherent in his business to neutralize any resultant handicaps.

We all insist that we must maintain our standard of living as against the lower living standards of other countries, and by so doing we automatically impose a handicap upon American shipowners. The best answer that Congress has worked out to this problem of meeting differential costs and expenses is to have the Federal Government supplement the larger costs for our country with money from the Federal Treasury. The question then arose: What is the safest and most effective manner of putting this principle into practicable operation? Congress decided to let this excess cost represent service rendered by the American shipping lines in carrying the mail and has seen fit to designate this financial aid as ocean-mail pay or a subsidy. Funk and Wagnall's Standard Dictionary defines subsidy as: "Pecuniary aid directly granted by government to an individual or commercial enterprise deemed productive of public benefit."

Webster's New International Dictionary defines subsidy as: "A grant of funds or property from a government * * * to a private person or company to assist in the establishment or support of an enterprise deemed advantageous to the public." Applying these definitions to the merchant marine we may say that the subsidy in this case is a payment of funds from the Government to American ship operators to offset the lower costs of ship construction and operation in foreign countries, so that American vessels may be placed on a sounder competitive basis in the world market. Merchant-marine subsidies take the form of ocean-mail pay and Government financing of shipbuilding and shipping operations to the extent that private business is unable to supply or provide.

Unfortunately, the Federal Government has not been industrious enough in its efforts to enlighten the people on the subject

of subsidies and this use of public funds; and many people probably think that the subsidy is nothing more than the compensation which transportation lines get for carrying the mail. It is not that, but rather a method for actually building a competitive American merchant marine.

Even with the much lower costs existing in other maritime nations, our chief competitors have found subsidies necessary in order to build and maintain their merchant marines. Great Britain, France, and Japan, with their much lower costs, have found subsidies necessary to maintain their commercial fleets for both economic and national defense purposes. It should not be difficult to understand, therefore, that a subsidy policy is essential in the building and maintenance of our merchant marine, at least until a better method is developed.

When we have accepted the necessity for a merchant-marine subsidy, we then face the question of how this money is to be most wisely spent, how the Treasury is to be safeguarded in these expenditures, and just what form these subsidies should take. When public funds are to be expended in as large quantities as those needed to maintain our merchant marine, the public is entitled to know what policy the Government has adopted and why such a policy is necessary. The question of subsidies comprehends, therefore, a study of the complete scope of the shipping and foreign-trade activities of the United States.

The designation of payments made to ship operators by the Government as "ocean-mail pay" is somewhat misleading. "Mail pay" is a misnomer, for payments are not made primarily as compensation for carrying the mail. If they were, these payments would only be a fractional part of what they are at present. Hence it would seem to me that there would be less misunderstanding if these payments were clearly and frankly designated as direct subsidies.

A private company operating an essential trade route under the American flag would require a capital investment and a continuing cost which, against foreign competition, would give no hope of a reasonable return over a period of years, but which would result in heavy losses instead. Consequently the Government of the United States determines essential trade routes and agrees to assist the ship operator by sharing in the venture through a contract service or subsidy payment.

What does this subsidy include and how is it determined?

First, as already explained, we have the excess cost of construction in this country as one of the items which the Government might seek to amortize partially. In the second place, we have the considerably higher cost of seamen and other labor as compared with foreign countries. Then we have the third factor of the subsidies given by foreign countries to their ship operators. After these facts are carefully weighed, the differential costs determined, and an agreement reached that the trade route is an essential one, the Government then, in effect, says to the ship operator, "We are absorbing a part of these additional costs in order that you may operate and develop this essential trade route." The payments made by the Government for this purpose are subsidies.

Since the transfer of the Shipping Board to the Department of Commerce as a regular bureau of the Department the Seceretary of Commerce is charged with the responsibility of fostering the development of our merchant marine. After a study of the country's shipping policy in effect during the post-World War period, I am convinced that we must initiate a sounder and more adequate merchant marine and subsidy program. To accomplish this objective, there are several major considerations which it seems to me deserve careful attention.

We all stand for fair and equitable competition in all lines of trade and commerce, but we all know that competition can be carried to such extremes as to destroy the purpose for which proper competition is designed. For instance, when the Government supports one line of ships on an essential trade route through subsidy payments, it is very foolish and destructive to make loans to enable other lines to build ships and engage in commerce in competition with the very lines which the Government is already supporting, and through which it is trying to build a merchant marine. Such a policy is like the man who would defend himself with one hand and commit suicide with the other hand.

Inasmuch as Government aids to shipping have as their objective the establishment of an efficient and ultimately a self-sustaining merchant marine, the essential trade routes to be served should be determined by analyzing the flow and volume of traffic with due consideration to such other factors as defense requirements, trade policies, and industrial and agricultural needs. When these requirements are determined, Government aid should be given to ship lines necessary to fulfill these requirements and aid should be withheld from any other domestic operators seeking to enter into direct competition with the line already receiving Government aid.

It seems to me that the present system of aid in the form of compensation for the carrying of ocean mails might properly be replaced by specific subsidies granted for the maintenance of essential services. The subsidies granted should be based on differentials in building and operating costs, but should be flexible enough to permit adjustments as changes in conditions and circumstances may warrant. Furthermore, subsidies should not be granted to more than one line competing in the same trade route.

In order to facilitate the proper handling of subsidies, two broad classifications of subsidies might be made: First, a subsidy to cover the differences in shipbuilding costs, so long as governmental policy provides for compensation for this differential; and, second, a subsidy to offset the difference in operating costs with competing foreign companies. The governmental agency administering the subsidy should also have discretionary authority to make allowances in the national interest to meet exceptional trade developments. With these factors as a basis, subsidy payments could be made with maximum equality, because some operators would have the major requirement of a construction subsidy, others an operating subsidy, and another, perhaps under certain conditions, a trade-development subsidy.

The application of this subsidy policy must take into consideration present conditions in the merchant-marine industry and a proper audit and check-up on merchant marine as a safeguard to Government expenditures. In respect to the latter requirement, the Government should have authority to examine books at frequent intervals of the creditor companies, establish uniform accounting, and scrutinize carefully all items of cost. On such data readjustments of the direct subsidies or cost differentials can and should be made at annual intervals.

In a special study of shipping trends conducted by the Transportation Division, Bureau of Foreign and Domestic Commerce, in connection with its economic survey of a proposed ship canal, the following facts were developed:

The fleet of seagoing steamers under American registry in the World War era was expanded from 2,000,000 gross tons in 1914 to 13,500,000 gross tons in 1921. Most of this additional tonnage was constructed during that period, part of it was acquired by purchase of American and foreign ships, and part of it through seizure of interned enemy vessels. Not all of the tonnage acquired was suitable for commercial use and a considerable portion of it was never so employed. A considerable amount is either laid up or sold. Even at the time it was built, this war-time tonnage was not up to date in type. At the time, quantity of production was the primary consideration.

This war-time fleet, far from modern at the time it was acquired, is still the backbone of our American merchant marine and constitutes the great bulk of our seagoing tonnage.

Since the war period there have been additions to the American tanker fleet and a number of American combination-type vessels have been built, largely with Government assistance. But, with only one or two exceptions, the American freighter fleet was built during the war-construction period.

Since the war, rapid strides have been made in ship construction, particularly with regard to more economic propulsion, coupled with a definite trend toward increased speed. For instance, when compared with the general run of machinery installed during the war period, a modern high-pressure, superheated steam engine installation would operate, if at the same speed, on 35 to 40 percent less fuel.

Tonnage acquired in the war period cannot be estimated to last more than 8 to 10 years more, and may be retired much faster if faced with competition of many ships of the newer types.

Unless provision is made for progressive replacement of most of our concurrently operated vessels, the passing of American shipping from foreign trade appears certain from one or both of the following causes:

The end of the present economic depression and attendant world trade revival will see the construction of a number of modern-type vessels under foreign flags, with which our tonnage cannot compete on equal terms. Also, at the end of 8 or 10 years, our war-built tonnage will be so obsolete that it will be retired very rapidly and its business pass into foreign hands.

It seems clear to me that the subsidy is only a part of the problem of developing an adequate merchant marine. The shipping acts reflect the intent of Congress that the shipping industry should be properly regulated. Without such regulation, no subsidy, however well administered, can accomplish its intended purpose. The subsidy must not be used to cloak inefficiency. The communities served by American shipping lines must supplement governmental aid and support by doing everything within their power to encourage and promote business on these American lines. In the past many of our seaport communities have failed to do their rightful share in supporting and maintaining the merchant marine.

The United States can expect to attain the highest degree of efficiency and progress in our merchant-marine activities only if the ship operators and the communities served by our shipping lines fulfill in every sense their responsibilities, which are fully as great as those of the Government.

What is needed here as elsewhere is complete cooperation among the agencies affected in attaining results for the common good. Our shipping bottoms are entitled to have proper consideration in transporting goods made possible through the new agencies for the development of trade with Russia and other countries where our Government is providing special credit assistance.

From these facts we can readily determine the scope of the merchant-marine problem which faces the United States today. At the same time the United States, as a member of the world family of nations, is eager to fulfill its responsibilities for the development and maintenance of desired international trade and commerce. We approach, therefore, the solution of these problems on the broadest possible basis, determined to meet our national responsibility, while bringing our best efforts to bear upon cooperative international aspects as well. To these ends I solicit the cooperative thinking and cooperative action of all concerned, particularly those definitely related to shipping and marine activities, in promoting our commerce and thus helping to build a greater United States.

OCEAN- AND AIR-MAIL CONTRACTS

Mr. PEAVEY. Mr. Speaker, I ask unanimous consent to extend my own remarks on the subject of air mail.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. PEAVEY. Mr. Speaker and Members of the House, the Lindbergh telegram to President Roosevelt in opposition to the cancelation of the Government's air-mail contracts and the facts revealed by recent investigations into the graft and fraud in the letting of the air- and ocean-mail contracts have fixed the attention of the people of Wisconsin on this particular branch of the Government's operations.

Few Wisconsin people know or have been told that Congress has on numerous occasions and in the consideration of many different bills been contending with the question of "easy money" on Government subsidies to contractors for carrying ocean and air mail for the past 4 years.

Congressman PATMAN, Democrat from Texas, on January 26, speaking on the floor of the House, called attention to just one instance where the question of mail subsidies was before the House. I believe the record in this case will be of interest to the people of northern Wisconsin.

I quote Mr. PATMAN as follows:

The Republicans are criticizing the Democrats on account of the appropriation for ocean-mail contracts. The subsidy system for steamship lines and air lines to carry the mail was started under the Republican regime. I think the ocean-mail contracts was one of the biggest rackets growing out of the disposition of property acquired during the war for emergency purposes. January 18, 1930, an appropriation bill for these same Departments was pending before this House. At that time I brought to the attention of Congress the great subsidies that were being paid to steamship lines and offered an amendment which would have prevented similar subsidies from being adopted in the future. There were 13 such contracts in contemplation at the time.

So far as I have been able to find out, I was the first Member of Congress to expose in detail the small amount of service rendered by the subsidized steamship lines and the large amount of money received therefor.

Permission being granted, I insert herewith a part of the CONGRESSIONAL RECORD of January 18, 1930, and which appears on page 1914 of the bound volume of the CONGRESSIONAL RECORD for the Seventy-first Congress, second session:

"Mr. PATMAN. Mr. Chairman, I offer the following amendment which I send to the desk.

"The Clerk read as follows:

"'Amendment offered by Mr. PATMAN: Page 75, line 20, strike out the figures "$28,000,000" and insert in lieu thereof the figures "$21,400,000."'

"Mr. PATMAN. If this appropriation is not reduced, the Post Office Department, in compliance with a duty under existing law, will, no doubt, enter into a contract with a steamship company for a term of 10 years under which the Government will be obliged to pay this steamship company $284,920 a year, or $2,849,200 for 10 years for carrying the United States mail on a line where the total amount carried during the fiscal year of 1929 amount to 42 pounds of letters and 1,263 pounds of packages.

"There are 12 other contemplated contracts besides this one. I have not had the time to investigate them. This is the only contemplated contract on which I have been able to receive information so far, although the officials in the Post Office Department have cooperated with me fully in obtaining this information, and there was no reluctance on the part of anyone in that Department to disclose the facts fully.

"If the same amount of mail is carried by the Tacoma-Valparaiso line that was carried during the fiscal year 1929, the value of the services rendered on each trip by the steamship company to the United States Government will be $2.36; 61 cents worth of letters and $1.75 worth of packages. For each one of these trips the steamship company will receive $16,700. In other words, the steamship company will receive about $7,000 for each one dollar's worth of service rendered.

"A glaring example of a subsidy may be pointed out in the case of recent ocean-mail contracts where the owners of one vessel received from the Government $14,915 for transporting a few pounds of mail. A service that was worth $7.10.

"November 14, 1929, the steamship *Everett* sailed from Tacoma, Wash., for Manila. It carried as part of its cargo United States mail consisting of 16 pounds of letters, or first-class mail, and 136 pounds of parcel post. The *Everett* is owned by the Tacoma Oriental Navigation Co., a private corporation; on February 16, 1928, she was purchased by this company from the United States Shipping Board; before the purchase the name of the vessel was *West Ison*. The purchase price was $91,644; one fourth of the amount, or $22,911, was paid in cash and the remainder to be paid to the Government in eight annual payments; the unpaid amount draws interest at the rate of 4¼ percent. The Shipping Board, at the expense of the Government, before delivering this vessel put it in first-class condition and ready for operation.

"If the owners of the *Everett* were paid the same price that foreign vessels will carry our mail for they would have received $7.10 for conveying this 16 pounds of letters and 136 pounds of parcel post. But, instead of the Government paying the owners $7.10 for this service, the owners of this vessel are receiving from the Government $14,915 for carrying a hat full of letters and a mail sack full of parcels."

Here is a case where we had an opportunity on an appropriation bill to reduce the appropriation to such an amount that it would have been impossible for Postmaster General Brown to approve 13 contemplated routes at an estimated cost of $6,600,000 a year for 10 years, or $66,000,000 in all.

It so happened that there was a roll call on this amendment, and I am inserting herewith the proceedings on the same day, which include the roll call in the House of Representatives on this question.

(The vote was taken; and there were—yeas 62, nays 178, not voting 187.)

It will be noticed that every Republican except Mr. PEAVEY, of Wisconsin, voted against this amendment. Mr. PEAVEY was known as a "progressive Republican." Our present Speaker, the Honorable HENRY T. RAINEY, voted for the amendment; so did our present majority leader, the Honorable JOSEPH W. BYRNS. It will also be noticed that the distinguished gentleman from Illinois, Mr. ARNOLD, the present chairman of the subcommittee, voted for the amendment.

Every Republican except Mr. PEAVEY, of Wisconsin—and the Republicans were greatly in the majority at that time—voted against the proposal to stop 13 contemplated ocean-mail contracts which were later agreed upon by and between the steamship companies and Postmaster General Brown and which has caused the inclusion in this bill of $6,600,000 to pay said steamship companies their subsidy for the next year. During the Seventy-first Congress, first session, there were 267 Republicans, 163 Democrats, and 1 Farmer-Laborite.

The Republicans cannot claim that they did not know what kind of contracts they were. I told them the names of the companies and the amount of the subsidy that many of the companies would get. I showed where Postmaster General Brown, if not stopped, would let a contract to a steamship company that would cause this Government to pay $7,000 for every one dollar's worth of service rendered. I have not quoted all of my speech on that occasion.

I am sorry that it is impossible to obtain support of the Members on the Republican side at a time when something could be done that would definitely stop a large number of ocean-mail contracts such as they now complain about. The best time to stop such contracts is before they are let.

Mr. CHRISTIANSON. Will the gentleman yield?

Mr. PATMAN. I yield.

Mr. CHRISTIANSON. Is not the gentleman thankful for Republican constituencies who have sent to Congress men who now stand for the same thing which the gentleman claims he stood for 3 years ago?

Mr. PATMAN. Yes. Of course, we had lots of Republicans here 4 years ago, but we did not hear of but one of them voting with us.

NAVY DEPARTMENT APPROPRIATION BILL, 1935

Mr. AYRES of Kansas submitted a conference report on the bill (H.R. 7199) making appropriations for the Navy Department and the Naval Service for the fiscal year ending June 30, 1935, and for other purposes.

PERMISSION TO ADDRESS THE HOUSE

Mr. HOEPPEL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HOEPPEL. Mr. Speaker, yesterday we heard an eloquent tribute paid to an employee of this House who has served 33 years. I hope that the gentleman who delivered that tribute [Mr. BOYLAN] will take cognizance of the valuable service of the employees in this House, and that he will take this subject up with the Civil Service Committee of the House in order that these gentleman may be retired under the same rules and regulations that pertain to civil-service employees. I understand some of these men have actually served 50 years in this Capitol, rendering a distinguished and outstanding service, but as yet they are not in a position to be retired. I think it is opportune and appropriate that this subject should be given consideration.

Mr. McFADDEN. Mr. Speaker I ask unanimous consent to address the House for 30 minutes.

Mr. BYRNS. Mr. Speaker, reserving the right to object, I do not know the subject upon which the gentleman is going to talk, but I simply wish to call his attention to the fact that the House has agreed to close debate on the pending bill at 2 o'clock.

Mr. McFADDEN. I may say to the gentleman from Tennessee that my request is in the nature of privilege. I do not want to consume a whole hour, however.

Mr. BYRNS. If it is on the question of personal privilege, I shall not object.

Mr. McFADDEN. If I do not need the time I have requested, I shall not use it.

Mr. COLLINS of Mississippi. Mr. Speaker, I shall not object to the request of the gentleman. I understand he wishes 30 minutes?

Mr. McFADDEN. Yes.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. McFADDEN. Mr. Speaker, on the 16th of February I made some remarks on the floor of the House in regard to some of the evaders of taxes. In those remarks I paid my respects to one, Henry L. Doherty and his companies, and to Andrew W. Mellon and his companies. Immediately the press carried the accounts of my statement in regard to Mr. Doherty. With all due respect to him, he had read only the early part of my remarks where I was dealing in a general way with the situation. I am rather of the opinion that if he had been familiar at that time with all of my statement he would not have made the public statements that he did in regard to me.

In order that the matter may be brought appropriately before you, I have just stated it as a matter of privilege.

I said, among other things, as quoted by the press, that Mr. Doherty was a tax evader and that he was being assisted by prominent lawyers; and among them I mentioned Arthur Mullen.

I said that Arthur Mullen was the national committeeman from the State of Nebraska; that he was floor manager of the Roosevelt forces at the Chicago convention; and that immediately after the Presidential election he set up shop here in Washington, as many attorneys do in the change of administrations, so that they can practice before the various departments and use their political influence to secure a clientele. When I suggested this Mr. Doherty immediately came back through the press and said that:

> Mr. Arthur Mullen has never at any time been consulted by me or the companies in which I am interested in connection with any tax matters whatsoever.

Mr. Mullen also stated in the press:

> I have never had any connection with any tax matters for H. L. Doherty or for the Cities Service Co.

Mr. Doherty also came back and said, rather vehemently, that I was a liar, and further stated that I was protected by my cloak of congressional immunity which I cowardly hide behind in these vicious and scurrilous attacks.

The next day or the following day after I spoke the gentleman from Oklahoma [Mr. McCLINTIC] asked unanimous consent to address the House for 1 minute for the purpose of correcting the RECORD. He placed in the RECORD a letter signed by Arthur F. Mullen, which appears in the RECORD of February 19, 1934. This letter reads as follows:

FEBRUARY 19, 1934.

Hon. JAMES D. McCLINTIC, M.C.,
Washington, D.C.

DEAR MR. McCLINTIC: I have just read the colloquy which passed between you and Congressman McFADDEN in the House on February 16, 1934, pages 2670 to 2672 of the RECORD.

The records of the Internal Revenue Department show that I have never appeared as attorney for Henry L. Doherty or any of his companies in any tax matter.

I have not been consulted by anyone regarding any of the tax matters of Mr. Doherty or any of his companies.

I would appreciate it if you would make this letter a part of the records of the House.

Yours respectfully,

ARTHUR F. MULLEN.

I do not propose to let either one or both of these men get away with anything like this. I am not cowardly, hiding behind congressional immunity, nor is there any need for it. What I have to say I say plainly on the floor of this House, and it ill becomes either Mr. H. L. Doherty or Mr. Arthur F. Mullen to try to deceive this House in the manner that they have in this respect. Hence I am presenting the facts to this House.

I probably should have been a little more specific. I was talking not only of tax matters but of the set-up of Mr. Doherty's companies, and I quoted certain specific increases in values that arbitrarily and without justification were used for capital purposes and that securities were sold on these marked-up values. In this connection I have here reports of the Federal Trade Commission on Mr. Doherty's companies. These are only a few of them. I have the balance in my office. These reports contain proof for the statement which I made in regard to Mr. Doherty's companies. The investigation by the Federal Trade Commission has been carried on for the last 3 years under Senate Resolution 83, which was introduced in the Senate by the late Senator Walsh of Montana. The disclosures in these hearings that are now pending before the Federal Trade Commission will confirm everything I have said in regard to Mr. Doherty's companies.

Of course, these attorneys who are lobbyists here in Washington, who come in on the political waves and set up shop here to practice before the departments and use their prestige and influence, do not always go in the front doors of these departments before which they practice. They have their errand boys to run around to the various departments. They meet the heads and key men of the departments socially and at dinners and privately. I should probably have listed Mr. Mullen more properly as a general counsel for Mr. Doherty. He is an attorney for Mr. Doherty, and there are many people in the departments that know it, and to make clear to you that this is a fact I shall read to you a letter from the Federal Trade Commission under date of February 23, 1934. May I point out before reading this letter the deliberate attempt on the part of Mr. Mullen to deceive the Membership of this House, to discredit me and to create the impression that he was in no wise associated with Mr. Doherty. I also point out to you that Mr. Doherty was conniving with him to create the same impression and they are both guilty.

This is a letter from the Federal Trade Commission, signed by Garland S. Feerguson, Jr., Chairman of the Board, and is as follows:

FEDERAL TRADE COMMISSION,
Washington, February 23, 1934.

(Senate Resolution 83)

Hon. LOUIS T. McFADDEN,
House of Representatives, Washington, D.C.

MY DEAR CONGRESSMAN: This is in reply to your letter of February 19, 1934, in which you ask me to advise you "the names of the attorneys and the firms they represented, who were before the Commission in the interests of Mr. H. L. Doherty personally, H. L. Doherty & Co., Cities Service Co., Cities Service Securities Co., or any of their subsidiaries or affiliates at any appearances that may have been made before your Board or any of its departments."

We have had public hearings in our utilities investigation on the following companies in Cities Service group: Cities Service Securities Co., Arkansas Natural Gas Corporation, Public Service Co. of Colorado, Lakeside Construction Co. At all of these hearings the only appearance noted for any of the companies involved was that of Robert Burns, Esq., of the firm of Fruehauff, Robinson & Sloane, 67 Wall St., New York City.

Conferences were held prior to these hearings in the office of the Chief Economist, attended also by the Chief Counsel, or his representatives, relating to the affairs of the above-named companies at which appearances on behalf of the companies were Mr. Burns, Arthur Mullen, Esq., of the firm of Mullen, Mullen, Shea & Massey, and certain officers and accountants of the companies. No formal appearances are, of course, made in informal conferences of this character. The conferences related to the affairs of the companies named and also to relations and dealings between those companies and either H. L. Doherty or H. L. Doherty & Co., and the attorneys named, I am informed, seemed to speak on behalf of H. L. Doherty and H. L. Doherty & Co., as well as for the companies named above.

In addition, at the time the Chief Counsel was preparing to offer the report on the Cities Service Securities Co. for the public record several applications for a continuance were made to the Commission, its Chief Counsel, and Chief Economist. These were presented by Ira L. Grimshaw, Esq., Wade Ellis, Esq., B. F. Weadock, Esq., now executive director of the Edison Electric Institute, and Mr. Burns and Mr. Mullen.

The following attorneys have appeared on behalf of the following companies of the Cities Service group before the Securities Division of the Commission: B. F. Weadock, Arthur Mullen, Mr. Wil-

liams, of Buffalo, Huston Thompson, C. M. Owen and S. W. O'Brien, of Hornblower, Miller, Miller & Boston, of New York City. (These latter appeared for Alpha Shares.) There were other attorneys whose names cannot be recalled.

I think this complies with your request. This letter contains all the information I have been able to gather on the subject you describe.

Very truly yours,

GARLAND S. FERGUSON, Jr.,
Chairman.

May I point out that involved in all these matters before the Federal Trade Commission were also the Federal taxes due the United States Government, the proof of which was in the hands of the Federal Trade Commission's experts who were looking into these matters.

I am very glad, indeed, to notice in this morning's paper the resignation of Arthur Mullen from his position as a member of the Democratic National Committee from Nebraska. He says that there has been much unfavorable publicity. There has been publicity, because the President of the United States issued a statement against lobbyists who were political officeholders and members and heads of political organizations connected with the Democratic Party and is now endeavoring to have passed by this Congress a measure which will prohibit men of the type of Mr. Arthur F. Mullen (and there are many of them) from setting up shop in Washington and using the prestige at times even of the President of the United States to secure entree for their clients, who pay them well, to evade taxes and to take part in other matters which they want to put across in the various departments of this Government.

Mr. PARSONS. Will the gentleman yield?

Mr. McFADDEN. I yield to the gentleman from Illinois.

Mr. PARSONS. During the 12 years of the Republican administration did we not have men who came to the Capital and did just the thing that the President is now trying to stamp out?

Mr. McFADDEN. May I say to the gentleman that I am not treating this as a political measure in any instance. Of course there were. I am speaking against the practice. I am speaking against the unfairness of this kind of situation which is costing this Government hundreds of millions of dollars annually in the fact that through their influence these men aid and abet corporations and large taxpayers in avoiding a Government attack through the various departments on their financial set-up, and because of such practices these groups are permitted to go ahead and exploit the people of the United States by selling fraudulent securities.

Mr. O'CONNOR. Will the gentleman yield?

Mr. McFADDEN. I yield to the gentleman from New York.

Mr. O'CONNOR. The gentleman was here during all 12 years of the Republican administration. Did he ever introduce any legislation to stop Will Hays and Bascom Slemp, or any of the other Republican gentlemen, from doing just what he is complaining of now?

Mr. McFADDEN. The gentleman knows very well that for the last 6 years I have been doing everything in my power, as has the gentleman from Illinois [Mr. SABATH], among others, to get this House to pay some attention to an investigation of these things. Owing to the activities of the late Senator Walsh, the Federal Trade Commission is nearing completion of its investigation. May I say that the influence of this House should be exerted to see that the influence of Henry L. Doherty and his kind does not take the Federal Trade Commission by the throat and prevent them from exposing that which their investigators now know in regard to these companies.

Mr. BURKE of Nebraska. Will the gentleman yield for a brief question?

Mr. McFADDEN. Yes.

Mr. BURKE of Nebraska. The gentleman referred to the letter of resignation of National Committeeman Arthur F. Mullen, of Nebraska. Did the gentleman also take occasion to read the letter of the President of the United States acknowledging receipt of Mr. Mullen's letter?

Mr. McFADDEN. Yes; I will be very glad to do that.

Mr. BURKE of Nebraska. I trust the gentleman will, because it will modify very greatly the remarks the gentleman is making.

Mr. McFADDEN. I have here the President's reply to Mr. Mullen, but before I read that I want to put in that part of this article which refers to Mr. Mullen's statement in regard to his resignation:

The President's reply, addressed to "Dear Arthur", said that he appreciated Mullen's motives and that he remembered expressing confidence in his integrity.

Mullen's letter to President Roosevelt said:

"Certain publications recently have appeared in the press which have sought to create the inference that my activities as a practicing attorney in Washington were unethical and embarrassing to the administration; that because of this I had incurred your displeasure and ill will, and, therefore, should resign from the National Democratic Committee."

I am quoting from the Washington Post of March 7:

President Roosevelt replied on March 5:

"Have just received your letter in which you indicate your intention to submit your resignation as national committeeman for Nebraska to the chairman of the State committee.

MOTIVE IS APPRECIATED

"It is necessary for me to say that I appreciate the motives which prompt you to take this action. I recall distinctly talking with you last October when the question of your law practice in Washington was brought up, and I remember assurances of confidence in your integrity that I expressed.

"I can appreciate your feeling, as indicated in your letter to me, that the time has come when you feel you should resign as national committeeman. I want you to know, however, that there is no change in my personal friendship for you, and that I will continue to count on your unswerving loyalty to the principles for which we stand, your entire sympathy with the steps we are taking toward national recovery, and a continuation of that loyal support to these principles that you have always manifested.

"I know that your retirement as national committeeman will in no way lessen your deep interest in public affairs, and I shall welcome a continuation of your counsel and advice where the welfare of your State and country are concerned."

Mullen is one of the President's closest political friends. He was floor leader for the Roosevelt forces in the Chicago national convention. Following election, Mr. Roosevelt offered him an appointment on the United States circuit court of appeals, but Mullen declined the post on the ground that he felt he could be of more assistance to the President in his political capacity.

So much for this resignation.

However, let me point out that for over a year, following the elections of 1932, these gentlemen of the type of Mullen have come into Washington. They have opened offices, secured their clients; they have been practicing before the departments for over a year. Some of them have become immensely wealthy, and, of course, they have their clients now, and I am wondering whether this resignation, perhaps, is not for the purpose of continuing Mr. Mullen as the attorney for Henry L. Doherty and others of his type to avoid what the Government departments are proposing to correct in their investigation of Mr. Doherty and others here.

Mr. COCHRAN of Missouri and Mr. SABATH rose.

Mr. McFADDEN. I am sorry, but I have only 30 minutes, and I have a great deal of matter I want to present.

Mr. COCHRAN of Missouri. I should like to ask the gentleman a question which I think is quite pertinent. Can the gentleman cite any specific instance where any Government official in the Federal Trade Commission or the Treasury Department or in any other bureau or department has granted any improper favor to Mr. Mullen or anyone else who is in the class to which the gentleman is referring?

Mr. McFADDEN. Let me reiterate what I said in my speech on the 16th of February. I do not want to name specific people, because I do not want to do other people harm. I will say to the gentleman that I have the names. There is no question about it, and I have introduced a resolution in this House based on facts which I am prepared to present to the proper committee. I do not want to draw an indictment of all the lawyers here in Washington who are practicing before the departments. I do not want to bring in the men in these departments who have been aiding and abetting these men, but I have their names and I know who they are. I will furnish them to the gentleman privately or to the Committee on Rules, before which committee my resolution is resting, asking for the appointment of a select

committee of five Members of this House to look into these questions which are set forth in that resolution. I also propose to put that resolution in the RECORD so that the Members may have an opportunity to read it.

The resolution is as follows:

House Resolution 287

Whereas the Treasury Department in a survey of the Bureau of Internal Revenue published in 1927 reported that "the major problem of tax administration is one of personnel"; and

Whereas changes made as a result of such survey have resulted in no material improvement of the administration of the taxing laws; and

Whereas numerous attorneys, agents, specialists, advisers, and lobbyists in the employ of claimants for refunds and for the reduction of deficiencies are said to pretend to have influence with officers and employees of the Bureau of Internal Revenue with the result that erroneous refunds are made and in cases of deficiencies the tax justly due the Government is lost; and

Whereas it is alleged numerous officials of the Bureau have been placed in positions of responsibility beyond their capacities; and

Whereas it is alleged many of such employees were not placed in their present positions by reason of merit; and

Whereas it is of the utmost importance to the Federal Government and to the taxpayers of the country that a highly efficient and trustworthy personnel be maintained: Now, therefore, be it

Resolved, That the Speaker of the House is authorized to appoint a special committee of 5 members, 1 of whom the Speaker shall designate as chairman, 3 of whom shall be of the majority party and 2 of the minority party, which shall investigate the Bureau of Internal Revenue to ascertain the extent of which said conditions exist and report its findings together with recommendations for corrective legislation to the House of Representatives not later than December 31, 1934.

For the purposes of this resolution the committee is authorized to sit and act during the present Congress at such times and places in the District of Columbia, or elsewhere, whether or not the House is sitting, has recessed, or has adjourned, to hold such hearings, to require the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths and affirmations, to take such testimony, to have such printing and binding done, and to make such expenditures as it deems necessary.

Mr. COCHRAN of Missouri. I would be glad to have names of Government officials who, the gentleman states, are aiding and abetting in these matters.

Mr. McFADDEN. I have quite a list of them, I do not think it is right to present that list to the House at this time, but if the gentleman insists, I shall do it, although I think it would be a mistake. There is a proper committee before which this information should be presented, and I will say to the Rules Committee that the case will be presented and it will be verified by members of your own administration.

I say this matter is a serious one. The question involved here is whether or not you are going to permit organizations of the type of Doherty's to come here and take advantage of even the President of the United States, as well as various men in the departments and continue to practice through the back door by using attorneys of Mullen's type and use all the influences that are well known to all of us here, or whether this situation is going to be corrected. Social maneuvers and important contacts should be stopped so far as the Government is concerned, as a basis of law practice and as a basis of cheating the Government.

A large number of these concerns have falsified their accounts and have sold securities to the innocent public. Of course they try to get influence and lawyers who stand in. They are willing to pay. This affects every one of you in your own district. There are probably 1,000 to 1,500 investors, if the number is equitably distributed, in each congressional district, who are interested in the securities which they have purchased from this one concern. The matter affects not only the investment of these funds, but it also affects the rates that are paid on gas and electricity, light and power, because this marked-up value is the basis for the issuance of new securities, and the rates that are charged by public utilities are based on these fictitious values.

Mr. PARSONS, Mr. HOWARD, and Mr. SABATH rose.

Mr. McFADDEN. I am sorry, but I have so much to present that I am afraid I cannot yield.

Mr. PARSONS. Will the gentleman yield for just a brief question?

Mr. McFADDEN. I will.

Mr. PARSONS. The gentleman is making a very interesting statement, and I am in agreement with most of it, but would the gentleman have us enact legislation here that would prohibit Members of Congress from interrogating departments or bureaus in assisting constituents in respect of matters before the bureaus or departments?

Mr. McFADDEN. I would not, if it is done within the scope of duty of the Members to the people whom they represent—the constituents of one's own district, but I would otherwise absolutely prohibit such practicing on the part of Members of the House and the Senate, and we have glaring examples that we could refer to in this respect. May I say that just as long as lawyers can flit into and out of public office in all three branches of Government, thence back into the private practice of law only to sell to his clients, good, bad, and indifferent, his knowledge of the weaknesses of government and finally run for its highest offices at the suggestion of and with the financial backing of godless boodler bankers and dishonest lawyers and public officials, just that long will the legal profession be the floodgates through which will flow floods of corruption from big business and the underworld into public affairs.

Mr. SABATH. Mr. Speaker, will the gentleman yield?

Mr. McFADDEN. Yes.

Mr. SABATH. I observed that the gentleman somehow or other has gotten information. Of course, this morning he has secured information from the departments, but outside of that he is capable of obtaining a lot of information, I do not know from what sources. Will he be able to obtain the information and the names of the lawyers and the experts that have secured during the last 12 years over $3,000,000,000 in refunds, to which he himself, as well as I, have called the attention of this House a good many times on this floor?

Mr. McFADDEN. I say to the gentleman that if this resolution is passed the information the gentleman is seeking I think will be fully covered and the situation will be corrected.

I would like to say to the House that I am thoroughly convinced that the Bureau of Internal Revenue cannot of itself correct this situation, and may I also say, with all respect to the committee, that the Joint Committee on Taxation of the House and Senate cannot of itself correct this situation. Both the Bureau of Internal Revenue and the joint committee need the help of a special committee of this House to accomplish the purposes of this resolution. This committee can call men from the Department and from the joint committee who will know how and can be trusted to do this job. And because of the fact that the men are available in the Department and in the joint committee, there should be very little expense attached to this investigation.

Mr. O'CONNOR. Mr. Speaker, will the gentleman yield?

Mr. McFADDEN. Yes.

Mr. O'CONNOR. I hope that in this information the gentleman will include investigating the connection the Whisky Trust has here in Washington and has had for years. That will be very interesting.

Mr. McFADDEN. I have not paid as much attention to that, perhaps, as has the gentleman from New York. I do not know whether that will be covered in this resolution or not, but I doubt it. The thing that should be looked into is the question of confidential settlements in the bureaus which permit evasion. Hundreds of millions of dollar are lost to the Government on account of the evasion of taxes and the practice before the departments and the courts of these particular corporations whose set-ups are illegal, whose set-ups are fraudulent, whose set-ups are made for the purpose of unloading securities upon marked-up values all over this country. I have been talking about that for a long time. I have been saying it as forcibly as

I could to this administration. I said it at the opening of the special session. I said that I wanted to see responsibility fixed, and not glossed over, of these houses of investment and other bankers, who have exploited this country as they have, who have used the Federal Reserve System, who have used all agencies of Government, to permit them to continue their nefarious operations, and I repeat, you are not going to restore confidence in the United States until you fix these responsibilities and punish these men as they are deserving of being punished. I hope this House will take action on what I am saying here in this matter, and I know that if any fair-minded Member of this House who wants to know the facts will check up on what I am saying he will find that what I say is absolutely true.

Mr. FORD. Mr. Speaker, will the gentleman yield?

Mr. McFADDEN. I am sorry, but I have not the time. I have extracts from several letters. I have extracts here from people who are familiar with what has been going on in regard to this, and I shall read one extract from a letter that I have, written from Pittsburgh, Pa., by a man who has made a real study of this matter, who was at one time in the employ of the Doherty companies. He says:

> For your further information, they sold Indian Territory Illuminating Co. stock in the State of Pennsylvania during the years 1930 and 1931. The stock was sold anywhere from $31 to $47 a share.

He says he does not think it was listed before the securities commission in Harrisburg. I wrote to that commission, and this is what they say:

> Indian Territory Illuminating Co. has never been registered as a dealer nor has any circular describing its securities been filed by any registered dealer.

There is the situation, where the securities of this particular company, because many of their securities were listed on the New York Curb, were sold in every State of the Union, regardless of whether the blue-sky laws permitted it or not. That is a matter that should be taken up by the securities commission in every State, because if they have sold securities in Pennsylvania without legal authority, these securities have been sold in other States without legal authority.

This matter is so serious that I am taking it upon myself to notify the president of the New York Curb Exchange of the facts that I am presenting here. I shall call this to his attention and say to the president of the New York Curb that all these figures in all of Doherty's companies should be checked, and am suggesting that they audit these books and that no more transactions in his securities should be dealt in on the New York Curb until they have correct information as to the standing of his companies. I am also notifying the president of the New York Stock Exchange of this same situation, although I do not know that they have specifically listed any of these securities on that exchange or that they are dealt in on the New York Stock Exchange. But I propose that they shall have notice of what is taking place, because this Doherty outfit are now selling their securities to innocent people. They are making false statements in the circulars of investment houses that are selling their securities. They have just opened up a new plan of selling shares in some new company. I have not the details in regard to it, but it is known as "Alpha." I do not know whether they are going to have a subsequent one called "Omega" or not.

This man Doherty has resorted to every well-known scheme of influence. He has a string of expert lawyers from one end of this country to the other. He has moved into Washington. This is where influence counts. He is a grand entertainer. If you will dig into this situation, you will see that it is the usual type of the get-rich-quick scheme. He has taken all of his money out of these companies at the top price in 1929. He unloaded thousands of shares of these securities, not only on his employees but on other innocent investors, on the installment plan. He has cashed in at great profits at these high prices. The public and his employees are holding the bag. In Washington during the Harding administration we had examples of the Green House on K Street. We now have another house on K Street, the Doherty Men's Club, where, I am told, those people who are helpful to Doherty and have influence can go and enjoy a very pleasant evening.

Mr. BOYLAN. Will the gentleman yield?

Mr. McFADDEN. I am sorry, but I do not have time.

Mr. BOYLAN. I would like the gentleman to put the address of the house in the RECORD. [Laughter.]

Mr. McFADDEN. I am going to do that.

Mr. MARTIN of Oregon. Does the gentleman from New York want entertainment?

Mr. BOYLAN. The gentleman declines to commit himself. [Laughter.]

Mr. McFADDEN. I may say for the benefit of my genial young friend from New York [Mr. BOYLAN] that the number is 1319 K Street. If the gentleman would like the telephone number, I can give him that. [Laughter and applause.]

Mr. BOYLAN. I thank the gentleman very much.

Mr. McFADDEN. The gentleman from New York is so conversant with the city of Washington that I am surprised he does not know of this place.

Mr. COCHRAN of Missouri. Of course, the gentleman knows the social club has been in existence in Washington for at least 12 years?

Mr. McFADDEN. I do, but it has been very active lately. I am told it is a very convivial place.

Mr. PARSONS. Will the gentleman yield?

Mr. McFADDEN. I yield.

Mr. PARSONS. Is that the same address at which Mr. Daugherty lived on K Street?

Mr. McFADDEN. I do not know the address of the little green house on K Street. If the gentleman will look in the telephone book he will find the number.

Mr. WOODRUFF. Will the gentleman yield?

Mr. McFADDEN. I will.

Mr. WOODRUFF. It seems to me that that name Daugherty, in connection with the little green house, has a strangely familiar sound.

Mr. McFADDEN. My memory recalls another Daugherty, but his name is spelled differently. My information is, however, that this club furnishes the same purpose that the little house on K Street did, to which the gentleman refers.

Mr. MAY. Will the gentleman yield?

Mr. McFADDEN. I yield.

Mr. MAY. I would like to ask what is the use of the Government setting up such agencies as the Federal Trade Commission and making large appropriations for its operations unless it aids the Commission by the very information which the gentleman is trying to give to the House?

Mr. McFADDEN. I may say that the Federal Trade Commission is doing and has done a wonderful job. The experts who have gone into these matters, which are contained in probably 10 volumes such as I have before me and which were sent to me by the general counsel of the Federal Trade Commission, have done a fine piece of work. Their reports contain a marvelous revelation of all of these things. [Applause.]

The SPEAKER. The time of the gentleman from Pennsylvania has expired.

ORGANIZATION OF THE ARMY

Mr. MARTIN of Oregon. Mr. Speaker, the House is being called upon to appropriate a very large sum of money for the Army. At the same time, the Army is subject to great criticism. I have been asked by many Members to explain the organization of the Army. I ask unanimous consent to address the House for 15 minutes.

The SPEAKER. Is there objection to the request of the gentleman from Oregon [Mr. MARTIN]?

There was no objection.

Mr. MARTIN of Oregon. Mr. Speaker, I am not volunteering this address. Many Members of the House, not familiar with Army organization or Army procedure, have asked me to clear up this situation, and I must give that as an excuse for addressing the House at this time.

Mr. Speaker, there are no traffic lights at the national crossroads. Nothing but the penetrating light of vision will enable us wisely to choose our direction. Such vision is but the reflected knowledge of our institutions. It is for each of us to contribute toward the sum of knowledge. In these brief moments I would like to throw the spotlight upon that region of national endeavor which has been home for me, and thus to increase your understanding of the American Army.

A few years ago the Honorable John W. Weeks published a dramatic narrative of the peace-time accomplishments of our Army. This text is worthy of study by every American citizen; because it portrays the character of a great national institution, devised for war, yet uniformly successful even when diverted to the pursuits of peace.

During the past few years the rumblings of impending war have grown stronger. The Army is stirred by a sense of our unreadiness for national emergency. In this moment of anxiety it has again been diverted from its primary purposes and called upon to assist in national recovery. There could be no better proof of its moral strength than its successful participation in a phase of national life for which it was not designed, at a time such as this.

No other agency in this country could have created the Civilian Conservation Corps overnight, or administered it better than has the Army. No other agency responded more promptly to the needs of the Civil Works Administration. No other agency has absorbed and employed public-works funds more efficiently than, for example, the expanded program of the Army engineers. No other agency has had a more urgent need for funds than the Army. Yet, at a time when public expenditures have been lavish, the Army has accepted quietly its meager allotment from the huge appropriations for public works, and the expenditure of these funds according to a program which was not its own choice.

In short, the Army's record of peace-time accomplishment has been unbroken during the past year. The Army has given full proof that, when assured the facilities and the undivided authority necessary to meet its responsibilities, it will continue to reach its objectives. I would like to stop at this point. But I must go on. I have promised to give light, not merely whitewash.

The Army has succeeded, but it has also been condemned. Most men admit that it has done well those tasks for which it was never designed. Many men claim, however, that it has failed in the very purposes for which it was created. It is charged that it has failed because of lack of suitable equipment. It is charged that it has failed to modernize. It is charged that it is stagnant, and that it has been so for 15 years. It is charged that it is unready for war.

There is no question but that modern equipment is lacking. You say it here on the floor of the House. The Army says it. The press repeats it. Radio broadcasts it. The man in the street knows it, and probably says to himself, "So what?" We represent the man in the street. It is time for us to inquire what and why is such a condition. Why should an army lack in its own field and succeed admirably in another backyard?

The average Member of Congress has a shrewd and instinctive understanding of the basic needs of a business enterprise. When the Army is called upon to perform peace-time missions, the public official is not afraid ultimately to give it the authority which it needs. So it succeeds. What could be simpler?

In the primary field of military preparation the conditions are reversed. The average Member of Congress has but a rudimentary understanding of the art and science of war. Knowing so little about it, he assumes, perhaps, that there is little to know about it. Is it not proverbial that we are most inclined to jump at conclusions and to interfere in those processes concerning which we have least knowledge?

From Valley Forge to the present day, our Army has been seriously handicapped in its legitimate field, by the unwarranted meddling of amateurs. Were it not that some of these meddlers are my very good friends, I should be tempted to compare them with little Jack Horner—

> Who stuck in his thumb,
> And pulled out a plum,
> And said, "What a brave boy am I?"

It would be unjust for me to attribute the meddlesome tendency solely to ignorance. It is indeed due, in part, to our inherited suspicion of military power. To one who knows our Army and its untarnished record of loyalty to civil authority, the permanence of this suspicion is paradoxical. Yet you do suspect the Army. And, because it focuses the cross section of military qualifications in the form of a convenient target, you suspect, above all, the General Staff.

The General Staff is a coordinating mechanism, created for the assistance of command. Command is vested in the President and administered through his Secretary and through the Chief of Staff. The viewpoint of command, which to some of you appears restrictive to progress, is seldom if ever the viewpoint of the General Staff. The viewpoint of command is the viewpoint of the Budget. This is, in turn, merely the budgetary reflection of the viewpoint of Congress. You have created a General Staff which is your own image. Because it is loyal to you, you condemn it.

The Army officer who appears before you is charged with loyalty to the Budget. He comes, perhaps, in defense of an insignificant item such as eight tanks, for example. He may believe, as does the General Staff, in the urgent need for 800 tanks. He is forced, nevertheless, to forget his own beliefs and resort to the mental gymnastics of defending an estimate which is yours, not his, from your own attack. After you haggle him down from eight to seven tanks, you ask him if the Army will still carry on in spite of its cuts. When he replies in the affirmative you jump to the conclusion, or at least profess to believe, that the Army has accepted willingly the stagnation which actually has been forced upon it by the Congress. Then you accuse the General Staff of being unregenerate and archaic in its views.

It is a wise American tradition that the Army should not become a political factor. Congress itself has insisted that the soldier should be freed from the necessities of self-advertisement, and protected against the temptations of public propaganda. It should be the wisdom of Congress, conversely, to establish itself as the defense of the Army. Yet, recurrently through history, Congressmen have been the first to attack this institution which is not allowed to strike back. The voice of the Army and of its General Staff is consistently ignored. Yet, in the tragic moments of inefficiency, it has been the Army that bears the brunt of attack.

Prior to the Spanish-American War the Army was a tiny band of scattered remnants, administered through a bureaucratic department which, in the knowledge of every trained officer, was obsolete and inadequate. Congress paid no heed to the voice of the Army. It was inevitable that our entry into war should have been marked, as it was, by scandalous inefficiency. Following the war, Elihu Root tore down the bulwarks of bureaucracy and created the foundation of the General Staff system of control.

Prior to the World War Congress again failed to support the Army and its new coordinating nucleus, the General Staff. Following the war the Army was again subjected to a storm of criticism to which it was forced to listen in silence. This time, through the guidance of Newton D. Baker, the remedy was again sought and the General Staff was built up virtually to the extent to which it exists today. The Congress should never forget that this organization was built up, at your own orders, in the clear light of postwar understanding to increase the efficiency of our country and the security of her sons in war.

History repeats its mistakes. The Army is again neglected. The moderate voice of its leadership is ignored. Financially handcuffed for 15 years, trained to sense the potentialities of war, and to know the need for progress in organization, equipment, and methods, it can only wonder in silence why its needs are ignored.

Our Army fully understands the principles of increasing dispersion, and increasing intensities of fire. Men once fought in ranks, 16 deep, elbow to elbow. With improvement of weapons and organization, ranks were reduced to 8; to 2; and to 1. Lateral intervals were increased to 1 yard; then 5; and what for the future? Dispersion has become three-dimensional. Thus men may have a reasonable chance for survival and victory in war.

But extension must follow the development of weapons. Thirty years ago, we adopted a magazine rifle. We still have it, out of date. Our Infantry should have light semiautomatics. At an enemy on the ground, and also in the air, these can deliver three to four times the volume of fire of the obsolete weapon. Infantry must have the light machine gun, new mortars, and large numbers of tanks which are so urgently needed to take over some of the grievous missions of shock action. It must be supported by vastly improved artillery weapons and transport. Infantry paths must be cleared and investigated by modernized cavalry. They must be assisted and supported by modernized forces in the air. Essential industrial plants and facilities must be protected by antiaircraft artillery which is equipped with modernized equipment. Troops must be prepared to resist the effects of chemical warfare. Communications must be brought up to date, employing all of the marvelous potentialities of radio. Engineers must have modernized bridge equipment. Above all, at the outset of war there must be war reserves sufficient to enable our first line to carry on until industries are mobilized. The Army understands all of this far better than any of you could possibly appreciate. Yet it has been unable to ask for what it needs.

I have endeavored to give you a story in two chapters. The first chapter relates to the achievement of great success in nonmilitary fields. The second is a tragedy of blighted potentialities. I shall not presume to argue the question. If I have not already shown clearly what is the cause of potential failure, and what should be done to remedy the deficiency, then I, too, have failed in my purpose. If I have succeeded in the slightest degree, the Congress will make a corresponding effort in the future better to understand its own creation, the General Staff.

The General Staff is constituted by temporary detail from all arms and services of the Army. Its membership, ever changing, includes, among others, infantrymen, aviators, surgeons, engineers and chemists, artillerymen, and supply experts. Representatives of all parts of the Army are brought together to form a conglomerate whole. This body is created to insure the presentation and weighted consideration of all viewpoints. Organization and procedure are planned to make use of these viewpoints so that, on every matter subject to departmental consideration, the Chief of Staff and the Secretary of War may obtain a composite picture in which all Army agencies are given balanced treatment. The General Staff is concerned primarily with policies. It has no power of action, except as expressly delegated by the will of command.

[Here the gavel fell.]

Mr. BURNHAM. Mr. Speaker, I ask unanimous consent that the gentleman from Oregon may proceed for 5 additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from California [Mr. BURNHAM]?

There was no objection.

Mr. MARTIN of Oregon. In respect to procurement of equipment and supplies, the General Staff is concerned solely as the agent of the using forces. During the reorganization of the War Department, after the World War, Congress insisted that the tremendous task of coordinating industry and procurement for war should be withheld from the control of Army officers and placed securely in the hands of civilians. Side by side with the General Staff, wholly independent of it and of the Chief of Staff, Congress therefore created an organization under the exclusive control of the Assistant Secretary of War, who, in turn, is responsible only to the Secretary of War. The considerations of this agency are predominantly industrial, as those of the General Staff are predominantly military. All contractual functions are therefore under the exclusive control of the Assistant Secretary of War.

Mr. WOODRUFF. Will the gentleman yield there?

Mr. MARTIN of Oregon. Yes; I yield.

Mr. WOODRUFF. In view of what the gentleman has just said, it naturally follows that if there has been any inefficiency or worse in the purchasing of supplies for the Army, it has been due to civilians and not to members of the Military Establishment itself?

Mr. MARTIN of Oregon. Absolutely; and yet people rush in and say the General Staff is to blame for all of this. It has nothing whatever to do with it at all.

Time and talents have permitted me to give you but a thumb-nail sketch of a great institution; and a viewpoint of some of its problems. It is a loyal organization. It can stand censure, and criticism, if it must. I urge upon you, nevertheless, that you practice restraint in resorting to critical measures. When you criticize the General Staff, you criticize the Army of the United States—Regulars, National Guard, and Reserves. When you criticize the Army, you criticize our country. Look upon the General Staff as the reflection of your own image. Cherish its good faith, as you would protect your own good name, and the welfare of our great Nation! [Applause.]

The SPEAKER. The time of the gentleman from Oregon has again expired.

INVESTIGATION OF NAZI PROPAGANDA

Mr. COX, from the Committee on Rules, submitted the following privileged report (Rept. No. 878) from that committee for printing under the rule:

House Resolution 198

Resolved, That the Speaker of the House of Representatives be, and he is hereby, authorized to appoint a special committee to be composed of seven members for the purpose of conducting an investigation of (1) the extent, character, and objects of Nazi propaganda activities in the United States, (2) the diffusion within the United States of subversive propaganda that is instigated from foreign countries and attacks the principle of the form of government as guaranteed by our Constitution, and (3) all other questions in relation thereto that would aid Congress in any necessary remedial legislation.

That said special committee, or any subcommittee thereof, is hereby authorized to sit and act during the present Congress at such times and places within the United States, whether or not the House is sitting, has recessed, or has adjourned, to hold such hearings, to require the attendance of such witnesses, and the production of such books, papers, and documents, by subpena or otherwise, and to take such testimony, as it deems necessary. Subpenas shall be issued under the signature of the chairman and shall be served by any person designated by him. The chairman of the committee or any member thereof may administer oaths to witnesses. Every person who, having been summoned as a witness by authority of said committee or any subcommittee thereof, willfully makes default, or who, having appeared, refuses to answer any question pertinent to the investigation heretofore authorized, shall be held to the penalties provided by section 102 of the Revised Statutes of the United States.

UNCLAIMED DEPOSITS IN NATIONAL BANKS

The SPEAKER. The Chair lays before the House the following communication from the Senate.

The Clerk read as follows:

Ordered, That the Secretary be directed to request the House of Representatives to return to the Senate the bill S. 2359, "To provide for the disposition of unclaimed deposits in national banks."

The SPEAKER. Without objection, the request is granted.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Horne, its enrolling clerk, announced that the Senate had passed without amendment a joint resolution of the House of the following title:

H.J.Res. 290. Joint resolution to provide an appropriation to carry into effect the act entitled "An act to provide for loans to farmers for crop production and harvesting during the year 1934, and for other purposes", approved February 23, 1934.

The message also announced that the Senate agrees to the amendment of the House to the bill (S. 1083) authorizing adjustment of the claim of the Potomac Electric Power Co., of Washington, D.C.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7295) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1935, and for other purposes.

The message also announced that the Senate recedes from its amendments nos. 31, 32, 33, and 34 to said bill.

WAR DEPARTMENT APPROPRIATION BILL—FISCAL YEAR 1935

Mr. COLLINS of Mississippi. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H.R. 8471) making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1935, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H.R. 8471, the War Department appropriation bill for the fiscal year 1935, and for other purposes, with Mr. LANHAM in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. In accordance with the previous order of the House, debate on the bill H.R. 8471 will proceed for 2 hours today and be confined to the bill, the time to be equally divided between the gentleman from Mississippi [Mr. COLLINS] and the gentleman from Ohio [Mr. BOLTON], at the end of which time the bill will be read for amendment under the 5-minute rule.

Mr. BOLTON. Mr. Chairman, I yield myself 15 minutes.

Under the agreement reached earlier in the week, the balance of the time for debate on this bill will be confined to a discussion of the bill itself. The Chairman of the Subcommittee on Appropriations intends to discuss the bill in detail. Consequently I propose to take only such time as needed to make some general remarks on the recommendations which the bill carries to this committee.

The bill as recommended to the committee represents the arduous work of the subcommittee for several weeks, and weeks of hearings. Happily, the bill meets the general approval of those most directly affected by its recommendations and it is believed the bill as recommended to the committee unanimously by the Subcommittee on War Department Appropriations will meet the approval of the committee. As we would naturally expect, discussions and studies of this matter have been led by the able chairman of the subcommittee. I am very glad to have this opportunity not only to express my personal regard for the gentleman from Mississippi and his intense interest in our Military Establishment, but also my respect for the manner in which he has handled these deliberations. But, further, I want to express my appreciation to him for the courtesy which he has shown the minority members of his committee. This year the chairman was handicapped, perhaps, by having two new minority members on his committee. This did not prevent him from giving us every consideration and we of the minority are grateful for the extreme courtesy he has shown us, and we feel very fortunate in having such an able leader of our committee considerations and our common problem.

I also should like to congratulate the chairman of the subcommittee on what he has accomplished in this bill. The gentleman from Mississippi has made suggestions to the committee and to the House of Representatives for many years with regard to certain types of equipment to be used by the Regular Army. Part of his recommendations are carried in this appropriation bill and so it really represents the culmination of years of work on this subject on his part.

I am one of those who believe in national defense. I believe the Regular Establishments of the Army and the Navy are not only the first line of our defense but our best insurance for peace. Consequently I am very happy at the support this bill gives the Army.

The bill carries appropriations of approximately $243,000,000 for the military activities of the Army. As we all know, the bill is divided into three parts: Appropriations for the War Department, appropriations for the military activities of the Army, and appropriations for the nonmilitary activities of the Army. The $243,000,000 recommended this year for military activities is approximately $30,000,000 less than the appropriations recommended to Congress for the current year, but approximately $25,000,000 more than the funds allowed the War Department by the Director of the Budget for the fiscal year 1933–34. When we add to this the huge sum of $115,000,000, which was allotted to the War Department by the Public Works Administration, we can see that the funds at the disposal of the War Department up to June 30 of next year are considerably greater than the War Department has had for several years.

I think it might be appropriate to point out the fact that after the appropriation bill was passed last year the administration saw fit to reduce it by many millions of dollars and cut down activities for which Congress appropriated money. Following that, however, this huge sum of $115,000,000 was allotted by the Public Works Administration; and in connection with that action it might be commented upon that the Public Works Administration made their allocations and allotments without regard to, or at least without following, the recommendations of the Chief of Staff as to the necessity of the different activities provided for.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

Mr. BOLTON. Certainly.

Mr. DOWELL. Was that at all in harmony with the recommendations of the subcommittee?

Mr. BOLTON. Our committee had nothing to say about the allotments made to the War Department by the Public Works Administration. I might say that what has been done in this instance is characteristic of what has been done with many other departments by the Public Works Administration. In other words, the Public Works Administration has seen fit to follow its own ideas in allotting money for various activities of the Government, many of which had been refused by congressional action.

Mr. DOWELL. One other question, if the gentleman will permit; I understand from the gentleman the General Staff was not consulted about these allocations.

Mr. BOLTON. No. The General Staff submitted a list of recommendations which will be found in the hearings. These recommendations amounted to approximately $380,000,000. From these recommendations the Public Works Administration selected certain ones for which approximately $95,000,000 was allotted for military activities. Of this amount over $60,000,000 was for Army housing. It is but fair to admit that the Public Works Administration in making its allotments was probably moved by the thought of primarily encouraging employment. I say, however, it is very unfortunate that the military necessities and tactical needs of the Army were not considered in making these allotments.

Mr. DOWELL. Would it have been possible to have allocated this money to military activities which would have been more beneficial to the Army and also have created the same amount of employment?

Mr. BOLTON. I think that is a matter of personal opinion. I, being a firm believer in the efficiency of the Army, would have preferred to have seen allotments made for equipment or for ordnance supplies or for mechanization and motorization rather than for the building of barracks, hospitals, gymnasiums, and parade grounds at the Army posts.

As I say, the military activities of the War Department have been well taken care of through the proposed appropriations. Insofar as the nonmilitary activities are concerned, $250,000,000 has been allotted by the P.W.A. For rivers and harbors and for flood-control improvements the total amount of the proposed appropriations comes to something like $279,000,000 as opposed to $349,000,000 appropriated last year. When we add to this $250,000,000 for non-

military activities and $115,000,000 for military activities allotted by the P.W.A. and available until June 30, 1935, I think we can agree that the War Department this year is well taken care of.

General MacArthur, commenting on the bill, said that the funds proposed to be appropriated for the War Department were meager but adequate. This comment was made prior to certain changes made by the committee in which recommendations for motorization, mechanization, and additional airplanes were added. The committee feels that the amount in the bill is adequate, and particularly in view of the augmentation by the P.W.A.

Insofar as the personnel of the Army is concerned, it is proposed at about the same basis as last year. Insofar as equipment is concerned, the committee feels that the ordinary equipment appropriated for is sufficient. In addition, however, there are three large items which the committee added through certain changes in the bill. One is for mechanization of a portion of the Regular Army, by which one regiment of Cavalry will be mechanized, as well as certain units of the Infantry. Another permits the total motorization program of the National Guard to be completed from funds recommended, with the exception of certain of the heavier types of artillery. The committee has appropriated additional funds for experimentation in the airplane field, as well as funds for the purchase of additional airplanes.

Mr. DOWELL. Will the gentleman yield again?

Mr. BOLTON. I yield to the gentleman from Iowa.

Mr. DOWELL. What is the cost of the motorization of the Army?

Mr. BOLTON. Does the gentleman mean motorization in this bill?

Mr. DOWELL. Yes. What is appropriated, or what is the extra amount involved?

Mr. BOLTON. There is an additional one million and a half dollars added to the bill for the purpose of motorization of the National Guard. In addition to this, there are about nine or ten million dollars of P.W.A. funds for motorization in the Regular Army.

Mr. DOWELL. Is that above the expense for motorization?

Mr. BOLTON. The $10,000,000 is the amount allotted by the P.W.A. in addition to funds appropriated in this bill.

Mr. DOWELL. What I want to get at is the aggregate; adding the $10,000,000 to the amount appropriated.

Mr. BOLTON. Between $10,000,000 and $12,000,000 for motorization alone.

Mr. DOWELL. May I inquire what is to be done with the horsepower in the Army? Is that to continue as it has been?

Mr. BOLTON. No. Does the gentleman mean as far as the actual operations of the artillery are concerned?

Mr. DOWELL. So far as the appropriations are concerned.

Mr. BOLTON. The Appropriations Committee has in mind that the horses which will not be used because of mechanization or motorization will be transferred to other units of the Army which today require horses and which today are underhorsed.

Mr. DOWELL. They will be continued?

Mr. BOLTON. In part. Some units will be cut down and some discontinued. There are about five or six thousand animals in the National Guard alone, which have, or can be dispensed with, meaning a tremendous saving on the part of the National Guard. As a matter of fact, the motorization program of the guard for the past 2 years has amounted to about $3,000,000. This expense will be taken care of entirely by savings in the elimination of horses, forage, and so forth.

Insofar as the training activities of the Army are concerned, the previous reductions made by the Director of the Budget will be corrected. Funds are carried in the bill for the training as heretofore of the regular units of the Army. Funds are carried for the National Guard which will permit of an increase in guard drills, also the regular 2 weeks' training at camp, and the regular number of Organized Reserves are appropriated for as recommended by the War Department.

Mr. WADSWORTH. Will the gentleman yield?

Mr. BOLTON. I yield to the gentleman from New York.

Mr. WADSWORTH. Can the gentleman give us some information in connection with the training of the National Guard in this respect? Will the supply of ammunition which may be expended in the coming fiscal year be sufficient to give all the units of the Regular Army and the National Guard their regular target practice in addition to their ordinary training with the rifle?

Mr. BOLTON. I cannot speak about the regular target practice, but the testimony before the committee indicated that ample funds have been set aside not only for the National Guard but for the Regular Army.

Mr. WADSWORTH. Are the funds set aside in this bill larger than the funds set aside last year?

Mr. BOLTON. I think they are much larger than the funds actually allotted last year. I may be mistaken in this.

Mr. WADSWORTH. I am very glad to hear that, because in this present fiscal year the fighting forces of both the Regular Army and the guard are being carried on with a minimum of instruction in their weapons, due to lack of ammunition, and a pitiable condition has arisen. I am glad that there will be a more generous allotment the next fiscal year.

Mr. BOLTON. I recall General MacArthur's testimony to the effect that ample funds were provided for rifle practice. As I say, insofar as training is concerned, we believe that ample funds are set aside for this purpose. This applies not only to the Regular Army and the National Guard but also the Organized Reserves.

The ordinary supplies for the Army are taken care of in the bill. There is one comment, however, I wish to make with reference to the general supply situation. It is on the broad subject of supplies and reserves for our Military Establishments.

We are all familiar with the situation confronting the War Department in 1917 and the fact that the various supply bureaus, with tremendous demands placed upon them, acted independently and without coordination, to such an extent that the President found it necessary to set up the coordinating body of the War Industries Board, with its Priorities Board, Clearance Committee, and similar activities, to correct the situation, and properly correlate the demands of industry.

After the war the National Defense Act was enacted, which, among other things, delegated the responsibility for the supervision of the procurement of supplies for the Army to the office of The Assistant Secretary of War, and which contemplated to so regulate the activities of the Army in that respect that difficulties such as experienced in 1917 would not be reenacted. Yet today each supply bureau of the Army is carrying on its procurement activities rather independently of other supply agencies, and, with the exception of matériel which is common to two or more branches of the field forces, it is customary for these bureaus to secure the necessary equipment and supplies requisitioned of them without regard to other activities.

[Here the gavel fell.]

Mr. BOLTON. I yield myself 5 additional minutes.

Mr. ROBERTSON. Will the gentleman yield?

Mr. BOLTON. I yield to the gentleman from Virginia.

Mr. ROBERTSON. Will the gentleman give us some information about the Army hospital at Denver, Colo.?

Mr. BOLTON. I will when I get through making my general statement.

It is quite true each supply bureau acts under the supervision of the office of The Assistant Secretary of War in its procurement program, but it is equally apparent no direct supervision or direction is authorized relative to sources of supply or industrial requirements of such programs. It is true studies and data relative to the industry of the country have been completed by the War Department and are constantly revised, but it is questioned whether the procure-

ment of supplies for the Army are made with these data primarily in mind and the necessity for close cooperation as well as the development and establishment of basic industries essential for such procurement always of first importance. The various bureaus are permitted to fill their requirements under such conditions as the law prescribes and from such sources as they determine, regardless of the activities of other bureaus.

While it is true that advances have been made in placing the responsibility for the procurement of types of equipment used by more than one branch of the Army under the authority of an individual bureau, yet it is apparent that the various supply bureaus of the Army are dealing with industry and their sources of supply in a manner which might result in the same confusion as referred to at the beginning of the World War.

The hearings through which the committee has sat indicate this lack of close supervision very clearly, and the very natural desire of each supply chief to carry out his activities as efficiently but independently as he is able.

It is believed that a study of the situation might develop facts which could well be corrected or at least indicate the necessity for closer cooperation, for emergency as well as peace-time activities. It is, of course, realized that because of the tremendous number of depots and posts which go to make up our Regular Establishment, centralized activity in the procurement of supplies is most difficult. It is believed, however, that a general policy of procurement under which conflict in purchases as well as the development of industry to meet requirements in times of emergency would be reduced to a minimum is highly desirable and possible, and would lead to greater efficiency both in times of peace as well as war.

Again referring to the National Defense Act, the responsibility for procurements is lodged in the office of The Assistant Secretary of War largely with a view of having in mind procurements on a large scale in time of national emergency, and for the purpose of avoiding conflict in the placing of orders with industry. The Assistant Secretary of War is charged with the development of additional sources of supply in order to most effectively utilize industry in times of emergency, and the assurance of adequate provisions for the mobilization of matériel and industrial organization.

Testimony throughout the hearings has indicated that the Ordnance Department have made real advances throughout the country in setting up ordnance districts for the express purpose of handling orders for ordnance equipment, though little has been done in this respect in other branches. Yet one very serious comment on our procurement activities during the World War was the fact that most of the large establishments producing ordnance matériel, such as guns, armor plate, ammunition, and so forth, were located within easy distance of the seaboard and very vulnerable on that account. While it has been indicated that efforts are constantly being made to develop the ability of industrial plants to produce ordnance requirements throughout the country, little indication is evidenced of actual steps to encourage production of ordnance matériel so essential to the success of an army at points inland.

It is believed highly desirable that consideration of this most important function of the Army be given attention and steps taken not only to coordinate the activities of the ordinary procurement, but to more effectually prepare for the production in various parts of the country of the many types of supplies necessary in huge amounts in time of war.

Similarly the matter of war reserves might well be given serious consideration and study. These reserves today are supposed to consist of matériel and supplies sufficient to promptly equip 1,000,000 men. Primarily the requirement applied to ammunitions and such munitions as require time to produce and were called for in large quantities. Fundamentally preparations should be such as to permit all requirements being secured promptly to properly equip the force designated. Practically part of those requirements can be procured more readily than others, part of those requirements deteriorate more rapidly than others, and some become obsolescent sooner than others. Heretofore Congress has appropriated huge sums to build up and maintain these reserves. Congress further disposes from time to time of surplus or damaged stocks. The recent demands made upon these reserves of the Army for C.C.C. camps, the disposal of large surplus stocks as well as reserve stocks, and the question of replenishment of those stocks brings the matter very much to the fore, and the desirability of reconsidering the entire requirements for that reserve and the best method of maintaining it. Recommendations were made to Congress for such a study by the Committee on Appropriations last year, and attention is again directed to this situation because of the reduction in appropriation for this purpose.

There are two distinct functions of the Army—one of arms, the other of supply. Neither is effective without the full cooperation of the other, and to secure the best results full efficiency must be had in both divisions.

My remarks are not directed as criticism of the activities or efforts of any branch of the War Department. It is rather a belief that further study of our activities might bring us further efficiency and keep us more abreast of the times, which is so essential in the Army, not only in arms and matériel but also on the method of procuring same.

Now I shall be pleased to yield to the gentleman from Virginia.

Mr. ROBERTSON. On the subject of procurement, I would like to ask, first, if it is not true that Government agencies are now carrying over $2,000,000,000 of surplus or excess supplies?

Mr. BOLTON. I am not able to give the gentleman the figures, but I know the amount is very large.

Mr. ROBERTSON. Is any plan being evolved, through the new Division of Procurement or any other agency, for consolidated inventories so that one agency can transfer to another without buying new supplies?

Mr. BOLTON. I know that the General Staff is giving that entire matter consideration and study, and I do know that forward steps have been taken since the war; but, as I have tried to point out, in my opinion, they can go a great deal further.

Mr. ROBERTSON. The other question was with respect to the Army hospital, at Denver, Colo.

Mr. BOLTON. No provision is carried in the bill for continuation of that hospital, largely on the recommendation of the Chief of the Medical Corps of the Army.

Mr. ROBERTSON. Is that because the Army does not feel it wants the hospital or because the Veterans' Administration was using the hospital and the Army bearing part of the expense?

Mr. BOLTON. I think it is a combination of circumstances.

Mr. ROBERTSON. You cut $50,000 off of the item and that is $50,000 under the recommendation of the Budget Bureau.

Mr. BOLTON. Yes.

Mr. ROBERTSON. Would the gentleman feel at liberty to express his own views as to whether this hospital should be continued or not?

Mr. BOLTON. Primarily my recommendation for the disallowance of these funds was based upon the recommendations made by the Surgeon General of the Army. [Applause.]

Mr. Chairman, I yield the balance of my time to the gentleman from Mississippi [Mr. COLLINS].

Mr. COLLINS of Mississippi. Mr. Chairman, in presenting the War Department appropriation bill for the fiscal year 1935, as has been my custom during my chairmanship, I shall avail myself of the opportunity first to speak to a subject pointing to the realization of a better, more efficient, and more effective Military Establishment. I feel that much is gained in this way of focusing public attention upon matters or conditions which should be corrected, if it be our purpose to have a modern and effective military machine both as regards matériel and personnel. Therefore, today I shall

speak at some length to the subject of youth as a prerequisite to the kind of a Military Establishment it is our aim and endeavor to have.

Through the medium of the report which accompanied the presentation of the bill which is before you for consideration, the committee has attempted to inform the House in considerable detail of its action upon the estimates as presented in the President's Budget. In addition, however, I wish to say some things to you about the principal phases of the bill, which I shall do upon the conclusion of my remarks upon youth.

What I have to say about age ought really to be dedicated to those 2,816 first and second lieutenants who have graduated from West Point since June 1920. The highest ranking man of these 2,816 junior officers is still 792 files from his captaincy, and he cannot hope for promotion in less than 4 long years. These forgotten men of the War Department, condemned to withstand the dryrot of a stagnated promotion list, are a real concern. For 14 years they have been lieutenants and for still many more years will they remain so, unless we act upon this problem or wait for Fate to take action for us.

Before I elaborate my view upon the ages of our own military men in particular and upon soldiers in general, a few figures are in order so that an adequate background may be supplied and full information made available. These figures are all contained in the hearings on this bill and reveal a situation that seems fraught with danger and needless expense if we are to maintain a Military Establishment supposedly efficient and instantly ready for action in an emergency.

On June 30, 1933, we had 10,872 promotion-list officers in the Regular Army—officers supposedly capable of combat duty in the event of an emergency. These officers held rank from second lieutenant to major general, and were from 21 to 64 years of age. A glance at the age table on page 104 for Regular officers shows that our 21 major generals, those supposed to exercise high command in war time, had an average age of 59.4 years. Our 46 brigadier generals, those officers who will command brigades and divisions in time of war, were even older, having an average age of 60.33. Our 466 colonels, those officers who nominally command regiments and who would be subject to front-line duty in war, at least those not drawn upon to supply a wartime shortage of general officers, had an average age of 58 years. Similarly, we find our 577 lieutenant colonels had an average age of 51.6 years. Our majors had an average of 44.6 years, our captains 42.6 years, first lieutenants 34.75 years, and second lieutenants 26.33.

What is the significance of these figures? How many of you gentlemen think a colonel of 58 years or more can successfully lead his regiment into the front line and conduct it through a modern engagement? How many men of 58 have the mental and physical stamina to stand the awful pressure of twentieth-century combat or the ravages of future scientific slaughter? There is no hope for sexagenarians in a military establishment, even in peace time, because the rapid advance of invention and ingenuity leave them far behind—desk soldiers, dreaming of battles they fought and won decades ago.

Our Army is not without its full complement of sexagenarians: 46 percent of our major generals, 63 percent of our brigadier generals, 27 percent of our colonels, and too many of our majors and captains will never see 60 again. We have on our active promotion list today 207 officers 60 years or over, and while they are legally entitled to be with us until they reach the age of 64, and while the Government may still, perhaps, realize on their services in so-called "administrative positions", they are of no more use in time of emergency and conflict than so many cigar-store Indians. Furthermore, the positions they now hold could better be filled by younger officers or by civilian clerks. I will grant that there may be exceptions, but from figures and data I will presently produce I hope to show that Father Time and Father Mars have rarely worked together to produce successful antiques in a modern army. I do not use clerks in a disparaging sense. Our War Department right now is staffed with a large number of officers, some of high rank, who were clerks prior to April 6, 1917, which signifies that there are clerks who have the capacity to do the work of officers.

Our Regular Army is not alone the repository of all the officers who seem to suffer from over age and threatened hardening of the arteries. Our Organized Reserves can produce a list of aging officers that ranks with any organization, civil or military, in the world today. The tables on pages 404, 405, and 406 in the committee hearings show we have 86,503 Reserve officers on the active or eligible list. It is assumed, whether properly or not, that they are physically competent to exercise command and withstand the rigors of modern campaign and conflict. As a matter of fact, they are the Reserve officers who have taken some training within the past 5 years.

Strange to say, the age levels in the Organized Reserves are lower—only slightly lower—than in the Regular Army. Happily, the sole major general in the Reserves misses being a sexagenarian by 1 year. However, in order to make up for this slip of venerability, we find on the eligible list of the Reserves, 5 of the brigadier generals 60 years or older, 18 percent of the 823 colonels 60 years or older, 10 percent of the 2,562 lieutenant colonels 60 years or over, 6 percent of the 5,656 majors aged 60 or over, 194 captains, 23 first lieutenants, and even 4 second lieutenants 60 years or over, all claiming years but not youth for their military laurels.

I should refrain from commenting further on 60-year-old second lieutenants, first lieutenants, captains, and majors. This situation is pitiful and the conditions surrounding it even too humorous for digression. Nine hundred and seventy-nine sexagenarians clutter up the so-called "active" list of our Reserve officers. There are 5,882 of these active-list Reserve officers over 50 years of age and let us bear in mind that Reserve officers are now commissioned in grades no higher than that of colonel. Perhaps some day we may realize that senility and national safety cannot join hands. If it be thought I draw too dark a picture here, I refer you again to the table on pages 405 and 406 in the hearings on this bill. For mirth-producing reading I suggest that this table of officers in the Auxiliary Reserve of the Officers' Reserve Corps be inspected. There we find generals, colonels, and majors in their eighties, and standing alone, like some prehistoric man, a second lieutenant aged 72.

I must admit that much of this data sounds like the report of an expedition that has been excavating stone tablets from an Egyptian city buried since time immemorial. Seriously, these tables are official War Department records, dated February 19, 1934—though the ages listed upon them lead one to believe they came from the archives of the Smithsonian Institution or were found in the tomb of King Tut. I do not want to seem to be singling out that over-aged gladiator, the 72-year-old second lieutenant, although he deserves mention. I notice in the tables that he has still an older and a higher-ranking officer in the wheel-chair brigade to report to—a major, age 86, of pre-Civil War vintage, but still a Reserve officer in the eyes of the War Department. And I am of the opinion, from what has been developed in committee hearings in the past few years, that even these Stone Age warriors of the Reserve Corps would have still older ones as comrades in arms if only it were possible, by regulation or otherwise, to make Reserve officers live longer. It is only through death that we can lose them from the muster rolls. Indeed, the words of that West Point cadet song have come true in more ways than one—the "Long Grey Line" stretches back into the years and includes the hoary and the aged.

These figures cannot be lightly dismissed with the hope that no such condition exists in our Air Corps. There youth is supposed to prevail. The tables on pages 157, 158, and 159 of the hearings show that there are 19 flying officers with 30 years of service in the Air Corps today. Seven of

these 30-year members are captains and some of the first lieutenants have as high as 24 years' service. On a straight age basis, an analysis of the personnel of the Air Corps shows that 34 percent are above the age of 40. I do not believe that all of these officers are capable of modern air combat in future high-speed planes at fighting altitudes.

There is little significance in merely reciting the ages of officers, as I have done, without making comparisons and relating these ages to war-time efficiency and combat work. I do not want to put the War Department's 86-year-old major and its 72-year-old second lieutenant out on the firing line just yet, even though it were necessary to carry them there. No such conditions as I have described were to be found in the A.E.F. during the World War. If we analyze the age figures in that great American Army, what do we find?

As a matter of truth, according to recent present press reports, a medical officer having the temerity to ground one of these old flyers runs the risk of being villified or involves himself in difficulties.

The supreme high command of the whole A.E.F., headed by Gen. John J. Pershing and including such distinguished staff members as Maj. Gen. Mason M. Patrick, Major General McAndrew, Brig. Gen. H. B. Fiske, and Brig. Gen. LeRoy Eltinge, had an average age of 48.8 years. None of these military leaders was a sexagenarian and all of them were in their low fifties or high forties. Compare these with our military leaders today, with 46 percent of our major generals and 63 percent of our brigadier generals sexagenarians and nearly ready, so far as their ages are concerned, to unhook their spurs and step jauntily into the nearest wheel chair.

We had generals in the World war in their thirties and colonels in their twenties, but we never get anyone lower than 55 or 56 in peace times. The commanding officers and generals of the staffs of the first, second, and third armies of the A.E.F. all averaged less than 50 years old, with one exception. Those two American generals of the A.E.F., Lt. Gen. Hunter Liggett and Maj. Gen. J. T. Dickman, who did reach 60 years of age while in service, invariably surrounded themselves with young generals in their thirties or forties. Gen. Douglas MacArthur, who commanded the Eighty-fourth Infantry Brigade under General Dickman, was 37 in the World War, while Gen. Hugh A. Drum, who was General Liggett's chief of staff, was 38 years old at that time.

Out on the front line with the combat divisions of the A.E.F. you saw no 60-year-old generals on the scene with minor exceptions. Here the average age was much lower, in the middle fifties. The following official War Department figures show that on November 11, the principal troop leading positions were held as follows:

	Oldest	Youngest	Average
Division commanders	63	44	55
Artillery brigade commanders	59	38	47
Infantry brigade commanders	62	37	51

Another important point to notice is that when division commanders were relieved, they were invariably replaced by younger generals. For instance, the First Division of the A.E.F. started out with a general aged 52 in command and ended at the armistice with a general in command aged 45. The Third Division, likewise, had as its first commanding officer a general aged 59. He was replaced with one aged 57 and finally a general aged 45 was placed in authority. I cite these instances, not to reflect upon the efficiency or the courage of any of our A.E.F. division commanders, but merely as an indication that modern warfare and age cannot be joined together in happy wedlock. And if these two instances seem isolated and not indicative of the general trend, I suggest that those of you with a penchant for military history follow the action of such A.E.F. divisions as the Twenty-sixth, the Thirtieth, the Thirty-second, the Thirty-fifth, the Forty-second, the Seventy-seventh, the Eighty-second, and the Ninetieth, each of which ended the war with a commanding general far younger than the one who first went into battle with it.

Even in the War Department in this country in 1917 and 1918 age had to give way to youth, and to give way rapidly. According to official War Department figures in 1918, the Chief of Staff, Gen. Peyton C. March, was only 54 years old. The chiefs of the branches of the War Department averaged 51 as against a pre-war average of over 60. Major generals appointed after October 1, 1918, averaged 54 years of age and brigadier generals averaged 47 years of age, with the youngest aged 35. The commanders of the units being formed in the United States up to and including the armistice showed these age levels:

	Oldest	Youngest	Average
Division commanders	61	43	53
Artillery brigade commanders	55	38	44
Infantry brigade commanders	51	34	47

In the Infantry of the Regular Army on November 11, 1918, there were 24 colonels who were under 40 and 1 of these was 29.

Mr. STUDLEY. Will the gentleman yield?

Mr. COLLINS of Mississippi. I will.

Mr. STUDLEY. How old was General Foch, who went through the entire World War?

Mr. COLLINS of Mississippi. He was one of the exceptions. He knew his weakness, and hence surrounded himself with young officers, and urged other allied countries to send only young men to France.

Mr. STUDLEY. How old was Hindenburg?

Mr. COLLINS of Mississippi. Ludendorff was the man upon whom Hindenburg depended, and was the outstanding general of the German Army.

Mr. STUDLEY. What was his age?

Mr. COLLINS of Mississippi. He was a young man. I do not want any man to believe that there have not been isolated instances in the world's history where men, in spite of their age, have been able to succeed in warfare. But these men have been the exception. If you will read history you will find almost without exception that every successful military leader was under 50, and most of them under 40 at their prime.

Mr. MARTIN of Oregon. Will the gentleman yield?

Mr. COLLINS of Mississippi. I will yield.

Mr. MARTIN of Oregon. Does the gentleman know the age of Napoleon? He was only 27 years old.

Mr. COLLINS of Mississippi. The gentleman is right; I am coming to that.

When General March took over the War Department in 1917 he ruthlessly weeded out senescent holders of sinecures and replaced them with men almost one half their age. He took R. C. Marshall, a captain in the Coast Artillery, and made him a quartermaster general in charge of all construction. He took Frank Hines, a captain in the Field Artillery, and made him a general in charge of personnel. R. E. Wood, a retired Cavalry major, was made Quartermaster General. These men were young by all the standards that now exist in the War Department. Only youth and physical prime can meet the full impact of war in any field.

Official War Department data has the following to say about the relationship between age and command:

RELATIONSHIP BETWEEN AGE AND COMMAND

Official War Department Data

Command or leadership of any group goes to the man who has the mental and physical qualities necessary for the duty, the mental qualities having been developed by study and by experience.

The mental and physical ability of the officers of the Army to perform their allotted tasks has for many years been of very serious consideration by those in authority. The results of this consideration have been the many measures taken to eliminate those unfit—retirement for physical disability, examination for promotion, class B, etc.

The normal peace-time requirements as to the daily efforts of the individual fill his time, but they do not carry the added items of responsibility for lives of those under them and with it

the corresponding nervous tension which appears in time of stress and war calling for a much fuller and extra effort.

Within our service, command has gone by seniority. With only the losses of officers due to quite natural causes, this has meant that seniority has carried with it age. Increasing age means increasing likelihood of mental and physical disabilities.

The problem of age in relation to command was one of the first which faced General Pershing on his arrival in Europe on our entry into the World War. In 1917 Pershing himself was nearly the junior major general. He was 57 years old, younger than all except Wood, who was only a month younger than Pershing.

In his early visits of inspection to French and British troops he was struck by the ages of the principal troop leaders—division and brigade commanders—so much so that he expressed himself in a cable to War Department in July 1917, as follows:

"My observation of the British and French Armies and most exacting arduous service at the front, fully convinces me that only officers in full mental and physical vigor should be sent here. Contrary course means certain inefficiency in our service and possible later humiliation of officers concerned. General officers must undergo extreme effort in personal supervision of operations in trenches. Very few British or French division commanders are over 45 or brigadiers over 40. We have too much at stake to risk inefficiency through mental or physical defects. Strongly recommend condition be fully considered in making high appointments, and suggest that no officer of whatever rank be sent here for active service who is not strong and robust in every particular. Officers selected for appointment general officer of line should be those with experience in actively commanding troops. Officers not fulfilling above conditions can be usefully employed at home training troops."

It is but necessary to look at the average ages of the officers of the Regular Army of pre-war time to realize the intense shock of such information.

Average age, Jan. 1, 1915

	Number in grade	Youngest	Oldest	Average
Major general	6	55	64	58.2
Brigadier general	15	55	64	59.6
Colonel	160	41	64	57.4
Lieutenant colonel	139	43	62	52.1
Major	363	33	64	46.4

It is, of course, to be realized that the French and British had arrived at this condition as to age of their general officers only after 3 years' fighting with its inherent losses and the accumulated experience to the younger and at the outbreak of the war junior officers.

That he continued to bear this in mind is shown by a letter direct to the Secretary of War on October 4, 1917, in part as follows:

"Both the British and French higher officers emphasize in the strongest terms the necessity of assigning younger and more impressionable men to command brigades and divisions. We would commit a grave error if we fail to profit by their experience. A division commander must get down into the trenches with his men and is at all times subject to severe hardships. * * * The French Army was filled with dead timber at the beginning of the war and many French failures are due to this fact. General officers must be fitted physically and mentally, must have experience and must have go and initiative, if they are to fill positions fraught with such momentous consequences to the Nation and which involve the lives of thousands, perhaps hundreds of thousands of our men."

And in his book Pershing speaks again of the subject as of the summer of 1918, when he says:

"After visits to units that had lately joined, further attention was given to qualification necessary in our higher officers. The British and French both had commented unfavorably upon the evident inactivity of many of them and even upon the infirmities of some of the division commanders who had been sent over during the preceding months to observe and study conditions at the front. It had been proved over and over again by the Allies that only the strongest could stand the continuous and nerve-racking strain of battle. * * *"

Lt. Gen. Hunter Liggett, in his book "A.E.F.", speaks of this same subject as follows:

"Some of the finest officers we had went to pieces under the emotional strain of command, fearful at the best, intensified here by the knowledge that they were leading troops only partially trained against the best organized and most skillful man-killing machine ever set going. The responsibilities broke their hearts. * * * These nervous collapses were most apt to manifest themselves when a man's command was held up with heavy losses. A commander needed iron in his soul at such moment. They were much more frequent among older officers of higher rank than among lieutenants, captains, and majors who had physical discomfort added to responsibility."

For the information of this House I am here inserting into the RECORD an official War Department table compiled by the statistical bureau of the General Staff of yearly age levels of our Army officers:

Average age—Regular Army officers—Promotion list only

	Major generals		Brigadier generals		Colonels		Lieutenant colonels		Majors		Captains		First lieutenants		Second lieutenants	
	Years	Months	Years	Months	Years	Months	Years	Months	Years	Months	Years	Months	Years	Months	Years	Months
June 30, 1933	59	6	60	4	58	0	51	7	44	8	42	7	34	9	26	4
Dec. 31, 1932	57	6	58	5	57	2	50	11	43	9	41	9	34	1	26	1
Dec. 31, 1931	58	4	59	3	56	10	50	10	43	4	40	11	33	11	26	0
Dec. 31, 1929	58	2	58	0	55	8	50	7	41	11	39	5	33	5	25	10
Dec. 31, 1928	59	4	58	2	56	3	51	8	42	9	39	6	34	1	26	9
June 30, 1924	60	5	55	2	54	5	49	5	40	3	36	4	31	11	26	0
Jan. 1, 1923	59	5	54	2	51	9	48	1	39	1	32	8	30	3	25	2

And here is another official War Department table compiled by the statistical bureau of the General Staff showing the ages of A.E.F. World War officers:

General officers, World War—average ages

	Oldest	Youngest	Average
Division commanders—Nov. 11, 1918, A.E.F.	63	44	55
Artillery commanders—Nov. 11, 1918, A.E.F.	59	38	47
Infantry brigade commanders—Nov. 11, 1918, A.E.F.	62	37	51
General officers on duty with General Headquarters—Nov. 11, 1918	58	42	48
General officers on duty with Service of Supply—Nov. 11, 1918	59	39	52

All other armies in the World War had the same experience with regard to age of their officers in the high command. The beginning of the World War saw the British Army led by the commanders who had won their spurs in the Boer War 10 years before, with the result that out of 12 officers above the rank of major general, 9 broke down, including the chief of staff. The same condition existed for the German Army, and it held for the French also. For instance, military historians tell how the French general, Lanrezac, for many years in charge of the French Military Academy and who commanded the Fifth French Army, at once became incapable of forward movement under fire, yet he had done nothing but preach the necessity of continuous attack.

If this be too recent history, turn to our Civil War. What were the ages of our great generals there? Stonewall Jackson at Shenandoah in 1862 was 38 years old. McClellan in the peninsula campaign was 36. J. E. B. Stuart at Chancellorsville in 1863 was 30. Nathan Bedford Forrest, who got there first with the most men, was 43. Sheridan at the Battle of Five Forks in 1865 was 34. Grant at Vicksburg was 41. Lee at the Battle of the Wilderness was 57, and Grant's 15-year advantage, military historians say, had

much to do with the final results. The average ages of 14 of our most successful Civil War generals at the time of their most extended engagements was but 41.9 years.

At this point I will include a table showing these ages:

Ages of Civil War generals in 1862

Jackson	38
McClellan	36
Grant	40
Longstreet	41
Stuart	30
Mosby	30
Beauregard	44
Forrest	41
Early	46
J. Johnston	55
Lee	55
Hancock	38
Sherman	42
Sheridan	31

The average ages of these generals in 1862 was 40.5 years.

Almost any war of major proportions may be selected at random and it will be discovered that combat is the province of youth and not of age. In Gen. J. F. C. Fuller's recent book entitled "Generalship, Its Diseases and Their Cures" he says that in—

> The Napoleonic Wars the average age of generals was under 40. At Waterloo, Napoleon was 46. In 1861 the average age of 20 Federal and Confederate officers who as generals played a leading part in the Civil War was 38½ years.

General Fuller says:

> All the great British generals except Cromwell and Marlborough gained their victories before middle age. Clive, Wolf, and Wellington were all famous at 30, world famous at 40.

And, believe it or not, we now have in the Regular Army first lieutenants as old as 60 and in the auxiliary of the Reserves a second lieutenant aged 72 and a major aged 86. I confess that some merciful legislation ought to be passed to keep these old gentlemen away from the noise of combat and the dangers of military machinery.

Infrequently equally fine statements are available from worth-while military sources in the United States, some of which I have already noted. One of the most recent was contained in the Field Artillery Journal for January–February 1933. Col. C. D. Herron, executive for Reserve affairs in the War Department, has in that issue of the Field Artillery Journal part of his speech he made to the 1933 annual convention of the Reserve Officers Association of the United States. The subject of his speech was Age. He said:

> Of all the combat officers who reached the front line and lasted until November 11, 1918, the oldest was 52. * * * If 52 be the upper limit set by the god of war for a mere summer's campaign, many of us [Reserve officers] are doomed to disappointment when war comes.

Further along he said:

> It may be surmised that when war comes those colonels of the Regular Army rated "superior" not more than 60 will receive promotion. However, all over 50 might as well recognize the fact that unless they prove to be Pershings or Hindenburgs, the enjoyment of such promotion will be fleeting. * * * When the armistice came, a few, but not many company officers above 30, were to be found on the front line. And some majors over 40. But by and large, their elders, like the colonels over 52, had gone.

Later he said:

> For combat troops there is for every rank an age above which it is futile for the individual to attempt or the Government to permit front-line duty. It is all very well for graybeards to frisk merrily about and sound the loud bazoo concerning their youthful vigor, but they deceive no one but themselves. Congress can decree that we remain on the active list until we are 64, but no law can make us fit to take the field at that age.

Notice this officer's statement:

> The colonels over 52 had all left the front lines by the armistice.

And look at these figures I have submitted which show that in our Regular Army today every colonel, with the exception of four, are 52 years of age or older. Are we to learn nothing from experience? Are we to defy the lessons of history and turn our War Department into an old soldiers' home?

I want to quote once more from General Liggett. In his book, The A.E.F., he says—

> One night in July 1918 I said to Pershing, "We are too old to make war. If I were 15 years younger I should not be sitting here before a map. I should be out all over the front." Pershing, who was 3 years my junior, smiled, but did not commit himself. Speaking for myself I meant just what I said. * * * I let chances go by which I should have accepted had I been 45 or younger.

This statement is sound military thinking. It is in accordance with what all great generals have believed. Napoleon, for instance, said that no general over 45 should be allotted an active command, and that no general over 60 should be given anything but an honorary appointment.

Of all the diseases and debilities to which modern armies are prone, none is worse in its effects from top to bottom than old age. An army may lack quantity and quality of armament and personnel and still give a good account of itself, provided youth is on its side. But if it suffers from old age, there is no hope for it, and no amount of men and munitions can save it from chaos and failure when emergencies arise. The War Department went to pieces like a house of cards when faced by the problem of the World War. The reason for this holocaust was age and age alone. Maj. Gen. Johnson Hagood, of our Army, told the House Military Affairs Committee last spring that the War Department is doomed to break down again in the event of war. I believe the reason for his prediction may be summed up in one word—"age." Gentlemen, let us eradicate "age" now and fill vacant positions with officers possessing vigor, stamina, and leadership. Let us not keep those thousands of first and second lieutenants graduated from the Military Academy since the World War so far down on the promotion list that they grow old and rheumatic while waiting to exercise the command and the responsibilities they are naturally fitted for.

The only real successes of the last war were achieved when those strongest military attributes of youth were utilized most fully. Those military attributes are mobility and surprise. Mobility in the last war was achieved through mechanization. Surprise was achieved through vigor and dissembling. Age possesses neither of these characteristics and cannot manufacture them by prayer nor by army orders and regulations.

In the last war, mobility, under the guidance of the elders, became zero. Surprise was forgotten in month-long artillery preparations for gigantic battles that were akin to slaughter houses. Vigor was limited by the range of the guns and deception by no other method than to daub paint on static fortifications under the hallowed name of camouflage.

Meanwhile science, the handmaiden of youth, forced age to abdicate. The tank, a dream in 1911, came to fruition 6 years later at Cambrai. Long after the World War was ended a military historian found in the pigeon holes of the British War Office the full plans for a tank that had been submitted to British generals in 1911. On the margin of the plan was a significant notation made by the aged military bureaucrat in rejecting the idea of the tank. The notation read, "The man's mad!"

Youthful "madness", symbolized in armored fighting vehicles, broke the existing stalemate on the western front. General Ludendorf termed the day the tank appeared in France as "the black day for Germany." In the airplane, youth found to the full its highest expression of vigor, mobility, and surprise. Yet even here age offered every handicap. For instance, when Germany toward the end of the war was in possession of 11,000 battle planes, tradition and conservatism, the characteristics of old age, prevented more than 33 bombers from ever raiding England together at one time.

War promises ever to become more mechanical. No longer will a nation permit its manpower to be killed on the grand scale as in 1914–18. Civilization cannot afford to be drained white and prostrated physically and materially for an-

other generation. No one but a stupid commander chained to tradition will ever have the temerity or the gall to send a soldier out on the future battlefield again protected only by khaki. Steel armor will protect the soldier from small-arms fire in the future, and if the venerable general staffs of the future through procrastination or through ignorance deny to youth this protection, civilization is doomed. Flinging soldiers into combat with less than this protection is criminal. Asking them to fight for their countries without it will ever be the function of those vociferous and unintelligent patriots who cry for human sacrifice but do not render it.

E. E. Slosson, a writer on scientific subjects, said recently:

The next war will be something not yet taught in West Point nor discussed in peace societies. In estimating belligerent assets, mechanical horsepower counts far more than man power in a country. Germany held out so long not because of Hindenburg but because of Haber, who discovered how to extract nitrogen for explosives from the air.

Give the fruits of science and mechanics to youth and you will have an unbeatable team. Rely solely upon age and you ask for disaster. Liddell Hart, a brilliant military critic, phrased it in this manner:

When war arises the small minds of aged military men, worn out by attention to trifles, are incapable of effort and fail miserably. Few men understand war in its largest aspects. Their past life has been occupied in drilling troops and they are apt to believe that this alone constitutes the art of war.

I am happy to note a changing policy on mechanization in the War Department. I commend to all of you a careful reading of an article by General MacArthur which appeared in the Hearst papers in connection with National Defense Week. What he says about effective machines is worth while. It is a very great pity that he concludes the article with a plea for "mere numbers of men." Let us hope that General MacArthur, while still young, will look forward toward mechanics and not backward toward man-power mobilization for his guidance. In this connection I submit as a criterion what Brig. Gen. B. H. Estes told the graduating class of the tank school at Fort Benning last month. He said:

What we must have is a swift, smashing military machine full of pep and vigor.

I claim to be no expert of mechanized fighting vehicles. I prefer to quote the best thought of recognized experts. That eminent British military thinker, B. H. Liddell Hart, said in a recent magazine article:

Anyone who has studied the armies of Europe is well aware of their imperviousness to change. Their form, far from being a further development upon that of 1918, resembles that of 1914 save for slight accretions. They are short-horned cattle with unwieldly infantry bodies. If I saw one of them begin to reduce of its own accord, I might begin to feel alarm and to suspect the adoption of some new instrument.

That observation is equally applicable to our own Army. The eternal cry is always for more man power and more animal power, never for more fire power. In the article just referred to by our Chief of Staff he publicly urged a 33-percent increase in enlisted strength for our Army, but even he had to admit that this might be accompanied by some increase in mechanization. This has been actually accomplished in our National Guard without increasing their numbers. Mechanization asks not for more men to go into combat but for fewer men, because each man is faster, more protected, less easily fatigued, and develops greater fire power with his ability to operate more and heavier weapons. Liddell Hart has stated that—

The annual cost of a light tank is only equivalent to that of a couple of infantrymen. In the wars where a mobile arm served as the arm of decision, its proportion to infantry was roughly 2 to 1.

Maj. O. T. Firth, of the British Army, said in an article in the Army Quarterly last year:

The difference between a horsed battery and a motorized battery in respect to training is amazing. In a motorized battery we have three times as much time to train specialists, range takers, etc., than in a horse battery.

We hear on all sides the cry to go slow, to experiment more. Often this doctrine means nothing more than a policy of drift and stagnation. Then we hear the elders claim that the supply of a mechanized force changes its powers of mobility into those of immobility. Liddell Hart has this to say on that point:

The problem of supplying a mechanized force is represented as being insuperable. In actual fact, a tank brigade can perform all the maneuvers of the present-day army without any transport at all. That is to say, soldiers march from 12 to 20 miles per day, cavalry from 20 to 40 miles per day. Mechanized forces can perform these maneuvers and return to their bases without refueling in 2 to 3 hours. In fact, modern armored "cavalry" ought to be accustomed to moving without transportation. Food for the men can be carried in the tanks. And an extended maneuver of 300 miles can be undertaken with a fuel supply carried on 20 trucks. What a contrast to the hundreds of horse and motor vehicles an infantry division must maintain!

I will even go further than this critic and venture to say that a modern mechanized force, like General Sherman's raiders in the Civil War, can ruthlessly scrap its transportation and equipment and live off the country. Gasoline pumps to supply a mechanized force today are as numerous as haystacks for the horse cavalry of 1865.

Let me give a picture of the war of the future. Says Gen. J. C. F. Fuller:

Will the army of today find any place in the future? This depends upon the nature of the ground and the nature of the enemy. Infantry will find a playground in those tracts of land difficult for mechanized forces, but it will have no real place in future warfare. In a war of the first magnitude no decisive battle has ever been lost or won in a mountainous country. Imagine what a mechanized battle will look like. It will be a series of rapid maneuvers, of feints, advances, retirements, followed by sudden annihilating blows. It will resemble a battle at sea, short and sharp, not prolonged. A few hours will see the complete destruction of a large mechanized force or its withdrawal to some land port where it will risk blockade. What use are infantry in such a war? Cut their line of supply and besiege them with tanks and they will only be an encumbrance. The little good they can do will be outbalanced by their need for supply. Cut away the usefulness of infantry and conscription has little reason to exist. The nation in arms, the creation of the Napoleonic Wars, will become a thing of the past and will give way to comparatively small long-service armies. The answer, therefore, is that wars will become less prevalent, gas engines causing the same restrictions in land warfare that steam power already has in sea warfare. No general of the future can hope to be a success if he shows himself antagonistic to the new social order, to the new education, or to new inventions.

Whatever we may say about youth—it may make mistakes, it may be impetuous, it may be inexperienced—but it is never antagonistic to novelty and invention. Youth in warfare never suffers from tactical arthritis nor is it afflicted with arteriosclerosis of its strategy. It never suffers the diseases of generalship. It is not burdened with years, it never stays in the rear, it prefers quality rather than quantity of armaments, it can provide leadership and it has, above all, physical vigor. Give an army leaders with these characteristics and we need never fear about our national security.

And for good measure we bring about economy along with efficiency in expenditures upon national defense, when we change our officer personnel from the old to the young. We can pay those who ought to be retired three fourths of their pay and the younger officers their full salaries and save $1,400 cash in each and every case. [Applause.]

Ladies and gentlemen of the Committee, I see no reason why we should not take a step in this direction, and that is one reason for the provision in this bill, written there with the unanimous vote of this committee, which begins the policy of eliminating practically 200 of these older men. With their elimination, we can feed younger men from the bottom into our Army and make the officer personnel a more active and efficient organization.

PROVISIONS OF THE BILL

I shall now proceed to a discussion of the bill itself. In my opinion, this is the best War Department appropriation bill that it has been my pleasure to help in bringing before the House. It is reported to you unanimously. I know that that means to most of you that there are many things in it

that do not meet with my approval. However, I am supporting it in its entirety, and I ask each and everyone of you to support it in its entirety. It is about $3,000,000 under the Budget. I do not mean to convey that all items are under the Budget, because we have reallocated and increased funds in a number of instances. I believe that if any of you would care to ask the confidential opinion of any member of the General Staff or of any well-informed Army officer in the War Department, with whom you may be acquainted, you would be told that this is as good, if not the best, War Department appropriation bill that has been reported to this House since the war. We feel unusually complimented today in having as one of the supporters of this bill my good friend the very able gentleman from Oregon, Major General MARTIN, of the United States Army. [Applause.]

I consider that I have been particularly fortunate in having as members of the subcommittee, of which I have the honor and privilege to be chairman, the gentleman from Arkansas [Mr. PARKS], who has given a great deal of his time and his thought to military subjects, and who has brought to every War Department bill many worth-while suggestions. I regard Mr. PARKS as one of the ablest Members of this House, and his contributions to this bill have been constructive and forward looking. We also have the gentleman from Texas [Mr. BLANTON] on this subcommittee and all of you know that Mr. BLANTON is one of the most tireless and intelligent workers in the House. For our minority members, we have the gentleman from Ohio [Mr. BOLTON] and the gentleman from New Jersey [Mr. POWERS]. Both of these gentlemen are World War officers. They know military subjects as they are. They are both young men, too, and are therefore not tied to old ways of thinking. They are intensely anxious to give to this Government an efficient military establishment, and their sound help and intelligent cooperation has been largely responsible for what I have said in praise of this bill.

Mr. BYRNS. How about John Pugh?

Mr. COLLINS of Mississippi. We all know John Pugh. No better or more intelligent man ever lived than John Pugh. He is pure gold. With his help our labors have been light. [Applause.]

This bill appropriates $279,000,000 plus. The appropriation bill for 1934 carried $349,000,000 plus, but the $349,000,000 plus that was made available for expenditures in 1934 has been reduced by budgetary limitation to $269,000,000 plus. Therefore, while this bill is about $70,000,000 less than the amount appropriated for 1934, it is about $9,500,000 in excess of the sum to which the Budget has limited current-year expenditures. However, that is not a good criterion to follow in considering this measure, because as to both military and nonmilitary activities extensive funds have been supplied by the Public Works Administration that are available for expenditure not only in the fiscal year 1934 but in the fiscal year 1935 as well. So, when we use the amount appropriated for 1934 of $349,000,000 for comparative purposes we should bear in mind that while that amount has been reduced to $269,000,000 by the Budget, it has been augmented by P.W.A. funds to the extent of $158,000,000. Upon that premise, we find that there is available for expenditure for all War Department objects in 1934, $428,000,000, and not the $349,000,000 that we appropriated.

Mr. MARTIN of Colorado. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Mississippi. Yes.

Mr. MARTIN of Colorado. What was the P.W.A. allocation used for?

Mr. COLLINS of Mississippi. It was used for various objects, all of which the gentleman will find in the report of the committee, not only for military but for nonmilitary objects as well.

Mr. MARTIN of Colorado. And I presume that accounts for the fact that we are not getting a lot of P.W.A. work in a number of places.

Mr. COLLINS of Mississippi. This bill appropriates $279,000,000, but there will be available for expenditure out of P.W.A. funds an additional $156,000,000, making a total of $435,000,000 for the fiscal year 1935. So if you should have the impression that this bill carries $279,000,000, you are making a very serious mistake, because there will be available for expenditure next year $435,000,000, which is in excess of $7,000,000 above the amount available for expenditure, as augmented by P.W.A. funds, in 1934. Taking into account C.W.A. funds available for expenditure in 1934 of $23,205,509, the current-year expenditure total becomes $451,000,000. None of the figures that I have given you take into consideration any of the C.C.C. funds, for it has been impossible for this committee to ascertain the extent to which the War Department has profited by or through that activity. Suffice it to say, however, so far as this particular measure is concerned, the appropriations recommended, in the aggregate, are more than $3,000,000 less than recommended in the Budget.

The appropriations for the War Department may be divided into three classes—the War Department proper, military objects, and nonmilitary objects. As to the War Department proper this bill increases the Budget by $12,944, and the principal reason for that increase is owing to the restoration of the office of Assistant Secretary for Air. Our action accords with existing law. There has been a great deal of controversy over this subject. The Air Corps always has felt that it should be able to reach the ear of the Secretary without having to go through the Staff, in order that their proposals might reach the Secretary without alteration or suggestion by officers not directly concerned. The committee has made provision for the reestablishment of this office merely for the purpose of submitting the question for determination to the House itself, and whichever way it may be settled here will be satisfactory to the membership of this committee.

One of the principal proposals of a forward-looking nature that was done by this committee was to take travel wherever it appears in this bill and group it under one head, so that there will be greater flexibility and also in order that we may keep a better check upon expenditures for travel in the War Department.

Mr. WADSWORTH. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield.

Mr. WADSWORTH. I should have interrupted the gentleman as he was referring to the Assistant Secretary of War for Air. The gentleman used the expression that this bill proposes to reestablish that office.

Mr. COLLINS of Mississippi. Yes.

Mr. WADSWORTH. Has it ever been disestablished?

Mr. COLLINS of Mississippi. The appointment has never been made, and the amount for the pay and office help was not included in the Budget.

Mr. WADSWORTH. The amount for pay and office help was eliminated from the Budget?

Mr. COLLINS of Mississippi. Yes; as it came to us.

Mr. WADSWORTH. How about the bill for the current fiscal year?

Mr. COLLINS of Mississippi. The money was appropriated.

Mr. WADSWORTH. But the office has not been filled?

Mr. COLLINS of Mississippi. The office has not been filled.

Mr. WADSWORTH. Can the gentleman say for what reason it has not been filled?

Mr. COLLINS of Mississippi. I do not have any idea. I understand that a similar office in the Navy Department has never been filled.

Mr. WADSWORTH. Assistant Secretary of the Navy for Air?

Mr. COLLINS of Mississippi. Yes; but the committee felt that this was a matter of policy that should be presented to the Congress. Under the Constitution it is the duty of the Congress to provide for the national defense, expressly so stated in the Constitution. This office not having been dispensed with by law, we felt that before it should be abolished we ought to present the subject to the Congress.

Mr. WADSWORTH. May I ask again if the committee itself expressed any opinion as to whether this officer should be appointed?

Mr. COLLINS of Mississippi. Personally, I think the office should be filled. I believe the better of the argument is in favor of filling the position.

Mr. WADSWORTH. But the committee has not said so in its report?

Mr. COLLINS of Mississippi. Yes; I think this is the opinion of the committee.

Mr. WADSWORTH. It is a Presidential policy that we are up against.

Mr. GOSS. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield.

Mr. GOSS. If the office should be filled under the terms of the bill, the Assistant Secretary for Air would not have charge of any of the procurement, would he? It would still be under the Secretary of War, in accordance with the National Defense Act.

Mr. COLLINS of Mississippi. I do not know that that is the law.

Mr. GOSS. The Assistant Secretary of War and General Foulois were before the Military Affairs Committee this morning, and that was their opinion.

Mr. COLLINS of Mississippi. Well, that is an interpretation of the statute that many of us may not accept.

Mr. GOSS. What does the gentleman think about it?

Mr. COLLINS of Mississippi. Personally, I think that the Air Corps and the Assistant Secretary for Air would manage to take charge of Air Corps procurements.

Mr. GOSS. Without regard for The Assistant Secretary of War?

Mr. COLLINS of Mississippi. That is my opinion.

Mr. PARKS. Will the gentleman yield?

Mr. COLLINS of Mississippi. Gladly.

Mr. PARKS. In the event of any disagreement, it would naturally go to the Secretary of War, and he would have final decision, as a matter of course?

Mr. COLLINS of Mississippi. That is right.

Mr. McCORMACK. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield.

Mr. McCORMACK. How long has this particular office been vacant?

Mr. COLLINS of Mississippi. Since the 4th of March.

There are quite a number of minor changes that have been made by the committee in the estimates. The principal worth-while changes that have been made in this bill relate, first, to the desire of the committee to furnish the Regular Establishment with some modern implements of war. We have 13 worth-while tanks; we have 4 armored cars; we have 80 automatic rifles; and that is about all. It is a pitiable condition. So we added, in addition to about $800,000 that is in this bill for tanks, combat cars, and automatic rifles, $2,119,200 for these purposes. This will be the beginning of real implementation for foot soldiers.

We will be able to secure enough tanks fully to mechanize one regiment of Cavalry, considering the tanks on hand and being bought this year. In addition to that, we will be able to mechanize two companies of Infantry.

The Staff is very much pleased with this provision. It is 100 percent in line with the splendid statement of General MacArthur on mechanization made to the Hearst newspapers only a few days ago.

In addition to this, the committee restores about $300,000 to chemical warfare. Likewise, we have provided money so that one officer from the National Guard of each State may go to the Chemical Warfare School. We intend to teach these soldiers modern military methods and ways of making war and that hiding behind a tree is not the last word in military strategy.

Furthermore there is carried in this bill other increases for chemical warfare in the way of mechanized vehicles for the discharge of chemical shells, something they have been asking for for a number of years, but which they have been unable to get on account of budgetary limitations. We appropriated the money for this object last year. It has been withheld because of budgetary limitations, and we are in a sense reappropriating it this year.

AIR CORPS

The Air Corps especially wanted an additional $1,000,000 provided for experimentation. They want to experiment with foreign engines. They want to experiment with worthwhile accessories to airplanes. We did not feel that we should cut down the money for any of the projects included in the Budget, especially for the purchase and operation of airplanes. Therefore, we have added $1,000,000 for experimentation for the Air Corps over and above the amount recommended by the Budget.

Mrs. ROGERS of Massachusetts. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield.

Mrs. ROGERS of Massachusetts. Can the gentleman state how many of our airplanes are equipped with both the Sperry & Union air-navigation systems?

Mr. COLLINS of Mississippi. This bill, together with what we have, will provide radio and other equipment of that nature for 55 percent of all the planes.

Mrs. ROGERS of Massachusetts. The commercial airplanes have both systems, or two systems, I understand.

Mr. COLLINS of Mississippi. I am very glad that the gentlewoman has asked me the question.

There are certain savings, we have been led to believe, that can be effected by the Chief of the Air Corps; and in this measure we authorize him to use those savings for the purpose of equipping planes with radio equipment and guns.

So much for the changes touching the Regular Establishments. I have mentioned the principal ones.

NATIONAL GUARD

Now, with regard to the increases elsewhere, this bill carries 42 drills for the National Guard. For the present year the National Guard has been restricted to 36 drills. This bill puts the number of drills up to 42. The law provides for 48. Even though we could, I do not know that we would have put the drills up to 48, the amount prescribed in the National Defense Act. As a matter of truth, England has an organization comparable to the National Guard; and the English officers believe that 42 drills is a sufficient number for their organization. Personally, I have talked with quite a number of very prominent men in the National Guard. I could not well give their names because it might not be a popular thing for them to say, but most of the men with whom I have talked believe that 42 is a better number than 48.

Besides increasing the number of drills, the committee has provided in this bill apparently $1,500,000 to complete the motorization of the National Guard. As a matter of truth, the bill contemplates an expenditure of $3,000,000. The guard is getting $865,000 from P.W.A. for motorization. This bill really gives them $3,000,000 additional. This is true, and yet it is not true. They are going to be able, through savings, to find $1,500,000. They have testified that much of the saving will result from being freed of the cost of repairing the old equipment that will be displaced. The National Guard authorities agree, furthermore, to amortize this $3,000,000 over a period of 2 years.

The CHAIRMAN. The Chair advises the gentleman from Mississippi that he has consumed 1 hour.

Mr. COLLINS of Mississippi. Mr. Chairman, I yield myself the balance of the time.

The CHAIRMAN. Without objection, the gentleman from Mississippi is recognized for an additional 30 minutes.

There was no objection.

Mr. COLLINS of Mississippi. The National Guard has a membership of 190,000 men. By changing the National Guard from an organization that is able to travel at the rate of 3 miles an hour to one that is able to travel at the rate of 25 or 30 miles an hour, in the event of an emergency, these 190,000 men can be taken to any part of the United States in 4 days. Not only that, but we have 190,000 men in the National Guard now available for combat duty. All

of these men, every one of them, are effectives. We have twice as many effectives in the National Guard today as we had 3 years ago without having increased their number by a single man. At the same time we have reduced the appropriation for the National Guard from around $35,000,000 to $27,500,000, yet we have more than doubled its former effectiveness.

These added drills cost approximately $250,000 apiece. You will notice that $968,000 is recommended for this purpose. In other words, the National Guard says it will be able to provide out of savings for 2 of the 6 additional drills.

You will observe with respect to this particular appropriation that $500,000 of the ammunition item has been eliminated. This is because of the fact that the guard has gotten $1,304,000 on ammunition from the P.W.A., of which $1,129,000 will be available for expenditure in 1935. This, together with the ammunition they have on hand, will be more than sufficient to take care of their needs during the fiscal year 1935.

Mr. WADSWORTH. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Mississippi. I yield.

Mr. WADSWORTH. Will the gentleman be kind enough to say when they got the allotment for ammunition from the P.W.A.?

Mr. COLLINS of Mississippi. I do not know when, but I can tell the gentleman the exact amount.

Mr. WADSWORTH. I am not questioning the amount. What I have in mind is that they did not get it in time to use it to any extent in the last training period.

Mr. COLLINS of Mississippi. I have heard no complaint from the National Guard.

Mr. WADSWORTH. Then this sum is still held over for use in the next fiscal year, is it?

Mr. COLLINS of Mississippi. There will be available for the use of the National Guard in 1935 out of P.W.A. money $1,129,315.

Mr. MILLARD. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Mississippi. I yield.

Mr. MILLARD. The gentleman stated that the enlisted strength of the National Guard was 190,000 men. He also made the statement that we had double the number of effective men. I did not quite understand it. Will not the gentleman explain the matter?

Mr. COLLINS of Mississippi. That is because of the fact these men were doing things other than the duty of soldiering. They are all now available for combat duty instead of administrative work and other duties not essentially of a military character.

Mr. MILLARD. That explains it. I thank the gentleman.

REDUCTIONS RECOMMENDED

Mr. COLLINS of Mississippi. With reference to the items of reduction that appear in this bill, the larger ones will be found under the Quartermaster Corps and they deal with matters of clothing, regular supplies, and items of that particular nature; items the Department has in abundance. I think the committee felt the quantity was more than sufficient to take care of normal needs. Also, the War Department has been able to sell to the C.C.C. millions of dollars worth of old supplies for which the War Department has been or will be reimbursed. I say millions, because this is true; the figures will approximate about $40,000,000, and perhaps a larger sum. New stores replaced for old will be available for issue, and we felt it was unnecessary to pile up supplies, many of a limited life that might deteriorate or become obsolete before used.

We have eliminated $541,996 by not providing for the recommissioning of the transport *St. Mihiel*. The estimates contemplate recommissioning the Army transport *St. Mihiel*, which has not been operated since November 16, 1932. Since then only the *Republic, Grant,* and *Chateau Thierry* have been on passenger runs. During the fiscal year 1933 a total of 48,564 passengers were transported and the *St. Mihiel* was out of use more than 7 months. During 1935 it is estimated that there will be moved by water 35,204 persons, exclusive of persons traveling between New York and San Francisco, and exclusive of persons on leave and furlough and persons attached to other branches of the Government. Such class of passengers totaled 18,352 during the fiscal year 1933. The committee does not believe that such class of travel warrants the added expense in these hard times of operating another boat. It has, therefore, eliminated $521,612, included under the "transportation" heading, with the view to recommissioning the *St. Mihiel*, and $20,384 under the "subsistence" heading on account of operating personnel for such vessel.

We have reduced the estimates by $271,579 for motor transportation. Possibly we should have cut it more. The new equipment that the Army will have, to be procured out of P.W.A. funds, should reflect lesser expenditures for maintenance and operation if the old equipment is gotten rid of, which we require them to do.

Of 8,309 vehicles on hand as of January 1, 1934, 5,894 are classed as World War procurements and 596 as older than 5 years. Literally hundreds of thousands of dollars have been squandered in trying to keep this old equipment operating.

To what extent, if any, old equipment would be discarded upon delivery of the new, there seemed to be considerable uncertainty on the part of the Department's representatives. The committee was unable to get any definite information. Therefore, it has inserted in the bill a provision prohibiting expenditures other than for salvaging or scrapping on any vehicles procured prior to January 1, 1920, except tractors. The Department is left to exercise its discretion as to these.

The committee has repeated the provision in the current appropriation act authorizing the purchase of light trucks out of savings that would accrue from their substitution for animals or their use instead of commercial transportation.

We have subtracted from the estimates $635,635 for rail transportation, mostly in the item for transportation of enlisted men upon separation from the Service. The estimate was based upon 46,000 separations. Upon inquiry we found that many classes of separations included in the 46,000 figure should not be considered. They even had deserters included.

Then we have reduced the item for the purchase of horses by $75,000. I have a letter from the Secretary of War concurring in this action for the purpose of helping to finance the cost of the mechanization program, to which I have already referred.

These are the outstanding reductions in the bill affecting the Military Establishment.

NONMILITARY ACTIVITIES

There are only two items in connection with the nonmilitary activities that perhaps I should explain.

We were asked, in a supplemental estimate, to appropriate $150,000 for the repatriation of unemployed aliens in the Republic of Panama. The appropriation has not been granted because the committee desires to give the proposal further study. Such provision, if any, it later may decide to recommend, will be included in another measure.

In the same document a recommendation was made that an appropriation of $50,000 be made to supplement the current appropriation "Sanitation, Canal Zone", in lieu of revenues lost owing (a) to the withdrawal by the Government of the Republic of Panama from the Panama Canal Insane Asylum of some 600 insane nationals of that country; (b) to a material reduction in the amount received from the Veterans' Administration for the hospitalization of veterans; and (c) to an agreement entered into between the United States and the Republic of Panama under which the Panama Canal hospitals are restricted to the care of employees of the United States Government and their families.

Of the current appropriation it appears that more than $50,000 has been reserved from obligation which may be administratively released to meet this deficiency in revenue.

CIVIL COMPONENTS

Let me add before I forget the items under the military title touching the Reserve Officers' Training Corps, the Or-

ganized Reserves, and the Citizens Military Training Corps were left exactly as the Budget recommended.

The Department, as I understand it, feels that the amounts carried in the bill for such components are sufficient.

Mr. WHITTINGTON. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield to the gentleman from Mississippi.

Mr. WHITTINGTON. With respect to rivers, harbors, and flood-control work, it is true that the appropriation for the improvements and works for the year 1935 is expected to be made out of the Public Works Administration funds?

Mr. COLLINS of Mississippi. That is right.

Mr. WHITTINGTON. This bill does not provide for the usual annual appropriation for this reason?

Mr. COLLINS of Mississippi. Because a large part of the money or most of it has been furnished by the P.W.A. for this fiscal year and most likely will be furnished by the P.W.A. for next year, at least.

Mr. WHITTINGTON. In the case of rivers, harbors, and flood-control work there will be available for 1935 construction the amounts not expended in the year 1934 and heretofore allocated by the Public Works Administration?

Mr. COLLINS of Mississippi. Yes.

Mr. WHITTINGTON. And such additional funds as may be allocated by the Public Works for 1935?

Mr. COLLINS of Mississippi. That is right.

Mr. WHITTINGTON. In the meantime, flood-control work and the rivers and harbors work will be maintained from previous appropriations unexpended?

Mr. COLLINS of Mississippi. Previous appropriations and allotments; that is right.

Mr. MARTIN of Colorado. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield to the gentleman from Colorado.

Mr. MARTIN of Colorado. Did I understand the gentleman to say that the committee considered appropriations for the R.O.T.C., the C.M.T.C., and the Organized Reserves sufficient?

Mr. COLLINS of Mississippi. Yes.

Mr. MARTIN of Colorado. There have been many inquiries along this line and I felt particularly concerned about these items.

Mr. COLLINS of Mississippi. Those organizations will be well taken care of.

Mr. MARTIN of Colorado. They ought to be.

LIMITATIONS AND LEGISLATIVE PROVISIONS

Mr. COLLINS of Mississippi. With reference to the limitations and legislative provisions, which will be found on page 33 of the report on the bill, may I say that the first one of these relates to enlisted men in certain offices in the War Department.

This committee is undertaking by this first provision to which I am directing attention to eliminate these men as they pass out of the picture, not withdraw them, but as they die, resign, or retire, prevent their positions being filled by military personnel, the idea being that their places should be filled eventually by civilians. This is the purpose of the first legislative provision.

On pages 5 and 6 of the bill there will be found another provision, reading:

> And it shall not be lawful to expend, unless otherwise specifically provided herein, for any bureau or branch of the War Department, or of the Army having or maintaining an office in the War Department proper at Washington—

And so forth. This is directed against the continued use of military appropriations for the objects and purposes of the appropriation "Contingent expenses, War Department."

The next provision, appearing on pages 10 and 11 of the bill, relates to transportation. It has been customary for the War Department to make agreements with the railroads each year and pay for the transportation of enlisted men, officers, and so forth, at 3 percent below the usual current rate charged by the railroads. The committee is of the opinion that the War Department should take advantage of low rates whenever they are available, such as round-trip transportation, thereby bringing about within the Department the savings that any prudent man would make. The purpose of this provision is to cause them to do this.

The next provision appears on page 11 of the bill, and provides that "no part of which sum (pay of the Army) shall be available for the pay of more than 11,750 commissioned officers whose commissions are dated prior to June 1, 1934." The purpose of the provision is to require the War Department by B-boards or otherwise to get rid of some of these older men and to place younger men in their stead, thereby giving some of the 3,000 men who have graduated from the Military Academy at West Point in the last 14 years a chance to advance.

The next provision relates to persons in the Air Corps and provides that none of the appropriation for flying pay "shall be available for increased pay for making aerial flights by nonflying officers above the grade of captain." In other words, we do not want these nonflyers of older ages to be given a 50 percent increase in pay for making these flights. I may say that they have to fly only 4 hours per month in order to draw flight pay and there is hardly a man in this House that does not fly, I dare say, more than that.

The next provision relates to the Panama Canal. There are a great many houses on the Panama Canal owned by the Canal and occupied by officers of the Army and Navy. They pay the Canal a nominal rental for these houses and then draw $75, $80, or $100 a month under the legal provisions relating to commutation of quarters. This is to take away their allowance for quarters when in occupancy of these houses. It does not prevent them from going out in the city of Panama or the city of Colon and renting a house as they would ordinarily, but it does prevent them from using a Government house and drawing a larger amount than they are charged for the use of the house or their full commutation, as the case may be.

The next provision relates to old automobiles. Most of the automobiles in the Army were bought during the war. The Public Works has set aside $10,000,000 for new automobiles for the Army. This provision is to prevent the War Department from continuing to operate these old war-time automobiles. There are two types of the old automobiles that they say they should be permitted to operate—namely fire engines and ambulances. I plan to offer an amendment changing this provision so as to permit the use of the old ambulances and old fire engines, but for reasons of economy the Congress should not delay in making an appropriation for new ones.

Mr. THOMPSON of Texas. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield to the gentleman from Texas.

Mr. THOMPSON of Texas. Going back just a moment to the matter of the elimination of some of the older officers, provision is made for 11,750 commissioned officers whose commissions are dated prior to June 1, 1934. How will you avoid eliminating some of the younger officers? Do I make the point clear?

Mr. COLLINS of Mississippi. Yes. There is no occasion to feel uneasy about that. They are not going to eliminate any of the younger ones.

There are about 800 officers in the Army now that a physical examination would show are unable to perform field duty. This will enable us to get rid of about 200 of the older men. The provision leaves the mechanics of the matter up to the Department. The Congress could not well invade that field.

Mr. THOMPSON of Texas. I agree with the gentleman.

Mr. COLLINS of Mississippi. I am sure it will be administered by the Department in accordance with the wishes of the Congress.

Mr. THOMPSON of Texas. I hope so. I think it is a splendid provision.

Mr. COLLINS of Mississippi. The next amendment relates to the closing of the Fitzsimons General Hospital.

The closing of this hospital has been recommended to the committee by the Surgeon General of the Army. Besides,

General Drum, who is the Assistant Chief of Staff, in two of his reports when he was Inspector General of the Army, recommended the closing of this hospital.

If the hospital is not closed it will mean Congress will have to appropriate about $5,000,000 for the reconstruction of the buildings.

Furthermore, a deficiency appropriation will need to be provided for its operation. The Army has no need for the hospital, and by closing it the Surgeon General expects to gain about 52 officers and in excess of 300 men for employment elsewhere. Also, the nurses who are there will be transferred to other places.

I find myself in this position. We have about 300 military posts in this country, most of which grew up during the days of Indian fighting. I have a map in my office with blue-headed pins and red-headed pins and green-headed pins, which undertakes to set out the points in the United States, where these posts and camps, and so forth, are located.

It is a great pity that the Army of this country is not accommodated in about 25 establishments, so that they could congregate large numbers of men and give them training in all of the various branches of warfare in small units and large units, instead of having them scattered around over the country and wasting much money on them in administration and otherwise, as we are doing today.

Mr. LEWIS of Colorado. Will the gentleman yield?

Mr. COLLINS of Mississippi. It seems to me whenever the Department itself comes to us and asks us to close one of these institutions, we should have the courage to do it.

I gladly yield to the gentleman from Colorado.

Mr. LEWIS of Colorado. Does not the gentleman know that this hospital was located during the war as the result of an inspection by officers of the Medical Corps of the Army because of the salubrious climate of Denver and the fact that for 60 years that city has been a health resort?

Mr. COLLINS of Mississippi. I imagine Denver is a very delightful place.

Mr. LEWIS of Colorado. I am not talking about it being a delightful place—I will concede that.

Mr. COLLINS of Mississippi. But it cannot be any more delightful than the gentleman who represents it.

Personally I should like very much to see the Veterans' Administration take over the management of this hospital and I shall be delighted to go with the gentleman to General Hines and help the gentleman persuade General Hines to take over and operate the hospital.

Mr. LEWIS of Colorado. I appreciate that very much, but, meanwhile, it is being operated by the Army, and being operated very successfully.

Mr. COLLINS of Mississippi. More or less in a stand-by fashion, I understand.

Mr. LEWIS of Colorado. Does not the gentleman know that the expense per patient per day of operating this hospital is less than any other Army hospital?

Mr. COLLINS of Mississippi. That is because it is being operated more or less on a stand-by basis.

Mr. LEWIS of Colorado. If I may suggest, it is more or less because of the fact there are about 900 patients there——

Mr. COLLINS of Mississippi. Two hundred and sixty-one, the hearings show.

Mr. LEWIS of Colorado. The hearings are not corrected to date, because I will show from a letter just received from the Surgeon General's Office that there were 914 patients there the end of last week. May I ask the gentleman if he knows what is the per diem per patient cost of operating Fitzsimons Hospital?

Mr. COLLINS of Mississippi. I imagine most of the officers and nurses and enlisted men who would ordinarily be charged up in such a table have been withdrawn.

Mr. LEWIS of Colorado. They are all charged up in this table.

Mr. COLLINS of Mississippi. All who are there.

Mr. LEWIS of Colorado. And I would call attention to the fact that the cost of operating this hospital is $4.05 per day per patient.

Mr. COLLINS of Mississippi. The gentleman will be accorded every opportunity to present his case.

Mr. LEWIS of Colorado. I thank the gentleman.

Mr. MARTIN of Oregon. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield to the gentleman from Oregon.

Mr. MARTIN of Oregon. With respect to the abandonment of all these old Indian posts and useless posts over the country, the gentleman, of course, understands that the General Staff has recommended the abandonment of these posts repeatedly to Congress?

Mr. COLLINS of Mississippi. Yes; and I may say to the gentleman that I have talked with the President about this matter. It may not be a very good thing to tell what a Member of Congress says to the President, but I assumed the President had the authority to abolish a lot of these posts; and assuming that, I suggested that when Congress adjourns he send somebody out to those he wants to abandon with an acetylene torch and burn them up and have them entirely burned up by the time the Congress meets again, so that we would not have anything over which to fight. [Laughter and applause.]

Mr. MARTIN of Oregon. The gentleman remembers that in order to mechanize a regiment of Cavalry, Marfa, Tex., was abandoned last year as an Army post.

Mr. COLLINS of Mississippi. Yes.

Mr. MARTIN of Oregon. And the gentleman is familiar with the onslaught that was made here on Congress and the President, and especially on the Chief of Staff, by all of Texas. All Texas rose in rebellion over the abandonment of a post of 450 men. That is the difficulty. The fault is not with the General Staff, but is right here in Congress.

Mr. COLLINS of Mississippi. Yes; the War Department wants to get rid of all of them except 25 or 30.

Mr. TABER. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield to the gentleman from New York.

Mr. TABER. Has the gentleman covered the question of how much money from all sources was available for 1934 and how much will be available for 1935?

Mr. COLLINS of Mississippi. I have covered that.

Mr. CULKIN. Will the gentleman yield?

Mr. COLLINS of Mississippi. I will yield to the gentleman.

Mr. CULKIN. Will the gentleman tell me where the authority lies to abandon these posts? Is it in the President?

Mr. COLLINS of Mississippi. He has that authority under the provisions of the Economy Act.

Mr. McDUFFIE. Will the gentleman yield to me?

Mr. COLLINS of Mississippi. I will yield to the gentleman.

Mr. McDUFFIE. I have not heard all of the gentleman's statement and I do not know whether or not he has covered the phase of the appropriation for air schools. You are carrying twenty-odd million dollars for aircraft, air schools, and so forth, and I assume the construction of a new air school could be had under that appropriation.

Mr. COLLINS of Mississippi. There is no money carried in this bill for the construction of a new air school.

Mr. McDUFFIE. Congress has made no effort to designate a site for such a school. I am wondering what is the gentleman's information as to what procedure will be taken when the time comes to expend money for the new school which is definitely needed.

Mr. COLLINS of Mississippi. There is a school which has been located in Illinois. That particular school has been recommended a number of times for abandonment by the Chief of the Air Corps. Congress last year eliminated, or rather diverted, appropriations that had been made for buildings at that school. The thought has been that this air school should be located either at Dayton or some place near salt water.

That was the idea of the Air Corps. Now, I understand that in view of the fact that there are certain cities, including Dayton, that feel that they should have this air school, they have set up a board——

Mr. McDUFFIE. The gentleman means a board in the War Department?

Mr. COLLINS of Mississippi. Yes; in the War Department, for further study. It will be my disposition to follow the recommendations of that board, and I feel that that will be the disposition of members of the committee.

Mr. McDUFFIE. The gentleman feels that the school will be located after the site is designated by the nonpolitical board, men trained in aeronautics?

Mr. COLLINS of Mississippi. That is right.

Mr. DOBBINS. Will the gentleman yield?

Mr. COLLINS of Mississippi. I will yield to the gentleman.

Mr. DOBBINS. With reference to the gentleman's statement that recommendations have been made to abandon the school in Illinois. The gentleman said it had been recommended several times. Is it not a fact that the last recommendation in favor of removal of the field from its present location has been reversed?

Mr. COLLINS of Mississippi. General Foulois testified that he had got to the point where he wanted a school, and he did not care where it was located.

Mr. DOBBINS. Is it not a fact that the last recommendation was made 2 or 3 years ago, and since that time it has been reconsidered and reversed?

Mr. COLLINS of Mississippi. No such information has come to this committee.

Mr. HARLAN. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield.

Mr. HARLAN. Where is the provision in the bill appropriating money for an air school?

Mr. COLLINS of Mississippi. There is no provision in the bill for that.

Mr. HARLAN. In what way will it be taken care of?

Mr. COLLINS of Mississippi. When the school is located, Congress will make an appropriation for it.

Mr. MARTIN of Colorado. They will get it out of the P.W.A., will they not?

Mr. COLLINS of Mississippi. I hope not.

Mr. McDUFFIE. My understanding was that funds are carried in this bill which may be used for the construction of this school.

Mr. COLLINS of Mississippi. No; there is no money in this bill for the construction of an air school.

Mr. McFARLANE. In regard to the appropriations carried for the Air Corps, in case we should be fortunate enough to unify the air forces, how would this hook up with the appropriations that should be made in that event?

Mr. COLLINS of Mississippi. I imagine that we would pass a resolution consolidating all of the appropriations that have been made for various air activities.

Mr. DUFFEY. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Mississippi. Yes.

Mr. DUFFEY. Where in this bill is there any reference to rifle practice and national matches at Camp Perry, Ohio?

Mr. COLLINS of Mississippi. There is no money in here for national matches. General Reckord is the head of the organization that always presents the case of the National Board for the Promotion of Rifle Practice. He is a most excellent gentleman and a splendid officer, and the committee always feels most kindly toward him. Naturally he would like to see the matches held, but he would not make a very spirited fight for them in times like these.

Mr. DUFFEY. The gentleman understands that Camp Perry is in Ottawa County, Ohio, and that I am very much interested in it.

Mr. COLLINS of Mississippi. I am sure the committee will take into consideration the fact that the gentleman represents that very fine district just as soon as flush times return.

Mr. SABATH. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Mississippi. Yes.

Mr. SABATH. In view of the information that has come to us, does not the gentleman think it would be beneficial and advisable that we should have this flying school, especially in view of the fact that we have the lands and buildings there at Chanute Field? Shouldn't there be an appropriation made? I understand from what some of the officers contended that there was a recommendation against its continuation there, but I think we should have in mind the service and not the pleasure of these officers, and for that reason that field should be retained.

Mr. COLLINS of Mississippi. Is the gentleman trying to make me say that I am against Chanute Field?

Mr. SABATH. No; I should like to have the gentleman say that he recognizes the need of that field, that it is helpful and beneficial and advantageous. That is what I hoped to hear the gentleman say.

Mr. COLLINS of Mississippi. I am sorry to say, as much as I think of the gentleman, I could not recommend Chanute Field.

Mr. SABATH. Has the gentleman ever visited that splendid location?

Mr. COLLINS of Mississippi. I am afraid that Chanute Field is not located at the right place.

Mr. SABATH. Has the gentleman ever visited that field?

Mr. COLLINS of Mississippi. No. I am simply taking the statements of experts who have testified from time to time.

Mr. SABATH. I am satisfied if the gentleman would give me and others from Illinois an opportunity to take him down there over that section of the country he would change his views and would come to the conclusion that it is a splendidly equipped field and location.

Mr. McDUFFIE. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Mississippi. Yes.

Mr. McDUFFIE. The gentleman is correct, in my opinion, when he states that a site for this school should be designated with one idea in view, one paramount purpose, and that is for the good of the service.

Mr. COLLINS of Mississippi. That is right.

Mr. McDUFFIE. And those who know about the service are better capacitated to say where this school should be than gentlemen on this floor.

Mr. COLLINS of Mississippi. That is right.

Mr. McDUFFIE. And we should follow the suggestion of an impartial board who will make an investigation of the country to determine where this school should be, for the best interest of the service.

Mr. DOBBINS. Mr. Chairman, will the gentleman yield to me, to interrogate the gentleman from Alabama [Mr. McDUFFIE]?

Mr. COLLINS of Mississippi. Yes.

Mr. DOBBINS. Does not the gentleman from Alabama concede that the Military Affairs Committee of the House is fairly well informed on military affairs?

Mr. McDUFFIE. Indeed, I do.

Mr. DOBBINS. And that its recommendation and findings on this matter are entitled to weight?

Mr. McDUFFIE. I think the Military Affairs Committee is an excellent committee, and I think its recommendations would have great weight in this House; but if the gentleman will permit, I think those gentlemen of the Army who are trained in aeronautics know better where a technical air school should be located than the gentleman and his committee could possibly know. I recognize the very fine ability of the gentleman [Mr. DOBBINS], who is a most useful and effective Member of this House; I hope the people of his district will have the good judgment to return him to Congress. The question I raise is one that demands expert knowledge of Army officers.

Mr. DOBBINS. The gentleman then would favor abrogating the functions of the Military Affairs Committee in favor of Army officers?

Mr. McDUFFIE. Oh, no; and the gentleman cannot put that construction upon anything that I have said. In such a case as this I believe the Army officers' judgment should have consideration.

Mr. DOBBINS. Is it not true that the Military Affairs Committee has passed on this matter a number of times and has never provided for the location of this field or the im-

provement of it at any other location than at Chanute Field, its present location?

Mr. COLLINS of Mississippi. I would not say that, because the Congress discontinued the appropriations.

Mr. DOBBINS. The Congress did not provide for any other location?

Mr. COLLINS of Mississippi. No.

Mr. DOBBINS. It simply canceled certain appropriations.

Mr. COLLINS of Mississippi. The matter was thoroughly argued on this floor.

Mr. DOBBINS. I must disagree as to the matter being thoroughly argued. The gentleman from Mississippi declined to yield while he was presenting a matter on behalf of the Appropriations Committee and not the Military Affairs Committee.

Mr. HARLAN. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Mississippi. Yes.

Mr. HARLAN. Is the gentleman familiar with the fact that at the time the Military Affairs Committee made this finding and recommendation which the House subsequently repudiated, that all of the testimony before that committee from the Army and the Air Corps was against the advisability of using Chanute Field, and that the Military Affairs Committee, for reasons of its own, and perhaps from some knowledge which was not in the record, found against this evidence?

Mr. COLLINS of Mississippi. I am very glad to get that information.

Mr. BYRNS. Can the gentleman tell us how many men have been killed by aircraft while flying the mail?

Mr. COLLINS of Mississippi. I am afraid my time is up. [Applause.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired. All time has expired. The Clerk will read.

The Clerk read as follows:

Office of Chief of Staff, $196,609.

Mr. BYRNS. Mr. Chairman, I move to strike out the last word. When the gentleman from Mississippi was closing I asked him a question with the view to eliciting the information, if possible, as to how many had been killed in the aircraft flying the mail. I should like to have the gentleman now, if he is in a position to do so, reply to that inquiry, in view of what has been said heretofore upon the floor of the House.

Mr. COLLINS of Mississippi. Deaths incident to carrying the mail have occurred as follows:

But one death has occurred from actually flying the mail.

On February 22 Second Lt. D. O. Lowry was killed at Deshler, Ohio. The War Department reports that this death evidently resulted from engine trouble. Lowry attempted a parachute jump, but the parachute failed to open.

That is the only death that actually has occurred from flying the mail.

Deaths of prospective mail pilots who were familiarizing themselves with routes have been as follows:

February 22, Second Lts. J. P. Grenier and Edward White were killed. While engaged in flying to familiarize themselves with the route between Salt Lake City and Cheyenne, they ran into an unexpected snowstorm, and both were killed. They took off in clear weather.

February 16 Lt. J. Y. Easton was killed at Jerome, Idaho, while flying to familiarize himself with his prospective route. Easton also ran into an unexpected snowstorm, and had also taken off in clear weather.

Then, in addition to the four deaths I have recounted, one death occurred on February 23, while a prospective pilot was en route to an air-mail station. Second Lt. G. F. McDermott, while flying with two others on that day in an amphibian plane to Langley Field, Va., via Bolling Field, D.C., made a forced landing off Fort Tilden, N.Y. McDermott was drowned.

Those are the facts as furnished to me this morning by the Chief of the Air Corps, from the official records. Only one actual death has occurred from flying the mail, which is a very much better showing than any of us had suspected.

Mr. BYRNS. As I understand, the gentleman has read the names of five or six officers?

Mr. COLLINS of Mississippi. Five.

Mr. BYRNS. And only one of those, as the gentleman has stated, was engaged actually in flying the mail at the time of his death?

Mr. COLLINS of Mississippi. That is correct.

Mr. BOLTON. Will the gentleman yield?

Mr. BYRNS. I yield.

Mr. BOLTON. Were there not five men killed flying pursuant to orders in preparation for flying the mail?

Mr. COLLINS of Mississippi. Three of them were deaths of prospective pilots familiarizing themselves with air-mail routes. One was en route to an air-mail station to assume the duties of an air-mail pilot.

Mr. BOLTON. They were flying as prospective air-mail flyers, under orders?

Mr. COLLINS of Mississippi. Oh, yes.

Mr. BYRNS. I will say to the gentleman that his statement, which he says is official, is quite a different story from the impression that has been left upon the House and upon the country by remarks made upon the floor which would seem to indicate that there have been a wholesale number of deaths due to flying the mail.

[Here the gavel fell.]

Mrs. ROGERS of Massachusetts. Mr. Chairman, I rise in opposition to the amendment. I cannot see what difference it makes whether an air-mail pilot came to his death while actually flying the mail, or whether he came to his death as the result of the fact that the Army was forced to prepare to take over the air-mail flying as a result of the administration's order. I was told by the Air Corps, and no one in the Air Corps has attempted to deny that six men of our Air Corps went to their death in 6 days after the Army took over the air-mail flying or was preparing to do so. Death makes an indelible record.

Mr. BYRNS. Will the lady yield?

Mrs. ROGERS of Massachusetts. I yield.

Mr. BYRNS. Does not the lady give any consideration whatever to the extremely bad weather we have had ever since this took place?

Mrs. ROGERS of Massachusetts. Yes; and I think that is all the more reason why the Army should not have been forced to take this over in the 2 worst months of the year.

Mr. BYRNS. Is the lady——

Mrs. ROGERS of Massachusetts. I cannot yield again. The gentleman never yields to me. Why should I yield to the gentleman?

Mr. BYRNS. I hope the lady will not do me that injustice.

Mr. MILLARD. Mr. Chairman, a point of order; the lady does not yield.

Mrs. ROGERS of Massachusetts. I refuse to yield again; I yielded to him once. The gentleman does not yield to me.

Why was this injustice done to the Army Air Corps, to aviation in general? It was not done for efficiency. It was not done for economy. It was not done for humanity. I ask you why this was done—it is self-evident it was done for politics. It was not enough to defeat President Hoover through scurrilous attacks made upon him by the Democrats, but the very people who wrecked by their vindictive criticism President Hoover's efforts to bring this country out of the depression now object to any criticism of the present administration as unpatriotic and political.

Time after time since the present administration has come into power they have taken first one person and then another, who served under President Hoover, and tried to besmirch that person's reputation and to besmirch the reputation of the Republican Party.

Every red-blooded person in Massachusetts bitterly resents bringing here to testify the Secretary of the Navy under President Hoover, Charles Francis Adams, illustrious son of an illustrious family, a man most respected, most ad-

mired, most beloved by everybody. The idea of bringing that man into the so-called "air-mail scandals"!

As yet nothing has been proven against these people Why was it done? Was it to throw dust in the eyes of the people? Why was it that contracts recently made have not been canceled? How would you like it if your family, your sons, or your relatives were unjustly accused of dishonesty without a hearing? There is but one reason for it, to bring the former administration into disrepute.

A spokesman of your party criticized the administration for going too far in its attack on Charles Francis Adams, my constituent. This apology was made in my own city of Lowell on Monday night when the son of the President said it was absolutely "silly" to bring Charles Francis Adams into this air-mail investigation, or into the stock investigation. The word he used was "silly." I call it outrageous.

Mr. FOSS. Mr. Chairman, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. Gladly.

Mr. FOSS. It is reported in the papers that the son of the President demands an apology from the committee calling Charles Francis Adams before it.

Mrs. ROGERS of Massachusetts. Yes; that is true also. The son of the President of the United States used the word "silly" in describing this attack; and why did he do it? He realized the smoldering resentment, the smoldering fire—and it is not just smoldering, either; it is growing into a bigger and bigger conflagration—against the administration for its extremely unfair, extremely unjust tactics.

I ask you, is it good sportsmanship? You knock a man out and then you kick him. It is not good sportsmanship. You have proved nothing against the man. You proved nothing against President Hoover's honor. You tried to bring the former President into this thing. You have attacked man after man, man after man, but you have not found a thing. [Applause.]

[Here the gavel fell.]

Mr. BYRNS. Mr. Chairman, I move to strike out the last two words.

Mr. Chairman, it has been one of the most regrettable incidents of my entire career in Congress, which has extended over a long period of time, that there have been those who have sought to make a political issue before the country of the unfortunate deaths which have occurred incident to the carrying of the air mail.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. BYRNS. Certainly; I will yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. I yielded to the gentleman.

Mr. BYRNS. I will yield a dozen times to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. I just proved the political nature of the movement to make the Army carry the air mail. If it was not political, why could not the weather have been taken into consideration before the order was issued?

Mr. BYRNS. For the simple reason, I may say to the gentlewoman from Massachusetts, that the country was convinced from the prima facie evidence developed before Senator BLACK's committee that graft and corruption and collusion had occurred in the making of these contracts.

Mrs. ROGERS of Massachusetts. But it had not been proved.

Mr. BYRNS. Mr. Chairman, I yield again to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. But graft and corruption had not at that time been proved, as the gentleman knows, for the hearings had just started. Punish the guilty, but do not make the innocent pay for it.

Mr. BYRNS. Oh, I beg the lady's pardon. I think the country was thoroughly convinced of the fact there was collusion, graft, and corruption.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield further?

Mr. BYRNS. I yield again to the gentlewoman from Massachusetts. [Applause.]

Mrs. ROGERS of Massachusetts. Is it not true that the meanest, the lowest criminal in the United States is not convicted without a trial? The air-mail companies were not given a hearing.

Mr. BYRNS. Oh, certainly; we all concede that; but let me say that while we are not trying anybody now, I hope that those who have been guilty of this graft and corruption will be duly exposed and punished.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield again?

Mr. BYRNS. In a moment. Just let me say this, the country was convinced, in my judgment, that graft and corruption had occurred in the making of these contracts; and what was the administration to do under those circumstances? Was it to sit idly by, and by its silence condone what had occurred; or was it to take action at once with reference to those companies which were carrying the mail? Under those circumstances there was nothing else to do but suspend them.

Mr. McDUFFIE. Mr. Chairman, will the gentleman yield?

Mr. BYRNS. I yield.

Mr. McDUFFIE. I heard nothing said on the floor of the House about the destruction of a commercial plane, which left Los Angeles last week, with the resultant death of eight people. Do they charge that accident to politics?

Mr. BYRNS. And this morning's paper carries an account of the loss of another commercial plane in which four people were killed, but nobody on the other side of the aisle complains about that. We do not hear anyone make complaint that the commercial air lines are not prepared to fly and to carry passengers, human freight, worth vastly more than any mail that is carried in airplanes.

Mr. O'CONNOR. Mr. Chairman, will the gentleman yield?

Mr. BYRNS. I yield to the gentleman from New York.

Mr. O'CONNOR. To carry to a logical conclusion the argument of the distinguished gentlewoman from Massachusetts, if an enemy attacked us, we would have to wait until the Army had a little practice doing the very thing they are supposed to be trained to do before they could defend us against the enemy. [Applause.]

Mrs. ROGERS of Massachusetts. Will the gentleman yield?

Mr. BYRNS. I thought I had the floor. Does the gentlewoman from Massachusetts want me to yield again?

Mrs. ROGERS of Massachusetts. I do.

Mr. BYRNS. Mr. Chairman, I yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. The gentleman realizes that the number of deaths of pilots flying the air mail under commercial contracts were only 7 in 1 year as against 6 for the Army during the first week of its flying of the air mail. Give the Army pilots a chance to fly more hours per capita. Give the pilots more practice in night flying. Send them back to perform the duties which they are intended to perform as a part of our national defense. Give the air mail back to commercial air pilots whose sole duty it is to fly the mails.

Mr. HILL of Alabama. Will the gentleman yield?

Mr. BYRNS. I yield to the gentleman from Alabama.

Mr. HILL of Alabama. The gentlewoman is in error about 6 deaths having occurred in carrying the mail. The total is 5 and it has been very clearly shown that 4 out of the 5 went to their death on account of the same weather conditions as destroyed the great private commercial liner and sent 8 people to their death and the same kind of weather that sent another plane down on yesterday causing a number of deaths.

[Here the gavel fell.]

Mr. BYRNS. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. BANKHEAD. Will the gentleman yield?

Mr. BYRNS. I yield to the gentleman from Alabama.

Mr. BANKHEAD. We have not heard a word in these debates about one phase of this proposition which I think is very important to be considered in view of the severe indictments that have been made. During the last 5 years the official statistics show, I think, that 150 commercial air-mail pilots carrying the mail have been killed. Nothing has been said about that.

Mr. BYRNS. I think the gentleman has stated approximately at least the number of deaths that have occurred. It is singular that in this election year, just a few months before the elections in November, there are some on the other side of this Chamber who have suddenly become aroused by the fact that on account of inclement weather and storms five brave officers have unfortunately gone to their death. As the gentleman from Alabama says, we heard no such complaint when something like 150 or more commercial air pilots went to their death. No one thought of making a complaint against the Government or the air-mail lines at that time or accusing anyone of being guilty of legalized murder.

Mrs. ROGERS of Massachusetts. Will the gentleman yield?

Mr. BYRNS. Will the gentlewoman please allow me to finish my statement and then I will yield.

No one sought to make political capital out of the deaths which occurred at that time. I repeat, it is one of the most deplorable incidents that has occurred in Congress that there are those who now seek to make the unfortunate death of these brave men, who were doing their duty, a political issue. But the country understands it, and the country will appreciate and understand just why these various speeches have been made upon the floor of this House, not once but repeatedly. The gentlewoman from Massachusetts states that you never condemn a person without trial. We have never condemned anyone, but we have said that in view of the graft and corruption which have been clearly shown by prima facie evidence to have occurred in the making of these contracts that the contracts of these men who were profiting at the expense of the Treasury of the United States shall be suspended while the facts are gone into and fully developed.

Something had to be done in the meantime to carry the mail. We were either in the position of condoning for the time being the occurrences which we all deplore and which I may say occurred during the administration of the party to which the gentlewoman and others who have made these complaints belong, or of suspending the contracts of these people until they can show that their skirts were clean. The Air Corps of the Army, under General Foulois, a man highly competent and splendidly trained, were entirely willing to undertake this duty. They are carrying the mail today. They will carry it until the Post Office Department can make arrangements to carry the mail in a different manner, and I dare say that if the administration had suspended these contractors and stopped the carrying of the mail we would have heard from the other side, particularly from those who have sought to capitalize these deaths politically, the complaint that we were neglecting the duties devolved upon the Government by law in carrying these mails. The truth is that the minority have no issue upon which they can go to the country. They cannot criticize legislation for which they all voted. Neither do they dare criticize the administration which is restoring prosperity and bringing relief from conditions brought on by a Republican administration. Those who have resorted to this criticism have done so hoping thereby to find an issue. In order to do so they have been compelled to reflect unjustly on the efficiency and the training of the brave officers of the Army Air Corps. I resent the imputation. No braver or more loyal set of officers ever lived. They are efficient, prepared, and willing to undertake any task. I give every meed of praise to them and their distinguished commander, General Foulois. [Applause.]

[Here the gavel fell.]

Mr. TABER. Mr. Chairman, I move to strike out the last two words.

Mr. Chairman, not a word of politics was heard in connection with the carrying of the air mail until it came from the other side of the aisle. I appealed to the other side to ignore politics and do the right thing in protecting our air-mail flyers. The gentlewoman from Massachusetts did that, but your cry and your answer, as has been the answer of the Democratic Party to every just criticism of anything that has been done by the administration, was that this was politics.

I am not playing politics now. I am calling attention to the politics that has been played, and the attempt at playing politics by the Democratic Party in connection with this airplane situation. Not a word has been said here that is not just as bad as those of us who tried to correct the situation in the air mail bill that was before the House said at the time that bill was up. The story has been told here by the Chairman of the Appropriations Committee, Mr. COLLINS, of the five deaths, and all of them attributable to this operation.

Mr. MILLARD. Will the gentleman yield?

Mr. TABER. I yield to the gentleman from New York.

Mr. MILLARD. The gentleman from Alabama [Mr. BANKHEAD] spoke about the number of deaths of commercial flyers carrying the mails. Does the gentleman know that since these flyers have learned to fly the beam very few deaths have taken place?

Mr. TABER. Of course, that would improve the situation.

Mr. DUFFEY. Will the gentleman yield?

Mr. TABER. I yield to the gentleman from Ohio.

Mr. DUFFEY. I should like to know whether the gentleman took occasion to read the remarks in the CONGRESSIONAL RECORD that were made by the gentleman from New York [Mr. MEAD] the other day.

Mr. TABER. I read those remarks and they were not an answer to the things that have been told here. The men who understand this situation are aware of the fact that it was reckless and foolhardy to turn the Army flyers loose the way they were turned loose. I am not playing politics. When I went on the floor first I tried to correct the situation. I believe all of you realize this should have been done, but, on account of politics, refused to correct the situation.

Mr. O'CONNOR. Will the gentleman yield?

Mr. TABER. I yield to the gentleman from New York.

Mr. O'CONNOR. What would the gentleman have done?

Mr TABER. I would have had them instructed in beam flying before they went out, and that was not done.

Mr. O'CONNOR. How long would that take?

Mr. TABER. It would not take very long. But why was it not done first?

Mr. O'CONNOR. How long is "so long"?

Mr. TABER. Oh, 3 or 4 days.

Mr. DOBBINS. Will the gentleman yield?

Mr. TABER. I yield to the gentleman from Illinois.

Mr. DOBBINS. Does the gentleman realize that since the last death among the Army flyers, with the Army flyers flying probably twice as far every day as the commercial flyers, there have been 12 deaths in commercial aviation while none has occurred in the Army?

Mr. TABER. I do not know that to be the situation.

Mrs. ROGERS of Massachusetts. That includes passengers.

Mr. TABER. There has been one passenger plane destroyed, I understand.

Mr. DOBBINS. And another today out in my own State of Illinois in which the aviation representative of one of the most severe newspaper critics of the administration met his death.

Mr. HAMILTON. Will the gentleman yield?

Mr. TABER. No.

Mr. HAMILTON. Is it not true that in every grave emergency, the Regular Army——

Mr. TABER. I do not yield.

There were two deaths in Ohio that have not been accounted for.

Mrs. GREENWAY. Will the gentleman yield?

Mr. TABER. I yield.

Mrs. GREENWAY. I thank the gentleman very much. I realize my fellow Members on this side may be uneasy as to my rising, because I have risen once before for the purpose of voting against the continuing of the Army mail service until the equipment was adequate to avoid hazard. I cannot resist rising now because I see no reason why we should confuse two totally different issues; that of carrying the mail as it is being discussed now, and the issue that was introduced, first, that of which we on this side of the House should be proud above everything else, namely, the "new deal", in which we are investigating the past and keeping faith with the taxpayers of the United States. [Applause.]

Mrs. ROGERS of Massachusetts. Will the gentleman yield?

Mr. TABER. Not at this time.

The situation is that the administration has taken upon itself a responsibility. I hope that if there are any guilty they will be prosecuted to the limit. If there is none guilty, the country will know about it. I only regret that it was not the attitude of the administration to establish this first. [Applause.]

[Here the gavel fell.]

Mr. GIFFORD and Mr. FISH rose.

Mr. GIFFORD. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, as one of those who has not taken any part in this discussion, but representing those who are interested, I want to say that my attention was arrested when I heard the leader on the other side of the House say that the people of the country are well informed and believe that there was fraud or corruption involved in this situation.

The people of the country were only made to believe that there was fraud or corruption, because in this, as in all these other matters, they believe in the President of the United States. [Applause.]

Yes; I want you to recognize the fact that the thought expressed by Congressmen on the floor of the House is not sufficient. The editorial writers of the papers throughout the country do not wait for Congressmen to consider the facts and place the blame. I want to remind you that they got their information from administration sources, with fraud and corruption asserted but in nowise established.

The second thought I want to express is with respect to the defense you offer here now, as well as previously, namely, that since pilots of some of the commercial transport lines went to their deaths, it is not strange that some of the Army flyers also went to theirs during the recent storms. My answer is that if private-line pilots, with such thorough training and up-to-date equipment, went to their deaths how much more reason was there to protect Army flyers, with their insufficient training and inadequate equipment.

It reminds me of the boy in the Army who tried to get back into the lines, and because he had forgotten the password said, "I am General Pershing." They knocked him down and hurt him badly and afterward asked him, "Why didn't you speak the truth?" He replied, "If you would do that to General Pershing, what would you have done to me?" [Laughter.]

If the finely equipped planes could not get through, how could Army machines have been expected to do so? Yet Members have answered this criticism by saying, "Read this, and see what happened to private flyers." Such an answer should be warmly resented.

Mr. COCHRAN of Missouri. Will the gentleman yield?

Mr. GIFFORD. Yes.

Mr. COCHRAN of Missouri. The gentleman in a number of speeches on the floor of the House has had a great deal to say about fraud and corruption in the activities of the C.W.A.

Mr. GIFFORD. Plenty.

Mr. COCHRAN of Missouri. Where did that fall?

Mr. GIFFORD. On the chairman of the committee who would not allow it to be investigated—squarely on your shoulders. [Applause.]

Mr. COCHRAN of Missouri. That charge exploded, and the gentleman set it off.

Mr. GIFFORD. It was exploded by the chairman of the committee who refused to have any further notice taken of it.

Mr. HARLAN. Will the gentleman yield?

Mr. GIFFORD. Yes.

Mr. HARLAN. The gentleman has made the statement that the charges of fraud were based entirely upon statements emanating from the White House, and the people believed them for that reason. Does the gentleman think that when an ex-Postmaster General takes his mail home and finds lost mail there accidentally, and says that some crook or assassin must have put it there, and when another employee of the Post Office Department tears up mail when he is under subpena and the mail has to be taken out of the cellar——

Mr. GIFFORD. Ask a question. I do not yield further. All that has been gone over.

Mr. HARLAN. Is it necessary to charge fraud under such conditions? Do they not admit it?

Mr. FISH. Mr. Chairman, I move to strike out the last six words.

Mr. COLLINS of Mississippi. Mr. Chairman, I think we have had enough on this subject.

The CHAIRMAN. The gentleman from Massachusetts has the floor. The gentleman has 2 minutes remaining.

Mr. GIFFORD. I thought my time had been exhausted. I tried to explain, above interruption of the gentleman from Ohio, that all those matters seem to have been gone over with a fine-tooth comb by that marvelous committee in another branch, and after days upon the stand the same ex-Postmaster General seems to have come forth with nothing proved against him.

You tried to bring reproach upon a lot of others and then say to this side of the House "politics." Oh, it does not lie in your mouths to say that. It has been nothing but politics to try to bring in those of a past administration all the year long and refuse to allow any sort of examination into the present administration.

Mr. OLIVER of Alabama. Will the gentleman yield?

Mr. GIFFORD. Yes.

Mr. OLIVER of Alabama. Does the gentleman feel that he has so carefully examined all of the evidence, which tends to show fraud, that he is now in position to say with very definite assurance that there was no fraud?

Mr. GIFFORD. I have not examined into the matter.

Mr. OLIVER of Alabama. But the gentleman's argument would suggest he had.

Mr. GIFFORD. We are informed by the press that after making many attempts to find something, nothing has come out of it.

Mr. OLIVER of Alabama. The gentleman will wake up some morning to find that he has been asleep at the switch.

Mr. BANKHEAD. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BANKHEAD. What is the matter pending before the Committee?

The CHAIRMAN. A pro forma amendment to strike out the last word.

Mr. BANKHEAD. I make the point of order, Mr. Chairman, that all debate on that amendment has been exhausted.

Mr. FISH. Mr. Chairman, I move to strike out the enacting clause.

Mr. GOSS. Mr. Chairman, I make the point of order that that motion must be in writing.

The CHAIRMAN. The Chair sustains the point of order. The Clerk will read.

The Clerk read as follows:

Office of Chief of Engineers, $108,296: *Provided*, That the services of skilled draftsmen, civil engineers, and such other services as the Secretary of War may deem necessary may be employed

only in the Office of the Chief of Engineers, to carry into effect the various appropriations for rivers and harbors, surveys, and preparation for and the consideration of river and harbor estimates and bills, to be paid from such appropriations: *Provided further*, That the expenditures on this account for the fiscal year 1935 shall not exceed $199,242; the Secretary of War shall each year, in the Budget, report to Congress the number of persons so employed, their duties, and the amount paid to each.

Mr. FISH. Mr. Chairman, I move to strike out the last word.

Mr. BANKHEAD. What is the last word, Mr. Chairman?

The CHAIRMAN. The last word is "each."

Mr. FISH. Mr. Chairman, that is what I propose to speak on. I propose to speak on what each pilot receives, and I will give some interesting information to the House.

I am sorry that I was not present to hear the impassioned and partisan remarks that have been made this afternoon about the efficiency of the Army Air Corps.

What is the use of us acting like a lot of children? What is the use on both sides of the House in making a lot of unfounded statements about the Army Air Corps, when after all, the only people responsible for the inefficiency or lack of training of the Army Air Corps is the Congress of the United States.

It is the easiest thing in the world to prove to Members on both sides and the American people back home. I am going to prove it quickly, and I hope I will get the help of the gentleman from Mississippi. I think he has taken a big step to build up the efficiency of the Army Air Corps in the bill before us by making available an additional million dollars for oil and gas to provide more actual flight training.

Mr. BANKHEAD. Mr. Chairman, I make the point of order that the gentleman is not speaking to his amendment.

The CHAIRMAN. The gentleman will confine himself to his proposed amendment.

Mr. FISH. I will confine myself to speaking on the amount of money and, primarily, on the number of hours that each of the Army air pilots have allotted to them per day and per year.

The fact is the Army air pilots, for lack of appropriation by Congress, are getting only 25 minutes a day air service. That is the whole trouble. How can you make efficient Army air pilots when you appropriate insufficient money, only $1,640,000 for oil and gasoline, which provides for only 25 minutes' flying a day to a pilot? The commercial air pilots have on an average 3 hours a day. Then you expect the Army air pilots, because of a lack of appropriation on our part, to compare with the private air pilots who have an average of 3 hours a day.

The new appropriation adds $1,000,000, which will increase the average per day per pilot to about 32 minutes, in comparison with 3 hours per day for the private pilots.

If anybody is to blame, it must be self-evident that it is the Congress of the United States, and I am not raising any partisan issue at the present time. I was not here when the recent partisan debate took place. Therefore I shall not inject myself into it.

Mr. O'MALLEY. Mr. Chairman, will the gentleman yield?

Mr. FISH. Yes.

Mr. O'MALLEY. Will the gentleman tell me how much time these pilots got under the Republican administration in Army training? Is there any difference in the time?

Mr. FISH. I am merely presenting the facts as they are. If the gentleman wants to raise a question of partisanship, I would call his attention to the fact that there has been a Democratic House for 3 years past. The chairman of the committee, the gentleman from Mississippi [Mr. COLLINS]—and I assume it is on his responsibility—has added a million dollars to this bill for oil and gas to extend the time for flights. He has increased the appropriation of last year for fuel oil and gas to the extent that the time of every pilot is lengthened from 24 minutes to 33 minutes a day.

Mr. O'MALLEY. That is much better than it was before, is it not?

Mr. FISH. If the gentleman will follow what I said, it certainly is, and I am congratulating the gentleman from Mississippi, if he is the one who did it, for increasing the time from 24 minutes to 33 minutes, but how does that compare with 3 hours plus in the private air-mail companies for the actual flying time of pilots per day?

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. FISH. Mr. Chairman, I ask unanimous consent to proceed for 3 minutes more.

The CHAIRMAN. Is there objection?

Mr. BANKHEAD. Mr. Chairman, I think we have had a pretty full discussion of this, and this section with which we are now dealing has nothing whatever to do with the air service.

Mr. FISH. If the gentleman will permit, I propose to offer an amendment, when it is reached, to increase the appropriation, for oil and gas, an additional million dollars.

Mr. BANKHEAD. When the gentleman does that he can discuss it. I shall not object to it, but it does seem to me that we ought to get down to a discussion of the bill, and I invoke the chairman of the committee because we have other pending legislation.

The CHAIRMAN. Is there objection to the request of the gentleman from New York that his time be extended 3 minutes?

There was no objection.

Mr. OLIVER of Alabama. Mr. Chairman, will the gentleman yield?

Mr. FISH. Yes.

Mr. OLIVER of Alabama. I am not willing to accept the implied indictment that the Army Air Service is inefficient. My understanding is that perhaps the most efficient, thorough, intense, and complete training that any air corps in this or any other country receives is that of the Army in its school at San Antonio, Tex. All pilots are required to pass the most rigid test and examination before they are qualified to fly, and many indeed have been denied the right to fly because they could not meet the very high and strict requirements of the Army.

Mr. FISH. I agree with the general statement of the gentleman from Alabama I have repeatedly stood on the floor of this House and upheld the Army Air Corps and have stated that in the past they trained the civilian flyers, probably 90 percent of them, that they are trained flyers themselves, and that they are exceedingly courageous, and that if given an opportunity they would make the best flyers in the world. But when Congress provides only 150 hours of flying per year, or 24.6 minutes flying per day, how can they keep up and continue to be expert flyers? In the new bill 200 flying hours are provided, or an average of 33 minutes per day. Under the amendment I propose, adding another million dollars, it would provide for 250 flying hours per year, or 41 minutes per day, as against 1,200 flying hours per year in private companies. Of course, it must be self-evident to all fair-thinking men on both sides that these Army pilots cannot go out and operate the mail routes and learn the beam flying and night flying and blind flying as well as the air-mail pilots who have been flying 3 hours a day over these air-mail routes for months and years and know every contour and sign post on them.

Mr. O'CONNOR. Mr. Chairman, will the gentleman yield?

Mr. FISH. Yes.

Mr. O'CONNOR. Is that compulsory? Must they fly that time each year?

Mr. FISH. That is all they can fly under the appropriation.

Mr. O'CONNOR. The reason I ask that is that for years we have had the question here of flying pay. I have sat and listened to it for hours before the Committee on Rules, and every flyer flew the very minimum he had to fly, and it was testified that he flew the very minimum, whether 25 minutes a day or not.

Mr. FISH. If the gentleman is correct he is making a very serious indictment of the Army Air Corps.

Mr. O'CONNOR. I am.

Mr. FISH. I hate to hear him make that statement unless he can substantiate it.

Mr. O'CONNOR. It is against the individual.

The CHAIRMAN. The time of the gentleman from New York has again expired.

The Clerk read as follows:

For contingent expenses of the Military Intelligence Division, General Staff Corps, and of the military attachés at the United States embassies and legations abroad, including the purchase of law books, professional books of reference, and subscriptions to newspapers and periodicals; for the hire of interpreters, special agents, and guides, and for such other purposes as the Secretary of War may deem proper, including $5,000 for the actual and necessary expenses of officers of the Army on duty abroad for the purpose of observing operations of armies of foreign states at war, to be paid upon certificates of the Secretary of War that the expenditures were necessary for obtaining military information, $27,500, to be expended under the direction of the Secretary of War: *Provided*, That section 3648, Revised Statutes (U.S.C., title 31, sec. 529), shall not apply to payments made from appropriations contained in this act in compliance with the laws of foreign countries or their ministerial regulations under which the military attachés are required to operate.

Mr. BROWN of Kentucky. Mr. Chairman, I move to strike out the last word, and I ask unanimous consent to proceed for 5 minutes out of order.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BROWN of Kentucky. Mr. Chairman, I wish to use these 5 minutes to dethrone one king of grafters and enthrone another. I read from the Louisville Courier-Journal of February 12, at which time there was a gathering of the American Legion at Paris, Ky., and at which place Dr. Jo M. Ferguson, head of the United States veterans' hospital at Lexington, Ky., made a talk. In that talk he paid a tribute to those Congressmen from Kentucky who voted here against the Economy Act last spring, and by innuendo a condemnation of those who voted for that act. For the benefit of the Membership of this House I shall now read the war record of that eminent gentleman who made the talk on that occasion, because since he was attempting to incite the soldiers of the country against those who voted for economy and to stir them up in a move to get back on the pay roll those thrown off, I think it well to know what moved this man in making a talk on that occasion. I find out from the War Department that he enlisted October 18, 1918, which is just 24 days before the armistice was signed.

We find that they did not call him from his home in Central City, Ky., for 17 days. That was 7 days before the armistice was signed. He was then called to Camp Johnson in Florida. He was a captain in the Medical Corps for that 7 days before the armistice was signed. He remained in the Army until July 11 of the following summer, but the war was over during that time. He remained as a captain in the Medical Corps, at a base salary of $200 a month. I do not have time to answer questions, because this is all very interesting and I want to call attention to some further things.

Mr. FISH. Will the gentleman yield?

Mr. BROWN of Kentucky. I cannot yield.

Mr. FISH. I wanted to know who the gallant soldier was.

Mr. BROWN of Kentucky. Dr. Jo Marvin Ferguson, head of the veterans' hospital at Lexington, Ky.

The war records show that he was offered a commission as a captain on August 6, 1917, and the records also show that on September 13 he declined that commission. That was at the beginning of the war, and the draft at that time included only those from 21 to 31, and the dear doctor was 40 years of age and therefore not included. His country offered him a chance to fight but it did not make him do it, and he therefore declined to do so. He did not want to fight then, but in the next year the selective draft caught him, for in the summer of 1918 they passed the selective draft including all between the ages of 18 and 45 which, of course, caught the doctor. And he then enlists on October 18, which was as late as possible to evade the draft and then comes in on his captain's salary in the Medical Corps and serves 7 days in the Army, before the armistice was signed, and the balance of his service was after the war was over and confined solely to such duties as a captain in the medical service would be required to perform. There was no drill for him, no smell of gunpowder, no rigors of campaigning of any form or manner but a fat salary of a captain in the Medical Corps and the ease attendant upon such a position. Now, this is the interesting part of it. Before the Economy Act was passed he was drawing $6,500 as head of that hospital, but that was not enough. He was drawing $150 a month emergency officer's retired pay. But that was not enough. He was getting $33 a month for a service-connected disability, based on 7 days as a captain in the Medical Corps. He was drawing a total from the Government of $8,696. The Economy Act cut him $3,099 per year, which was money which he never had any right to draw, for he served only 7 days before the armistice and suffered no injury in any form or manner.

Mr. BLANTON. Did he have some teeth injury?

Mr. BROWN of Kentucky. That is what I am coming to. Here is what his injury was, based on an affidavit of one of his home-town doctors in Central City, Ky. Let me tell you what he said the last day before he left camp. This is the statement he made to the examining surgeon at the time of his discharge on July 11, 1919:

I have no wound, injury, or disease, whether in the military service or otherwise.

That is what he said July 11, 1919, when they mustered him out of the Army, and September 1921 he gets an award of $33 a month dating back to the day after he got out of the Army, $33 a month beginning July 12, 1919. The very day after he made the statement that he had no disability whatsoever, he starts drawing back pay for an injury which, according to his own statement, he did not have.

This is what his home-town doctor said who examined him:

I examined him. He had a pulse at rest of 84; a pulse after exercise of 100. I found the following symptoms: Swelling of the feet and ankles.

He diagnosed the case as rheumatism. Rheumatism! A captain in the Medical Corps for 7 days' war-time service. His home-town buddy said, on which this disability is being paid:

I believe his disability is attributed to the service, due to the fact that he had abscessed teeth.

[Laughter.]

The CHAIRMAN. The time of the gentleman from Kentucky [Mr. BROWN] has expired.

Mr. BROWN of Kentucky. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

Mr. MARTIN of Oregon. I ask that the gentleman be given 5 additional minutes.

Mr. BAILEY. Mr. Chairman, I ask unanimous consent that the gentleman proceed for 5 additional minutes.

Mr. BLANTON. Mr. Chairman, I ask unanimous consent that the gentleman be granted 5 additional minutes.

The CHAIRMAN. Without objection, the gentleman is recognized for 5 additional minutes.

There was no objection.

Mr. BROWN of Kentucky. Mr. Chairman, I think this hero who has proclaimed against a great many of us down here deserves this extra 5 minutes, in order that we may get more of his great record in time of war.

Mr. RANDOLPH. Will the gentleman yield?

Mr. BROWN of Kentucky. I yield.

Mr. RANDOLPH. Is it not a fact that the indictment made by Dr. Ferguson is not against all Members of Congress, but simply the Members in the Kentucky delegation?

Mr. BROWN of Kentucky. That is correct.

Mr. BLANTON. Will the gentleman yield?

Mr. BROWN of Kentucky. I yield.

Mr. BLANTON. It might be interesting to our friend from Kentucky to know that there have been 4,800 of those impostors dropped from the retired list, and now draw no longer their unmerited monthly loot from the Government, and if the gentleman will look at House Document No. 269, which

I just had printed, he will see that of those six-thousand-three-hundred-odd emergency officers who got themselves retired, only 1,518 of them are now on the rolls drawing monthly retired pay.

Mr. BROWN of Kentucky. That is too many.

Mr. BLANTON. I know that the gentleman from Kentucky is going to aid us materially in preventing these emergency officers who have been dropped from being put back on the rolls by the amendment which has been passed by the Senate.

Mr. BROWN of Kentucky. I want to finish with this gentleman's record.

On 7 days' service in the Army, on the affidavit of his home-town physician, he has been drawing $33 a month as a service-connected case. This gentleman has been, since 1922, in the Veterans' Bureau as head of a hospital.

Mr. PARKER. Will the gentleman yield for a question?

Mr. BROWN of Kentucky. I yield.

Mr. PARKER. Did the gentleman say the trouble was caused from cold feet? [Laughter.]

Mr. BROWN of Kentucky. I said the diagnosis of his case showed that his feet and ankles were swollen, and that the doctor, his home-town buddy, said it could be attributed to service connection, because he had had abscessed teeth. From his own statement of the case, the only service he had was as captain in the Medical Corps, without any drilling that would have made ankles or feet swell, but he comes in there as a part of the Veterans' Administration, lives on the pay roll, not once, but three times, and yet we are going to vote in a few days, as the gentleman from Texas has said, on Senate amendments that will put this louse back on the Government pay roll in three different places. [Laughter.] And still honest veterans have to go down there to be taken care of by this fellow who has been grafting on the Government ever since the day after he got out of the Army.

Why, he was grafting even before that. In 1917 when other doctors volunteered and went to war they offered him a commission, but he did not want to fight. He did not have to then, but he had an opportunity to go fight the next year. When he saw he was going to be caught in the selective draft and when the war was over he enlisted.

Mr. Chairman, I am as much in favor as anyone else of putting back on the rolls every honest veteran whose case has not been treated fairly; I am in favor of giving him what he deserves; but I am not in favor of blanketing in a lot of grafters like this one whose case I have just outlined. [Applause.]

Mr. MARTIN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Kentucky. I yield.

Mr. MARTIN of Oregon. The gentleman from Kentucky has very ably unmasked one of these veteran politicians. The country is full of them. Has the gentleman any more on his list? Why not go after some more of them?

Mr. BLANTON. I have 4,800 of them on my list. And we have had them removed from the pay roll, and some are State judges drawing big salaries.

Mr. MARTIN of Oregon. These men are masquerading as soldiers, nothing more.

Mr. BROWN of Kentucky. The Economy Act did not go far enough along this line, for 1,500 of them were left on the rolls. I would like to reach every one of them. It is this type of man who is willing to graft and eat up the money that is allotted for honest veterans that prevents the deserving veterans from being cared for. The money that this man has been taking from the Government on a disability which he never incurred based on manufactured evidence and contradicted by his own statement at the time he left the service is money that ought to be going to actual cases of men who suffered disbility but who cannot get on the rolls because of such grafters as this.

The Economy Act was aimed at and made necessary by such grafters as Dr. Ferguson, and the sooner the American Legion and other service organizations kick out this type of grafter the sooner will their organizations become real peace-time service organizations, devoted to the country's need. I have been a member of the American Legion, and I do not believe that this organization or, for that matter, the real service man of this country, favors Dr. Ferguson's type, living like leeches on a Government which in time of war they declined to serve until they could not evade the draft and who then come in and take the money that should go to those who actually suffered injury in their country's service. It should be the goal of the American Legion to clean this type out of their ranks instead of placing them on their program as was done in the meeting at which Dr. Ferguson spoke in Paris. I believe that his record of grafting on the Government is without parallel, and so I therefore ask that we dethrone William Wolf Smith, who has been known as the "king of grafters" along this line, and crown a new king of grafters. From this time on, the name of William Wolf Smith should be forgotten, and when we speak of graft which deprives honest veterans of an opportunity at compensation we should enthrone the name of Dr. Jo Marvin Ferguson, the new king of grafters on the Veterans' Administration pay roll. He should not only be kicked off the compensation pay roll but should be kicked out of the Veterans' Administration.

[Here the gavel fell.]

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn.

There was no objection.

The Clerk read as follows:

For pay of not to exceed an average of 12,000 commissioned officers, $28,617,645, no part of which sum shall be available for the pay of more than 11,750 commissioned officers whose commissions are dated prior to June 1, 1934; pay of officers, National Guard, $100; pay of warrant officers, $1,336,407; aviation increase to commissioned and warrant officers of the Army, not to exceed $1,579,410, none of which shall be available for increased pay for making aerial flights by nonflying officers above the grade of captain; additional pay to officers for length of service, $7,039,844; pay of enlisted men of the line and staff, not including the Philippine Scouts, $45,946,153; pay of enlisted men of National Guard, $100; aviation increase to enlisted men of the Army, $457,904; pay of enlisted men of the Philippine Scouts, $945,401; additional pay for length of service to enlisted men, $3,453,300; pay of the officers on the retired list, $9,188,436; increased pay to not to exceed four retired officers on active duty, $4,620; pay of retired enlisted men, $11,610,000; pay of retired pay clerks, $1,519; pay not to exceed 60 civil-service messengers at not to exceed $1,200 each at headquarters of the several Territorial departments, corps areas, Army and corps headquarters, Territorial districts, tactical divisions and brigades, service schools, camps, and ports of embarkation and debarkation, $64,800; pay and allowances of contract surgeons, $46,148; pay of nurses, $759,204; pay of hospital matrons, $540; rental allowances, including allowances for quarters for enlisted men on duty where public quarters are not available, $5,386,397: *Provided*, That during the fiscal year ending June 30, 1935, no rental allowance shall accrue to any officer of the Government in consequence of the provisions found in section 10, title 37, United States Code, while occupying quarters at his permanent station not under the jurisdiction of the service in which serving but which belong to the Government of the United States, or to a corporation the majority of the stock of which is owned by the United States, in excess of the rental rate charged for such quarters on March 5, 1934; subsistence allowances, $5,290,066; interest on soldiers' deposits, $30,000; payment of exchange by officers serving in foreign countries, and when specially authorized by the Secretary of War, by officers disbursing funds pertaining to the War Department, when serving in Alaska, and all foreign money received shall be charged to and paid out by disbursing officers of the Army at the legal valuation fixed by the Secretary of the Treasury, $100; in all, $121,758,094, less $285,000 to be supplied by the Secretary of War for this purpose from funds received during the fiscal year 1935 from the purchase by enlisted men of the Army of their discharges, $121,473,094; and the money herein appropriated for "Pay, and so forth, of the Army" shall be accounted for as one fund except that no amount in this paragraph specifically limited may be increased: *Provided*, That no part of this appropriation shall be available to pay any officer detailed as a military aide to any civil officer of the United States outside of the War Department except the President: *Provided further*, That no appropriation contained in this act shall be available for or on account of the maintenance of more than 32 military attachés: *Provided further*, That no appropriation contained in this act shall be available for or on account of the maintenance of more than 83 bands: *Provided further*, That during the fiscal year ending June 30, 1935, no officer of the Army shall be entitled to receive an addition to his pay in consequence of the provisions of the act approved May 11, 1908 (U.S.C., title 10, sec. 803), or of section 1261 of the Revised Statutes (U.S.C., title 10, sec. 692).

Mr. McDUFFIE. Mr. Chairman, I make the point of order that the language, on page 11, line 8, beginning with the word "no" and ending with the figures "1934" in line 11, constitutes a change of substantive law and, therefore, is legislation on an appropriation bill.

The CHAIRMAN. The Chair will hear the gentleman on the point of order.

Mr. McDUFFIE. Mr. Chairman, in 1911 Congress passed an act providing that the pay of Army officers detailed for work on rivers and harbors may be taken from the funds appropriated for that work rather than from the general funds of the Regular Establishment.

Into the law of 1911 was written substantially this language, that the pay of Army officers detailed for work on river and harbor projects may be paid out of funds appropriated for a given project.

There is probably some $200,000 involved here which might be termed hidden costs. It is to eliminate this that I am asking that this language be stricken.

For instance, in the operation of the Mississippi-Warrior barge line it is often alleged that the salary of General Ashburn, who is in charge of this operation, is not being charged against the operation. Whether the operation has merit is not the question here; the charge is being made that the general's salary is not accounted for in its set-up costs of the operation. The same allegations are often made as to river and harbor work.

When the statute of 1911 was passed providing that these Army officers, the officers of the Corps of Engineers, may be paid from funds appropriated for a given project, the question of its interpretation was raised, and the then Attorney General, Mr. Knox, held with reference to river and harbor work that the word "may" was mandatory. The decision of Attorney General Knox was followed by a decision of the Comptroller General to the effect that the word "may" was mandatory. Since 1911 the officers charged with the duty of river and harbor development have been paid from funds appropriated for given projects.

Assuming that it is now the law that such officers are to be paid from funds allocated to the various projects under their supervision and direction, I make the point of order that this language constitutes a change of substantive law and, therefore, is legislation on an appropriation bill and subject to a point of order.

The CHAIRMAN. Does the gentleman from Mississippi wish to be heard on the point of order?

Mr. COLLINS of Mississippi. Only to say that the gentleman mistakes entirely the purpose of the language. It is not subject to a point of order; it is clearly a limitation. A transfer has been made to the amount here carried from another part of the bill and whether or not a change will be made in the present procedure of charging the pay of Engineer officers on river and harbor work, has been left for administrative determination.

Mr. BLANTON. Mr. Chairman, I call the Chair's attention to the fact that this is merely a limitation pure and simple on the expenditure of this fund. The committee has the right at any time to make such a limitation on expenditures.

The CHAIRMAN. In the opinion of the Chair, the language against which the point of order is made is a limitation. Although it may have an effect upon existing law, nevertheless, it is a restriction which, in the opinion of the Chair, is clearly in order and against which a point of order would not lie.

The Chair overrules the point of order.

Mr. HOEPPEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HOEPPEL: Page 11, lines 25 and 26, strike out "$11,610,000" and insert in lieu thereof "$12,846,672."

Mr. HOEPPEL. Mr. Chairman, it is possible that a point of order may be raised against this amendment. I wish, nevertheless, to explain what is sought to be accomplished by the amendment.

The pending bill provides $450 per annum rental allowances for Government clerks. This same bill provides only $75 per annum rental and clothing allowances for retired enlisted men. In other words, retired enlisted men receive only $75 for the entire year for rent and clothing, yet Government clerks receive $450 for rent alone for the same period. I claim this is an unfair disparity.

In addition, in this bill we provide only 27 cents per day subsistence for retired enlisted men. This amount is insufficient and wholly inadequate.

The men in active service receive 35 cents per day. This figure of 35 cents is predicated upon the fact that they buy in annual allotments and at wholesale, otherwise the allowances would be higher. The aged retired enlisted men who have served in two or three battles, many decorated for bravery, are only receiving 27 cents per day to subsist themselves. Bear in mind that they must purchase subsistence at retail, which makes this small figure insignificant. This is not as much as some of us give in tips. Compare these enlisted men who have served our Nation faithfully and honorably in two or three wars and who receive only 27 cents per day for subsistence with Federal prisoners' allowances. I have here a letter from the Director of the Federal Prisons, Department of Justice, in which he states they are appropriating 60 cents a day to feed racketeers, bootleggers, and criminals of every sort, while we here are only providing 27 cents a day for retired men to subsist themselves in their own private homes.

Mr. BLANTON. Will the gentleman yield?

Mr. HOEPPEL. I yield to the gentleman from Texas.

Mr. BLANTON. The gentleman need not be afraid of a point of order, because he can move to raise this amount to $100,000,000, and it would not be subject to a point of order.

Mr. HOEPPEL. I hope the gentleman will bear in mind that I am seeking to provide for the most honorable body of men that ever served our flag. Some of these men are Civil War veterans. They are also receiving only 27 cents a day subsistence. As a comparison, may I say that enlisted men in active service detailed for duty in any city of the United States receive $1.95 per day to subsist themselves and for their quarters, whereas retired men living in the same city receive only 55 cents per day for the same facilities. In other words, enlisted men of the same grade in active service receive four times as much as the retired enlisted men, who are unable to work. Most of these men bear service-connected disabilities, and because of the fact they are retired they cannot receive one cent of pension regardless of the disabilities they have. Also bear in mind almost 2,000 of these men receive less than $66 per month less 15 percent.

Mr. BLANTON. Will the gentleman yield?

Mr. HOEPPEL. I yield to the gentleman from Texas.

Mr. BLANTON. This subsistence proposition merely means three meals a day?

Mr. HOEPPEL. Three meals a day.

Mr. BLANTON. Breakfast, dinner, and supper?

Mr. HOEPPEL. Correct.

Mr. BLANTON. The gentleman would call it breakfast, lunch, and dinner since coming to Washington, but does the gentleman from California know that there is being fed our Army now better food and more of it than has ever been fed to them before in the history of this country for all three of the meals—breakfast, dinner, and supper? There is more food and better food than they have ever received in the history of this country.

Mr. HOEPPEL. They are grateful to Congress for this consideration, but the Congress should take cognizance of the retired men who are unable to take care of themselves. The criminals, outlaws, and highbinders to whom I have referred receive 60 cents per day and from a glance at this picture you can readily note the commodious and elegant cells which they occupy. I hope you will vote for this amendment.

[Here the gavel fell.]

Mr. COLLINS of Mississippi. Mr. Chairman, I rise in opposition to the amendment.

This amount of $11,610,000, which the gentleman seeks to increase, will pay the retired pay of 10,009 enlisted men according to schedules provided by law. We could add more money to this appropriation, but these 10,009 men would not get one penny more than the amount appropriated here. It may be a very nice gesture the gentleman is making, but a gesture is all it is. It would be utterly foolish for us to amend this figure by appropriating more, because these men could not get it if the money were appropriated.

The question was taken; and on a division (demanded by Mr. HOEPPEL) there were—yeas 6, nays 23.

So the amendment was rejected.

Mr. DOWELL. Mr. Chairman, I move to strike out the last word and ask unanimous consent to speak out of order.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. DOWELL. Mr. Chairman, on Friday last I sought to secure some information from the Appropriations Committee relative to the appropriation for Federal roads next year. I had a great deal of difficulty getting definite information relative to the program. However in answer to a question of mine the gentleman from New York [Mr. TABER] made a statement with reference to the amount available for next year. As will be recalled, $400,000,000 was appropriated for the Public Works highway projects in the Industrial Recovery Act and my inquiry went to the point of ascertaining how much of this remained for use next year. The gentleman from New York answered as follows:

If the gentleman will turn to pages 80, 80–A, and 81 of the Budget message I think he will find that approximately $200,000,000 out of the $400,000,000 will be available for expenditure in 1935.

Mr. Chairman, if that is correct, of course, it divides the appropriation about equally, but this statement coming from the Budget message I desire to correct.

Mr. MacDonald, Chief of the Bureau of Public Roads, was before the Committee on Roads of the House on February 23, and I quote from his statement before that committee, as follows:

Mr. MACDONALD. But this will give you a partial answer now, as of the 17th of February—we had approved 6,139 projects. That "approved projects" means that the State highway departments have prepared the surveys, plans, and specifications, the Bureau has approved all of the details of the project, and the work is ready for letting. That involved $275,000,000, a small part of which came from other funds. Two hundred and fifty-five million dollars came from the Public Works highway funds.

Mr. WHITTINGTON. When do you anticipate that the remainder of the $400,000,000 will be allocated?

Mr. MACDONALD. It will be substantially completed in the latter part of April or the first of May.

Mr. WHITTINGTON. In other words, there will be contracts approved for the expenditure of the entire $400,000,000 by the first of May, in your judgment?

Mr. MACDONALD. Yes, sir; substantially so. There are always projects in every State that for some reason or other take more time to get under way, but substantially the amount will be approved and either be actually contracted or in the process of contracting in the latter part of April or first of May. As of today we have approved projects covering 74 percent of the total highway allotment.

In the report of the Bureau of Public Roads to the Secretary of Agriculture entitled "Progress Report, June 1933 to February 1934, Highway Improvement Projects, Federal Public Works", I quote the following:

FUNDS AVAILABLE FOR ADDITIONAL HIGHWAY PROJECTS

Seventy-three and three tenths percent of the total $400,000,000, less administrative reserve, apportioned to the States is now obligated to the 6,139 projects already approved. There remained as of February 17, $105,262,000 available for additional projects.

* * * * * * *

As indicated on this chart, employment on Public Works highway projects will continue to rise rapidly until June, when it will reach its approximate maximum of around 280,000 men continuously employed. By the 1st of September the major part of the work will have been completed, and employment in this field will fall rapidly during the latter half of the year. The Public Works highway program will be completed as a major employment measure by the 1st of January.

This was sometime ago. I have here a statement from the Bureau of Roads as of March 3, which shows that $296,694,000 of the $400,000,000 has been already obligated. This is 75.3 percent of the entire appropriation.

You will note Mr. MacDonald, in his statement before the Committee on Roads, has stated that this appropriation of $400,000,000 will be obligated by the latter part of April or the first of May of this year. He also stated that the major part of the work will have been completed on September 1 of this year and the employment in this field will fall rapidly.

With no appropriation, the Bureau of Public Roads has told you that after September 1 there will be a closing out of the road work in every State in the Union, and the employment they have been giving to the thousands of men will cease as far as road building is concerned.

[Here the gavel fell.]

Mr. DOWELL. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. DOWELL. I am speaking to this question now because all of us know that the highway commissions of the several States must make out their program for the work of the coming year in advance, and these programs must be approved by the Department.

Unless Congress now makes appropriation for the fiscal year of 1935, road construction cannot be carried on and the men employed in road building throughout the country will find themselves out of employment.

This is a serious question and must have the attention of this Congress, and I am calling your attention to it now, that it may not be overlooked and that Congress may not fail to act.

In my judgment, there is no money expended by the Federal Government which is distributed among more people than the money expended in the building of roads. Federal road building furnishes employment to labor in every section of the country and more of the appropriations reaches the pockets of labor than any of the other appropriations.

The Bureau of Roads estimates that 80 to 85 percent of the money expended in road building goes to labor. I hope that the committee having this matter in charge will give it proper attention. [Applause.]

The Clerk read as follows:

Regular supplies of the Army: Regular supplies of the Quartermaster Corps, including their care and protection; stoves required for the use of the Army for heating offices, hospitals, barracks, and quarters, and recruiting stations, and United States disciplinary barracks; also ranges, stoves, coffee roasters, and appliances for cooking and serving food at posts in the field and when traveling, and repair and maintenance of such heating and cooking appliances; authorized issues of candles and matches; for post bakery and bake-oven equipment and apparatus; for ice for issue to organizations of enlisted men and offices at such places as the Secretary of War may determine, and for preservation of stores; authorized issues of soap, toilet paper, and towels; for the necessary furniture, textbooks, paper, and equipment for the post schools and libraries, and for schools for noncommissioned officers; for the purchase and issue of instruments, office furniture, stationery, and other authorized articles for the use of officers' schools at the several military posts; for purchase of commercial newspapers, market reports, and so forth; for the tableware and mess furniture for kitchens and mess halls, each and all for the enlisted men, including recruits; for forage, salt, and vinegar for the horses, mules, oxen, and other draft and riding animals of the Quartermaster Corps at the several posts and stations and with the armies in the field, for the horses of the several regiments of Cavalry and batteries of Artillery and such companies of Infantry and Scouts as may be mounted, and for remounts and for the authorized number of officers' horses, including bedding for the animals; for seeds and implements required for the raising of forage at remount depots and on military reservations in the Hawaiian, Philippine, and Panama Canal Departments, and for labor and expenses incident thereto, including, when specifically authorized by the Secretary of War, the cost of irrigation; for the purchase of implements and hire of labor for harvesting hay on military reservations; for straw for soldiers' bedding, stationery, typewriters and exchange of same, including blank books and blank forms for the Army, certificates for discharged soldiers, and for printing department orders and reports, $2,576,880.

Clothing and equipage: For cloth, woolens, materials, and for the purchase and manufacture of clothing for the Army, including retired enlisted men when ordered to active duty, for issue and for sale; for payment of commutation of clothing due to warrant

officers of the mine planter service and to enlisted men; for altering and fitting clothing and washing and cleaning when necessary; for operation of laundries, existing or now under construction, including purchase and repair of laundry machinery therefor; for the authorized issues of laundry materials for use of general prisoners confined at military posts without pay or allowances, and for applicants for enlistment while held under observation; for equipment and repair of equipment of existing dry-cleaning plants, salvage and sorting storehouses, hat-repairing shops, shoe-repair shops, clothing-repair shops, and garbage-reduction works; for equipage, including authorized issues of toilet articles, barbers' and tailors' material, for use of general prisoners confined at military posts without pay or allowances and applicants for enlistment while held under observation; issue of toilet kits to recruits upon their first enlistment, and issue of housewives to the Army; for expenses of packing and handling and similar necessaries; for a suit of citizen's outer clothing and when necessary an overcoat, the cost of all not to exceed $30, to be issued to each soldier discharged otherwise than honorably, to each enlisted man convicted by civil court for an offense resulting in confinement in a penitentiary or other civil prison, and to each enlisted man ordered interned by reason of the fact that he is an alien enemy, or, for the same reason, discharged without internment; for indemnity to officers and men of the Army for clothing and bedding, etc., destroyed since April 22, 1898, by order of medical officers of the Army for sanitary reasons, $4,207,112, of which amount not exceeding $60,000 shall be available immediately for the procurement and transportation of fuel for the service of the fiscal year 1935.

Mr. WADSWORTH. Mr. Chairman, I move to strike out the last word, to ask the chairman of the subcommittee a question. I notice on page 21, line 11, this language:

For indemnity to officers and men of the Army for clothing and bedding, etc., destroyed since April 22, 1898.

Why go back so far?

Mr. COLLINS of Mississippi. That is old language simply carried to take care of an occasional case.

Mr. WADSWORTH. Those cases must come pretty near being mildewed.

Mr. COLLINS of Mississippi. Once in a while one arises and has to be taken care of.

The Clerk read to page 28, line 12.

Mr. COLLINS of Mississippi. Mr. Chairman, I ask unanimous consent that the next paragraph for the construction and repair of hospitals be passed over until tomorrow.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent that the next paragraph be passed over for consideration tomorrow. Is there objection?

There was no objection.

The Clerk read to page 29, line 12.

Mr. FISH. Mr. Chairman, I move to strike out the last word. I want to say to the chairman of the subcommittee that this is a very important section of the bill, and I suggest that it be passed over for consideration tomorrow because if he insists on taking it up this afternoon I shall have to make a point of no quorum.

Mr. COLLINS of Mississippi. I cannot consent to its being passed over.

Mr. FISH. Mr. Chairman, I make the point of no quorum.

The CHAIRMAN. The gentleman from New York makes the point of no quorum. The Chair will count. [After counting.] Forty-two Members present—not a quorum.

Mr. COLLINS of Mississippi. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. LANHAM, Chairman of the Committee of the Whole House on the state of the Union, reported that that Committee had had under consideration the bill H.R. 8471, the War Department appropriation bill, and had come to no resolution thereon.

ENROLLED JOINT RESOLUTION SIGNED

Mr. PARSONS, from the Committee on Enrolled Bills, reported that that committee had examined and found truly enrolled a joint resolution of the House of the following title, which was thereupon signed by the Speaker:

H.J.Res. 290. Joint resolution to provide an appropriation to carry into effect the act entitled "An act to provide for loans to farmers for crop production and harvesting during the year 1934, and for other purposes", approved February 23, 1934.

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 1083. An act authorizing adjustment of the claim of the Potomac Electric Power Co. of Washington, D.C.

ADJOURNMENT

Mr. BYRNS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 52 minutes p.m.) the House adjourned until tomorrow, Thursday, March 8, 1934, at 12 o'clock noon.

COMMITTEE HEARING

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

(Thursday, Mar. 8, 10 a.m.)

Continuation of hearings on H.R. 7852, the National Securities Exchange Act of 1934.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. COX: Committee on Rules. House Resolution 198. Resolution to authorize special committee to investigate Nazi propaganda activities and certain other propaganda activities; without amendment (Rept. No. 878). Referred to the House Calendar.

Mr. KRAMER: Committee on Immigration and Naturalization. H.R. 8317. A bill to extend the validity of declarations of intention beyond 7 years; without amendment (Rept. No. 879). Referred to the House Calendar.

Mr. LEA of California: Committee on Interstate and Foreign Commerce. H.R. 7801. A bill to extend the times for commencing and completing the construction of a bridge across the Columbia River at or near The Dalles, Oreg.; without amendment (Rept. No. 880). Referred to the House Calendar.

Mr. KELLY of Illinois: Committee on Interstate and Foreign Commerce. H.R. 7803. A bill authorizing the city of East St. Louis, Ill., its successors and assigns, to construct, maintain, and operate a toll bridge across the Mississippi River at or near a point between Morgan and Wash Streets in the city of St. Louis, Mo., and a point opposite thereto in the city of East St. Louis, Ill.; with amendments (Rept. No. 881). Referred to the House Calendar.

Mr. KELLY of Illinois: Committee on Interstate and Foreign Commerce. H.R. 8040. A bill granting the consent of Congress to the Iowa State Highway Commission and the Missouri Highway Department to maintain a free bridge already constructed across the Des Moines River near the city of Keokuk, Iowa; without amendment (Rept. No. 882). Referred to the House Calendar.

Mr. CROSSER of Ohio: Committee on Interstate and Foreign Commerce. H.R. 8477. A bill authorizing the State Road Commission of West Virginia to construct, maintain, and operate a toll bridge across the Potomac River at or near Shepherdstown, Jefferson County, W.Va.; without amendment (Rept. No. 883). Referred to the House Calendar.

Mr. LEA of California: Committee on Interstate and Foreign Commerce. S. 2545. An act to extend the times for commencing and completing the construction of a bridge across the Columbia River at or near Astoria, Oreg.; without amendment (Rept. No. 884). Referred to the House Calendar.

Mr. SADOWSKI: Committee on Interstate and Foreign Commerce. S. 2593. An act granting the consent of Congress to the Highway Department of the State of Minnesota to construct, maintain, and operate a free highway bridge across the St. Louis River at or near Cloquet, Minn.; without amendment (Rept. No. 885). Referred to the House Calendar.

Mr. SADOWSKI: Committee on Interstate and Foreign Commerce. S. 2594. An act granting the consent of Congress to the Highway Department of the State of Minnesota to construct, maintain, and operate a free highway bridge

across the Mississippi River at or near the southerly end of Lake Bemidji, Minn.; without amendment (Rept. No. 886). Referred to the House Calendar.

Mr. CHAPMAN: Committee on Interstate and Foreign Commerce. S. 2675. An act creating the Cairo Bridge Commission and authorizing said commission and its successors to construct, maintain, and operate a bridge across the Ohio River at or near Cairo, Ill.; with amendment (Rept. No. 887). Referred to the House Calendar.

Mr. MILLIGAN: Committee on Interstate and Foreign Commerce. S. 2347. An act to amend the Inland Waterways Corporation Act, approved June 3, 1924, as amended; without amendment (Rept. No. 888). Referred to the House Calendar.

Mr. CONNERY: Committee on Labor. H.R. 8492. A bill to provide a 30-hour week for industry, and for other purposes; without amendment (Rept. No. 889). Referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE

Under clause 2 of rule XXII, the Committee on Claims was discharged from the consideration of the bill (H.R. 8482) conferring jurisdiction upon the Court of Claims of the United States to hear, consider, and render judgment on certain claims of George A. Carden and Anderson T. Herd, and the same was referred to the Committee on the Judiciary.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. WOLCOTT: A bill (H.R. 8511) to amend the Home Owners' Loan Act of 1933 to reduce the interest rate on obligations and/or liens acquired by the Home Owners' Loan Corporation from home owners; to the Committee on Banking and Currency.

By Mr. AYERS of Montana: A bill (H.R. 8512) to amend the act of March 3, 1927, amending section 1 of the act of May 26, 1926, entitled "An act to amend sections 1, 5, 6, 8, and 18 of the act approved June 4, 1920, entitled, 'An act to provide for the allotment of lands of the Crow Tribe, for the distribution of tribal funds, and for other purposes'"; to the Committee on Indian Affairs.

By Mr. EDMISTON: A bill (H.R. 8513) to authorize the coinage of 50-cent pieces in commemoration of the birthplace and boyhood home of Gen. Thomas J. (Stonewall) Jackson; to the Committee on Coinage, Weights, and Measures.

By Mr. KLEBERG: A bill (H.R. 8514) authorizing the Secretary of the Treasury to convey a part of the post-office site in San Antonio, Tex., to the city of San Antonio, Tex., for street purposes, in exchange for land for the benefit of the Government property; to the Committee on the Post Office and Post Roads.

By Mr. SMITH of Washington: A bill (H.R. 8515) to provide for the construction of a post-office building at Kelso, Wash.; to the Committee on Public Buildings and Grounds.

By Mr. COLLINS of Mississippi: A bill (H.R. 8516) granting the consent of Congress to the board of supervisors, of Leake County, Miss., to construct a bridge across the Pearl River in the State of Mississippi; to the Committee on Interstate and Foreign Commerce.

By Mr. KELLY of Pennsylvania: A bill (H.R. 8517) to provide for needy blind persons of the District of Columbia; to the Committee on the District of Columbia.

By Mr. BLACK: A bill (H.R. 8518) to authorize the Commissioners of the District of Columbia to permit the Congregation Shewry Tallmud Tairy, of the District of Columbia, to lay out a cemetery in the District of Columbia; to the Committee on the District of Columbia.

Also, a bill (H.R. 8519) to amend sections 5, 9, and 12 and repeal section 36 of the District of Columbia Alcoholic Beverage Control Act; to the Committee on the District of Columbia.

By Mr. DUNN: A bill (H.R. 8520) to authorize the operation of stands in Federal buildings by blind persons; to create a bureau for the blind in the Post Office Department; to issue licenses to blind persons for the operation of such stands, and to supervise the same; to the Committee on the Post Office and Post Roads.

By Mr. SISSON: A bill (H.R. 8521) authorizing the appropriation of $600,000, or so much thereof as may be necessary, to refund payments made to the collector of taxes of the District of Columbia for illegally assessed taxes for paving roadways or laying curbs or gutters in the District of Columbia, including penalties charged and paid, as may on the date of approval of this act be legally due Paving Tax Refund Corporation of the District of Columbia, a corporation organized under the laws of the State of Arizona; to the Committee on the District of Columbia.

By Mr. BROWN of Georgia: A bill (H.R. 8522) to authorize the President to commission certain officers in the Regular Army; to the Committee on Military Affairs.

By Mr. McLEOD: A bill (H.R. 8523) to provide for the creation of the Pan American Peoples Great Highway Commission, and for other purposes; to the Committee on Foreign Affairs.

By Mr. OLIVER of New York: A bill (H.R. 8524) granting retirement to certain former employees of the Treasury Department; to the Committee on the Civil Service.

By Mr. WEIDEMAN: A bill (H.R. 8525) to amend the District of Columbia Alcoholic Beverage Control Act to permit the issuance of retailers' licenses of classes A and B in residential districts; to the Committee on the District of Columbia.

By Mr. BOYLAN: Resolution (H.Res. 294) authorizing payment of expenses of investigation authorized by House Resolution 293; to the Committee on Accounts.

By Mr. CONNERY: Resolution (H.Res. 295) for the consideration of H.R. 8492, a bill to provide a 30-hour week for industry, and for other purposes; to the Committee on Rules.

By Mr. ANDREW of Massachusetts: Joint Resolution (H.J.Res. 291) directing the Secretary of the Navy to make Boston Harbor the home port of the U.S.S. *Constitution*, and to maintain it there as a national museum; to the Committee on Naval Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROWN of Georgia: A bill (H.R. 8526) for the relief of James O. Greene and Mrs. Hollis S. Hogan; to the Committee on the Post Office and Post Roads.

By Mr. CARPENTER of Kansas: A bill (H.R. 8527) granting a pension to Mary L. Golden; to the Committee on Invalid Pensions.

By Mr. CHRISTIANSON (by request): A bill (H.R. 8528) to provide for the carrying out of the award of the National War Labor Board of April 11, 1919, and the decision of the Secretary of War, of date November 30, 1920, in favor of certain employees of the Minneapolis Steel & Machinery Co., Minneapolis, Minn.; of the St. Paul Foundry Co., St. Paul, Minn.; of the American Hoist & Derrick Co., St. Paul, Minn.; and of the Twin City Forge & Foundry Co., Stillwater, Minn.; to the Committee on War Claims.

By Mr. DOBBINS: A bill (H.R. 8529) for the relief of Herbert F. Wascher; to the Committee on Claims.

By Mr. FIESINGER: A bill (H.R. 8530) granting a pension to Evaline Binkley; to the Committee on Invalid Pensions.

By Mr. McCLINTIC: A bill (H.R. 8531) for the relief of Earl J. Babcock; to the Committee on Military Affairs.

By Mr. MOTT: A bill (H.R. 8532) for the relief of Lincoln County, Oreg.; to the Committee on Claims.

By Mr. OLIVER of Alabama: A bill (H.R. 8533) for the relief of Mrs. Tonnie Smith Young; to the Committee on Claims.

By Mr. REECE: A bill (H.R. 8534) for the relief of Garland Hartman; to the Committee on Military Affairs.

By Mr. SNYDER: A bill (H.R. 8535) for the relief of Lawrence W. Muncey; to the Committee on Military Affairs.

By Mr. WEAVER: A bill (H.R. 8536) for the relief of Dr. C. A. Toline; to the Committee on Claims.

By Mr. WERNER: A bill (H.R. 8537) for the relief of Ursula S. G. Cleaver; to the Committee on Claims.

By Mr. WILLFORD: A bill (H.R. 8538) for the relief of H. E. Harvey; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

2807. By Mr. ADAMS: Petition of approximately 4,000 residents of New Castle County, and approximately 125 residents of Kent and Sussex Counties, Del., favoring passage of a bill to safeguard inherent rights of the American people relative to radio broadcasting; to the Committee on Merchant Marine, Radio, and Fisheries.

2808. By Mr. ANDREW of Massachusetts: Petition of Charles H. Stevens and 24 other citizens of Groveland, Mass., favoring the passage of House bill 7019, providing for old-age pensions; to the Committee on Labor.

2809. By Mr. BEITER: Petition of Holly Lodge, No. 70, Ladies' Society to Brotherhood of Locomotive Firemen and Enginemen, protesting against the proposed consolidation of the railroads of the United States, and particularly the Prince plan; to the Committee on Interstate and Foreign Commerce.

2810. By Mr. CARTER of California: Petition of W. Larson, G. H. MacDonald, Dan Shearer, and 43 other residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2811. Also, petition of Nellie Potter Kahot, Mrs. A. J. Church, Margaret L. Kirt, and 32 other residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2812. Also, petition of Perry B. Hollis, R. W. Trowbridge, Thomas A. Merrit, and 47 other residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2813. Also, petition of H. A. Mayberry, P. A. Allison, W. B. Giles, and 19 other residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2814. Also, petition of F. E. Barry, C. Smith, and 48 other residents of Alameda County, Calif., urging the restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2815. Also, petition of Richard E. Robertson, Martha Meyer, Lillian M. Anshultz, and 18 other residents of Alameda County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2816. Also, petition of Julius Swanson, Willard Lynch, L. S. McMichael, and 22 other residents of Alameda County, Calif., urging the immediate payment of the bonus; to the Committee on World War Veterans' Legislation.

2817. By Mr. COLLINS of California: Petition signed by 7,500 voters of the Nineteenth Congressional District, Calif., urging the restoration to Spanish-American War veterans, their widows, and dependents of the pensions they were receiving prior to the passage of the Economy Act; to the Committee on Pensions.

2818. By Mr. FISH: Petition of 61 citizens of Warwick, N.Y., requesting an investigation into the propaganda of munitions companies, and that findings of such an investigation be made public; to the Committee on the Judiciary.

2819. By Mr. GOODWIN: Petition of Hudson Valley County Council Veterans of Foreign Wars in convention, urging support in the passage of the current bonus bill, claiming the veterans in their community are actually destitute and in dire need of immediate payment; to the Committee on World War Veterans' Legislation.

2820. Also, resolution of the Ulster County Pomona Grange, Lake Katrine, N.Y., that Ulster County Pomona Grange favors a 5-percent tariff on coconut oil and sesame oil, and urges the passage of this bill; to the Committee on Ways and Means.

2821. By Mr. KELLY of Pennsylvania: Petition of citizens of Pittsburgh, Pa., protesting against censorship of radio messages; to the Committee on Merchant Marine, Radio, and Fisheries.

2822. By Mr. KRAMER: Resolution of the Council of the city of Los Angeles, petitioning the Secretary of the Navy to retain all present and contemplated Coast Guard facilities at Los Angeles Harbor; to the Committee on Naval Affairs.

2823. By Mr. KVALE: Petition of members of the First Methodist Church of St. Paul, Minn., protesting against the increasing of armaments; to the Committee on Naval Affairs.

2824. Also, petition of Trades and Labor Assembly, International Falls, Minn., urging protective legislation for pulp and paper industries; to the Committee on Ways and Means.

2825. Also, resolution of the Farmers' Union, Lyon County, Minn., opposing direct marketing of livestock; to the Committee on Agriculture.

2826. Also, petition of members of the First Methodist Episcopal Church of Duluth, Minn., protesting against the increasing of armaments; to the Committee on Naval Affairs.

2827. Also, petition of citizens of Minneapolis, Minn., urging legislative action for the remonetization of silver; to the Committee on Coinage, Weights, and Measures.

2828. Also, resolution of the Farmers' Union of Lyon County, Minn., urging passage of the Frazier, the Swank-Thomas, and the Wheeler bills; to the Committee on Banking and Currency.

2829. Also, petition of members of St. Mark's Evangelical Lutheran Church, of North St. Paul, Minn., protesting against the increasing of armaments; to the Committee on Naval Affairs.

2830. Also, resolution of the Farmers' Union, Lyon County, Minn., urging passage of the bonus bill; to the Committee on Ways and Means.

2831. By Mr. LINDSAY: Letters of Ethel Sakson, Ethel Penzes, Ann Brooks, and Daniel Penzes, all of Brooklyn, N.Y., favoring the enactment of the McFadden radio bill, H.R. 7986, to amend the Radio Act of 1927; to the Committee on Merchant Marine, Radio, and Fisheries.

2832. By Mr. MARTIN of Massachusetts: Memorial of the House of Representatives of the Commonwealth of Massachusetts, urging the return to its home port of the U.S.S. *Constitution*; to the Committee on Naval Affairs.

2833. By Mr. MEAD: Petition of the Central Council of Polish Organizations and Societies, Buffalo, N.Y., urging proposed Cannon amendment to the naturalization law; to the Committee on Immigration and Naturalization.

2834. Also, petition of the International Brotherhood of Electrical Workers, Local No. 45, Buffalo, N.Y., urging favorable action on House bill 7580; to the Committee on the District of Columbia.

2835. By Mr. MILLARD (by request): Petition signed by members of James Daley Post, No. 200, Veterans of Foreign Wars, of Hastings-on-Hudson, urging immediate payment of veterans' adjusted-compensation certificates; to the Committee on Ways and Means.

2836. By Mr. PARKER: Petition of J. B. Tippins and 26 other citizens of Evans County, Ga., urging the enactment of legislation providing for an old-age pension; to the Committee on Pensions.

2837. By Mr. RUDD: Petition of Hal U. Fisher, 209–58 One Hundred and Eleventh Avenue, Bellaire, Queens, N.Y., and 16 other citizens of Bellaire, favoring the repeal of the gasoline tax as outlined in Senate bill 2038; to the Committee on Ways and Means.

2838. By Mr. THOMASON: Petition of residents of Hyman, Mitchell County, Tex., recommending reduction of cotton production; to the Committee on Agriculture.

2839. Also, petition of citizens of Crane County, Tex., urging immediate payment of the soldiers' bonus; to the Committee on Ways and Means.

2840. By the SPEAKER: Petition of Jose M. Garcia, secretary Provincial Board, Lingayen, P.I., urging the passage of the King bill; to the Committee on Insular Affairs.

2841. Also, petition of the members of the Switchmen's Union of North America, protesting against any plan of railroad managers or others to merge railroads where such merger would result in the closing of terminals, yards, or plants which would result in the lay-off of man power; to the Committee on Interstate and Foreign Commerce.

SENATE

THURSDAY, MARCH 8, 1934

(Legislative day of Wednesday, Feb. 28, 1934)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

THE JOURNAL

On motion of Mr. ROBINSON of Arkansas, and by unanimous consent, the reading of the Journal for the calendar days Tuesday, March 6, and Wednesday, March 7, was dispensed with, and the Journal was approved.

CALL OF THE ROLL

Mr. McKELLAR. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Couzens	Kean	Robinson, Ark.
Ashurst	Cutting	Keyes	Robinson, Ind.
Austin	Davis	King	Russell
Bachman	Dickinson	La Follette	Schall
Bailey	Dieterich	Lewis	Sheppard
Bankhead	Dill	Logan	Shipstead
Barbour	Duffy	Lonergan	Steiwer
Barkley	Erickson	Long	Stephens
Black	Fess	McAdoo	Thomas, Okla.
Bone	Fletcher	McCarran	Thomas, Utah
Borah	Frazier	McKellar	Thompson
Brown	George	McNary	Townsend
Bulkley	Gibson	Metcalf	Trammell
Bulow	Glass	Murphy	Tydings
Byrd	Goldsborough	Neely	Vandenberg
Byrnes	Gore	Norris	Van Nuys
Capper	Hale	Nye	Wagner
Caraway	Harrison	O'Mahoney	Walcott
Carey	Hastings	Overton	Walsh
Clark	Hatch	Patterson	Wheeler
Connally	Hatfield	Pittman	White
Coolidge	Hayden	Pope	
Copeland	Hebert	Reed	
Costigan	Johnson	Reynolds	

Mr. LEWIS. I desire to announce that the Senator from South Carolina [Mr. SMITH] is unavoidably detained from the Senate, and that the Senator from Kansas [Mr. McGILL] is detained by a severe cold.

Mr. HEBERT. I desire to announce that the Senator from South Dakota [Mr. NORBECK] is necessarily absent from the Senate.

The VICE PRESIDENT. Ninety-three Senators have answered to their names. A quorum is present.

SUPPLEMENTAL ESTIMATES FOR DEPARTMENT OF JUSTICE (S.DOC. NO. 151)

The VICE PRESIDENT laid before the Senate a communication from the President of the United States, transmitting supplemental estimates of appropriations for the Department of Justice, fiscal year 1935, amounting to $193,900, which, with the accompanying papers, was referred to the Committee on Appropriations and ordered to be printed.

FIELD SERVICE POSITIONS IN FARM CREDIT ADMINISTRATION (S.DOC. NO. 150)

The VICE PRESIDENT laid before the Senate a letter from the Governor of the Farm Credit Administration, transmitting, in response to Senate Resolution 135 of the present session, a statement showing the number of all persons employed in the field service of that Administration in each salary grade, segregated by States, together with the names and addresses of all persons receiving in excess of $2,000 in each State, compiled as of January 31, 1934, which, with the accompanying statement, was ordered to lie on the table and to be printed.

COMPENSATION OF OFFICERS AND DIRECTORS OF CORPORATIONS

The VICE PRESIDENT laid before the Senate a letter from the Chairman of the Federal Trade Commission, which, with the accompanying papers, was referred to the Committee on Banking and Currency, and the letter was ordered to be printed in the RECORD, as follows:

FEDERAL TRADE COMMISSION,
Washington, March 6, 1934.

The PRESIDENT OF THE SENATE,
United States Senate, Washington, D.C.

DEAR SIR: In connection with the Commission's recent report to the Senate dealing with salaries and other compensation paid by certain corporations with securities listed on the New York Stock Exchange or the New York Curb Exchange, the Commission has received letters from the American Austin Car Co., Inc., and from Messrs. S. H. Vallance and Frank Bulkley, of which copies are hereto attached. There is also attached a copy of the Commission's replies to these letters.

In view of the representation made in these letters to the effect that the Commission's report to the Senate regarding "other compensation" paid by the American Austin Car Co., Inc., was erroneous, the Commission has directed that copies of the correspondence be forwarded to the Senate.

By direction of the Commission.

GARLAND S. FERGUSON, Jr., *Chairman.*

The VICE PRESIDENT also laid before the Senate a letter from the Chairman of the Federal Trade Commission, which, with the accompanying statement, was referred to the Committee on Banking and Currency and the letter was ordered to be printed in the RECORD, as follows:

FEDERAL TRADE COMMISSION,
Washington, March 7, 1934.

The PRESIDENT OF THE SENATE,
United States Senate, Washington, D.C.

DEAR SIR: In the Commission's recent report to the Senate dealing with salaries and other compensation paid by certain corporations with securities listed on the New York Stock Exchange or the New York Curb Exchange, the statement was made that the "General Refractories Co. sent in a schedule originally, but later wrote to the Commission to have this report returned to the company for revision. General Refractories Co. did not return the report in revised form, nor did it answer a further request for the report."

Upon the publication of this report the General Refractories Co. advised the Commission that it had sent in its report on January 15. In view of this the Commission advised the company that although its report had not been received, that if it would furnish a copy of its report immediately, the Commission would forward the information to the Senate with an appropriate explanation. There is enclosed herewith, therefore, the information as to the salaries paid by the General Refractories Co. to its executive officers and directors.

By direction of the Commission.

GARLAND S. FERGUSON, Jr., *Chairman.*

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate resolutions adopted by the Senate of the State of New Jersey favoring the passage of legislation abolishing the Federal gasoline sales tax, which were referred to the Committee on Finance.

(See resolutions printed in full when presented today by Mr. BARBOUR.)

The VICE PRESIDENT also laid before the Senate the following joint resolution of the Legislature of the State of Virginia, which was referred to the Committee on the Library:

Whereas it is the desire of the General Assembly of Virginia that the historic grounds and points of interest at Old Appomattox Courthouse be suitably marked, restored, and preserved; and

Whereas such can best be accomplished by establishing this area as a national park: Now, therefore, be it

Resolved by the senate (the house of delegates concurring), That the Congress of the United States be, and it is hereby, memorialized to establish a national park at the said historic spot embracing within its boundaries the points of interest and restoring thereon all buildings connected with the events which took place at and in the said area; and be it further

Resolved, That the clerk of the senate transmit a copy of this resolution to the President of the United States, the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to each Senator and Representative therein from the Commonwealth of Virginia.

Agreed to by the senate March 6, 1934.

O. V. HANGER,
Clerk of the Senate.

Agreed to by the house of delegates March 6, 1934.

JNO. W. WILLIAMS,
Clerk of the House of Delegates.

The VICE PRESIDENT also laid before the Senate a resolution adopted by members of the American League of Medical Freedom, assembled in mass meeting at Seattle, Wash., protesting against the passage of the so-called "Copeland-Tugwell pure food and drug bill", particularly on the alleged ground that "It will place in the hands of the Assistant Secretary of Agriculture despotic powers in matters of health and gives the person or persons ruled against by the said Secretary no recourse to the courts of the land", which was referred to the Committee on Commerce.

He also laid before the Senate a telegram from A. Tapani, secretary of Italian Local, No. 202, Amalgamated Clothing Workers of America, of Rochester, N.Y., endorsing the so-called "Wagner labor dispute bill" and the proposed child-labor constitutional amendment, which was referred to the Committee on Education and Labor.

He also laid before the Senate a resolution adopted by Lazarus Davis Lodge, No. 548, Independent Order of B'rith Abraham, of Dorchester, Mass., favoring the adoption of Senate Resolution 154 (submitted by Mr. TYDINGS), opposing alleged discriminations against Jews in Germany, which was referred to the Committee on Foreign Relations.

He also laid before the Senate a petition of sundry citizens of Chicago and vicinity, in the State of Illinois, favoring the passage of House bill 7483, providing a minimum wage for substitutes in the Postal Service, which was referred to the Committee on Post Offices and Post Roads.

He also laid before the Senate the petition of Felix F. von Wilmowsky, of New York City, N.Y., praying for legislative relief from certain alleged oppressive practices which under color of law are resorted to in the Patent Office, which, with the accompanying papers, was referred to the Committee on Patents.

He also laid before the Senate a resolution adopted by the municipal board of the city of Manila, P.I., favoring the passage of the so-called "King bill", granting full independence to the Philippine Islands, which was referred to the Committee on Territories and Insular Affairs.

Mr. GIBSON presented a petition of sundry citizens of Chester and Ludlow, in the State of Vermont, praying for the passage of House bill 7019, providing old-age compensation, which was referred to the Committee on Education and Labor.

Mr. ROBINSON of Arkansas presented a letter from Herman Dierks, Kansas City, Mo., relative to a provision in House bill 7835, the revenue bill, affecting the lumber industry, which was referred to the Committee on Finance.

Mr. TYDINGS presented resolutions adopted by LaFayette Lodge, No. 86, Independent Order of B'rith Abraham, of New York City, N.Y., favoring the passage of Senate Resolution 154 (submitted by Mr. TYDINGS), opposing alleged discriminations against Jews in Germany, which were referred to the Committee on Foreign Relations.

He also presented petitions of sundry citizens of Providence, R.I., and New York City, N.Y., praying for the passage of Senate Resolution 154 (submitted by Mr. TYDINGS), opposing alleged discriminations against Jews in Germany, which were referred to the Committee on Foreign Relations.

TAX ON GASOLINE

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in full in the RECORD and appropriately referred resolutions adopted by the Senate of the State of New Jersey on the subject of the gasoline tax.

There being no objection, the resolutions were referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

GASOLINE-TAX RESOLUTION

Whereas the Congress of the United States of America has imposed a tax upon all sales of gasoline; and

Whereas the State of New Jersey and all other States of the United States have already imposed taxes upon such sales; and

Whereas the Federal tax on such sales is untimely and prohibitive and, coupled with the respective State taxes on such sales, places a burden upon the users of gasoline beyond that which they should carry and beyond that which the traffic can legitimately bear; and

Whereas the taxation of sales of gasoline should properly be left to the exclusive use of the States as a means of providing funds for road construction and maintenance: Now, therefore, be it

Resolved, That the Congress of the United States be, and it is hereby, respectfully memorialized to enact with all convenient speed such legislation as may be necessary to abolish the Federal gasoline sales tax and to surrender to the States exclusively the power to tax such sales in the future; and be it further

Resolved, That a copy of this resolution be transmitted to the President of the United States, the Clerk of the House of Representatives, the Secretary of the United States Senate, and to each Member of Congress elected from the State of New Jersey, and that the latter be urged to use their best offices to procure the enactment of such legislation as will accomplish the purposes of this resolution.

FIDELITY INSURANCE FOR BANK EMPLOYEES

Mr. FRAZIER presented a telegram from W. C. MacFadden, secretary of the North Dakota Bankers' Association, which was referred to the Committee on Banking and Currency and ordered to be printed in the RECORD, as follows:

FARGO, N.DAK., *March 6, 1934.*

Hon. LYNN J. FRAZIER,
United States Senate, Washington, D.C.:

Putting banks of the country in hands of merciless fidelity insurance monopoly by passage of Senate bill 2849, would be terrific blow in increased expenses. Cost has been increased from four to twenty dollars per thousand with no such increase in dishonest bank employees. Defeat of bill should be overwhelming.

W. C. MACFADDEN,
Twenty-nine Years Secretary North Dakota Bankers' Association.

REPORTS OF COMMITTEES

Mr. BACHMAN, from the Committee on Military Affairs, to which was referred the bill (S. 610) for the relief of Thomas Salleng, reported it with amendments and submitted a report (No. 421) thereon.

He also, from the same committee, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 841. An act for the relief of Charles C. Floyd (Rept. No. 422); and

S. 2661. An act for the relief of Clayton M. Thomas (Rept. No. 423).

Mr. TOWNSEND, from the Committee on Claims, to which was referred the bill (S. 1857) for the relief of John L. Summers, disbursing clerk, Treasury Department, and for other purposes, reported it with amendments and submitted a report (No. 424) thereon.

He also, from the same committee, to which was referred the bill (H.R. 3780) for the relief of William Herod, reported it without amendment and submitted a report (No. 425) thereon.

Mr. CAPPER, from the Committee on Claims, to which was referred the bill (S. 2142) for the relief of Mrs. Charles L. Reed, reported it with amendments and submitted a report (No. 426) thereon.

He also, from the same committee, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 2342. An act for the relief of I. T. McRee (Rept. No. 427); and

S. 2627. An act for the relief of Arvin C. Sands (Rept. No. 428).

Mr. COOLIDGE, from the Committee on Claims, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

S. 1993. An act for the relief of the Lower Salem Commercial Bank, Lower Salem, Ohio (Rept. No. 429);

S. 2141. An act for the relief of Roy Lee Groseclose (Rept. No. 430);

S. 2373. An act for the relief of Isidor Greenspan (Rept. No. 431);

S. 2636. An act for the relief of James Slevin (Rept. No. 432);

S. 2798. An act for the relief of Nephew K. Clark (Rept. No. 433); and

S. 2807. An act for the relief of the Germania Catering Co., Inc. (Rept. No. 434).

Mr. LOGAN, from the Committee on Claims, to which were referred the following bills, reported them each with an amendment and submitted reports thereon:

S. 2558. An act for the relief of William J. Cocke (Rept. No. 436); and

S. 2879. An act for the relief of the Sanford & Brooks Co. (Rept. No. 437).

Mr. LOGAN also, from the Committee on Claims, to which was referred the bill (S. 411) for the relief of the International Manufacturers' Sales Co. of America, Inc., reported it with amendments and submitted a report (No. 438) thereon.

Mr. McKELLAR, from the Committee on Post Offices and Post Roads, to which was referred the bill (H.R. 7966) to authorize the Postmaster General to accept and use equipment, landing fields, men, and material of the War Department for carrying the mails by air, and for other purposes, reported it with an amendment.

Mr. HARRISON, from the Committee on Finance, to which was referred the bill (S. 2398) for the relief of Nancy Abbey Williams, reported it without amendment and submitted a report (No. 435) thereon.

Mr. NEELY, from the Committee on Interstate Commerce, to which was referred the bill (S. 2411) to amend the Emergency Railroad Transportation Act, 1933, reported it with an amendment and submitted a report (No. 439) thereon.

Mr. LONERGAN, from the Committee on Interstate Commerce, to which was referred the bill (S. 2897) to regulate interstate commerce by granting the consent of Congress to taxation by the several States of certain interstate sales, reported it with an amendment and submitted a report (No. 440) thereon.

ENROLLED BILLS PRESENTED

Mrs. CARAWAY, from the Committee on Enrolled Bills, reported that on the 7th instant that committee presented to the President of the United States the following enrolled bills:

S. 407. An act for the relief of Willie B. Cleverly;

S. 2277. An act to establish fish and game sanctuaries in the national forests;

S. 2461. An act to amend an act entitled "An act to give the Supreme Court of the United States authority to prescribe rules of practice and procedure with respect to proceedings in criminal cases after verdict"; and

S. 2529. An act to promote the conservation of wild life, fish, and game, and for other purposes.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. GIBSON:

A bill (S. 2983) for the relief of the United Marble Cos., Inc., Rutland, Vt.; to the Committee on Claims.

By Mr. LA FOLLETTE:

A bill (S. 2984) for the relief of Wayne Bert Watkins; to the Committee on Claims.

By Mr. DAVIS:

A bill (S. 2985) to permit radium to be accepted in payment of war debts due from Belgium, and to provide for the distribution of such radium; to the Committee on Finance.

By Mr. GEORGE:

A bill (S. 2986) granting an increase of pension to John P. Phillips; to the Committee on Pensions.

By Mr. McNARY:

A bill (S. 2987) to restore homestead rights in certain cases; and

A bill (S. 2988) to amend section 3 of the act of July 13, 1926 (44 Stat. 915), entitled "An act for the relief of certain counties in the States of Oregon and Washington, within whose boundaries the revested Oregon & California Railroad Co. grant lands are located"; to the Committee on Public Lands and Surveys.

By Mr. COPELAND:

A bill (S. 2989) to confer jurisdiction on the Court of Claims to hear and determine the claims arising from the use by the Postal Service of the United States of a combined postmarking and stamp-canceling device, generally known and referred to as the "Norton device or stamp", and more particularly described in United States letters patent issued to Marcus P. Norton, nos. 25036, 37175, and 38175; and to award compensation therefor; to the Committee on Claims.

By Mr. BANKHEAD:

A bill (S. 2990) for the relief of Mrs. Tonnie Smith Young; to the Committee on Claims.

By Mr. SHEPPARD:

A bill (S. 2991) to encourage civil aviation in the United States; to the Committee on Commerce.

By Mr. DILL (by request):

A bill (S. 2992) to amend paragraph (c) of section 5155 of the Revised Statutes, as amended, relative to the establishment of branches of national banks; to the Committee on Banking and Currency.

By Mr. WHEELER:

A bill (S. 2993) to promote the safety of employees and travelers upon railroads by compelling common carriers by railroad engaged in interstate and foreign commerce to man locomotives, trains, and other self-propelled engines or machines with competent employees, to provide the least number of men that may be employed on locomotives, trains, and other self-propelled engines or machines, to provide qualifications for certain employees, and providing a penalty for the violation thereof; to the Committee on Interstate Commerce.

By Mr. BACHMAN:

A bill (S. 2996) to authorize the attendance of the Marine Band at the United Confederate Veterans' 1934 Reunion at Chattanooga, Tenn.; to the Committee on Naval Affairs.

By Mr. CAREY:

A bill (S. 2997) authorizing loans by Federal land banks to incorporated associations and corporations in certain cases, and for other purposes; to the Committee on Banking and Currency.

By Mr. CUTTING:

A bill (S. 2998) for the economic development of the Mescalero Indians of New Mexico; to the Committee on Indian Affairs.

THE N.R.A. AND THE ANTITRUST LAWS

Mr. BORAH. Mr. President, I received a telegram this morning from Grand Island, Nebr., a portion of which I desire to read. I have received a number of telegrams and letters of the same nature. The telegram states:

> I am compelled to close March 17 what 6 months ago was a profitable service station gasoline business in Grand Island, Nebr. Evidently the big oil syndicates are in control. They have raised crude oil from 10 cents a barrel to a dollar. Gasoline at the refinery is three times what it was a year ago, thus giving the big syndicates plenty of money with which to fight the independent oil retailer. They are disregarding the code in Nebraska except the parts that help them. The officers of the big oil trusts have been appointed on the coordinating board. Locally the State manager of the Standard Oil is vice chairman of the State oil code committee. The representative of one of the big syndicates remarked that the oil retailers' fight in Nebraska was a fight to a finish, evidently expressing their intention to wipe out the independent oil dealer, which their present method will do. How long will the administration permit big oil trusts to totally disregard the code, disregard the State law, and disregard the right of a small man to exist? The new deal is putting me out of business. The Interior Department has dispatched two men within the last 60 days to Nebraska to investigate these conditions, both of whom have frankly admitted it was deplorable to see major companies literally wipe out independents.

I desire to say, in passing, that the Secretary of the Interior has endeavored to remedy these situations, but I am of the opinion that so long as the law remains as it is it will be impossible for the Secretary to accomplish what he seems to desire, and what I have no doubt he does desire, to protect small business and also protect the consumer. The telegram continues that these men from the Department stated that—

> They did not know what they could do about it. Thus, with Federal power they have raised crude and raised gasoline and used the profits to run me out of business. I am sending this telegram hoping that something may be done. * * *

Mr. President, one of the most important items in the oil industry which looks toward monopoly and enables the major companies to control the situation and to effectuate com-

plete monopoly is the fact that the pipe lines transmitting the oil are owned by the major companies, or some of them.

I ask leave to introduce two bills, which I trust will have the consideration of the Committee on Interstate Commerce, to which I ask that they be referred.

The VICE PRESIDENT. Without objection, the bills will be received and referred as requested.

The bill (S. 2994) to amend section 18 of chapter 1 of title 15 (Commerce and Trade) of the United States Code; and

The bill (S. 2995) to amend paragraph (8) of section 1 of the Interstate Commerce Act, as amended, were each read twice by their titles and referred to the Committee on Interstate Commerce.

Mr. LEWIS. Mr. President, may I inform the able Senator from Idaho that the Secretary of the Interior has lately offered a modification of the code because of the very complaint the Senator from Idaho makes, and has sent out an examining commission with a view of making a return to him of the facts on which he may justify a change in the code to meet the exact situation pointed out by the Senator from Idaho.

Mr. BORAH. I have no doubt of the intention of the Secretary of the Interior to bring about a change. I am very thoroughly convinced, however, that so long as the antitrust laws are suspended and so long as the pipe lines are owned by the major companies it will be impossible to accomplish what he desires.

AMENDMENT TO REVENUE BILL—MATCHES

Mr. WALSH. Mr. President, I ask leave to submit an amendment to House bill 7835, the revenue bill, which I request to have printed, printed in the RECORD, and referred to the Finance Committee, together with the accompanying letters and a statement.

There being no objection, the amendment was referred to the Committee on Finance, ordered to be printed, and, with the accompanying papers, to be printed in the RECORD, as follows:

Amendment intended to be proposed by Mr. WALSH to the bill (H.R. 7835) to provide revenue, equalize taxation, and for other purposes.

At the proper place in the bill to insert the following:

"SEC. —. (a) Section 612 of the Revenue Act of 1932, as amended (relating to tax on matches), is amended by adding before the period at the end thereof a comma and the following: 'And except that in the case of fancy matches and matches having a stained, dyed, or colored stick or stem, packed in boxes or in bulk, the tax shall be 5 cents per 1,000 matches.'

"(b) Section 612 of such act, as amended, is further amended by adding at the end thereof the following new paragraph:

"'There is hereby imposed upon cigarette and cigar lighters, and upon other devices used as substitutes for matches that can be used more than once, a tax equivalent to 25 percent of the price for which such lighters or devices are sold by the manufacturer, producer, or importer thereof.'"

CLEVELAND, OHIO, *February 15, 1934.*

Hon. DAVID I. WALSH,
Washington, D.C.

MY DEAR SENATOR: Regarding revenue bill H.R. 7835, now being considered by the House of Representatives, wish to advise the match industry of the United States would like very much to amend Revenue Act of 1932, section 612, Tax on Matches, by the addition of the following two paragraphs:

"There is hereby imposed upon fancy matches and on matches having a stained, dyed, or colored stick or stem, packed in boxes or in bulk, sold by the manufacturer, producer, or importer, a tax of 5 cents per thousand matches.

"There is hereby imposed upon lighters or on so-called 'matches' that can be used more than once, a tax equivalent to 25 percent of the price for which so sold."

We respectfully call your attention to the fact American match manufacturers are now paying 2 cents per thousand matches excise tax, which actually figures 25 percent of their net return from sales. As a very large volume of strike-on-box matches are being imported into this country (at the present time principally from Japan) paying a duty of 6 cents per gross, whereas the duty imposed by the Seventy-first Congress reads:

"PAR. 1516. Matches, friction or lucifer, of all descriptions, per gross of 144 boxes, containing not more than 100 matches per box, 20 cents per gross, etc., etc."

Later in the same paragraph it reads:

"Wax matches, wind matches, and all matches in books or folders or having a stained, dyed, or colored stick or stem" are dutiable at "40 percent ad valorem"—

was undoubtedly intended by Congress to be a higher rate than 20 cents per gross, yet matches with "colored" stems, otherwise identical to all other safety matches, are appraised on a basis of 15 cents per gross and 40 percent of this value is only 6 cents per gross instead of 20 cents per gross.

Through the evasion of the 20-cent duty by coloring the stems the customs revenue lost approximately one half million dollars in 1933, and the American match industry did not get the protection intended by Congress.

As the American match manufacturers pay 25 percent of their net return from sales in excise, we feel on lighters "25 percent of the price for which so sold" is but fair and equitable.

We estimate the adding of these two paragraphs to revenue bill H.R. 7835 under title 4 of Excise Taxes will yield revenue of at least $1,000,000 per year.

We respectfully urge your giving this matter careful consideration, as we consider it will stop a "leak" in the existing statutes, give the match industry the benefits intended by Congress, and provide appreciable revenue.

Very truly yours,

COLUMBIA MATCH CO.,
J. H. WEAVER, *President.*

SPRINGFIELD, MASS., *March 3, 1934.*

Hon. DAVID I. WALSH,
United States Senator,
Senate Office Building, Washington, D.C.

DEAR SENATOR WALSH: We are very glad to learn that you are interested in an amendment to the tax bill now before the Senate Finance Committee that will increase the tax on fancy matches and matches having a stained, dyed, or colored stick or stem from 2 cents per thousand to 5 cents per thousand, and that will impose a tax on cigar and cigarette lighters and other similar substitutes for matches, and so make it possible for the wood match with a plain stick, which is already taxed, to compete fairly with the colored stick match and the automatic lighters.

This support that you are giving is very much appreciated by this company and by all of its employees in the State of Massachusetts. It has seemed unfair to us that our matches should be taxed and articles that are used as substitutes which decrease employment in this factory should remain untaxed.

We earnestly request that you do everything possible, therefore, to have this amendment adopted.

Assuring you of our continued support,

Sincerely yours,

THE DIAMOND MATCH CO.,
T. J. REYNOLDS, *Vice President.*

THE MATCH INSTITUTE,
New York City, February 24, 1934.

To Members:

EXCISE TAX STATISTICS

The report just released by the Treasury Department shows that $264,959.26 was collected in excise taxes during January 1934 on match sales in December 1933, as compared with $313,411.01 collected on November sales and $247,130.52 collected on December 1932 sales.

Following are the collections since January 1:

Tax collections, 1933

On December sales	$264,959.26
On November sales	313,411.01
On October sales	362,170.60
On September sales	1,406,125.73
On August sales	374,919.91
On July sales	906,591.30
On June sales	1,262,149.36
On May sales	555,724.15
On April sales	427,990.88
On March sales	310,799.74
On February sales	257,604.08
On January sales	400,285.85

Since the beginning of the year the total taxes collected on matches amount to $6,842,731.87, or an average of $570,227.66 per month.

E. O. MERCHANT.

BANKRUPTCY AND RECEIVERSHIP PROCEEDINGS—EXPENSES OF SPECIAL COMMITTEE

Mr. ASHURST, Mr. MCADOO, Mr. VAN NUYS, Mr. HEBERT, and Mr. AUSTIN submitted the following resolution (S.Res. 203), which was referred to the Committee on the Judiciary:

Resolved, That the special committee authorized and directed by Senate Resolution 78 on June 13, 1933, to investigate the administration of receivership and bankruptcy proceedings in the courts of the United States, is hereby authorized to expend in furtherance of such purposes the sum of $20,000 in addition to the amount heretofore authorized and expended.

PROCEEDINGS OF THE CONVENTION OF AMERICAN INSTRUCTORS OF THE DEAF

Mr. HAYDEN. Mr. President, I present and ask to have referred to the Committee on Printing, with a view to having the matter printed as a public document, the proceedings of the twenty-seventh meeting of the convention of American Instructors of the Deaf.

The VICE PRESIDENT. Without objection, the matter will be so referred.

THE ADMINISTRATION'S SUGAR BILL—ADDRESS BY SENATOR COSTIGAN

Mr. NORRIS. Mr. President, on the 6th day of March the Senator from Colorado [Mr. COSTIGAN] delivered a speech over the radio on the administration's sugar bill. I ask unanimous consent that that speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

There is recent evidence that sugar is not so much a food as an explosive. Its innocent whiteness is deceptive. As with gold, into which it is ordinarily convertible, men who pursue its lure often lose their sense of proportion. Lavishly appealing to gamblers, sugar has made fortunes for the few and ignored the well-being of the many. Some of its beneficiaries draw large salaries or reap the rich harvests of speculation but bitterly resist its possibilites of distributed prosperity. They seem to hold that their advantages can only be preserved by slander and the use of an occasional newspaper to throw the dust of falsehood into the eyes of the unsuspecting. Such faithlessness to the public is deplorable but not fatal. It recoils on the accusers. The issues are so vital that in the long run no libel, however large, no newspaper, however morally small, can escape discovery, for truth is mighty and will prevail.

ADMINISTRATION'S SUGAR BILL

On Lincoln's Birthday there was introduced in Congress a much misrepresented bill which is part of President Roosevelt's farm-improvement program. It directly aims at the betterment of farm conditions and earnings for American sugar growers. The bill (S. 2732) has three special aims. First, it seeks to add sugar beets and sugar cane to the other basic commodities, such as wheat, cotton, and corn, and, so doing, looks to the combination of a more moderate tariff—measured by differences in production costs here and abroad, approved by the Tariff Commission—with benefit payments or bounties to sugar growers. This means on the side of farm earnings, if the bill passes, that sugar farmers will receive the pre-war fair exchange value of sugar beets. If the bill were now a law, last year's beets and cane would be giving growers an average of more than $1 per ton above the growers' final price received for the average of all beets and cane under factory contracts. Second, the bill provides that bounty payments are to be raised, without any increase in sugar cost to consumers, out of the proceeds of a processing tax on refined sugar exactly matching in amount the tariff reduction. Third, the bill provides a stabilization limitation on tonnage production in the different sugar areas of the continental United States, our island possessions, and shipments to the United States from Cuba.

QUOTA RESTRICTIONS AND THE 1933 STABILIZATION PLAN

The program for stabilizing continental and world sugar prices by quota restrictions and agreements is one which has grown in favor among sugar producers—both growers and factories—in recent years. A world-wide restrictive effort is known as the "Chadbourne plan". Experts believe that plan has failed until now to stabilize world prices, chiefly because the United States and its island possessions have not been included. Only last fall my hearers will remember that our domestic sugar interests, including beet and cane growers, were willing, by a voluntary stabilization agreement under the Roosevelt Farm Act, to limit production both here and abroad, and strenuously urged the Secretary of Agriculture to give their plan official approval. This, he then refused to do for reasons publicly stated, among which was his conviction that the agreement did not sufficiently protect sugar growers. Under that plan, our domestic growers were willing, with allowances for normal increases in consumption, to abide by a limitation of 1,100,000 short tons of Philippine imports; 1,700,000 for Cuban imports, and to impose a limitation on themselves of 1,750,000 short tons. The main and proper purpose, of course, was to improve and stabilize sugar prices by preventing excessive production which depresses those prices in the market. It is nevertheless an admission of the wisdom of setting limits even to domestic production.

One recent farm witness before the Senate Finance Committee declared he would submit, but would not accept, a domestic quota imposed by law. When pressed, he emphatically said that he was standing by a principle, but would rather have the administration's bill than no bill at all. In fairness, it should be noted that people will, of course, differ over what constitute proper quotas, and friends of sugar growers in Washington are unitedly urging the largest just quotas for domestic producers which public action can secure. It must, however, be remembered that most legislation in the end is the result of a fusion of different views and demands of legislators, and I submit as sound that any temporary experiment with quotas, which is to be tried under the present bill, involves no fundamental issue of principle.

OBJECTIONS TO DOMESTIC QUOTA

The chief objection of some spokesmen for domestic sugar-beet growers springs from the fact that the 1933–34 crop of sugar beets resulted—in part through abnormal business and unemployment conditions—in the production of 1,756,000 short tons of beet sugar and the domestic beet quota specified in the administration's bill is 1,450,000 short tons. Domestic interests urge that our domestic quota is less than this year's production and Cuba's is more, whether or not for international reasons stressed by the State Department. Some domestic producers oppose any domestic limitation short of this year's production, even though that may result in excessive sugar supplies. It should, of course, be said that the domestic figure the administration inserted in the bill, while less than this year's unusual output, is higher than any figure for domestic beet-sugar consumption in the previous history of our industry. The highest preceding domestic consumption was from beets produced in 1932 and marketed in 1933, namely, 1,372,703 short tons. All other preceding years showed lower domestic consumption. The question remains, and is being earnestly debated in Washington at this hour—what is the largest limitation on domestic production which may be guaranteed in the law, without upsetting the total program of stabilization of prices and farmers' earnings? It is not only a proper subject for debate but calls for expert advice, having in view both American and world sugar production and their combined effect on sugar prices in relation to the world market. It is still hoped by domestic representatives that a larger domestic quota will finally be written into the bill. Undoubtedly, too, there will be provisions for a suitable domestic share of any expected or unexpected increase in domestic consumption.

Farmers who believe in growing sugar beets without restriction will, no doubt, continue to object to any curtailment whatever of production. There are also persons interested in lands suited to sugar production acquired for speculative purposes who will similarly protest. However, farmers, who have thoroughly considered the disastrous results on prices of unlimited sugar supplies under world conditions, will not fail to grasp that their interests will be best served by orderly and centralized joint action and control of sugar production and marketing. In this connection, it should be mentioned that, if the present bill becomes law, its passage will doubtless be promptly followed by a helpful marketing agreement.

MODERATE TARIFFS AND BOUNTIES

The combination of a more moderate sugar tariff with bounty payments is a far sounder treatment of the sugar problem than the persistent policy of ever higher tariffs, which has led our domestic industry to the verge of ruin. Warnings have been sounded for years against the fatal flaws in our old sugar-tariff policy. As recently as 1930 ex-Senator Thomas, of Colorado, at that time said to be an attorney for the Great Western Sugar Co., declared that the Smoot-Hawley tariff bill, to quote his words, "dooms the sugar-beet industry to certain extinction." There is a familiar ring about that prophecy, which was then properly laid at the Republican door and today is mistakenly laid at the Democratic. Senator Thomas' statement was not far-fetched. Under Republican tariff policies we have long paid a huge tariff bounty—$40 per ton—to sugar producers in our island possessions. This has greatly increased Puerto Rican, Hawaiian, and particularly Philippine production at the expense of world prices and to the disadvantage of domestic sugar growers. Sugar from these islands enters the United States duty free. In contrast, Cuba, a foreign country, pays on sugar coming here the tariff of $40 per ton. Our present domestic sugar production, therefore, is much less threatened by Cuba than by the Philippines' output, which for years has been increasing by leaps and bounds. In 1933, for example, the United States consumed almost three times as much Philippine sugar—1,247,000 tons to be exact, and this year it will be more—and only half as much Cuban sugar as we consumed from these islands 9 years ago, in 1925. Indeed, it is this tariff-stimulated switch from Cuba to the Philippines which has thrown Cuba—which since our War with Spain has been under our guardianship—into the agonies of starvation and revolution and brought us in recent months to the brink of another costly military intervention.

A WISER SUGAR POLICY

Because of these effects of our tariff policies on sugar producers, some of us have long urged a new tariff policy, reducing through a lower tariff, the stimulus to excessive Philippine and other island production, and safeguarding domestic growers through a bounty. This substitute and wiser method receives administration and other expert approval in the pending bill. However novel the proposal in some parts of the country, it is not new to experts or to the splendid Colorado sugar-producing areas I know best. In 1930 the advantage of combining moderate sugar tariffs and bounties was definitely submitted for many weeks to discussion and debate before sugar growers and other farmers of that famous sugar region. The election result was a mandate in which beet growers joined other citizens in favor of these key features of President Roosevelt's bill. I am, therefore, merely repeating when I say—backed by long official experience on the Tariff Commission—that the pending bill is the most constructive tariff effort to save and promote our domestic sugar industry in the history of this country. It is the Rooseveltian new deal experimentally applied to sugar. This new approach to an old problem is so well worth trying that growers can afford for the time being to be less worried about some details. It represents an immense advance over out-worn methods. Secretary of Agriculture Wallace was amazed that sugar producers have not enthusiastically seized this opportunity to lift sugar out of politics, provide reasonable and stable production and prices, and assure sugar growers under any and all circumstances at least living earnings from beets by receiving under the law their fair exchange value. Having his attention drawn to a loose, and in part foolish, hypothetical discus-

sion by a previous witness, Secretary Wallace, whose intelligence and uprightness are beyond question, declared in substance that he will administer the law so as to safeguard the industry. He insisted, as anyone who understands it knows, that the bill looks to the relief of beet growers and he denies that it contemplates in any respect the elimination or retirement of the sugar industry.

TARIFF REDUCTION THROUGH THE TARIFF COMMISSION

Sugar farmers naturally want to know the effect of the administration bill on farm crops and earnings from sugar. However, one important fact must first be mentioned. A tariff commission—which is still Republican, because its membership has not yet been changed—working under the provisions of the tariff law of 1930, passed by a Republican Congress and approved by President Hoover, has very recently unanimously recommended to President Roosevelt a half cent per pound reduction in the tariff on sugar. When we talk of restricting sugar production, therefore, it should be remembered that if President Roosevelt acts on the Tariff Commission's recommendation, without doing anything else, the result may be a disorganized market, with reduced prices for sugar and sugar growers, which in the end will impose some practical restrictions on production. Tariff experts calculate that such reduced prices, unless something is done to offset them, may for a time diminish returns to beet farmers 75 cents or more per ton of beets. Fortunately the needed offsetting factor is found in President Roosevelt's bill. The President has shown his friendliness to domestic growers by making clear that, before he acts under the law and proclaims the Tariff Commission's recommended reduction, he is willing, through the present bill, to save farmers from such reduced prices by imposing under the present bill a processing tax equal to the reduction approved by the Tariff Commission. That would leave the domestic price level unchanged, and out of the processing taxes the growers would be paid their bounties, as was done in the case of wheat growers.

SUGAR GROWERS' BENEFITS

If this bill had been law during the last few months, our farmers, who expect to receive an average of about $5.30 per ton for last year's beets, would instead be now assured of receiving on this cash crop an average of something like $6.45 per ton. Every farmer can do his own calculating with this figure as his starting point. Under the bill payments will be made on the basis of the fair exchange value of beets and cane, thus making a figure changing with changing living costs, but always assuring purchasing power for articles farmers buy equal to the purchasing power of beets and cane in the 5-year period from August 1909 to July 1914.

Bearing in mind that increasing tariffs on sugar during the last 10 years have brought decreasing, not increasing, returns to beet growers, the significance of the offer of pre-war fair exchange value to sugar farmers is plain. Farmers in times past have assumed that if they obtained higher prices in dollars per ton by bargains with factories at the planting season, their problems would be solved. They have, therefore, accepted contracts with factories making some or all of the returns from beets dependent on the price of sugar, then waited for that price to rise. However, even when the price of sugar goes up, the price of other commodities also usually rises to the general price level. The net result at the end of a crop year with rising prices is often no better and sometimes worse than when prices remain unchanged. For example, in 1927, when farmers received as much as $7.67 per ton for beets, the highest figure in the 1925–33 period, the average prices of articles farmers buy had advanced 50 percent above the pre-war level, so that beet farmers were actually no better off with $7.67 per ton than in the pre-war period with an average price of $5.67 per ton.

Since 1920, except in the year 1923, farmers have not received the fair-exchange value for their sugar-beet crops which is assured to them by the administration's bill. In fact, the bill now before Congress has been expressly drawn to remedy this situation and aid beet and cane growers. The funds and machinery are provided for giving growers fair-exchange value for their crops. This means that as prices of articles that farmers buy increase, the beet and cane prices per ton to growers will increase. Surely this is more valuable to farmers than to rely on possible price increases for sugar which may never materialize. In other words, under the bill, the grower, even if the price of sugar goes down, has a Government price guaranty, and, of course, if prices of sugar under his company contract go up and entitle him to more, he then gets more under his contract.

Expert analysis of the bill, applied to individual growers, also shows that under the administration's plan, total receipts for beets produced on the proposed restricted acreage should exceed the total received under present conditions under a larger unrestricted acreage. If, on the other hand, the bill does not become law, and sugar prices decline in an unstabilized market, growers will receive substantially less per acre for beets than would be received under the pending bill if adopted. With reference to the proposed restriction in acreage, two facts should be borne in mind. One is that there will be less expense on the smaller acreage. The other is that the unused acres can, if the farmer likes, be devoted to the production of any other crops than those termed "basic" under the Agricultural Adjustment Act.

SURPLUS PRODUCTION

It should be added that the administration has in view plans for taking care of excess sugar supplies now available from the various producing areas supplying the United States market and that its plans look in the direction either of the distribution of such supplies over a considerable period, or the removal of all or part of such supplies from the market, without damaging market prices.

FUTURE OF INDUSTRY

Complaints have been made that such restrictions on domestic production will ruin the industry. Naturally representatives of sugar-producing regions have earnestly urged the largest possible domestic production consistent with reasonable sugar prices and farm earnings. It must be pointed out that the industry was not ruined year before last when production was about equal to the limitations proposed in the administration's bill. Indeed the industry, both factories and growers, received better returns and were generally more prosperous in years when production was considerably below the level now suggested by the administration.

EXPORT MARKETS

Our sugar-producing farmer ought also to bear in mind that great numbers of American farmers in other States, such as wheat growers and hog raisers, have their separate problems and interests. The pending bill offers to such other farmers an opportunity to increase some of their export markets for agricultural commodities for which there is now a domestic surplus. In 1928 it was estimated that 1,738,000 acres were required to grow the exports, such as lard and wheat flour, we then sent to Cuba, while in 1932 only 921,000 American acres were required for that purpose. Restoration of the Cuban market for more than 800,000 acres of American exports to the 1928 level is, therefore, sought by other American farmers. To sugar-raising States, of course, sugar production comes first, but other States have their representatives in Congress and are also making their appeals for consideration.

CONCLUSION

In conclusion, although I introduced the present measure in the Senate for the administration and am convinced that its program, which permits reasonable amendments, is highly constructive and important, I have no wish to force on American sugar growers this legislation if they really oppose it, however much I believe it will help them. So far, however, the messages I have received lead me to conclude that the bulk of sugar farmers who know what is in the bill strongly favor the legislation.

While, of course, wanting the largest practicable quota for domestic sugar growers, I declare with confidence that the administration's bill is so meritorious in substance and plans that most of the opposition proceeds either from lobbyists for powerful special interests or from those who favor some other less helpful plan which will not protect the growers if Congress fails to legislate. With many informed men in Washington, who are publicly criticizing and privately praising this bill, it is time for the growers to make their own decision. The impending probable change in the sugar tariff immensely strengthens the argument for the bill. For one, I am satisfied that sugar growers, made more than ever alert by our long depression, will not, in line with one of Aesop's Fables, throw away the substance of farm help to plunge after the shadow of a long-discredited tariff policy. If the bill becomes law, American sugar growers should rejoice that 1934 saw a leader in the White House of sufficient vision and courage to move experimentally toward a long delayed but necessary new deal for the sugar industry.

UNEMPLOYMENT AND RELIEF—ARTICLE BY FRANK R. KENT

Mr. FESS. Mr. President, on last Monday I attempted to analyze the report of the Labor Department on unemployment. This morning there appears an article in the Baltimore Sun touching the question of unemployment and relief. It is a good-tempered article, one of the best I have read. It is written by Mr. Frank R. Kent. I believe everyone would like to read it, and I ask unanimous consent to have it printed in the RECORD.

There being no objection, the article was ordered to be inserted in the RECORD, as follows:

[From the Baltimore Sun, Mar. 8, 1934]

THE GREAT GAME OF POLITICS—THE BOTTOM PROBLEM

By Frank R. Kent

WASHINGTON, *March 7.*

The seriousness of the situation that now confronts the administration is appreciated by the more thoughtful men within it. It has not, however, been plainly stated by any spokesman.

Heads of the various new deal agencies, each immersed in his own experiment, have no chance to grasp it. Only those can who try to see the thing as a whole. It is no exaggeration to say these are worried. There is a division of opinion as to how to deal with the problem publicly. On the one hand there is the necessity of sustaining popular optimism with the illusion of success; on the other is urgent need of driving home the fact that the crisis is acute. It is not easy to make the choice. One way involves glossing over the facts; the other means unpleasant admissions.

The truth is the Federal relief projects show signs of getting beyond control. In another year, unless means of lessening the burden are found, they will be. As Mr. Hopkins, some weeks ago, said of C.W.A., "We have the bull by the tail and can not let go." This is what is back of the tremendous N.R.A. drive to compel industry to employ more men, to shorten hours, and spread

work. It is back of the demand for complete tariff control for the President, and the determination to prevent additional appropriations for veterans. Behind the whole looms the fact that the Federal Government, in cooperation with the States, is today supporting with public funds millions of men and women. This is the basic administration problem. If support is withdrawn, the condition might be chaotic. Under present conditions the Government dares not do that. This was shown when the President announced a new relief plan as a substitute for the C.W.A., which is exactly the same thing, except in name.

If the Government stops, millions will be without means of subsistence. If it continues, in the judgment of one highly placed man, it will break both the Federal Government and the States. It is enough to cause concern. No one has exact figures, but in every State thousands of families are on the Government pay rolls. The total runs high into the millions and the funds, partly Federal and partly State—except in one or two cases where the States have refused to do anything and the Government does it all—represent a huge total. Many of these people are actually in need, but no small proportion prefers to live this way than to work. Many never expect to work again. Many get more pay than they could by working either for business or on farms.

In addition, the machine to handle and distribute the cash is big, elaborate, and expensive. In every State there is a large central salaried organization headed by a Federal director. In every county of every State there is a similar organization in miniature. There has been no tabulation of the number thus employed or the cost, but no one denies the overhead is great. The President says the Government cannot be expected to keep this up indefinitely. It not only cannot be expected to keep it up—it can not keep it up. More than anything else it is the item responsible for the great increase in national deficit and debt. Within the past year it has forced every State to plunge deeper in the hole. In Maryland last year it was necessary to increase the State debt by twelve millions—nearly 50 percent. This year to get its share of Federal funds an equally great increase will be essential. Thus in 2 years the State debt will have been doubled. Maryland is merely a typical State. If there is indefinite continuation, the end of this is clear. It means, say those who grasp the facts, either chaos or paper inflation. When the Treasury is finally drained, the Government will have to print the money.

The real problem is the relief problem. There seems no sense in not plainly stating it. It is at the bottom of everything, and it has to be solved if we are to keep solvent. Unless it is, the whole new deal is doomed. The President knows this and so do his better-class advisers. The hope lies in a business recovery by the end of the year far greater than today.

THE STIMSON DOCTRINE AND ECONOMIC CONDITIONS

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial in the Nation of March 7, 1934, entitled "Retreat from Stimson." The desire for peace which has permeated our entire Nation has led us to think of other nations as we think of ourselves. Idealism has its place and must be maintained; however, we must not be blind to conditions as they are in the world today. We do not desire war, but if war should come, what shall we say of ourselves and the lack of preparation which is everywhere manifest among us? We need deceive ourselves no longer. A distinguished religious leader told me that in his opinion there are not more than two chancelleries in the world which can be counted upon to uphold the principles of the Prince of Peace. If war should come, economic demands would be made upon us which we would be unprepared to meet. These demands would come whether we maintained neutrality or not. The economic program which calls for curtailed production has no justification in either peace or war, but it certainly will show at its worst disadvantage when the flames of war begin to consume all and more than the warring nations can produce. War leads to devastation, famine, and want. War orphans, war widows, and hungry civilian populations will then cry out for aid and we shall be unprepared to meet their needs. The wisdom of Joseph, who realized that inevitably years of plenty are followed by years of want, is just as true as ever. In the interests of our national well-being and of the impending world crisis every dictate of high idealism and common sense unite to demand that we now prepare in every possible way to meet the emergency which lies ahead. I also ask unanimous consent to have inserted at this point in my remarks an editorial from the Irish World entitled "Armageddon."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Nation, Mar. 7, 1934]

RETREAT FROM STIMSON

Washington dispatches indicate that President Roosevelt is thinking of modifying the Stimson doctrine. Such modification would inevitably result in American recognition of the Japanese state of Manchukuo. These reports have met with no denial either from the White House or from the State Department. Nevertheless, we find it hard to believe that the President is seriously contemplating a retreat from the Stimson doctrine, or if he is, that he has really weighed the consequences of such action.

When Japan by its conquest of Manchuria set the civilized world at defiance and brazenly violated its obligations under the League Covenant, the Kellogg Pact, and the nine-power treaty, the United States could have followed any one of several courses. It could have attempted to enforce the treaties to which it is a party by the employment of force in the form of a blockade or by direct intervention, either independently or in concert with the other parties to these treaties. Or it could, jointly with the other powers, have applied economic sanctions, thus depriving Japan of the materials it needed to carry on its campaign of aggression. On the other hand, it could have sat back and done nothing, allowing the Japanese to go their way without restraint.

Instead of any of these the United States chose a middle course. It elected to rely upon moral suasion as a means of obtaining enforcement of and respect for the peace treaties. Under the Stimson doctrine it refused to recognize any territorial gains or other changes resulting from military aggression or from violation of international agreements. This doctrine was immediately adopted by the entire membership of the League of Nations except Japan and Siam. As an integral part of the doctrine it was agreed that recognition should be withheld from Manchukuo. Thus the moral weight of the whole world was thrown against Japan and its conquest of Manchuria.

That this policy was having the desired effect may be seen from the extraordinary efforts the Japanese have been making to break through the solid diplomatic blockade of Manchukuo. They have not even been above attempting to trick the Western Powers into recognizing Manchukuo. They have labored hard and long to build up the pretense of an independent state in Manchuria, going so far as to lift the pitiable Manchu prince, Pu-yi, out of obscurity to set him upon a new "imperial" throne. They have endeavored to win French recognition by promising French capital a share in the economic exploitation of Manchuria, and German recognition by dangling attractive trade opportunities before the hard-pressed Hitler regime. While these efforts are mainly significant because they betray the anxiety the Japanese have felt in consequence of the world's moral condemnation of their aggression, it now appears that the Japanese maneuvers may soon succeed in breaking through the united front of the powers. French capitalists are reported ready to extend long-term credits to the South Manchuria Railway, while the German Government is said to be on the verge of recognizing Manchukuo.

If one country abandons the Stimson doctrine in the hope of gaining commercial or other economic advantage, every other power will be sure to follow. This will mean a reversal of the League's policy, though the reversal may not be formally proclaimed; and it has been indicated in Washington that if the League changes its stand the United States will do likewise. Even from a purely selfish point of view such action on the part of the powers would be foolish, for Japanese Government and private-monopoly interests have already grabbed virtually everything of consequence in Manchuria. Moreover, if reports from Moscow are true—and these reports can readily be confirmed by the American Military Intelligence Service in the Far East—the Japanese are developing Manchuria largely with a view to using it as a military base for an invasion of Siberia. American recognition of Manchukuo would then be equivalent to giving American support to preparations for another Japanese war of aggression. In brief, we should be endangering the purposes of our recent rapprochement with the Soviet Union. But recognition of Manchukuo would be more than foolish, and in its implications it would go far beyond any bearing it might have on our relations with Moscow. It would mean the abandonment of a moral principle for the sake of political or commercial gain. It would place a heavy premium on treaty violations. It would, in fact, place the United States in the role of treaty breaker, at least in spirit, since recognition of the booty State of Manchukuo would constitute open and unashamed approval of the Japanese rape of Manchuria in defiance of all Japan's international obligations.

[From the Irish World, Mar. 3, 1934]

ARMAGEDDON

When careful and impartial observers the world over are predicting the outbreak of a new world war, and when a priest of the Catholic Church endorses such a prediction, it is time for those who believe in peace to be prepared to maintain it.

Preaching recently in St. Patrick's Cathedral, New York City, Rev. Father Joseph C. Fleming made this significant remark:

"Whether we know it or not, the battle lines are forming for Armageddon, and the most disheartening reflection at the moment is the world's indifference to this tremendous fact."

Not only are militaristic powers urging on the war lords to renewed battle, but there are subsurface movements gathering mo-

mentum which threaten the overthrow of all ordered government everywhere.

So far as this latter aspect of the situation is concerned, few will deny that misgovernment has done more than anything else to encourage these subversive elements. They can be seen in action the world over. Here in the United States we have escaped, at least to some extent, the penalty for this state of affairs, not because there was no abuse of governmental power here but because there is in Washington at this time a man of the people resolved to rid us of the parasites who have fattened on the wealth created by the people.

For years the Irish World has opposed with all the force at its command not only the abuse of riches but the unjust accumulation of riches. Today a similar protest is being voiced in many quarters, on the radio, and in the pulpit. There has come to be a realization of the fact that something is radically wrong with a system which permits thousands, nay, millions, to starve in destitution while a few possess many times more money than they will ever be able to use.

We protested against people suffering from lack of food and clothing in a country which produced a surplus of food and clothing. Today that protest is being sounded all over the Nation. The only difference is that our protest was voiced at a time when the racketeers and the profiteers were in power; it has become more popular today when those at the head of the Government are leading an assault upon these forces of evil.

Not merely 2, 5, and 10 years ago, but 40, 50, and 60 years ago the Irish World—as its files show—took a determined stand against those who took the profits of the workers and used them for their own enrichment while the worker himself and his family seldom escaped from the shadow of starvation and destitution.

The advent of a new deal in our National Government has given rise to the hope that these abuses will be corrected here and those responsible for them will receive the punishment they have so richly earned. It is too much to hope that everything can be accomplished in a year or two, but the fact that the situation has been recognized and faced and that the general cleaning out of these parasites has commenced has had a great deal to do with the present tranquillity of this country. The people believe in Roosevelt and in the Roosevelt policies. They are giving him a full and generous measure of support. They refuse to listen to the critics who try to tell them that Roosevelt is all wrong, not because they reject criticism but because the critics have no alternative to offer that does not ultimately lead back to the selfsame system which brought about the wide-spread wreck and ruin which we call the depression.

In other nations we see riots and bloodshed as oppressed people rebel against tyranny. We must look further than the newspaper reports to know why these things are. We are told that Socialists revolted in Vienna; that they were quelled by anti-Nazi organizations. These are probably facts, but why are people attracted to socialism, to Nazi and Fascist doctrines? Is it not because they are the victims of social oppression? Where this oppression does not exist, or where efforts are being made to change the system which brought it into being, these elements obtain little or no support from the mass of the people. The people of Paris rebelled against abuse, corruption, and gross fraud; not against their system of government but against the acts of those in that government.

On the other side of the question we see so-called "statesmen" striving deliberately to bring about another deluge of blood. How few and how puny are the efforts being made to create friendship between nations; how many are working to stir up enmity! In central Europe, at the present time, there are men who make no secret of their intention to start another war if the opportunity is afforded them. The Governments of France, England, Italy, and Germany are kept in leash chiefly because of lack of money with which to purchase munitions. Plot and counterplot, intrigue and trickery, are characteristic of the chancelleries of Europe today; more, are their chief occupation. Russia rattles the saber; Japan snarls. And the greatest country of them all, the one with the least warlike intentions, the one that is creditor to the world, scraps its fleet, reduces its army, and invites a warring world to come and take it.

The world situation today, viewed dispassionately, is loaded with dynamite.

It may be that armageddon approaches. If such be the case, it is evident that the one nation capable of saving what remains of our civilization is this Republic of the West. Here, at least, let us be strong enough to keep out of war; let us do all that lies in our power to prevent war by having the strength to render a decisive "no."

The future of humanity may yet rest upon the shoulders of those who govern this country.

EDUCATION AND PREVENTION OF CRIME—ADDRESS BY SENATOR COPELAND

Mr. BYRNES. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject "Education and the Prevention of Crime", delivered by the senior Senator from New York [Mr. COPELAND] before the National Education Association, department of superintendence, Cleveland, Ohio, convention, on February 28, 1934.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Any Member of the United States Senate would be flattered by an invitation to speak to this group. I say this because the National Education Association is representative of what in many respects is the most important profession practiced by men and women.

We have chosen in America to turn over to the school teachers not only those duties which are naturally theirs, but also many of the functions which should be performed in the home. We have come to expect the teacher to instruct our children in manners, personal hygiene, social etiquette, and the household arts. We expect the teacher to give by precept and example that moral and ethical training which in other times was imparted by the home and the church.

At this moment I have no desire to challenge the fundamental wisdom of this, our almost universal custom. It is mentioned merely to prepare the way for certain comments which will follow.

Before entering upon that discussion, let me pay a brief tribute to the teacher. I regard that public servant as the most potent factor in the training of our children in honesty, worthy ambition, self-control, and substantial preparation for merited success in the battle of life.

It happens many times that the influence of an inspiring teacher has neutralized evil tendencies which environment has imposed upon unfortunate children. No thoughtful person who analyzes his own mind can fail to find reason for gratitude to this or that teacher for the rich contribution of noble thoughts and desires planted there during school days.

The teacher is the most self-sacrificing, hard-working, and poorly paid individual of all those included in the schedule of public servants. That is my honest conviction and one I have held for many years.

Certain recent experiences of my own have given me a growing belief that America must lean still more heavily upon the school teacher. As chairman of a committee appointed by the United States Senate to investigate crime, it has been my duty to listen to the testimony of hundreds of witnesses. What we have learned centers upon one point—the necessity of preventing juvenile delinquency. To accomplish this the schools can do more than all other agencies within public control.

The importance of what I shall have to say to you is emphasized by the statistics of crime. In the United States today the average age of the criminal is 23 years. The largest age group is found at 19 and the next largest group at 18. The seeds of moral delinquency sown and grown during school age develop into evil plants, the fruits of which are publicly displayed by boys and girls long before maturity of their minds and bodies.

In saying these things to this particular group I am not unmindful that the members of your association have long been concerned over the problems which crime presents. I am aware of the serious thought you have given this subject and am acquainted with your research bulletin on Crime Prevention Through Education, published in 1932, and your Tenth Yearbook on Character Education, published in the same year.

I am depending on your wide background of knowledge to fill in an outline of the facts for which I have but brief space. I must trust your trained imaginations to supply the details, depending upon your proven patriotism and loyalty to perfect and carry out some such plan as the one I shall propose.

First, let me present a brief statement of fact: From several sources, apparently authoritative estimates of the cost of crime, it appears to total approximately one fourth of our national income. This sum, as is pointed out in your bulletin, exceeds by at least three times our total expenditures for education. We can agree, I believe, that the cost of crime in money and in reduced morality of the people is devastating beyond computation.

You know better than I how much the situat'on has been aggravated by recent publicity given the activities within the law of certain metropolitan bankers, utility heads, and business executives. Such infractions of the moral law reported by the press, are dramatic presentations which must have undermined the public morale and the morals of many individuals. Your minds will quickly jump to acts within your own knowledge, where perhaps there may have been smaller monetary losses but which are equally distressing examples of that lack of the sense of trusteeship and general public spirit which should characterize men of affairs. The antisocial conduct of persons operating within the law, ruthlessly exploiting the economic resources of the public, has inflamed the minds and emotions of criminals and weaklings. Recognized as one of the major causes of our economic condition, those acts have added to the general social unrest.

In short, the factors that have acted to promote criminality have been added to of late because of economic conditions, and what the average man believes is the chief cause of our economic distress. No matter how we approach the problem, we surely must agree that the menace of antisocial behavior and actual crime is greater than ever before.

Where does crime begin? The answer to that question will determine what we should do about it. While there are many causes, no doubt, yet there will be no dispute of the thesis that the perfect home should develop the perfect character.

Most of us regard character building as the primary responsibility of the home. But, if I may jump to my conclusion on this point, I am forced to recognize that there is no immediate hope of greatly improving the home conditions of those who may later follow criminal careers. To accomplish this end is a long-range process.

We think of the church as having a heavy responsibility in character building. But as regards this, I can criticize no church except my own. For any except my own denomination I have no right to comment upon the adequacy of its character-building program or to make recommendations for the extension of its work. I will say of my own denomination that I believe there is much more it should be doing. But whatever the churches may do in the future, we cannot turn to them for an immediate and major attack on the problem of crime. I pause only long enough to express confidence that the church will lend support to a well-planned program of prevention.

This brings me to the schools. It is an old custom, familiar to you, to carry to the doorstep of the school all the problems that cannot be solved in the home or elsewhere in the community. To blame the schools and the teachers appears to be one of the diversions of the American people. But it is not in this spirit that I approach the subject under discussion.

I could devote my available time to reviewing the forces which have tended to transfer from the home to the school almost the entire responsibility for the welfare of children. To you this is a well-known story. But when I turn my thoughts to what the schools can and should do in the matter before us, I have been wondering how the public would respond to a new plan. What would happen to a proposal that the public schools assume the responsibility for a basic crime-prevention program?

In face of the alarming facts about crime and the growing anti-social conduct within the law, may not the public be wondering what has happened and why? How many are inquiring how such a state of affairs has come to pass in a country that has so liberally supported schools for the express purpose of insuring good citizenship?

Personally, of course, I do not place upon the American public-school system primary responsibility for this crisis. But what shall we say in reply to those who charge the public schools with a share of the blame?

The report and a digest of the hearings of our Senate subcommittee, which will soon be off the press, contain pointed discussions of this question. I want to refer you to this report for comments on the merits of the public-school record of past performance. Whatever may be your own conclusions, I know you are ready to face the issue of your future responsibilities in this field; and, of course, it is the future alone that we can do anything about, whether in the line of your duty or mine.

One of the questions I want to ask you today is this:

Does the habit of appraising the influences of schools exclusively in terms of intellectual achievement and manual skill have anything or everything to do with our trouble?

To define clearly what I mean I want to make reference to two recent publications: First, the committee of the American Association of University Professors, in its report issued last May, stated that the purpose of college teaching is to "induce self-propelled intellectual activity on the part of the student."

The second reference is to a report of the Commission on the Social Studies, entitled, "A Charter for the Social Sciences in the Schools", drafted by Charles A. Beard. This is intended to emphasize the value of scholarship and skill in scientific method as a primary dominating objective. This point of view is epitomized on the ninety-ninth page of the report, which I quote:

"All the way through the schools the process may be followed, *ever sharpening the mind*" (the italics are mine) "by increasing the complexity of the situations about which questions are asked and of the materials necessary to correct answers, rising steadily in the complexity and abstraction of the subjects considered."

The words "character", "conduct", "behavior", "attitude", and "emotions" do not appear in Beard's index. His discussion of character and the process of character building are limited to a few sentences in the closing pages of his 117-page charter. These two reports financed by large foundations seem to represent the point of view of orthodox leadership of our higher educational institutions.

Is it proper for me to ask: Have not educators tended to define the job of the schools in terms of developing tool skills, and of mastering narrowly defined content? Have they not placed unduly exclusive emphasis upon sharpening the minds of those who are to be the lawyers and the executives of the future, as well as the minds of the average run of us who pass through the school system?

Has not the habit of appraising the results of schools in terms exclusively of intellectual achievement and manual skill tended to produce a citizenry with sharpened wits and skilled craftsmanship rather than a realizing sense of social obligation and good citizenship?

Has not our attention been too sharply focused on the universal mastery of scientific method, to the exclusion of the personal and social needs of the masses of our children?

Let me turn from this questioning process a moment to say this: Sometimes the scientist becomes so engrossed in what he sees in the microscope that he fails to lift his eye from the instrument to gaze upon the wide world about him.

I have asked what I intended to be pointed questions regarding problems which to me as a layman are not being solved by the intelligentsia—and I use that word with entire respect. Have not teachers and teachers' colleges, in their zeal for a predetermined curriculum and for a universal intellectual discipline, forgotten that their objective is good citizens rather than subject matter conformity? In all candor, I believe they are shooting over the target.

We must take society as it is. Our program of education must be suited to the requirements and capabilities of each boy and girl according to individual need. In view of this self-evident truth, it may be fortunate that the many and no doubt brilliant suggestions of educational literature have met no more than intellectual, languid, and ephemeral acceptance. Far be it from me to criticize, but, in humility of spirit, I contend that there is something in education more vital than sharpening the mind.

Undoubtedly many ideas in education now considered too advanced will find a place in the practice of the schools of the future. It is to be expected that there should exist some lag between the time of general acceptance of a policy, program, or principle and its complete incorporation into practice.

Even though the program I present today may be approved by you, it will take time to appraise its value. But certainly as regards past objectives has there not been an excessive lag in the field of education? Even though this exists in public education, it is also true in home training, in parent education, in the efforts of the church, and in the work of character-building agencies. But these last institutions are outside your field. Certainly your desire is to define the objectives of teaching and of the total school experience and to realize them as soon as possible.

I want to refer next to the 1932 Bulletin No. 17, Monograph No. 13, of the United States Department of the Interior, Bureau of Education, entitled "Provisions for Individual Differences, Marking, and Promotion." This monograph reports a study covering the efforts of the secondary schools to break away from traditional practices and to adjust their programs to individual needs. This report appears to indicate that there is a tremendous desire to do something about the problem of the differences in individuals. But in this report I have found grounds to warrant several questions: Have not the standardizing agencies of the past, the rigid requirements for college entrance, and the prescriptive curriculum made well nigh impossible real progress in meeting the variable needs of the masses of our students? Have the schools and teacher-training institutions made adequate provisions for ascertaining the abilities and needs of pupils as indivduals? Has any school or teachers' college carried out the logical implications of Professor Morrison's justly famous statement to the effect that teachers should spend half their time studying their pupils as growing individuals and the rest of their time doing what that study shows to be desirable and necessary?

My attention was recently called to an interesting innovation made by Supt. Herbert S. Weet and inaugurated just before his retirement from the public schools of Rochester, N.Y. Dr. Weet has been active in your body for so many years that I am confident he is known and loved by all of you.

Dr. Weet has provided for two groupings, (a) in accordance with individual ability and (b) a marking system which undertakes to recognize five major areas of desired results, including character building and habits. I note, however, that in his system promotion is decided solely on the marks in tool subjects, such as spelling, arithmetic, and geography.

I hope no one will read into my remarks the slightest inclination to criticize any teacher, any parent, any social worker, or any clergyman for the emphasis placed upon the scientific method, upon objective thinking, or other methods of procedure. Anything I might say is necessarily no more than the general opinion of a layman anxious to be helpful. My purpose is to stimulate your interest and to cause you to focus your attention upon what I personally regard as important—a restudy of the objectives of education from the viewpoint of the individual child who must live in a complex and changing society.

Perhaps the examples I have given are sufficient preface to a preliminary concrete suggestion dealing with a way in which the public schools can help in a major attack on the prevention of crime. The suggestion calls for a thorough-going application of a particular one of the many generally accepted proposals with which you are familiar, a proposal which, because of the lag I have mentioned, has not yet been adopted into universal practice.

Nearly 10 years ago Dr. Ben D. Wood, of Columbia University, proposed the adoption of a continuous record card for general use in the public-school system. The plan for a continuous record has been promoted by various agencies, including the American Council on Education. Many individuals have urged its adoption.

Professor Wood early proposed that the school record should include not only the classroom grades and objective measures which are useful in long-term intellectual guidance but also a behavior record so designed as to disclose the blossoming character and personal and social development of the child. Such a behavior record has been demonstrated and, as I view it, greatly improved in the practice of the Rochester Athaenaeum.

If the system is used, as I believe it should be, in every community, the public schools will have placed every child under continuous constructive observation. The child who shows anti-social tendencies may then be given special attention and such treatment as the individual case requires. Under this system, prevention of crime can be undertaken in time to produce results. You can readily imagine the far-reaching effects if the character-building agencies of the community collaborate energetically with the schools in helping suspected predelinquents to achieve normal adjustment.

Of course, it is not enough merely to start upon another campaign of record making. Attics and basements are filled with "reports" and material which its fond authors thought to be of such importance that it might sometime be studied, formulated,

and made of practical use. Holding the same idea, the United States Government is erecting what is called the "Archives Building." It occupies an entire square on Pennsylvania Avenue in Washington. This is to be used to store papers, some of them valuable, no doubt, but many of them worthless trash.

If the behavior reports were to be filed in cabinets somewhere, in order that a statistically inclined person might use them sometime, I should not be interested. Such reports are invaluable, provided their significance is recognized and their potentialities are wisely exploited. But the realization of these potentialities in terms of better individual school adjustments and more effective citizenship depends upon a reorientation of our whole teaching and administrative personnel regarding the place of guidance, personal adjustment, and character building in relation to the curriculum and the traditional procedures and attitudes which it has engendered and perpetuated.

It ought to be clear that if a pupil in the schools manifests habits of thought or tendencies which are or may become antisocial in their nature, there should be instituted at once an inquiry to determine what is wrong, and appropriate corrective measures should be taken without the traditional subservience to the formal integrity of the curriculum. To this end there must be set up in connection with every school system a means of immediate treatment of the child who appears to need it. Surely in every community there are enough general medical practitioners, dentists, psychiatrists, specialists, and surgeons, also trained psychologists and social workers, who will gladly examine the child and give the school authorities the needed help to determine a course of action.

The thought I have in mind is that the behavior record will carry a warning that there is danger along the path of progress of this particular pupil. It may be a red light, indicating the necessity to stop, look, and listen. If it serves to attract attention to the need for special treatment and if, as a result of collaboration with these scientific consultants, the child is returned to mental and physical health, our first purpose has been accomplished.

In urging the importance of the social, personal, and moral influences of the schools, I do not mean to minimize the intellectual influences and scientific disciplines. These are now and, I hope, will ever be important in our schools. What I here suggest is that our pursuit of intellectual discipline shall not be so exclusive as to leave character building to chance, nor so undiscriminating with regard to individual limitations and needs as to provoke or perpetuate negative reactions and antisocial attitudes in some of our children. Let us not forget that while appropriate intellectual training may go far toward correcting antisocial attitudes, it is also true that inappropriate or wrongly motivated learning efforts may produce opposite results.

The testimony of several leading educators at the subcommittee hearings indicates that unconstructive attitudes and the formation of antisocial groups among school children frequently originate in or are perpetuated and aggravated by academic maladjustments. Hence the importance of maintaining continuous records both of growth in academic and intellectual achievements and of extra-curricular experiences, personal and social adjustments, and character development.

The reports of all school systems that have come to my notice reveal an appallingly large number of academic failures in every grade year after year. Authentic testimony indicates that many, if not most, predelinquents are found in these failing groups. Are these failures inevitable or are they due largely to the fact that our curriculum is still so rigid that many of our pupils are confronted with academic tasks which are beyond their abilities, irrelevant to their interests and needs, and which foredoom them to what our inflexible academic standards call failure? It seems to me, as an interested layman deeply sympathetic with teachers in dealing with their complex problems, that the type of intellectual and behavior record here proposed, which centers attention upon the pupil as a growing entity, cannot fail to increase their success in dealing with problem cases of all types.

But important as the use of the behavior record will be with the problem child, its use is vastly more important with all the rest of the pupils. My good friend, Dr. Eugene A. Colligan, president of Hunter College, has supplied me with an excellent manuscript relating to teacher guidance in conducting character education in the public-school system of New York. These guides suggest a thoroughly sound program of day-to-day instruction.

In taking over the guidance of a new pupil, however, the teacher is at great disadvantage without a history of the child's behavior in the earlier grades. As I view the problem, behavior records promise to do for the practice of the teacher in the field of character building what records have done for the doctor in his practice. Except in case of emergency, no surgeon would think of operating unless he had studied the case records of the patient. The reports of what the attending physicians have found in the past will help the surgeon to do a good job, and perhaps be the determining factor as to what shall be undertaken.

These references to the behavior-record system pave the way for another question:

Is it possible to do vastly better in character building than we are now doing?

If you answer in the affirmative, there remains the question as to how we shall break through the restraints that have stood in the way of progress in this field. How must we go about our task if we are to make full use of the available knowledge and experience at our command?

As a first movement in a major attack, let us secure from the public a new mandate. Let us have new specifications of the results expected from public education, or a restatement of objectives. I believe that in drawing these specifications there must be written in large letters certain primary conditions. We expect results in character and in everything that is essential to good citizenship rather than results measured chiefly in terms of facts learned or in terms of pure intellectual activity or sharpened minds. If you agree with me, I am prepared to join with you in an effort to win general acceptance of a public policy redefined in such terms as I have stated.

The National Government may assemble facts which will be helpful in the formulation of a general policy in education. Let it be borne in mind, however, that the States never delegated to the Federal Government any legislative or administrative authority in the field of education. Under our Constitution the acceptance of a new policy and of action under such a policy must be left to voluntary cooperation.

In order to have an agency to coordinate such volunteer efforts and to assist in the work of our Senate Subcommittee on Crime, we have formed an advisory body known as the "Education and Law Conference." The plan of organization of the conference assumes that its members will all be voluntary, nonofficial, unpaid workers.

We are in process of organizing an advisory committee and several technical committees. Through these we hope to carry on the work of the conference. The members of these technical committees will be selected from experts known to be free to actively participate in the work of the conference. For example, Prof. Ben D. Wood has accepted the chairmanship of our committee on records, and Prof. W. W. Charters the chairmanship of our committee on instructional materials. Other committees will be organized as the plan proceeds.

If we agree upon the wisdom of such an organization, we need to consider a second step. Sane, practical measures must be taken to develop in practice a full expression of a new American policy in education. Such measures should be evolved as will not interfere with present day essential educational practice and without reduction in efficiency in providing the pupils with the tools of literacy. It is particularly important in these days of economic stress, too, not to increase unduly the cost of the schools. But the desired results cannot be attained unless the plan is so stated as to catch the imagination of every community and command its respect and voluntary cooperation.

To make a clinical test, to use the words of my profession and to demonstrate the type of development proposed, Dr. Ballou, superintendent of the Washington schools, is arranging to initiate the proposed plan in the District of Columbia. This will involve evolution in many areas. You can see that he must face problems in administration, records, individual instruction, materials of instruction, training teachers in service, adult classes, and evening classes. In community contacts there will be a new relationship to the movies, the press, the facilities for recreation, the church, the juvenile courts, children organizations, and many more.

In the furtherance of Dr. Ballou's development the American Council on Education and the Education and Law Conference have set up a joint committee for the coordination of community effort in making this development a success. Under this arrangement the technical committees of the Education and Law Conference serve in an advisory capacity only. The local joint committee functioning as a committee of the American Council has assumed the responsibility for all operating activities.

I have given you the details of this set-up because I want you to see how we are proposing to face not only the local conditions but the deep-rooted traditions of State rights and local autonomy. The most that may be claimed for the Federal Government in such a matter is that it is the function of the Congress to do what it can for the people under the general-welfare clause of our Constitution.

Our experience with prohibition has reminded us that it is dangerous to attempt to modify the practices of our people in major activities through constitutional amendment and Federal legislation. Just as the operation of bringing about temperance in America rests upon the educational agencies of our country, so the building of character and good citizenship is more dependent upon volunteer cooperation than upon laws.

It has seemed necessary for the success of Dr. Ballou's project to seek general public approval of his plan and also the approval and cooperation of the colleges and universities in the District, the churches, the so-called "character-building agencies", the welfare agencies, and all the rest of the agencies which you know from experience affect operations of the public-school system. I hope the procedure proposed for the District of Columbia will be followed in each State. A new deal in education must grow from the seeds of progressive ideals and ideas which have been so generally planted locally by you and other leaders in the past.

The agencies of informal education must have a large place in any consideration of this subject. For example, the newspapers, motion pictures, and the radio make a daily impression on the majority of our people. That the combined influence of these agencies is growing more constructive requires only a comparison of the releases of a decade ago with those of the present. Here, as in other areas of education, the path of progress is through cooperative study and action, and I hope these agencies will join in using for this purpose the education and law conference.

Because I place such complete dependence upon voluntary cooperation, I have concluded there is needed only one general legis-

lative enactment by the Congress. In consequence I have introduced in the Senate a bill which is intended to serve two purposes:

First, it is intended to establish a privileged status in the Federal courts for teachers and their behavior records of the American Council type—records which I hope will eventually be established for every child of school age in this land.

And second, I hope this bill will establish, so far as the Federal Government is concerned, the professional status of the teacher as parallel with and comparable in its dignity and authority to that of the doctor and clergyman.

If this proposed act meets with your approval, I trust you will join the movement to see that it is also written into the statutes of the 48 States. Support of such legislation assumes that you are ready to support my major thesis, which is that we must redefine the desired objectives of education for our children as individuals in society.

If you support this thesis, I repeat:

We must secure, from the public, support for a restatement of what should be the American policy as to the desired results of education in terms of character and citizenship as well as content. We must secure from higher educational institutions an emancipation from the requirements for college entrance insofar as they in fact interfere with the legitimate efforts to achieve results in terms of a newly defined public policy. If this policy is adopted, the colleges themselves may well go through a period of soul searching as to the possibility of their own need of readjusting their practices.

To these ends I bespeak your voluntary cooperation, both in the general support of the Education and Law Conference and in the work of its education committees, in fostering joint projects initiated in the spirit of the proposed District of Columbia project. If by this means we can make a successful attack upon juvenile delinquency, the next generation will bless us for our efforts. If we succeed in deepening the public spirit of our students and developing that high sense of trusteeship which will stand the test during the competitive actions of later life, we shall have saved the Nation from a repetition of the alarming disclosures of vicious conduct in high places. We shall have had a large part, too, in giving to America the leading place in moral as well as technical education.

CONSTITUTIONALITY OF THE COTTON ALLOTMENT BILL

Mr. BANKHEAD. Mr. President, I requested the Attorney General's Office to give me the benefit of the services of one of the best attorneys in the Department on the power of Congress under the taxing clause of the Constitution. Mr. Alexander Holtzoff was selected. I submitted to him the bill known as the "Bankhead cotton control bill" and asked him to give me an opinion on the constitutionality of the taxing provision of the bill.

Subsequently Mr. Holtzoff submitted to me his opinion on the subject. While this opinion is not an official one I think it is valuable and will be helpful to Members of Congress who are interested in the subject. I ask unanimous consent to have it printed in the RECORD.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

THE CONSTITUTIONALITY OF THE COTTON ALLOTMENT BILL (S. 1974)

By Alexander Holtzoff

The bill proposes to impose a tax on all cotton ginned in the United States. There is to be exempted from this tax an amount of cotton grown on each farm not exceeding the amount allotted to it by the Secretary of Agriculture. For the purpose of making the necessary allotments to each farm engaged in the cultivation and production of cotton, the Secretary of Agriculture is directed to ascertain the available supply and the probable market requirements of cotton year after year and to apportion it amongst the cotton-producing States, the counties within the States, and the farms in each county pursuant to a formula prescribed in the bill. The bill is thus a revenue measure.

I. THE BILL IS A VALID EXERCISE OF THE TAXING POWER

The bill seeks to impose an excise tax on the ginning of cotton. The power of Congress to impose excise taxes is unlimited, subject only to the qualification that they must be uniform—and this has been held to mean uniform in the geographical sense. The limitations of the fifth and tenth amendments do not circumscribe the taxing power in any respect.

Thus, in *McCray* v. *United States* (195 U.S. 27, 61), it was said:

"Whilst undoubtedly both the fifth and tenth amendments qualify, insofar as they are applicable, all the provisions of the Constitution, nothing in those amendments operates to take away the grant of power to tax conferred by the Constitution upon Congress."

Likewise, in *Billings* v. *United States* (232 U.S. 261, 282), the Court wrote as follows:

"It has been conclusively determined that the requirement of uniformity which the Constitution imposes upon Congress in the levy of excise taxes is not an intrinsic uniformity, but merely a geographical one (*Flint* v. *Stone-Tracy Co.*, 220 U.S. 107; *McCray* v. *United States*, 195 U.S. 27; *Knowlton* v. *Moore*, 178 U.S. 41). It is also settled beyond dispute that the Constitution is not self-destructive. In other words, that the powers which it confers on the one hand it does not immediately take away on the other; that is to say, that the authority to tax which is given in express terms is not limited or restricted by the subsequent provisions of the Constitution or the amendments thereto, especially by the due-process clause of the fifth amendment."

Again it was stated in *Brushaber* v. *Union Pacific Railroad Co.* (240 U.S. 1, 12, 24):

"That the authority conferred upon Congress by section 8 of article I, 'to lay and collect taxes, duties, imposts, and excises' is exhaustive and embraces every conceivable power of taxation has never been questioned, or, if it has, has been so often authoritatively declared as to render it necessary only to state the doctrine.

* * * * * * *

"So far as the due-process clause of the fifth amendment is relied upon, it suffices to say that there is no basis for such reliance since it is equally well settled that such clause is not a limitation upon the taxing power conferred upon Congress by the Constitution; in other words, that the Constitution does not conflict with itself by conferring upon the one hand a taxing power and taking the same power away on the other by the limitations of the due-process clause."

In *United States* v. *Doremus* (249 U.S. 86, 93), these principles were summarized as follows:

"The only limitations upon the power of Congress to levy excise taxes of the character now under consideration is geographical uniformity throughout the United States. This Court has often declared it cannot add others. Subject to such limitation, Congress may select the subjects of taxation and may exercise the power conferred at its discretion. (*License Tax Cases*, 5 Wall. 462, 471.) Of course, Congress may not in the exercise of Federal power exert authority wholly reserved to the States. Many decisions of this Court have so declared. And from an early day the Court has held that the fact that other motives may impel the exercise of Federal taxing power does not authorize the courts to inquire into that subject. If the legislation enacted has some reasonable relation to the exercise of the taxing authority conferred by the Constitution, it cannot be invalidated because of the supposed motives which induced it. *Veazie Bank* v. *Fenno* (8 Wall. 533, 541), in which this Court sustained a tax on a State bank issue of circulating notes. *McCray* v. *United States* (195 U.S. 27), where the power was thoroughly considered, and an act levying a special tax upon oleomargarine artificially colored was sustained. And see *Flint* v. *Stone Tracy Co.* (220 U.S. 107, 147, 153, 156), and cases cited."

The motive of the Congress in levying a tax is immaterial and will not be considered by the judicial branch of the Government in determining the constitutionality of a tax measure. Consequently the mere fact that the ultimate purpose of a tax measure is not to collect revenue but to accomplish some other purpose does not constitute a ground for declaring it unconstitutional.

Thus in 1866 Congress passed an act levying a 10-percent tax on bank notes issued by State banks. The real object of the statute was not to raise revenue, but to eliminate State bank notes from circulation. It is understood that no revenue was ever collected under this measure, so effectively was its real purpose accomplished. The validity of this measure was challenged on this ground, among others. In *Veazie Bank* v. *Fenno* (8 Wall. 533) the constitutionality of the act was upheld.

In *McCray* v. *United States* (195 U.S. 27) the Supreme Court upheld the validity of the statute taxing oleomargarine. The act provided for a very low tax on white oleomargarine and a much higher tax on yellow oleomargarine, because the latter so closely resembled butter that it was frequently sold as a substitute. Again the actual intention of the Congress was not to provide a new source of revenue, but to suppress the sale of oleomargarine as a butter substitute under circumstances under which the purchaser did not realize that he was not buying real butter.

A very striking illustration of this principle is found in the Narcotic Act, which, under the guise of the exercise of the taxing power, placed traffic in narcotics under severe and stringent restrictions in an endeavor to suppress all dealings in drugs other than those expressly permitted. Again the validity of this act was attacked, but the objections were overruled and its constitutionality upheld in *United States* v. *Doremus* (249 U.S. 86).

There are two decisions that might possibly be cited as opposed to the foregoing line of authorities, but on close analysis they become clearly distinguishable. They are the *Child Labor Tax Case* (259 U.S. 21), and *Hill* v. *Wallace* (259 U.S. 44). In the first of these cases the Supreme Court held unconstitutional a tax on all concerns employing child labor. In the second, there was held invalid a measure imposing a tax on dealings in grain futures other than those consummated on boards of trade and embodying an elaborate scheme for regulating boards of trade. In each instance, the decision of the Supreme Court was placed on the ground that the purpose of the measure was to regulate intrastate business, in one case manufacturing and mercantile concerns employing child labor, and in the other case, boards of trade, which from the facts before the Court did not appear to have any relation to interstate commerce. This reasoning is clearly inapplicable to the situation here under consideration. The business affected by the measure is not a wholly intrastate business. On the contrary, it is principally interstate. The bill seeks to reach interstate commerce in cotton. It is a well-known fact that the major portion of the cotton produced in the United States, after it is picked, enters the channels of interstate and foreign commerce. This bill does not touch the growth and

production of cotton. It seeks to reach it at the moment it begins to enter the channels of trade, namely, when it is ginned. Most of it then finds its way into interstate or foreign commerce.

II. THE EXEMPTION FEATURES OF THE BILL ARE VALID

The fact that the bill exempts from the tax a certain minimum amount of cotton allotted to each producer in no way detracts from the validity of the measure. It is within the constitutional power of Congress in levying an excise tax to create exemptions. An obvious illustration in support of such procedure is found in the exemption features of the income tax law, the validity of which were expressly upheld in *Brushaber* v. *Union Pacific Railroad Co.* (240 U.S. 1).

Similarly, in the oleomargarine case, to which reference has been made (*McCray* v. *United States*, 195 U.S. 27), a much higher tax was imposed on yellow oleomargarine than on white oleomargarine, with the motive of preventing oleomargarine producers from coloring their produce yellow and thereby misleading the public into thinking that it is butter. In *Billings* v. *United States* (232 U.S. 261), the Supreme Court upheld the tax on foreign-built yachts, although no similar tax was imposed on yachts of domestic construction.

III. THE BILL DOES NOT CONTAIN ANY DELEGATION OF LEGISLATIVE POWER TO THE SECRETARY OF AGRICULTURE

The authority to apportion the amount of cotton to be produced in any one year by the various cotton-producing States, the counties in each such State, and the farms in each county does not constitute a delegation of legislative power. The bill fixes a standard or a formula which the Secretary of Agriculture is to apply. Section 1 declares the policy of Congress. Section 2 requires the Secretary to ascertain from an investigation of the available supply of cotton and the probable market requirements, the quantity of cotton that should be offered for sale during the succeeding cotton-crop year. Section 4 prescribes the measure by which the Secretary of Agriculture is to apportion the entire amount of cotton among the several cotton-producing States, i.e., the ratio of the average number of bales produced in each State during the 5 crop years preceding the passage of the act to the average number of bales produced in all the States during the same period. On a similar basis he is directed to make an apportionment among the several counties in each such State and likewise among the various farms within each county. Thus there is no room for arbitrary action by the Secretary. The bill directs the Secretary of Agriculture to find certain facts and to make certain apportionments pursuant to a prescribed formula. This is not a delegation of legislative power.

An examination of congressional legislation indicates that from the earliest days of the Republic, Congress has had occasion to pass laws containing a general principle or a formula, leaving to the Executive the determination of the occasion on which the general principle should be invoked and the manner in which it should be effectuated. Some acts included provisions that violations of any regulation that might be made by the Executive in carrying it into effect should be deemed criminal offenses. In a long line of decisions the Supreme Court has sustained the constitutionality of this type of legislation. It realizes that as a matter of practical administration of governmental affairs, it is impossible to foresee and cover every detail by legislative enactment. Much must be left to the discretion of executive officials. The legislative branch of the Government need properly concern itself solely with enacting general principles the detailed application of which must often be left to the judgment of administrative officers. Congress delineates and sketches a general outline; the Executive fills in the details.

These principles were summarized as follows in *Mutual Film Corp.* v. *Ohio Industrial Commission* (236 U.S. 230, 245):

"While administration and legislation are quite distinct powers, the line which separates exactly their exercise is not easy to define in words. It is best recognized in illustrations. Undoubtedly the legislature must declare the policy of the law and fix the legal principles which are to control in given cases; but an administrative body may be invested with the power to ascertain the facts and conditions to which the policy and principles apply. If this could not be done there would be infinite confusion in the laws, and in an effort to detail and to particularize, they would miss sufficiency both in provision and execution."

Within a few years after the adoption of the Constitution, during the second administration of George Washington, Congress, by the act of June 4, 1794, granted to the President authority to lay an embargo on all ships and vessels in the ports of the United States "whenever, in his opinion, the public safety shall so require", and under regulations, to be continued or revoked "whenever he shall think proper."

By the act of February 9, 1799, the President was given authority to remit and discontinue for the time being the restraints and prohibitions which Congress had prescribed with respect to commercial intercourse with the French Republic "if he shall deem it expedient and consistent with the interest of the United States", and to revoke such order "whenever in his opinion the interest of the United States shall require."

During the administration of Thomas Jefferson, Congress, by the act of December 19, 1806, delegated to the President the power to suspend the operation of the nonimportation act, "if in his judgment the public interest should require it."

By an act approved on May 1, 1810, by President Madison, who participated in the framing of the Constitution probably to a greater extent than any other single individual, Congress authorized the President to revive a former act as to Great Britain or France if either country had not by a certain day so revoked or modified its edicts as not to violate the neutral commerce of the United States.

The act of March 3, 1815, conferred upon the President the power to declare the repeal as to any foreign nation of the several acts imposing tonnage and import duties, when he should be satisfied that the discriminating duties of such foreign nations, so far as they operate to the disadvantage of the United States, had been abolished.

It is a significant commentary on the topic under discussion that all of the statutes that have just been enumerated were enacted while many of the framers of the Constitution were still living and active in public life. It does not appear that the constitutionality of any of these statutes was ever called in question.

The act of May 31, 1830, contained provisions similar to those of the act of March 3, 1815.

By the act of March 6, 1866, the President was clothed with authority to declare inoperative the provisions of the act forbidding the importation of cattle whenever in his judgment that might be done without danger of the introduction or spread of contagious or infectious disease among the cattle of the United States.

The Tariff Act of October 1, 1890, authorized the President to suspend the free importation of sugar, molasses, etc., from any country which levied duties against importations from this country that he might deem unequal and unreasonable. The validity of this enactment was attacked as delegating legislative power to the President. The Court overruled this contention and sustained the validity of the statute (*Field* v. *Clark*, 143 U.S. 649, 680).

The act of March 2, 1897, prohibited the importation of inferior tea. It was provided that the Secretary of the Treasury should appoint a board of experts every year to fix and establish uniform standards of purity, quality, and fitness of all kinds of tea imported into this country. All tea inferior to such standards was to be deemed within the prohibition as to importation. In *Buttfield* v. *Stranahan* (192 U.S. 470, 496) the Supreme Court ruled that the statute was constitutional and did not involve the vesting of the Secretary of the Treasury with legislative power.

The Rivers and Harbors Act of March 3, 1899, authorized the Secretary of War to determine that certain structures constituted obstructions to navigation and to require their alteration or removal. Failure to comply with the order of the Secretary of War was made a criminal offense. The validity of this statute has been sustained in a number of cases, and convictions for violations of the statute have been affirmed (*Union Bridge Co.* v. *United States*, 204 U.S. 364; *Hannibal Bridge Co.* v. *United States*, 221 U.S. 194; *Wisconsin* v. *Illinois*, 278 U.S. 367, 414).

By the act of February 1, 1905, the Secretary of Agriculture was authorized to make rules and regulations to regulate the occupancy and use of forest reserves and to preserve the forests from destruction. Any violation of the act or of such rules or regulations was made a criminal offense. The Secretary of Agriculture promulgated a regulation prohibiting the grazing of stock in any forest reserve without a permit. The defendants were indicted on a charge of driving and grazing sheep on a forest reserve without a permit. Demurrers to the indictments were sustained and the Government appealed to the Supreme Court. The latter tribunal reversed the judgments, holding that the statute was constitutional and did not comprise any delegation of legislative power to the Secretary of Agriculture (*United States* v. *Grimaud*, 220 U.S. 506).

The Transportation Act of 1920 authorized the Interstate Commerce Commission, whenever it was of the opinion that an emergency existed requiring immediate action, to suspend its rules as to car service and to make such reasonable rules with regard to to it as in its opinion would best promote the service. The act provided that violations of such rules should constitute a criminal offense. On July 25, 1922, the Commission issued an order reciting that, in its opinion, an emergency existed and formulating certain rules in reference to furnishing coal cars to the mines. A conviction for violating this rule was upheld and the constitutionality of the act sustained in *Avent* v. *United States* (266 U.S. 127). In discussing this point, Mr. Justice Holmes stated that "Congress may make violation of the Commission's rules a crime."

The Tariff Act of September 21, 1922, contained the so-called "flexible provisions" authorizing the President to increase or decrease rates of duty by proclamation in order to equalize them with the difference in costs of production in the United States and the principal competing country. The constitutionality of this provision was challenged as an invalid delegation of legislative power to the Executive. The Supreme Court reached the conclusion that the act was constitutional (*Hampton & Co.* v. *United States*, 276 U.S. 394).

The Supreme Court has applied the same principles in passing upon the validity of State legislation. Thus, in *Sproles* v. *Binford* (286 U.S. 374), the Court upheld the validity of a provision of the Texas motor-vehicle act, which prohibited the transportation over State highways of certain overweight or oversized vehicles, but authorizing the highway department to grant special permits for limited periods exempting from its operation equipment that could not be reasonably dismantled.

LIVING COSTS AND SALARIES OF FEDERAL EMPLOYEES

Mr. COSTIGAN. Mr. President, Mr. Luther C. Steward, president, and Miss Gertrude McNally, secretary, of the National Federation of Federal Employees, recently joined,

assisted by other officials and representatives of that organization, in a series of brief radio addresses, beginning January 17 and ending February 1, 1934, in which problems of living costs, including reasons for maintaining salaries of Federal employees at normal and proper levels of subsistence, were discussed. I believe it will be helpful to have these addresses preserved in more permanent form, and I ask that they be printed in the CONGRESSIONAL RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

LUTHER C. STEWARD, PRESIDENT NATIONAL FEDERATION OF FEDERAL EMPLOYEES, JANUARY 17, 1934

The National Federation of Federal Employees is happy to avail itself of the opportunity afforded by the public-spirited sponsor of this program to present to the public over this station the facts in the broad campaign we are waging to bring about the restoration of Federal salaries.

In these 5-minute programs we shall tell the story, the very moving human story, behind the cold facts which make a handful of statistics, a few pages of congressional legislation, and a Roman holiday for those who would "balance the Budget" at the expense of hundreds of thousands of already underpaid and overworked human beings.

In order to understand the whole story we must go back months ago before the so-called "economy legislation" was enacted.

Selfish interests, headed up by such organizations as the United States Chamber of Commerce, the National Manufacturers Association, the National Economy League, and others, early began the most intensive of all propaganda campaigns to shove the burden of the depression from the shoulders of their powerful and influential members onto those of the small wage earners of the Nation, including the Federal employees.

The brunt of the attack was borne by the Federal employees. In a campaign of vilification they were attacked as leeches and drones; the work they were doing was ridiculed; and in addition to wholesale wage cuts, complete emasculation of the Federal service was demanded.

The Budget, they declared, must be balanced, and at the expense of the Government workers and the Federal service, set up to serve the whole people of the country.

The campaign was successful. So-called "economy legislation" was passed. This legislation brought wage cuts, furloughs, reduction of leave, and the loss of other conditions of labor which had been gained only after years of struggle.

The National Federation of Federal Employees emphasized from the outset that national economic recovery could not be brought about by such means. Soon the Federal Government itself gave substantial recognition of that fact in the setting-up of the Nationary Recovery Administration, whose prime purpose is to bring about wage increases and shorter hours of labor.

Thus, the Federal Government now is in the anomalous position of advocating wage increases and shorter hours for other employers and of taking a diametrically opposite position with respect to its own personnel. The Government cuts the wages of its own employees; and then tells private enterprise, and quite correctly so, that recovery cannot be achieved in that manner.

Since their original misguided campaign, some of the special interests have suffered a partial—but by no means complete—change of viewpoint. All of them no longer are so confident that economic balance can be restored by a specious balancing of the Budget by destroying the buying power of hundreds of thousands of men and women throughout the country.

Many legislators, too, have changed their minds. But the economy legislation is still with us. Every consideration of sound economics and justice demands its repeal.

In future programs in this series we shall bring you many facts in support of this contention.

MISS GERTRUDE M. M'NALLY, SECRETARY-TREASURER, NATIONAL FEDERATION OF FEDERAL EMPLOYEES, JANUARY 19, 1934

There are at least three basic reasons why the Federal wage scale should be restored. They are:

The Federal pay cut is exactly contrary to the sound principle of wage increases and shortened hours advocated for private business and industry by the Federal Government through the National Industrial Recovery Act and through the National Recovery Administration.

The Federal pay cut is a rank injustice to the hundreds of thousands of already underpaid men and women who are carrying on the vital duties of the Government.

The Federal pay cut is indefensibly bad from the standpoint of efficient personnel administration.

Time this evening does not permit a full discussion of any one of these reasons. However, during the course of these programs the many phaces which logically find a place under these and other important headings will be presented. Tonight, however, I want to discuss a little more fully the question of the Federal pay cut as it refers to the N.R.A.

Wisely, the Federal Government has undertaken the most comprehensive plan in history to bring to the wage earner a fuller measure of the fruits of his own labor.

The Federal Government has said to business and industry:

"The only way out of this depression is to put more persons to work. We must spread employment, reduce hours, and improve purchasing power by raising wages."

That is a program every thinking man and woman in the country can support. It is a sound program. It provides, at least, the principle which must show us out of the worst of all economic crises.

The Federal Government has been supported in its N.R.A. program by the mass of the people. But the large vested interests have opposed it, either openly or under cover. The same interests that campaigned for a so-called "balanced Budget" by the slashing of Federal pay now point to the Government position on pay as a reason why they should not raise the wages of their own workers.

In other words, the Federal Government does not come into court on this issue with clean hands. It cannot say to business, large or small:

"Follow the example of the Federal Government and raise wages so that purchasing power may be increased."

The Federal Government instead of raising wages has crushed the wage scale—in some cases reductions run as high as 50 percent because of furloughs pyramided upon the basic cut.

Thus, in a very definite manner, the Federal Government has been, demonstrably, the largest single handicap to its own sound and constructive program of economic reconstruction.

This fact was impressed upon all unbiased observers during the months which preceded the opening of the present session of Congress. So important did the issue loom that countless individuals, organizations, and Members of Congress made known their reversal of their original stand on the Federal pay question.

But despite these incontrovertible facts, despite the clearly apparent change in public and legislative opinion, the pay cut and its manifold attendant evils still stand.

The National Federation of Federal Employees is continuing its battle for pay restoration now. It is a battle in which the public is vitally concerned. Your support is needed now.

MISS MATILDA LINDSAY, NATIONAL ORGANIZER, NATIONAL FEDERATION OF FEDERAL EMPLOYEES, JANUARY 22, 1934

There is an implied contract in the relationship between the Federal employee and the Government. A great many Federal employees have had opportunities to leave the Federal service and go into private business and industry at a substantially greater rate of pay.

In most cases Federal employees have weighed this increased wage scale against the value of the implied contract with the Government; a contract which gave assurance of permanent occupation, for efficiency, at a meager, but nevertheless fixed, rate of pay.

On the basis of this implied contract, Federal employees have taken over certain obligations. They began the purchase of small homes. They have endeavored to provide life insurance for the protection of their families, for even under normal conditions Government pay is such that the building of an estate for one's dependents is a virtual impossibility by any other means.

These are fixed charges. Other fixed charges are such items as light and fuel costs, transportation costs, and the like.

Although Federal employees have suffered reductions in pay ranging from 15 to 50 percent, rates of interest on mortgages have not declined. Insurance premiums in many instances have actually increased. Transportation, fuel, light, and other charges either have remained stationary or have risen.

Federal employees have been ground between two millstones. The Federal Government has broken its contract, and at the same time the burden of fixed charges, entered into on the basis of that contract agreement, has increased.

Many of my listeners may say that the same thing applies to every person in the community. That is not true, because in the so-called "boom years" Federal salaries lagged far behind the wages paid in private business and industry. A comparison of similar positions in the Government and in private enterprise showed that persons in the latter field were receiving several times—and often much more—the salaries paid to Federal workers.

But, despite this fact, a majority of the civil-service personnel remained in Government employ, bearing in mind their contract which it was felt would not be repudiated.

But that is exactly what has happened. In practical effect Federal employees have been penalized for remaining in the civil service and carrying on the vital functions of Government during the years when far higher salaries on the outside were beckoning most alluringly.

That, of course, is palpably unfair. But the situation does not end by being simply unfair. These Federal employees are still faced by the stark necessity of meeting fixed charges which were soundly and sensibly incurred as good citizens and the heads of families.

Because of the smallness of Federal pay, employees never have had much leeway. Now, with pyramiding pay cuts and furloughs and immovable or increased fixed charges to meet, conditions have become well-nigh unbearable.

The Federal Government has a responsibility here which it cannot evade. It has a responsibility to cease its repudiation of a contract. It has a responsibility to deal fairly with thousands of employees who, on the basis of a stated set of conditions, placed their careers at the disposal of the Government. Beyond that the Government has a responsibility to end a situation which is so

completely out of harmony with the principles it has set up as models for private business and industry.

The time is at hand for the Federal Government to deal fairly and squarely with its own workers. Further delay is indefensible!

HARRY W. JOHNSON, NATIONAL ORGANIZER, NATIONAL FEDERATION OF FEDERAL EMPLOYEES, JANUARY 24, 1934

I am sure that few people realize the full extent or import of the Federal pay cut.

In the first place, it is fallacious to assume that Federal pay has been cut simply by 15 percent. As a matter of fact, pyramiding furloughs in many instances have raised that pay slash as high as 50 percent. In many other cases cuts of 20, 25, and 30 percent have been sustained.

These cuts have been taken by hundreds of thousands of Federal workers throughout the land. In Washington alone 70,000 persons have been affected directly.

But actually more than 70,000 persons in Washington have been affected—far more than 70,000—indeed, the whole city of Washington is suffering from the deep slash in purchasing power.

The Federal Government on the one hand is endeavoring to build up purchasing power, through the National Recovery Administration and through the Public Works Administration and Civil Works Administration. On the other hand it has slashed—and now declares that it wants to continue that reduction—the wages of hundreds of thousands of its own civil-service employees, men and women who have prepared themselves for a career in the Federal service and have qualified for that work by training and experience.

The result is a serious hardship not only upon Federal employees but upon the thousands and, indeed, millions of persons who are dependent upon them. Furthermore, business and industry in every city and town in the Nation, in varying degree, are feeling the effects of the sharp and continuing reduction in purchasing power.

Throughout the period of the depression the meager salaries of Federal employees have been stretched to care for an ever-increasing number of dependents. On every Government pay day lines at the post offices testify to the thousands of workers who are sending money orders to destitute relatives throughout the country.

This money has gone into circulation immediately. The reduction in Federal compensation thus has worked a many-sided hardship. It has curtailed the ability of Federal employees to relieve distress. It has placed many thousands of already underpaid employees themselves in actual need and want. It has had a decidedly deleterious effect upon business throughout the land.

We have an all too graphic picture of the effect of the Federal pay cut upon business right here in Washington.

Although the city has maintained a commendable economic balance, and the business community has given ample proof of its stability, the retarding effect of the wage reduction is not to be questioned.

Business leaders are frank to say that a concerted and aggressive forward movement in local business can come only when the Federal Government falls in line with its own National Recovery Administration principles and restores the pay level. In making such a statement business authorities are not in any sense heretical. They are in no sense lacking in a willingness to aid the administration in its great program of reconstruction. They are simply facing facts, realizing that the purchasing power of 70,000 wage earners in a city of half a million population must be returned to normal if business is to proceed on a thoroughly normal basis.

The Federal Government can render a broad human service and a vitally important economic service by righting the wrong which has been done to the hundreds of thousands of small-salaried men and women who are serving the Government everywhere.

Throughout the depression Federal employees have borne their social responsibilities nobly and well, handicapped as they were first by meager wages and then further hindered by income reductions ranging from 15 to 50 percent.

The Federal Government should remove this restriction and its inevitable subsequent retarding influence upon the whole course of national economic recovery by discarding the unjust and unsound wage cut it has inflicted upon its employees. The sooner such action is taken, the quicker national recovery will be achieved.

ALFRED HARMON, SECRETARY-TREASURER DISTRICT OF COLUMBIA FEDERATION OF FEDERAL EMPLOYEES' UNIONS, JANUARY 26, 1934

I want to speak tonight about the cost of living in the District of Columbia and its relationship to the nearly 80,000 Government workers in Washington.

But I shall not burden you with figures, knowing full well the difficulty of following them as they come in rapid succession over the air. However, you may be certain that the facts which I shall present briefly are based on the Federal Government's own accurate survey.

Put in its simplest possible form, the statement may be made that it costs more to live in Washington than it does elsewhere. Living costs go up here sooner, they come down later; and when they do come down, they fall far less than in almost any other community in continental United States.

Now, we know that there are definite reasons why this should be so. And all of us who know Washington and live in it for the beautiful city that it is recognize these facts.

But it is unfair of the Federal Government to penalize its workers simply because they happened to be stationed at the seat of government.

And it is especially unfair to aggravate that condition by the reduction which has been in effect and which it was planned to keep in effect.

In other words, Federal employees working in Washington always are at a disadvantage in the matter of living costs as compared with Federal workers in most other communities. There is no pay differential in favor of the Federal employees here, although it is proved by the Government's own figures that it always costs more to live here. Thus, with the lesser drop in the cost of living, the pay cut has worked a far more emphatic hardship.

So it is that the Government worker in Washington finds himself, from the practical and not the esthetic standpoint, in an economic plight which is hurtful not only to himself and his family and dependents but to the business community as well.

Federal employees, or at least a great many of them, enjoy living in Washington and deem it a privilege to be here. But as a matter of fact they have found on an increasing scale that it is a privilege which they cannot afford, especially since the pay cut became effective.

Federal employees must face the facts. And the facts are that the Washingtonian pays a premium, as compared with workers elsewhere, on all staple commodities, from rents to potatoes and all up and down the line.

That is a condition which should be taken into consideration. It is a condition which, I am sorry to say, has not been taken into consideration.

Within the past few weeks a new and vitally important factor has been projected into the picture, which will further complicate and aggravate the desperate economic plight of the Federal employee in Washington.

It is the prospect of rapid and sharp increases in commodity prices attendant upon the new monetary policy.

Without desiring or intending to enter into any detailed discussion of the plan which has been sincerely entered into for the sole purpose of furthering the cause of general economic recovery, it must be recognized that Federal workers are at a distinct disadvantage in a program which entails a marked rise in price levels.

Government pay is fixed. It cannot be revised upward from month to month as is possible in private business and industry and as occurs in those fields as business improves and as prices rise.

Federal pay schedules, unfortunately, are inflexible to a high degree; certainly they always have been inflexible where increases are concerned.

It will be remembered that that so-called "economy legislation" called for varying decreases but not for any increases should the price level move forward.

So we see that the Federal employee in the District of Columbia pays a heavy and ofttimes virtually unbearable price for the undoubted privilege of residence here. And that that price, already high, is likely to be even more of a burden as the new monetary policy successfully achieves its purpose.

Economic justice demands that Federal employees not only be returned to their original pay schedules but that provision be made for rates which will enable these workers to live on an American standard as the price level continues to rise.

Certainly that is not asking too much.

It seems to us that every man and woman in the District, whether or not he or she is in the Federal service, can conscientiously support our contention. Will you not lend your active cooperation in this struggle for a square deal?

HENRY G. NOLDA, SECRETARY-TREASURER FEDERAL EMPLOYEES' UNION NO. 2, JANUARY 29, 1934

In previous talks in this series, the broad economic principles involved in the whole Federal pay cut issue have been discussed.

This evening I want to tell you something about the human side of the question. I want to discuss it fairly and frankly, telling you just what the pay cut has meant to thousands of your friends and neighbors.

Federal salaries always have been low, very low. Now, with the pay cuts which range anywhere from 15 to 50 percent, the rank and file of employees of the richest Nation on earth are facing a blank wall.

By that I mean that to thousands of Federal employees our vaunted "American standard of living" is a cruel jest. Thousands of Federal employees are not adequately clothed. Thousands of Federal employees cannot adequately clothe their families. Thousands of Federal employees and their families are not eating properly or sufficiently, because their wages do not permit it. Thousands of Federal employees will leave their families destitute, because they cannot save against the inevitable day of need.

I realize that this is not a pleasant subject. I realize that many of us—and some even in the Federal service itself—do not like to face these facts. There is a tendency to "play them down", to "hush them up", to talk in generalities.

But the time for generalities is past. We must face the facts. The facts are that right here in Washington today there are thousands of Federal employees who cannot make ends meet because their employer pays them starvation wages. That is not a pretty picture, especially when that employer happens to be the Federal Government. But the picture has the unfortunate virtue of being absolutely true to life as it is being lived by great num-

bers of Federal employees in the District of Columbia and elsewhere throughout the land.

Federal employees are not spendthrifts. They do not throw their money about with any more reckless abandon than any other group. They are the heads of families, with dependents who look to them for support either in declining years or to give them the start in life which America proudly declares in the heritage of every child born under the Stars and Stripes.

Federal employees are keenly aware of their social and economic responsibilities, responsibilities which they are carrying with unflinching devotion in the face of almost insuperable obstacles.

We can see what the Federal pay cut really means only when we study individual cases. It is with no sense of pride in any respect that I say that I have ample opportunity to study hundreds of cases and to see daily the hardships which are being endured by loyal and faithful workers who are being penalized unjustly and unfairly.

Under present conditions, with pyramiding pay cuts and rising living costs, it is impossible for thousands of Federal employees to do more than barely keep body and soul together. Living has been reduced to the barest necessities. For many, to whom cultural opportunities have been closed because of lack of funds, life has lost its savor and its zest.

President Roosevelt has said, with characteristic breadth and vision, that life must offer more than simply the satisfaction of the rudimentary wants of food and shelter and warmth.

It is truthfulness, it must be said, that this, and only this, is possible to thousands of men and women who toil night and day in the far-flung services of the Federal Government. And in many cases food and shelter and warmth are to be had only when starvation wages are buttressed by pittances borrowed at exorbitant rates of interest, or by meager savings which had been laid by at the sacrifice of those little luxuries that help to make life worth while.

I am convinced that the American people will not wish longer to countenance these conditions. I believe that the average American citizen wants his Government to pay its employees on a basis more nearly in keeping with the American standard of living, although the Federal pay level never actually has reached that standard.

It is not in the nature of the people of our Nation to indulge in sweatshop tactics, to pay as little as possible for an extreme maximum of service.

Yet that is the policy which the Federal Government is following. That is the policy which has forced hundreds of thousands of American citizens, trained, efficient, loyal, and faithful workers, into an economic morass which is unbelievable to all except those who really know the facts.

The National Federation of Federal Employees knows these facts. It is presentng them in the hope that a knowledge of them will help to right the great injustice whch has been done.

This is the responsibility not of a small group but of all citizens. Every American should do his part to make "the American standard" a reality!

DR. J. FRANKLIN MEYER, PRESIDENT FEDERAL EMPLOYEES' UNION NO. 260, JANUARY 31, 1934

The Federal pay cut has had a very serious effect upon the scientific services of the Federal Government.

Furthermore, the effect which current conditions will have upon the future of those services is equally as important and presents a question in which every American citizen has a vital concern.

I fear that the words "Government scientist" have rather a strange connotation for a great many of our people. Particularly since the recent campaign of vilification by such organizations as the United States Chamber of Commerce, National Economy League, National Manufacturers' Association, and others, many people have tended to look upon the Government scientist as a caricature. He is pictured as long-bearded and vacant-eyed ancient who putters aimlessly about an incredible laboratory, wasting the taxpayers' money in idle alchemy.

Such a picture is not only an untruth but a dangerous untruth. In reality, the scientific branches of the Federal Government are rendering a tremendous service to the whole people. They are protecting our lives and our homes; they are setting up safeguards against disease; they are teaching business and industry new methods; they are showing the farmer and the city dweller how to save in new and important ways; they are establishing standards which are an essential to the progress of our civilization.

I regret that I have not sufficient time at my disposal to do more than to indicate the tremendous range of the Federal scientific services and their importance to every man, woman, and child in the Nation.

Trained, experienced, highly skilled scientists are laboring in Washington and in the field at shamefully low wages to maintain the scientific progress and integrity of our Government. Always poorly paid, with the wage cuts these men and women now are working for salaries which are but a scant fraction of those paid in the outside world for similar services. At great personal sacrifice, scores of Government scientists have remained at their posts for years. Their reward, I am sorry to say, has been only in the satisfaction of a job well done, for the Government's own reward to them has simply been to reduce their already indefensibly low salaries.

The scientific services of the Federal Government, and I am referring now to every branch, have a record of which they may be justly proud. In attacking that record and in vilifying the personnel, selfish special interests have demanded themselves beyond description.

To serve the Federal Government, scientists have spurned wealth and glory. And in many cases they have laid down their lives in an unselfish devotion to duty.

From the work of these men and women the whole Nation derives practical profit.

The Government scientist adds to the Nation's prosperity, increases its life expectancy, adds substantially to all of those tangible and intangible factors that help to make life worth living.

An inevitable effect of the Federal pay cut will be increasing difficulty in maintaining intact the personnel of the scientific services. The longer the pay cut is in effect, the more difficult that task will become.

Many great scientists have joined the Federal staff because of the supposed assurance of a continuity of effort and a wage at least sufficient to purchase the necessities of life. They have given up opportunities to earn large sums elsewhere in return for the different but definite opportunities afforded in the public service.

But now the Federal Government has broken its contract, and it proposes to keep on in that way.

The result must be, unless remedial action is taken quickly, to make the Federal scientific service far less attractive in the future.

In other words, it will not be possible for the Federal Government to command the services of scientists as it has done in the past. These men and women will examine the Government's record as an employer and say that they cannot do else but refuse to make a sacrifice so heavy.

None of us, and least of all the scientists themselves, want such a condition to come to pass. But come to pass it must, unless the Federal Government decides to follow the principles it is advocating for private business and industry and becomes a constructive employer and puts into practice a sound program of personnel administration.

The scientific branches of our Government serve the whole Nation. Every citizen has a deep and abiding interest in their welfare and in the responsibility of bringing about conditions which will enable them to continue and to be of greater service in the future.

MISS GERTRUDE M. M'NALLY, SECRETARY-TREASURER NATIONAL FEDERATION OF FEDERAL EMPLOYEES, FEBRUARY 1, 1934

It has become increasingly clear to the public generally that the Federal pay cut is wrong economically and that it is unfair and unjust. That viewpoint certainly has gained ground throughout the country. Of the utmost importance, many Members of Congress have reached that conviction.

But despite this change in attitude, there still are persons who speak in effect like this: "I don't see why the pay of Federal employees should be restored. They don't do anything, anyway."

Now we might just as well look the facts in the face. There are a great many people who really believe Federal employees are leeches and drones who do nothing but draw their pay. The work they do, in the opinion of these persons, is of little value and importance, and in any event constitutes no real task.

This view has been fostered very largely by selfish special interests who have sought to further their own ends by bringing the Federal service into disrepute.

Never before has there been afforded such a complete refutation of so baseless a contention as has been revealed to the world within the past year.

Upon the shoulders of the Federal Government—and in the final analysis that means upon the shoulders of the men and women in the service—has been thrown the tremendous responsibility of carrying out a broad program of economic recovery. It must be understood that this is not a responsibility of the emergency agencies alone. Every permanent establishment of the Government is playing a great part in this effort.

But this emergency program is just one phase of the story of the Federal employee's work.

The man or woman who says, either in earnest or in jest, that "Federal employees don't do anything, anyway", is simply giving clear evidence of a complete lack of understanding of the functions of government.

Federal employees aid and safeguard every aspect of life.

Federal employees deliver the mail.

Federal employees inspect livestock and dairies for the health protection of the public.

Federal employees live at lonely lighthouses to make shipping safe.

Federal employees make the primary charts and maps essential in so many fields.

Federal employees are engaged in a host of vital scientific projects.

I wish sincerely that I had the time here to name the many ways in which Federal employees bring order and progress and happiness into all of our lives. And the details of their work, which often is hazardous in the extreme, make a fascinating story.

Tonight I can do little more than to indicate the wide variety of services rendered efficiently, faithfully, and loyally by Federal employees, and to emphasize the falsity of the belief that these services are without great public value.

Only recently, in a public address, Dr. Lewis Meriam, distinguished authority of the Brookings Institution, reaffirmed the fact that "Government has been called upon to bail out the sinking ship of private industry." He declared that it is upon employees

of the classified civil service that chief reliance must be laid for the success of the recovery plans. And Dr. Meriam was outspoken in asserting the dollars and cents value of the service rendered by the permanent Federal establishment.

Dr. Meriam is but one of many leaders who have come to the front to give the lie to the interests who would willingly sacrifice these services for selfish reasons.

If we accept the fact that the Federal Government, as a modern, civilized, central authority, should provide protective and other services essential in this day and age, we also must agree that the personnel is entitled to a living wage.

Always meager, Federal salaries now, under the weight of pay cuts and furloughs, have been crushed to subsistence levels, and in many instances below that.

For the good not only of the employees themselves, but in the best interests of our national economy, that situation should be corrected.

MISS BELLE A. TROULAND, PRESIDENT FEDERAL EMPLOYEES' UNION NO. 105, FEBRUARY 2, 1934

The advent of women into the Federal service parallels to a striking degree the struggle of women to liberate themselves from the shackles of second-class citizenship.

It was with real misgiving that women were admitted into the Federal service during the last century. Aside from all else, serious doubt was expressed of their efficiency and ability.

As time went on, women proved amply their right to serve the Federal Government. They demonstrated in countless phases of the Government's activities that their loyalty and faithfulness and patriotism were equaled by their honesty and efficiency.

Today we may look back with very real pride upon the record which women have established in the Federal service.

At all times, in all places, under all conditions, they have acquitted themselves splendidly.

Today they have earned the right to the vital place they occupy in the Federal service. It is a place which they occupy not for sentimental reasons, but because they have proved their value and capacity.

The Federal pay cut has rested heavily upon the shoulders of these women, who rightly have assumed responsibilities in keeping with their services to the Federal Government.

Never paid in accordance with the vital character of the work done, these employees are suffering the most severe hardships. In many instances they are the sole support of families. I venture to say that there is not a woman in the Federal service today who is not contributing a substantial part of her usually meager income to the support of persons who, through no fault of their own, cannot earn a livelihood.

I do not wish to go into the heart-breaking details of the numberless cases of this nature which have been brought to my attention. I do, however, want all of those within the sound of my voice to believe me when I say that the situation brought about as a result of the pay cut is bitterly and shamefully acute.

While an increasing number of notable women are occupying high places in the Government, it is a fact, of course, that the greatest number of women are in the low-pay groups. To them the pay cuts and the furloughs—which simply mean more pay cuts—have reduced the salary scale to bare subsistence levels. In many instances Federal wages are not enough to keep body and soul together.

Every real American is quick to anger at the unjust working conditions under which so many women have labored in the past.

We all have agreed that this country will no longer tolerate such conditions, whether they affect men or women.

Every thoughtful citizen has applauded the efforts of the Federal Government to improve conditions of employment. But how many citizens are aware that the Federal Government itself is not yet in the vanguard?

How many citizens know that the Federal Government has crushed the wage scale to the lowest possible level, has speeded up its operations to the breaking point, and has refused to set a standard of employment that could serve as a model for the rest of the country?

How many persons in the outside world realize the full and somber meaning of the Federal pay cut to the thousands of men and women, your neighbors and mine, who are working bravely and unselfishly for a great common cause?

The women in the Federal service ask for no special consideration. They want no unusual favors.

They, along with their fellow citizens in the Federal service, ask only for simple justice.

That is being denied to them so long as pay cuts remain to shadow their lives and the lives of their loved ones.

PURCHASING POWER OF GOVERNMENT EMPLOYEES

Mr. SCHALL. Mr. President, in his recent message to the N.R.A. code authorities, President Roosevelt clearly states the urgent need of putting purchasing power into the hands of labor and the consumer. It is, therefore, inconceivable to me how the leaders in this body can say, as they have said, that the administration is against the McCarran amendment to restore purchasing power to Government employees. It seems to me that Congress is digressing from the logical and proper path in following its leadership, and that it should follow the suggestion of the President to provide such purchasing power as it can for the American people. Thus only is it following the wish of the administration unless the administration is adopting a course of being "all things to all men."

I ask leave to insert in the RECORD an editorial from the Washington Times for March 8, 1934.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times, Mar. 8, 1934]

FALSE LEADERS TAKE HOUSE INTO PAY-CUT DETOUR

"Every examination I make and all the information I receive lead me to the inescapable conclusion that we must now consider immediate cooperation to secure increase in wages and shortening of hours." (President Roosevelt.)

Congress cannot sidestep the clear-cut duty imposed upon it by the Government program in regard to private industry.

That duty compels immediate and complete restoration of the salaries of the hundreds of thousands of men and women who carry on the functions of the Federal service.

The evasion and equivocation which the McCarran salary-restoration amendment to the independent offices appropriation bill is meeting in the House indicate clearly that someone in high authority in that body is out of line with the Government's recovery policy.

The dodging and ducking which some Members of that body are executing seem to be designed to give succor and encouragement to those backward private employers who are resisting the efforts of the Government to put the working man back into the buying market.

Everyone knows that there are some few private employers to whom the recent address of the President on "purchasing wages" is just a lot of words.

Everyone knows that there are some few private employers who are determined to hold back recovery to the extent that that recovery includes the expenditure of money for decent wages.

And the conclusion is inescapable that those recalcitrant or reluctant employers are finding just the excuse that they need in the recalcitrancy and reluctance of Members of Congress to deal promptly and with enlightenment with the Federal pay-restoration amendment.

Every day that the House continues its game of "committee, committee, who has the bill" it is inviting noncompliance by industry with the President's program.

With amazing effrontery the very men who are delaying the enactment of this essential recovery measure pretend to be the champions of the general reconstruction program.

If they really have the interest of that program at heart, they will abandon their dilatory maneuvers and get behind the McCarran amendment.

All of their arguments against the restoration have been knocked into a cocked hat by the Presidential address to the N.R.A. code authorities.

That address clearly pointed the only way we can travel toward recovery—that way is labeled by the leader "increase of the consumer's purchasing power."

Those who would guide us by another way would lead us into pitfalls and ditches.

Those Members of the House who are in doubt as to the position they should take when given an opportunity to vote on the McCarran amendment should beware of these false leaders.

Right now those false leaders have led the House into a detour. They have sidetracked the measure which would send the Government along the pathway it is urging upon its citizens.

But that detour cannot last forever.

Eventually the McCarran amendment will come out of the detour and reach the floor of the House.

Then will the Membership of that body have an opportunity to stand and be counted.

By that vote the American people will be able to determine which of their representatives want to abandon the Government program and which are willing to give it the support which it deserves.

INCLUSION OF CATTLE AS A BASIC COMMODITY

The Senate resumed the consideration of the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Virginia [Mr. BYRD].

Mr. McNARY. Mr. President——

The VICE PRESIDENT (putting the question). The ayes seem to have it; the ayes have it, and the amendment is——

Mr. McNARY. Mr. President——

The VICE PRESIDENT. The Senator from Oregon.

Mr. McNARY. I was attempting to attract the attention of the Chair before the decision of the Chair had been announced. This measure was argued at length yesterday, except as to the proposal now submitted by the Senator from

Virginia. Personally, I should like to hear some further debate upon the pending amendment. I ask unanimous consent that the vote by which the amendment was adopted may be reconsidered.

The VICE PRESIDENT. The Chair has not declared that the amendment was adopted. The Chair was perhaps a little fast. The Chair understood the amendment was agreeable to the Senator in charge of the bill and that probably, like other amendments, it would be agreed to without discussion. The Chair now holds that the amendment has not been adopted.

Mr. McNARY. I fully appreciate the courtesy of the Chair. I thought the pending amendment, however, was the amendment offered by the Senator from Texas [Mr. CONNALLY].

The VICE PRESIDENT. The amendment of the Senator from Texas was agreed to yesterday. The amendment now pending is the amendment offered by the Senator from Virginia [Mr. BYRD] to include peanuts as a basic commodity.

Mr. McNARY. I have not seen the amendment of the Senator from Virginia. I have not heard it read. I do not know what reason may exist for the inclusion of peanuts as a basic commodity.

The Senator from Texas [Mr. CONNALLY] made a very interesting statement yesterday and argued at length the reasons why he believed cattle should be included as a basic commodity. I should like to have some discussion by the Senator from Virginia setting forth the reasons why he wants peanuts included as a basic commodity, the amount of money he expects will be necessary before the bill becomes operative as to peanuts, and some reason therefor. I desire that he shall go into the matter logically and thoroughly, and let the merits of the question, if any it has, be presented. I am sure the Senator from Virginia will realize the situation and conform to the suggestion I have made.

Mr. BYRD. Mr. President, the amendment carries no appropriation. It simply provides that peanuts shall be included under the Agricultural Adjustment Act as one of the basic commodities. The amendment was considered by the Committee on Agriculture and Forestry of the Senate and has the unanimous endorsement of that committee. It likewise has the approval of the Secretary of Agriculture, Mr. Wallace. I ask that a letter which Mr. Wallace has written to me giving his approval of the amendment may be inserted in the RECORD as a part of my remarks.

Before that is done, however, let me say that so far as I am advised the peanut growers of Virginia and of the South are unanimously in favor of having peanuts included under the Agricultural Adjustment Act as a basic commodity. The main reason for that is that under the Agricultural Adjustment Act plans are now in operation for the purpose of reducing the acreage that is planted to cotton and tobacco. The fear is expressed that this acreage will be planted to peanuts and therefore peanut growers of Virginia and the South are anxious to come under the Agricultural Adjustment Act on the same basis as other commodities, without asking for any appropriation whatever, so as to avoid having planted to peanuts the land that has been taken out of cotton and tobacco.

If the Senator from Oregon has any further questions, I shall be glad to answer them.

Mr. McNARY. Mr. President, it has been exceedingly difficult, because of the noise and confusion in the Chamber, to hear anything the Senator from Virginia has said. Does the Senator contemplate any addition to the funds now provided?

Mr. BYRD. No appropriation whatever is asked for, I will say to the Senator. The amendment simply proposes to make peanuts one of the basic commodities together with the other commodities covered by the act, and carries no appropriation of any character.

Mr. McNARY. Does the Senator contemplate by his amendment that money derived by the growers shall come from the processing tax alone?

Mr. BYRD. That is true. If it comes from any source it will come from the processing tax.

Mr. GEORGE. Mr. President, with the permission of the Senator from Virginia——

Mr. BYRD. I yield.

Mr. GEORGE. Let me say to the Senator from Oregon that even the levying of a processing tax would not necessarily follow in this particular instance if the bill were amended as now proposed. The real difficulty is in the transfer or shifting of the large number of acres that have been taken out of the production of other basic commodities and that land being planted to peanuts. That makes a complicated condition and threatens the industry. That is the primary reason for the amendment at this time.

Mr. McNARY. I desire to ask the Senator from Virginia if his amendment has ever been referred to a committee having general jurisdiction of the subject matter, or has it been referred to the Secretary of Agriculture or to the A.A.A. for an opinion?

Mr. BYRD. Mr. President, the Senator from Oregon evidently did not hear what I said. The amendment has been considered by the Committee on Agriculture and Forestry of the Senate. It has the unanimous approval of the Committee on Agriculture and Forestry. It has the approval of the Secretary of Agriculture, and I have sent his letter to the desk and shall ask that it be inserted in the RECORD.

Mr. McNARY. Has the letter been presented?

Mr. BYRD. The letter is on the clerk's desk, and if the Senator cares to have it read I shall be pleased to have that done.

The VICE PRESIDENT. The clerk will read the letter, as requested.

Mr. KING. Mr. President, before that is done, does not the Senator expect, if his amendment shall be adopted, that there will be, as a necessary corollary to it, additional legislation asked for and obtained—first, an appropriation for the enforcement of the law; and, secondly, a processing tax, or, at any rate, some other legislation that will give a little more effectiveness and vitality to his amendment? It certainly cannot be just a mere declaration, left suspended in the air in that way, that peanuts are to become a basic agricultural commodity. There will have to be some dynamic force behind it; though, of course, the Secretary of Agriculture, with his vast army of employees, has great dynamic force in that way.

Mr. BYRD. The amendment merely provides that peanuts shall become a basic commodity on an equality with other basic commodities included in the act. Whether or not there will be a processing tax I cannot say. The main purpose of the amendment is to prevent the land that is now being taken out of cotton and tobacco being planted to peanuts, because the character of land that is suitable for those products is suitable for peanuts. The main purpose is to bring about an arrangement whereby there shall not be an increase in the acreage planted to peanuts.

Mr. GEORGE. Mr. President, may I say that under the Agricultural Adjustment Act, unless peanuts are declared to be a basic commodity, the power does not exist to control the shifting to the planting of peanuts of the acreage taken from cotton and tobacco.

Mr. BYRD. The Senator is entirely correct.

The VICE PRESIDENT. Without objection, the clerk will read the letter of the Secretary of Agriculture, as requested.

The Chief Clerk read as follows:

DEPARTMENT OF AGRICULTURE,
Washington, D.C., February 12, 1934.

Hon. HARRY F. BYRD,
United States Senate.

DEAR SENATOR BYRD: This will acknowledge your letter of February 3 with reference to the question of including peanuts as a basic commodity in the Agricultural Adjustment Act.

As you know, we have in operation at the present time a marketing agreement for peanut millers under the management of a control board consisting of 5 peanut growers and 5 peanut millers. This board met in Washington on February 5 of this week, and passed a resolution requesting that peanuts be designated as a basic commodity in order that the Agricultural Adjustment Administration may have broad powers in dealing with the problem of controlling peanut production in 1934.

In view of the rather large areas suitable for peanut production, and in view of the reduction in cotton and tobacco acreage now being effected in the present peanut-producing areas,

we recognize that it will be necessary to take definite steps to discourage undue expansion in peanut acreage in 1934. We believe also that the designation of peanuts as a basic agricultural commodity will give the Agricultural Adjustment Administration more latitude in dealing adequately with this problem.

If you feel, therefore, that the peanut producers are prepared to support a program of production control, I can assure you that the Agricultural Adjustment Administration will make every effort to utilize its facilities in the administration of a program designed to control peanut production and improve the income of peanut producers.

Sincerely,

H. A. WALLACE, *Secretary.*

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Virginia yield to the Senator from Idaho?

Mr. BYRD. I do.

Mr. BORAH. As I understand the reading of the Secretary's letter, if this amendment should go in the bill it would give the Agricultural Department absolute power to determine whether or not any particular land left vacant by reason of reduction of cotton production should be permitted to be devoted to raising peanuts.

Mr. BYRD. The Senator, I think, is mistaken. The amendment simply gives to the Secretary of Agriculture the same control with respect to peanuts that he has with respect to any other basic commodity under the Agricultural Adjustment Act.

Mr. BORAH. As I understand, the theory of that is that, owing to the fact that there is going to be a reduction of cotton acreage, the acreage might be planted to peanuts; and the Senator, by his amendment, is seeking to give to the Secretary of Agriculture power to say that that may not be done.

Mr. BYRD. That is only to be done through agreement with the growers and by compensation to them. It is not an arbitrary power.

Mr. BORAH. We are not lodging in him yet the power to say that a man shall not raise a certain crop without the Secretary's consent? I am greatly relieved to know that is not true.

Mr. BYRD. This amendment does not increase the power of the Secretary of Agriculture.

Mr. HASTINGS. Mr. President——

The VICE PRESIDENT. Does the Senator from Virginia yield to the Senator from Delaware?

Mr. BYRD. I do.

Mr. HASTINGS. Has the Senator any idea what the processing tax upon peanuts will be?

Mr. BYRD. I have no idea.

Mr. HASTINGS. Then the Senator has not any idea how many less nuts we will get for 5 cents than we now get? [Laughter.]

Mr. BYRD. I will say to the Senator that regardless of how many less nuts we get, I will present him with a bag of the finest peanuts in the world.

Mr. NEELY. Mr. President, let us hope that we shall not get any more nuts in the Senate. [Laughter.]

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Virginia.

Mr. NORRIS. Mr. President, I may have an entirely erroneous idea, but I have been laboring under the impression that when any agricultural product is defined in the law as a basic product, it necessarily follows that a processing tax should be levied upon that product.

There are a great many people who want to have different commodities classified under the law as basic agricultural products, but who are opposed to having any processing tax levied on those particular products.

Cattlemen throughout the West are telegraphing to their Senators—I have seen several of the telegrams, and have received several of them—that the cattlemen in a certain community are in favor of having cattle named in the law as a basic product, but they are opposed to the levying of any processing tax upon cattle.

As I say, I may be wrong; but it seems to me that if a commodity is defined in the law as it now stands as a basic agricultural product, it follows as a matter of law that a processing tax can be levied upon that particular product. Otherwise, we would have two kinds of basic agricultural products: One would be a basic agricultural product upon which a processing tax could be levied, and the other would be a basic agricultural product upon which a processing tax could not be levied.

If that be true, then I presume every Senator who represents a district where some of these basic products are produced would want to have taken away the power under the law to levy a processing tax upon those particular products. It strikes me that it would be very unfair to have two basic agricultural products named, and provide by law that a processing tax should be levied on one and not on the other, if my impression is correct that when a product is added to the list of basic agricultural products it necessarily follows that a processing tax can be and probably will be levied upon that particular product.

Mr. CONNALLY. Mr. President, will the Senator yield?

Mr. NORRIS. I yield.

Mr. CONNALLY. The Senator is correct to the extent that if any benefit payments are made to an industry, then of course the processing tax is imposed; but if the Secretary does not pay benefits, but merely arranges marketing agreements, or something of that kind, a processing tax would not necessarily be required. They would all be treated in the same way, however.

Mr. NORRIS. Could not the Secretary, under the law as it now stands, make agreements of that kind whether there was a processing tax or not?

Mr. CONNALLY. Voluntary agreements will be worked out with the industry. They will not necessarily involve the payment of benefits. If any benefits are paid to the producers, the processing tax must be levied; and that necessarily follows.

Mr. NORRIS. What benefit can come to the owners of any particular product if we do not levy a processing tax upon the product? I had understood that the power to levy a processing tax necessarily followed if a given product were put on the list and made by law a basic commodity.

Mr. BAILEY. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Nebraska yield to the Senator from North Carolina?

Mr. NORRIS. I do.

Mr. BAILEY. As I understand the present law, the whole purpose of the Agricultural Adjustment Act, and especially the processing tax, was to restore what we call parity prices as of 1909–14. All that this amendment does is to place peanuts in the same category with the other agricultural products named in the bill, and of course with a view to restoring parity prices, so far as the Agricultural Adjustment Administration can do so, by means of an appropriate processing tax on peanuts.

Mr. NORRIS. All right. If we assume that power, the Senator has a processing tax, then, on peanuts.

Mr. BAILEY. Now let us take the facts. If the Secretary undertakes to operate with a view to restoring the parity price, as I understand the law, the tax is imposed upon the processing of peanuts for the express purpose of restoring the parity price.

Mr. NORRIS. I understand that.

Mr. BAILEY. And it can be done in two ways: One by way of benefit payments to induce a curtailment of the crop; the other by way of curtailing the crop and reducing the supply, and therefore increasing the price. That, as I understand, is the philosophy of the Agricultural Adjustment Act.

Mr. NORRIS. Mr. President, I am a member of the committee to which the original bill was referred. I remember that this question of what we should put in was the subject of debate and discussion and consideration that lasted for 2 or 3 weeks, most of the time in executive session, on the part of a committee that were conscientiously and honestly trying to meet the problem; and the question as to what should be included as basic agricultural products was one of the most important questions that came up for consideration.

There was a division in the committee as to what we should put in. There was a time, as I remember, during our consideration of the bill, when almost every agricultural

product known was included as one of the basic agricultural commodities, until it became apparent, I think, to every member of the committee that we had overloaded the bill. I was one of the minority of that committee, which included, I believe, the then chairman of the committee, which believed in the beginning, and believed when we finished, that the agricultural commodities that should be listed under the law as basic commodities, and therefore be subject to the processing tax, should be limited to two products. One was wheat, and the other was cotton. They covered in their scope practically the entire country.

The legislation was experimental. We had never had anything like it before, and there were various opinions as to how it would work. Nobody knew positively, no matter how definite his ideas might be. I think all would have to admit that, after a full discussion, there was not a member of the committee who could definitely satisfy his own mind as to just how the processing tax was going to work. In the committee I voted to confine the commodities to two, namely, wheat and cotton, of both of which we produced a surplus, both of which were commodities permanent in their nature, so that they were different from hogs or cattle, or anything that would have to be handled within a limited time.

Mr. LONG. Mr. President, will the Senator yield?

Mr. NORRIS. I yield.

Mr. LONG. I have been receiving a number of letters, particularly from cotton producers, and I wondered whether the committee had taken into consideration this kind of a problem. In these letters the correspondents tell me that as a result of reducing these crops a great many share tenants have simply been thrown out, and a good many of the laborers and hands on the farms, having nothing at all to plant, have therefore been discharged.

Mr. NORRIS. I have not received any such communications that I remember. What the Senator says may be the situation; I am not disputing it. However, I do not know just why that should follow.

Mr. LONG. These correspondents state that a planter, say, is raising a thousand acres of cotton; his farm is cut down, let us assume, to six or seven hundred acres, and there will therefore be 300 acres he will not plant. So the particular share tenant of that particular part of the crop, or the hands needed for that particular part of the crop, instead of having anything done for them, just naturally must be laid off. Is there any way in which that can be corrected or taken care of in this measure?

Mr. BORAH. Secretary Wallace says in his article, I remember, that it may be necessary to transport them north.

Mr. NORRIS. Mr. President, let me give my idea of the situation presented by the Senator from Louisiana. I should say that if a crop is limited it matters not what it may be—and a processing tax contemplates a limitation of the acreage—the loss to the farmer of that acreage has to be paid for out of the processing tax. That is the theory of it. But whenever that is done, whenever acreage is reduced, no matter what it may be, it necessarily follows that there is less employment, that there is a reduction, although there are provisions in the measure about taking care of other crops which will be substituted for the ones which are basic commodities in order to relieve the situation which might arise by virtue of substitutes being produced in lieu of commodities upon which a processing tax was levied, the idea being at the time that the processing tax would somewhat increase the price to the consumer.

When the original law was under consideration by the committee, I think without exception every member of the committee had the idea that the cost to the consumer would be increased on account of the processing tax. Up to date it has not worked that way in all cases. In the case of hogs it has seemed to me that the processing tax has been a failure. Instead of the consmer paying it, it has been taken out of the farmer, and his price has been reduced.

I noticed a statement made in a recent hearing, at which I was not present, by Mr. Davis, for whom I have the very highest regard and whose ability, I think, is unquestioned I would be inclined to follow him if I were in doubt. He recently testified that while they were disappointed with the processing tax on hogs, he was satisfied that the time was just here now when the processing tax on hogs was going to be felt, and that the farmer was going to get the benefit of it. I do not know whether it will turn out that way or not. If it does not, as the Senator representing a great many farmers whose chief production is hogs, I would be very much inclined to vote to take off the processing tax on hogs.

Mr. CONNALLY. Mr. President, will the Senator yield?

Mr. NORRIS. In just a moment.

Therefore, it seems to me that if we are going to divide the tax, have some commodities not subject to the processing tax and some subject to the processing tax, I should like to have some of the processing taxes, which already exist, taken off.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. NORRIS. In just a moment.

I received a telegram from some cattlemen who said, in substance, that some organization had met and they had passed a resolution unanimously in which they stated:

> We want cattle included as a basic commodity, but we do not want anybody to have the power to levy a processing tax on cattle.

With due regard to those gentlemen, it seemed to me that it would be a good deal like saying to a man, "I want you to go swimming today, but I do not want you to get wet." It seems to me that the processing tax logically follows the inclusion of a product as a basic commodity. If I am wrong about that, why not do away with the entire processing tax and put everything in as a basic commodity? It seems to me that if we did that we would be just where we were when we started, that we would not have done any good.

I know that some Senators contemplate offering an amendment to the bill to put in oats as a basic commodity. An amendment will be offered to put in rye as a basic commodity. An amendment will be offered to put in flax as a basic commodity. Probably one will be offered to put in potatoes as a basic commodity, and so on. If we start to putting in these other articles, why should we exclude some the producers of which want them put in and nominated in the law as basic commodities?

Now I yield to the Senator from Texas.

Mr. CONNALLY. Mr. President, let me say to the Senator from Nebraska that the Senator from Texas does not favor the exemption of cattle from the processing tax. He said yesterday he would not stand on this floor and advocate a bounty to one industry which other industries did not get. I want to set myself clear with the Senator in that respect. If cattle are included as a basic commodity, the cattle industry will have to bear a processing tax, just like every other industry.

Mr. NORRIS. I think it should.

Mr. CONNALLY. That is right and that is just. I am not contending otherwise. In the matter of hogs——

Mr. BORAH. Mr. President, does the Senator say that if cattle go into the bill a processing tax is to be laid?

Mr. CONNALLY. Not necessarily. I want to read the law to the Senator.

Mr. BORAH. I know; but the Senator has framed this measure, and he says he does not want cattle in unless there is a processing tax, that he would not advocate a bounty. As I understood the Senator yesterday, he said that he desired to leave it entirely discretionary with the Secretary.

Mr. CONNALLY. Oh, no.

Mr. BORAH. Then I misunderstood the Senator.

Mr. CONNALLY. If the Senator will look at the RECORD, he will see that the Senator from Texas did not intend to convey any such impression. The Senator from Texas said that the Secretary might administer the other portions of the bill, about marketing agreements, and might determine

that it was not necessary to levy a processing tax because no benefits would be paid directly to the industry. Here is the law, section 9 of the original Adjustment Act. I quote:

When the Secretary of Agriculture determines that rental or benefit payments are to be made with respect to any basic agricultural commodity, he shall proclaim such determination, and a processing tax shall be in effect with respect to such commodity from the beginning of the marketing year therefor next following the date of such proclamation.

The Senator from Texas said yesterday, and he now repeats, that if under that act the Secretary determines to make benefit payments to any industry, then he has to levy a processing tax. If he works out a program which does not involve the payment of benefits or rentals—a program, say, of marketing agreements which do not involve the payment of money out of the Treasury—then, of course, he does not have to levy a processing tax.

Mr. NORRIS. I think that is a fair statement of the law. I want the Senator from Texas to understand that I am not finding fault with him or with any other Senator, but there is a great question whether it is a benefit or otherwise to have a commodity subject to the processing tax. I do contend that no producer of a commodity has the right to ask to have it included as a basic commodity unless he is willing and unless he understands in advance that a processing tax may be levied against that particular product. It cannot be levied against the product unless it is named as a basic commodity. So, whenever we put a commodity in that class, we make it subject as a matter of law to the processing tax, and I do not see how anybody can ask for an exception.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. NORRIS. I yield.

Mr. TYDINGS. I was interested in trying to find out how this tax could do the farmer any good, and I should like to ask the Senator whether he agrees with the conclusion that the levying of the processing tax will make the article upon which it is levied cost more to the consumer. Is that correct?

Mr. NORRIS. That was the theory. I do not know whether it is going to work out that way. It has not worked out that way with respect to hogs.

Mr. TYDINGS. If it shall not work out in that way, the consumer will pay more.

Mr. NORRIS. Yes.

Mr. TYDINGS. If it shall not work out in that way, the farmer will get less.

Mr. NORRIS. Yes.

Mr. TYDINGS. Assuming that it works out so that the farmer gets less, then it has not done what it was set up to do.

Mr. NORRIS. That is absolutely true.

Mr. TYDINGS. If it shall work out so that the consumer pays more, with 8,000,000 or 10,000,000 or 12,000,000 people out of employment all over the country, will not the result be that we will cut down the consumption in the exact proportion that we increase the cost to the consumer?

Mr. NORRIS. The Senator from Maryland has stated a proposition that is logical, but it is not logical to the extent to which he applies it.

Mr. LONG. Mr. President——

Mr. NORRIS. Permit me to finish, Mr. President. There will be a tendency to decrease consumption. I think every honest man who has studied the question must admit the truth of that statement, for when we raise the price we necessarily decrease consumption. That question was presented and discussed up and down before the committee and by the committee. The object of the legislation, however, was to help the farmer; to enable the farmer to get an increased price for his products. We were all in earnest in that endeavor. I think all those behind the movement, the administration and the committee, were conscientious in that endeavor. It was realized, however, that if the farmer should get a higher price the consumer would have to pay a higher price.

Mr. TYDINGS. Certainly.

Mr. NORRIS. But it was felt by all that under no circumstances should the consumer ever demand that the producer produce at a financial loss to himself that which the consumer used as food. That is the theory of the legislation.

Mr. TYDINGS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Nebraska yield to the Senator from Maryland?

Mr. NORRIS. I yield.

Mr. TYDINGS. I am more in agreement with the Senator's observation that the farmer will receive less money for his commodities with the processing tax rather than more. I agree with the Senator's first conclusion that had the price been raised, theoretically, at least, it would have cut down consumption; but in the application of the law the tax is imposed at the source, upon the producer of the manufactured product; and if imposed there, in my opinion it will do nothing more or less than cause the farmer to get less for his product with the tax on it than he would have gotten without the tax.

Mr. NORRIS. No; that was not the intention.

Mr. MURPHY. Mr. President——

Mr. NORRIS. Just a moment, Mr. President. The theory was that the processing tax should be paid by the manufacturer; that he would pass it on to the consumer; that the farmer would get the benefit of it. It has worked, in the case of hogs, so that instead of that being done, the processing tax has been taken out of the farmer in a reduction of the price he has received.

That was well shown here yesterday when the Senator from Idaho, I think, read a letter from one of the packers who frankly said that they were paying less than they did before. I should not want to continue with that kind of a processing tax if I thought there was no better hope for the future; and I have only the hope of Chester Davis, one of the experts working out this problem, who says in his testimony, in substance, that when the processing tax is first applied it will for a time reduce the price received by the producer, but that in time—and he thinks that time has now arrived, for there is a slight increase in the price of hogs—the farmer will get the benefit of it.

Mr. MURPHY and Mr. TYDINGS addressed the Chair.

The PRESIDENT pro tempore. Does the Senator from Nebraska yield; and if so, to whom?

Mr. NORRIS. I yield first to the Senator from Iowa, who has been seeking for some time to interrupt me.

Mr. MURPHY. Mr. President, having reference to the conclusion stated by the Senator from Maryland that a price decline will necessarily follow the imposition of the tax, because there will be a diminution in the consumption of the food taxed, our experience with the processing tax on hogs has been that the first tax imposed was followed by a decline in the price of hogs. When the tax was stepped up from 50 cents to $1.50, I think last February, the Department of Agriculture, profiting from the experience of the imposition of the first taxes, timed purchases of pork so as to resist the impact of that increase. A billion more pounds of pork were marketed in November, and 25 percent more were marketed in December, than in the corresponding months of the year before. That pork, except for what went into storage and what went into the export trade, was absorbed by the consumer.

Mr. KING. Except what was wasted.

Mr. CAREY. Mr. President——

Mr. NORRIS. Mr. President, I yielded to the Senator from Iowa. He has not yet finished.

Mr. MURPHY. Since the imposition of the second tax the price has not declined. One development not taken into account in the statement of the Senator from Maryland is that the justification for this program is the eventual emancipation of the hog industry. The whole program contemplates that in consequence of the imposition of this tax, which produces the money to pay the farmer for reducing his production of hogs and withdrawing acreage from corn production, he will receive much higher prices for what he will market next year.

Mr. TYDINGS. Mr. President, I should like to make a comment in reply to the Senator from Iowa.

Mr. NORRIS. If the Senator from Iowa is through, I yield to the Senator from Maryland.

Mr. TYDINGS. What I am afraid of is that we shall then go into the second phase; namely, that if we shall finally get an increase in price we will then enter the time, which the Senator says we are now entering, when there will be a decrease in consumption.

May I make another observation? Let us consider the relief fund of $950,000,000. Some of it was spent for pork. The higher the price of pork, the less pounds of pork the $950,000,000 will buy. The lower the price of pork, the more pounds of pork the $950,000,000 will buy. We must take one horn or the other of the dilemma. We cannot hold onto both of them.

Mr. NORRIS. Mr. President, let me deal with that dilemma now. I tried to show awhile ago that while the Senator from Maryland was, I thought, perfectly logical in his deduction, it did not follow that the same logic extended clear through. In other words, while increasing the price has a tendency to decrease consumption, the amount will not necessarily balance the increased amount that the farmer gets for his stock.

Mr. TYDINGS. That is true.

Mr. NORRIS. That was the only objection I found to the Senator's logic.

Mr. TYDINGS. It might be more; it might be less.

Mr. NORRIS. I do not see how it could be more. In fact, it could not be more, and I think it certainly would be less. Although it seems to me no man ought to deny, if he wants to face this question fairly, that if we increase the price paid to the farmer for a certain product we necessarily decrease consumption to some extent. That decrease to the consumer is not necessarily the same in amount as the increase to the producer. That is the point I desire to make.

Mr. TYDINGS. Mr. President, I think that point is well taken.

Mr. NORRIS. The theory of the processing tax was this: We were confronted by a situation in which the farmer was producing the food that we eat at a financial loss to himself. Everybody knew that he could not indefinitely do that. No one who consumes food ought to object to paying the man who produces it at least the cost of production. I was one member of the committee, and I was one of the Senators on the floor of the Senate when we had the original bill up for consideration who favored an amendment, which amendment was agreed to in the Senate—it was taken out in conference—making provision that the farmer should receive not only the cost of production, but there should also be included a reasonable profit in connection with production.

In my judgment we made a mistake when we designated anything as a basic commodity beyond the two commodities I have previously mentioned—wheat and cotton. Inasmuch as it was an experiment, inasmuch as everyone knew it was an honest attempt to help the farmer, to help the producer of the foods we eat, although we did not know what the result of the experiment would be, it was my thought that we should try it first on the two commodities that were practically universal in production and in use, and wait until we saw, after a full trial, how that worked out, before we included anything else in the enumeration of basic products.

Mr. LONG. Mr. President——

Mr. NORRIS. I will yield in a moment. The committee, I think, reached the same conclusion after it had put in all the other products and then, seeing how ridiculous it was, took nearly all out again.

One exception that I finally agreed to was in reference to hogs. I did that after I had a long conference with the Secretary of Agriculture, who, as we all know, comes from a section which produces hogs and corn to a very great extent. I believed then, and I believe now, he understood the section very well, and he was in favor of levying a processing tax on hogs. I did not want to do it. I yielded after a while, but I thought then, and I believe now, that we have made a mistake in including all these products, and if we include one, if we include cattle, if we include peanuts, certainly I would not say that we should not include rye, we should not include flax, we should not include oats—and I do not know where we would stop. That is the only objection I have to any of them.

Mr. KING. Peanuts?

Mr. NORRIS. Yes; peanuts.

Mr. BAILEY. Mr. President, may I interrupt the Senator?

Mr. NORRIS. I yield first to the Senator from Louisiana [Mr. LONG].

Mr. LONG. Mr. President, I want to ask the Senator a question, and I presume and hope I can attract the attention of the Senator from Oregon [Mr. MCNARY]. We started out with a back-to-the-land movement and that back-to-the-land movement is still under way. I just want to say to the Senator that I am going to vote to put peanuts in the law; and anything else that it is moved to put in and that anybody wants to put in; I am for putting them all in; but we started with a back-to-the-land movement and we have wound up in this way: As I understand from what the Secretary of Agriculture himself has said, we have got to take a lot of people off the farms and transport them to the North and try to absorb them in industry. So that has knocked down the back-to-the-land movement. So we have the proposition, on one hand, that we must depopulate the farms, and, on the other hand, that we must put people back on the land.

Mr. NORRIS. Mr. President——

Mr. LONG. Mr. President, will the Senator just let me complete the suggestion?

Mr. NORRIS. Yes.

Mr. LONG. I want the Senator from Nebraska to consider if it would not have been better to have taken the Louisiana and South Carolina plan and have planted surplus crops and stored the surplus for the following year, according to the Scripture, than to have gone along depopulating the farms?

Mr. NORRIS. Mr. President, let me say, in passing, that that is another plan, and perhaps it is better than the present one. During the last 10 or 12 years I have listened attentively, I should say, in the aggregate, for at least 5 years of my existence, to men who had plans, most of them to relieve the farmer and many of them to relieve the whole economic situation. In the main these plans come from men who are perfectly honest and perfectly earnest; they are conscientious; and I cannot say that any particular one is wrong. But here is a plan that we have agreed upon; that we have adopted; we have gone part way through it; and I do not want to quit. I do not want to make it ridiculous either. I do not want to overburden it with a whole lot of other products that I think ought not to be included, although the experiment probably can continue if we put them all under the law. The Secretary of Agriculture does not need to levy a processing tax unless he wants to, but I believe it is a mistake—and, it seems to me, we are to blame in part for the mistake—to put on too much. We have overloaded the law; we have gone too far. Someone else may not think so, and he is just as honest about it as I am. We are all trying to accomplish the same end, and I am in earnest about it, as I think everybody else is. We are conscientious about it; we have gotten into a dilemma; we are confronted by a predicament from which we must extricate ourselves; and how are we going to solve the problem? When we start and get half way through it, it seems to me we make a mistake by not going on and giving the plan a full trial. If it will not work, we will have to admit it, say that it will not work, and try something else.

Chester Davis, as I have said, has been connected with the farm question ever since the World War. He comes from Montana; he is a student of the subject; he is perfectly conscientious; he is perfectly honest. I have reached the conclusion that the processing tax on hogs was a failure; I have reached the time when I want to abandon it. I have read what he said about it; he has charge of it, and he says it is going to work, and he wants it to be tried just a little

longer. I realize that sometimes when we try these experiments we wear the fellow out on whom we are trying them, and he disappears from the equation. Yet I cannot doubt the sincerity of Mr. Davis nor his wisdom, and he has gone a good way with it.

I think that hogs never ought to have been included as a basic commodity. I come from a hog-producing section, and I was opposed to including hogs in the provisions of the law although, as I said, I yielded. After I was convinced that the Secretary of Agriculture was very anxious to try the experiment with respect to hogs, I thought it best to give him an opportunity to do it. Now that we have arrived about at a point where we are going to get benefit for the producer of hogs, I would hate to quit; yet, at the same time, I would hate to add a whole list of other products to the basic commodities. It is not because I depreciate the importance of other commodities at all, but because I believe the time has not arrived when we should do that. Yet, if we are going to do it with one, I see no reason why we should not do it with all.

Mr. BYRD. Mr. President——

Mr. NORRIS. I yield to the Senator from Virginia.

Mr. BYRD. Mr. President, I agree with the Senator from Nebraska that perhaps the farm relief law should have included only two commodities, wheat and cotton, at the beginning so as to give a trial to the plan, but it did not include only those two commodities.

Mr. NORRIS. I am sorry to say the Senator is right.

Mr. BYRD. The situation that confronts us now is that with respect, for example, to cotton and tobacco—and especially tobacco—if there shall be a reduction of acreage planted to tobacco, as there will be under the agreements that have been made, then that acreage is going to be planted, for example, to peanuts, and is going tremendously to increase the production of peanuts and reduce the already abnormally low price of peanuts, which is now less than the cost of production.

Mr. NORRIS. Let me ask the Senator right there if there has not been an agreement made for the reduction of acreage planted to tobacco?

Mr. BYRD. Yes.

Mr. NORRIS. Has there been any agreement made as to peanuts?

Mr. BYRD. No agreement has been made as to peanuts, because peanuts are not a basic commodity under the Agricultural Adjustment Act.

Mr. NORRIS. In the case of tobacco the agreement that has been made about the reduction of acreage planted has been reached by the producers of tobacco themselves. They are parties to the agreement.

Mr. BYRD. The only way that the agreement was reached was by putting a processing tax on tobacco in order to compensate the farmers who reduced their tobacco acreage.

Mr. NORRIS. Suppose we put all agricultural products on the list of basic commodities, would not the result be just the same as though we had included none? If we should levy a processing tax on every one of them, and make an agreement as to the reduction of acreage, we would have the same difficulty.

Mr. BYRD. We would not have the same difficulty with respect to putting the land that is taken out of one crop into another crop where the land is suitable for the new crop. In the case of peanuts, tobacco land is especially suitable for their production. It might interest the Senator to know that we put rice in the Agricultural Adjustment Act, and the Senator voted for it, and I voted for it; but, as a matter of fact, the value of the rice crop of this country is far less than the value of the peanut crop. It is further true that there are only 9,000 farms in this country planted to rice, while there are 326,000 farms planted to peanuts.

Mr. NORRIS. The Senator has me wrong in respect to my attitude regarding rice. I was not in favor of including rice in the bill.

Mr. BYRD. The Senator voted for the bill that included rice.

Mr. NORRIS. Yes; I voted for the bill; but that was one feature of the bill I did not like.

Mr. BYRD. The point I make is this: We have included these other commodities in the law——

Mr. NORRIS. Mr. President, I do not think it is fair to say, I will say to the Senator, that because I and others who agreed with me—and there were quite a number of members of the committee who did agree with me—as to what products should be included as basic products voted for the bill after other commodities were included we were necessarily in favor of including those particular products as basic commodities. That would not be a fair statement.

Mr. BYRD. Very well; I will apologize to the Senator; but the fact remains that these other commodities are included in the law, and operations are now under way to reduce the acreage of those particular commodities. That acreage is going to be planted to some other crop; and it seems to me we have got to put these other commodities under the Agricultural Adjustment Act in order to prevent an overproduction of commodities that may be planted in the acreage that is withdrawn under the provisions of the present law.

Mr. NORRIS. I have forgotten some of the provisions of the law, but I think we had carefully worked out the provisions of the bill when it was pending and gave the Secretary of Agriculture the power to meet that condition. We realized that in putting on the processing tax we might increase the price to the consumer, that we might have the market supplied with substitutes, and there is a provision in the law by which a tax is levied on such substitutes with the idea of giving the Secretary of Agriculture control over the situation.

Mr. BYRD. Does the Senator think that on peanuts, for example, there could be placed a processing tax without peanuts being included in the law?

Mr. NORRIS. No; I do not believe that to be so. I believe the Senator is right; that, in order to get a processing tax, it is necessary to include the commodity as one of the basic commodities.

Mr. BYRD. The Senator well knows in order to get a farmer to reduce his acreage that he must have some compensation for doing so. He is not going to do it by voluntary agreement. That has been tried for a number of years, but the effort has failed.

Mr. NORRIS. When the tobacco farmer reduces his acreage does he not have to agree, is it not part of his agreement that he shall not put the acres on which he does not cultivate tobacco into peanuts or some other agricultural product?

Mr. BYRD. The letter of the Secretary of Agriculture, which is lying on the desk, says that peanuts should be included as a basic commodity——

Mr. NORRIS. I heard that letter read.

Mr. BYRD. Because the farmer who reduces his acreage of cotton or tobacco will plant the land to peanuts, and that certainly indicates that peanuts should be classified as a basic commodity.

Mr. NORRIS. The Senator would not be in the dilemma in which he is with regard to peanuts if tobacco were not included in the law.

Mr. BARKLEY. We would be in a worse dilemma with reference to tobacco if tobacco were left out.

Mr. NORRIS. If tobacco were not a basic commodity, then, the reduction in tobacco acreage would not be such as could be planted in peanuts.

Mr. BYRD. But tobacco is a basic commodity.

Mr. NORRIS. Is not that the case with regard to hogs? We already have too much in the bill.

Mr. BYRD. It is a basic product, and I do not think that it could be taken out of the law as a basic product, no matter who attempted to take it out.

Mr. NORRIS. Probably it could not be, because it was put in with the other products by a majority vote; it was put in legally and fairly, so far as that is concerned.

Mr. ERICKSON. Mr. President, I have just received a telegram from the Montana Stock Growers Association pro-

testing against making cattle a basic commodity if that action carries with it a processing tax. I ask unanimous consent that this short telegram may be read from the desk.

The PRESIDENT pro tempore. Without objection, the telegram will be read.

The Chief Clerk read as follows:

HELENA, MONT., *March 6, 1934.*

Hon. JOHN E. ERICKSON,
United States Senate, Washington, D.C.:

Montana Stock Growers Association is opposed to making cattle basic commodity if this carries a processing tax. Will appreciate your support of our wishes in this matter. The industry in such condition that no additional burdens can be carried.

MONTANA STOCK GROWERS ASSOCIATION.

Mr. BAILEY. Mr. President, I had intended to speak for some little time regarding the peanut industry, but a number of Senators have requested that they have opportunity to speak at this time, and I will occupy the floor for just a moment.

I wish to make a brief statement regarding the situation of the farmer producing peanuts in North Carolina. I think that situation furnishes an instance and a commentary on the Agricultural Adjustment Act, and the administration of the act, of very great value. In my State there are about 17 counties in which peanuts are the principal agricultural product and means of livelihood for the farmers. In each of those counties cotton and tobacco might be produced, but the farmers in those counties have specialized in raising peanuts, and, incidentally, since hogs go with peanuts as a byproduct, in raising hogs.

Under the administration of the Agricultural Adjustment Act, the tobacco farmers of North Carolina, in a great belt surrounding the territory in which the peanut farmers operate, have, to the extent of some 97 or 98 percent, executed agreements, and received considerations for the execution of those agreements, to curtail the production of tobacco, in acreage as well as output, by 30 percent, and to that extent they will have 30 percent less to do in the current year, and they wish to find something more to do. In the same territory are the cotton farmers, and they have executed agreements to curtail the cotton crop by 25 percent, and that leaves them in need of something more to do.

Here is the point: In executing the cotton agreements and the tobacco agreements the cotton and tobacco farmers were required by the Agricultural Adjustment Administration to agree also not to produce more wheat or corn or other crops which were competitive with the crops of the Middle West, the whole crop situation being considered one, and it being quite clear that if the effect of curtailing the cotton and tobacco crops would be just to increase the production of wheat and corn and other crops in the South at the expense of the farmers in the Middle West and the far West, nothing would be accomplished.

With that state of facts, the peanut farmers are exposed to the almost irresistible necessity operating upon the cotton and tobacco producers to produce something in place of their cotton and tobacco. They have reduced the cotton; they have reduced the tobacco; they feel the necessity of employing their stock and employing themselves. There is the land, and there is the opportunity. They cannot produce any more cotton or tobacco but must abandon acreage and produce less. They are not allowed to produce more wheat; they are not allowed to produce more corn; and naturally they will produce peanuts.

Now see what the effect will be. If the peanut farming operations are spread from about 17 counties into probably 40 counties, the men who have lived by way of producing peanuts in northeastern North Carolina are destroyed. Whether this act is a good act or not, the farmer producers of peanuts are under the necessity of self-preservation to demand of this Government that it shall throw around them the same protection it throws around the farmers who are producing other crops. On the other hand, while they labor under the necessity that is imposed upon them of self-protection, the United States Government, having entered into this sort of thing, is not less under the necessity of protecting them in the interest of justice.

Mr. President, that is the situation. There is no disposition to make this act a ridiculous thing. The peanut is spoken of with a certain light sense of humor; we understand that. But the man who makes his living down in North Carolina, in those 17 counties, by way of producing peanuts, sees no humor whatever in the situation under which the Government itself throws him into competition with a great territory, induces the cotton farmer and the tobacco farmer to plant at his expense, and drive his crop down to nothing.

The matter is a matter of very great importance, and I will agree with the Senator from Nebraska and with the Senator from Idaho, and with the other Senators that, since the Government has gone into this business, necessity on one hand and justice on the other demand that it go all the way or retrace its steps. So I ask, in behalf of the peanut farmers in North Carolina, that steps be here taken to enable them to come under this adjustment act and within the powers of this administration in order that they may be saved from destruction by way of the operations of the Government, to which they are loyal and which derives its life from them and the taxes they pay.

ST. LAWRENCE DEEP WATERWAY TREATY

Mr. BROWN. Mr. President, on the 10th day of January last the President submitted a message to the Senate requesting consideration of the ratification by this body of a Great Lakes-St. Lawrence Treaty with Canada. In the second sentence of the President's message he stated:

> Broad national reasons lead me without hesitation to advocate the treaty.

Mr. President, the State which I have the honor to represent borders neither on the St. Lawrence River nor the Great Lakes, and, therefore, she may not derive from the completion of this great project the benefits accruing to some of her sister States. New Hampshire never profited, directly, from the hundreds of millions of dollars expended by this Government on the Mississippi waterway system nor from the huge expenditures made for flood control on that river. New Hampshire has never directly benefited from the expenditure of the millions of our national funds on the Hudson River, the ports of Albany, New York, Baltimore, or any other ports of the Atlantic or Gulf coasts. Yet New Hampshire indirectly profits, each and every time, from any Federal expenditures which materially add to the welfare of this Nation.

Mr. President, in the brief statement which I shall make with relation to this project, I hope to consider the subject in no narrow, sectional attitude, but to follow the broad and unselfish view adopted by the President in his message addressed to this body.

I shall not discuss the question of costs; that has been answered to my satisfaction by the Army engineers in their evidence before the subcommittee of the Committee on Foreign Relations, that sat and took testimony from November 1932 to February 1933. I admit my incompetency and that of every other Senator in this Chamber to question the ability of these engineers, who have the most authoritative and reliable information available to the Government upon public expenditures of this character. Neither do I intend to discuss the effect of the treaty upon our sovereignty over Lake Michigan. The Department of State has fully satisfied me on this subject.

I shall not detain the Senate to consider at length the diversion of water from Lake Michigan to the Mississippi watershed. A glance at the map shows that the State of Illinois is taking water from one natural water course and diverting it into another. This bold action naturally met with opposition from the State of Wisconsin, which filed a suit in July 1922. Three years later the States of Minnesota, Ohio, and Pennsylvania brought similar actions to restrain this alleged illegal diversion. In April 1926 the State of Michigan filed a similar suit. In October of the same year the State of New York filed a separate bill for like relief. Subsequently the three cases were consolidated, and the decision of the Supreme Court appears in the RECORD in the

able address made by the senior Senator from Wisconsin on the 31st of last January. There can be no question but that the courts will grant relief to communities damaged by the diversion of flow from one watershed to another. I deem it an advantage to those benefited by the permitted diversion that under this treaty Canada agrees to accept the decision of our Supreme Court upon this question.

Mr. President, my remarks will be directed to the benefits which will flow to this Nation as a whole and not to any particular section or locality. The amount of costs allocated to this country—and all figures are approximate—is $272,500,000; $56,500,000 will be expended for locks in the St. Marys River and to deepen and broaden the channels of the St. Clair River, Lake St. Clair, and the Detroit River. Of this amount, $14,500,000 has already been appropriated, leaving $42,000,000 additional money to be spent on these rivers. The remainder, or $216,000,000, is to be expended in the International Rapids section, which lies between New York State and the Province of Ontario. Of this amount, the State of New York will pay for the hydroelectric power to be developed on the American side of the international boundary line $90,000,000, leaving $126,000,000 as an outlay by the National Government in this section. If we add to this amount the $42,000,000 yet to be appropriated for the works in the rivers of the upper locks, we have a total of $168,000,000 of new money to be raised and paid for this development over a period of from 8 to 10 years during its construction. As I see it, the only question involved when stripped of all irrelevant argument is: Will the Nation as a whole be sufficiently benefited to justify the expenditure?

Every impartial study made by governmental agencies has answered this question in the affirmative. In 1920 President Wilson asked the International Joint Commission, a body consisting of 3 members from the United States and 3 from Canada, created under the treaty of 1909, to investigate and report on the feasibility of building a waterway from the Great Lakes to the Atlantic Ocean. The Commission, assisted by competent advisers designated by the two Governments, made a most comprehensive study covering 2 years. A number of routes were considered, including one from Buffalo to the Hudson, another from Oswego to the Hudson, another by way of Lake Champlain to the Hudson, and the St. Lawrence route. It held 44 hearings, 33 hearings in 16 States of this country, and 11 in 5 Provinces of Canada. These hearings were held at convenient points from New York, on the Atlantic coast, to Boise, Idaho, and Calgary, Alberta. Three hundred and fifty-eight organizations and prominent individuals appeared, consisting of agriculturists, presidents of civic organizations, public men of national reputation, engineers, and officers having technical knowledge, officers of farm organizations, leaders of finance, grain dealers, wholesale grocers, livestock breeders and dealers, lumbermen, millers, manufacturers, miners, naval architects and navigators, publishers, paper manufacturers, public-utility officers, packers, statisticians, traffic experts, officers of rail- and marine-transportation companies. Of nearly 150 organizations, only 30 appeared in opposition. The same organizations and interests from Montreal and the eastern seaboard cities who are now protesting against this waterway appeared in opposition at the hearings held before the Commission in 1920 and 1922. The Commission weighed their arguments, but found the weight of evidence against them and in favor of the waterway. The Commission took 7,500 printed pages of testimony.

The committee cast aside the other routes and recommended in its report:

First. That the Governments of the United States and Canada enter into an arrangement by way of treaty for a scheme of improvement of the St. Lawrence River between Montreal and Lake Ontario.

Second. That the new Welland Ship Canal be embodied in said scheme and treated as a part thereof.

That report was made in 1922, during President Harding's administration. President Harding took occasion to comment on this project in an address delivered in this city in January of that year, in which he said:

> The heart of the continent, with its vast resources in both agriculture and industry, would be brought in communication with all the ocean routes by the execution of the St. Lawrence Waterway project. To enable ocean-going vessels to have access to all the ports of the Great Lakes would have a most stimulating effect upon the industrial life of the continent's interior.
>
> The feasibility of the project is unquestioned, and its cost, compared with some other great engineering works, would be small.

In 1924, President Coolidge appointed the St. Lawrence Commission of the United States, of which Secretary of Commerce Hoover was chairman. Canada appointed a similar body, called the "Advisory Committee." These two commissions appointed the International Board of Engineers to study further the many engineering problems involved in the development. After 2 years of investigation by the Commission, during which time intensive study was made by the engineers, the Commission reported to President Coolidge. It stated not only that the construction of this waterway was imperative for the relief and future development of the continent but that the saving to the farmers annually would equal the cost of the development.

Mr. President, are we to ignore the impartial conclusions reached by governmental agencies that had the best information available to arrive at a conclusion based on good judgment? Are we to sweep away lightly the conclusions reached by men who devoted to the public service years of their time to perform a patriotic duty? I insist that the conclusions reached by the two commissions to which I have referred cannot be lightly cast aside.

The States of New England became so deeply interested in this waterway that in 1923 a committee consisting of 5 representatives from each of the 6 New England States was organized—

> For the purpose of conducting a comprehensive study and rendering an unbiased opinion respecting various conflicting claims and arguments which have been advanced from time to time respecting the feasibility and desirability of developing the St. Lawrence River as a seaway for deep-draft vessels from the Great Lakes to the Atlantic Ocean.

The 30 men on this committee were made up of ex-Governors, ex-Congressmen, leaders of finance, public-service commissioners, and other men conspicuous in the life of New England. Of the 5 men from my own State, 3 were former Governors, 1 a former Member of Congress, and another had devoted much time to public service.

That committee investigated the power possibilities, the economic features involved in the waterway for navigation purposes, the rights of the United States and Canada in the St. Lawrence River and the Great Lakes, the estimated savings in transportation costs, the navigation possibilities, the question of costs, the interference to navigation by fog and ice, the effect of the closed winter seasons, the possible adverse effect upon the railroads, the lack of balanced cargoes, the influence of the project upon the Nation's merchant marine.

All these subjects were considered by leading men of the States of New England some years ago, and their report concludes with the following statement:

> The committee, therefore, places itself definitely on record as favoring the early entrance of this Government into negotiations with the proper officials of the Canadian Government looking toward the prompt consummation of a treaty which will make possible the undertaking of the enterprise, and urges upon all New England's local and national representatives the desirability of their full cooperation in every reasonable manner to bring this result about.

Mr. President, this is the recommendation of 30 prominent New Englanders to their representatives, and although made a few years ago, the facts have not changed; and if this proposition was feasible at that time, it is feasible today.

In 1930 Governor Roosevelt, of New York, appointed the St. Lawrence Commission to investigate the power possibilities of that portion of the river contiguous to New York State. After a year's investigation, this commission made a report favorable to the development, and upon that report a law was passed in the State of New York creating the power authority of the State and declaring the policy of the State of New York to be in favor of the development of the

river for navigation, commerce, and the development of hydroelectric power therefrom.

Upon the submission of the St. Lawrence Waterway Treaty to the Senate it was referred to the Committee on Foreign Relations, and a subcommittee of that committee commenced hearings in November 1932. All parties interested appeared and registered their approval or disapproval. After hearing the evidence, the subcommittee gave its approval to the treaty and recommended its ratification. The full committee did likewise in its report to this body.

Mr. President, the record shows that 3 Federal governmental agencies, 1 official New York State agency, and 1 unofficial but representative New England agency have had this undertaking under advisement over a period covering the past 14 years, and each and every one has given its unqualified approval and has vouched for its economic soundness.

President Roosevelt has not been content with the reports to which I have referred. He has had studies made by the various departments of the Government. We have before us information from the War Department, the Department of Commerce, the Interstate Commerce Commission, and the Federal Power Commission. Those studies show that railroads will be benefited, not injured, and that railroad employees will not be detrimentally affected. They further show that the project will not in any way affect or interfere with the proper use of the Mississippi River or the Missouri River for navigation. These studies show that the midcontinent might have saved in transportation charges on foreign imports and exports alone, without considering domestic commerce, about $79,000,000 annually. Based on this estimate the saving on foreign commerce alone to the Great Lakes States in 3 years is more than sufficient to pay the United States Government's share of the waterway.

Mr. President, my experience in this body has been brief, but I doubt if any public enterprise has ever received the thorough, unbiased, and conscientious study which has been given the St. Lawrence project, and I cannot disregard the conclusions which have been reached.

The Republican Party endorsed this waterway in its national platform. President Roosevelt as a candidate committed his party to it. Both candidates in their campaign declared in favor of it, and I propose to uphold the President of the United States in carrying out a pledge which he made to the American people when he was a candidate for the Presidency and which he is now endeavoring to fulfill.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 6604) to establish the composition of the United States Navy with respect to the categories of vessels limited by the treaties signed at Washington February 6, 1922, and at London April 22, 1930, at the limits prescribed by those treaties; to authorize the construction of certain naval vessels; and for other purposes; agreed to the conference asked for by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. VINSON of Georgia, Mr. DREWRY, Mr. GAMBRILL, Mr. BRITTEN, and Mr. DARROW were appointed managers on the part of the House at the conference.

GREAT LAKES-ST. LAWRENCE DEEP WATERWAY TREATY

Mr. WHEELER. Mr. President, on February 18 of this year the senior Senator from the State of Pennsylvania [Mr. REED], delivering a radio address over the National Broadcasting chain, made this statement:

> Sixteen months ago, by a huge majority, this administration was elected. Its platform held out many fair promises which evidently made a strong appeal to the American people. As if to emphasize the solemnity of these promises the platform said: "We believe that a party platform is a covenant with the people to be faithfully kept by the party when intrusted with power, and that the people are entitled to know that the party when intrusted with power shall fulfill that platform pledge."

On another occasion in the same speech he said:

> These were the solemn promises on which the Democratic Party secured enough votes to give it control of the Government of the United States. Let us see how these solemn promises have been kept.

Again in the same speech he said:

> In view of this record, is it fair to assume that all of the Americans who voted the Democratic ticket are in favor of the policies of the new deal? I do not think that it is. Those voters relied upon the promises of the Democratic platform. They trusted the solemn assurances that were given them in these planks of the platform. Anyone who favors these present policies could not have approved that platform.

Again he states:

> I have now run hastily over the list of broken promises, for which this administration must some day account to the American people, and in the brief time remaining to me I want to consider the effect of this bad faith upon the condition of the Nation, and to outline briefly the alternative course that I believe the Nation ought to be helped to follow.

Mr. President, I concur in what the Senator from Pennsylvania said with reference to campaign promises and with reference to platform promises. I particularly desire to call attention this afternon to the promises that were made by Mr. Roosevelt in the last campaign with reference to the St. Lawrence Treaty, and I also want particularly to call attention to the platform pledges that were made by the Republican Party on that same subject.

The President sent his message to the Senate January 10 with a report of an economic and engineering study covering every phase of the Great Lakes-St. Lawrence project for navigation and water power.

Since that message and report were received, not a speech has been made in this body that refutes or even effectively challenges a single statement of fact upon which the President's conclusions and recommendation rest.

Mr. WALSH. Mr. President, some of us have not yet made our speeches.

Mr. WHEELER. That may be so, Mr. President.

LOCAL AND SPECIAL INTERESTS VERSUS NATIONAL BENEFITS

It is true that appeals have been made to the local and special interests, which the President condemned in his message. It has been claimed that the President was misinformed and misled by his advisers when he asked the ratification of the treaty. But no one has yet successfully shown that the President was in error in respect to any fact which led him to the decision that the completion of this project will permanently benefit the people of every section of the United States.

To say that the President of the United States is ignorant of the facts related to the St. Lawrence shows an entire want of familiarity with the public record of Franklin D. Roosevelt. Yet certain Senators have justified their opposition to the treaty in speeches on this floor by charging that the President was misinformed when he submitted his message.

ROOSEVELT'S 5-YEAR FIGHT FOR ST. LAWRENCE POWER

No one can read the official papers and messages of Mr. Roosevelt as Governor and as President from 1929 to 1934 and deny that he has given more continuous study to this question than any other living public man—more than even the Members of the Senate. He dealt with this project for 4 years as Governor with the same consistency with which he is dealing with it as President of the United States. It is amazing that Democrats should arise here and charge him with acting upon this subject without proper consideration and experience with the problem.

In his inaugural address as Governor of New York, on January 1, 1929, more than 5 years ago, Mr. Roosevelt said:

> In the brief time that I have been speaking to you, there has run to waste on their paths toward the sea enough power from our rivers to have turned the wheels of a thousand factories, to have lit a million farmers' homes—power which nature has supplied us through the gift of God. It is intolerable that the utilization of this stupendous heritage should be longer delayed by petty squabbles and partisan dispute. Time will not solve the problem; it will be more difficult as time goes on to reach a fair conclusion. It must be solved now.

I WANT THE CONSUMERS TO GET THE BENEFIT

On March 12, 1929, in a special message to the legislature, Governor Roosevelt said:

For a generation the need for power for industrial and domestic purposes has been steadily increasing, and during this period the ownership by the people of the State of New York of a vast potential source of energy in their portion of the waters of the St. Lawrence River has received increasing public attention. * * *

I have spent many hours and many days in study of the mechanics of the problem. I am very certain that we have today in existence sufficient data and facts to justify the elimination of any further study as to mere physical feasibility. I have gone over volumes of carefully gathered information, including a comprehensive physical survey of the suggested site or sites on the St. Lawrence River. * * * It is my judgment that no insuperable difficulty lies in the relationship between the State of New York on the one side and the United States Government or the Canadian Government on the other side. * * *

I want to see something done. I want it done in accordance with sound public policy. I want hydroelectric power developed on the St. Lawrence, but I want the consumers to get the benefit of it when it is developed.

Is there any indication in that statement, Mr. President, that he is depending only upon advisers with reference to the St. Lawrence deep waterway? On the contrary, it shows conclusively that not only has he listened to advisers but that he himself has taken an interest in this question, and that he has made careful survey of every single detail in connection with it.

REELECTED GOVERNOR ON PUBLIC-POWER ISSUE

In 1930 Mr. Roosevelt based his campaign for reelection as Governor upon the power and public-utility issue. In speech after speech he produced the facts to show that domestic rates for electricity in his State were, on the average, about four times the rates charged on the other side of the St. Lawrence River in the Province of Ontario.

In the principal speech of his campaign tour, at Syracuse, N.Y., on October 22, 1930, he said:

While for decades we have been permitting the millions of horsepower lying in the flow of the St. Lawrence River to go idly on its way to the ocean, the Canadian municipalities have been taking advantage of their natural water-power resources so as to convert it into cheap electricity. * * *

ROOSEVELT INSPECTS PROJECT SITE ON ST. LAWRENCE

During the last two summers I have been up to the Niagara and St. Lawrence Rivers a number of times.

Not that the President is taking somebody else's statement for it, but he himself has been up to the Niagara and St. Lawrence Rivers a number of times.

On these visits I have seen power houses erected by private corporations which obtained franchises from the State practically for nothing. I could not but reflect on the short-sighted policy of those past legislatures which had so wantonly given away the heritage of the people of the State.

I had long before that given the subject much consideration and had come definitely to the conclusion that that policy had been uneconomic and unsound; but as I stood on the banks of the St. Lawrence and Niagara Rivers and saw this rich possession which should rightfully belong to the people of our State going into power houses of private corporations, I formed a firm resolve that so long as I am Governor and so long as it is at all possible for a State agency to develop these resources that no more would they be given or leased to private corporations.

THE POWER TRUST AGAINST GOVERNOR ROOSEVELT

In 1931 the State Senate of New York, controlled by the Republican Party, attempted to deprive Governor Roosevelt of the power to name the membership of a State commission authorized to act upon this problem. The senate sought to name the members of this commission by legislative act. On April 2, 1931, Governor Roosevelt said:

I am convinced that this action is dictated by forces which have prevented the development of water power on the St. Lawrence for the last generation. I am convinced that Republican leaders in and outside the legislature have realized that this movement toward the public development of water power is, from their viewpoint, dangerously near to achievement. * * * The conclusion is irresistible that this action was taken purely to hamstring, hinder, and stop the power development.

What Governor Roosevelt said 3 years ago is equally true today. The same forces that he met and defeated in his own State are still attempting to stop the power development on the St. Lawrence River, and they are doing it now by attacking the navigation features of the pending treaty.

PRIVATE COMPANIES EAGER TO LEASE ST. LAWRENCE POWER RIGHTS

In his address to the legislature on January 1, 1930, Mr. Roosevelt answered one of the absurd arguments against the development of the St. Lawrence River which is still being heard today in opposition to the pending treaty. He said:

Let us stop once and for all the silly talk that the electricity available by the development of the St. Lawrence is not needed or not usable in a practical way. We know that private companies are only too eager to proceed if the State were to abandon its rights. * * *

It is becoming more and more clear that the families, whether they live in the cities, in the villages, or on the farms, have been paying too much for their electricity and are therefore not in position to use to a proper degree the many labor-saving devices of modern invention. * * *

Whether mere regulation of electric utilities in the future can be made more successful than it has proved in the past remains a serious question. In the meantime the development of the great State-owned natural resources offers a definite method of relief.

ROOSEVELT CONDEMNS ALUMINUM CO. GRAB

At the crisis of his administration over this issue in April 1931, Governor Roosevelt announced that he would take the case to the people. On April 7, 1931, he spoke on the radio, as follows:

You are familiar with the fact that over 20 years ago the legislature literally gave away for nothing to the Aluminum Co. of America the title of the State in the bed and waters of the St. Lawrence River; that this action was rescinded and annulled by a subsequent legislature. * * *

In the early years of Governor Smith's term a desperate effort was made by the power companies and the Aluminum Co. to get the State to turn the St. Lawrence sites over to them on a so-called "50-year lease."

Mr. Roosevelt described the defeat of this attempted grab by the Aluminum Co., and the subsequent effort of the private power companies of the State to block the public development of the power they had been seeking to exploit. The Governor was then trying to obtain from the legislature the enactment of a law creating the present Power Authority of the State of New York, and in this radio address he stated:

* * * I can only say that I hope there will be no political or administrative obstruction in Washington, and the State of New York must very properly make its plans so as to interfere in no possible way with the present or future navigation of the St. Lawrence River. The State of New York has no desire to selfishly block either our Federal Government or the Canadian Government in any development of the St. Lawrence which they may mutually agree upon. There is, therefore, no real reason for obstruction in Washington.

PUBLIC OPINION BOUND TO WIN IN THE LONG RUN

"From the very beginning", he said, "I have held to a consistent course and to a consistent objective. I have fought all along for development of this power by an agency of the State itself and not by any private corporation. Furthermore, I have fought from the very beginning for the use and distribution of this power for the great purposes of bringing more and cheaper electricity into the homes of the State * * * The influence of a handful of political leaders is strong and so is the influence of private corporations when they see an opportunity to get something for nothing * * * but public opinion, when it understands a policy and supports it, is bound to win in the long run."

In the teeth of this public record, the charge can no longer be seriously made on this floor that President Roosevelt was "misinformed", "ill-advised", and "mislead", when he sent his message to the Senate urging the ratification of the pending treaty.

The fact is the President knew exactly what he was doing, and he had sufficient confidence in the Members of both parties in the Senate to believe they would join with him in bringing to completion a project that would confer great national benefits, even though it meant the opposition of the Power Trust.

Not only that, Mr. President, but we find among Democratic and Republican Senators those who have stood on the floor of the Senate and condemned others, who did not always follow the President, while they themselves have said, "We want to follow the President of the United States." Yes; some of them wanted to follow him when it came to cutting down the pay of the soldiers; some of them wanted to follow him when it came to curtailing the expenses of

the Government of the United States, and when it came to cutting down the pay of the workers of the Government; but when it comes to facing the opposition of the great corporations that are now opposed to this project they forget their loyalty to the Chief Executive of this Nation.

CANDIDATES OF BOTH PARTIES PLEDGED TO PROJECT IN 1932

There has been much discussion in this debate as to exactly what was promised the American people in 1932 in respect to the development of the Great Lakes-St. Lawrence project.

There need be no doubt upon that subject. The candidates of both parties specifically and repeatedly promised that this project would be completed without delay and the representatives of the land-locked States of the Middle West and the Northwest are here today to demand the fulfillment of that pledge.

Mr. DIETERICH. Mr. President——

The PRESIDING OFFICER (Mr. CLARK in the chair). Does the Senator from Montana yield to the Senator from Illinois?

Mr. WHEELER. I yield.

Mr. DIETERICH. At that time there was not any treaty in existence. Is not that right, I will ask the Senator?

Mr. WHEELER. Yes, I think there was no treaty in existence at that time.

Mr. DIETERICH. The party declared itself on the question of the St. Lawrence waterway.

Mr. WHEELER. Yes.

Mr. DIETERICH. There was no indication then as to what the division of power rights would be between the United States and Canada, was there?

Mr. WHEELER. I think that is correct.

Mr. DIETERICH. What does the Senator say as to how the power rights should be divided as between the United States and Canada?

Mr. WHEELER. I think there is only one way in which they can be divided, upon an equitable basis, and I think they are being divided upon an equitable basis. I think the United States cannot afford to take the position of saying to Canada that we will reject the treaty on that ground. There is no use of arguing about it. I appreciate the fact, with all due deference to my good friend from Illinois, that people who are bound and determined to defeat this treaty—and we might just as well be frank about it—are the same group who were in Chicago saying, "Let us stop Roosevelt from being nominated", and that effort came to a large extent from the power interests in the city of New York or which had headquarters there.

Mr. DIETERICH. Mr. President, will the Senator yield further?

The PRESIDING OFFICER. Does the Senator from Montana yield further to the Senator from Illinois?

Mr. WHEELER. I gladly yield to the Senator from Illinois.

Mr. DIETERICH. The Senator does not accuse me of being in that category, does he?

Mr. WHEELER. Not in the slightest, not at all. I think, however, the Senator is being misled by propaganda which they disseminated.

Mr. DIETERICH. The Senator says he thinks the power rights should be divided equitably, but it is a fact that the United States furnishes 65 percent of the water that flows over Niagara Falls; and does he think that an equitable division there would give Canada 38,000 second-feet and the United States only 20,000 second-feet?

Mr. WHEELER. I think there is plenty of power if we give them that much and the United States only takes that much for the people of the United States.

Mr. DIETERICH. Mr. President, will the Senator yield further?

Mr. WHEELER. Yes.

Mr. DIETERICH. This treaty, if ratified, would forever dispose of the division of power, would it not?

Mr. WHEELER. I am not particularly interested in that. I am perfectly willing, let me say to the Senator, to trust the ability and the integrity of the President of the United States and the commissions that have been appointed to solve this problem upon a sound and equitable basis, both to the Canadian Government and to the United States. I am not familiar with the details, let me say to the Senator, of the working out of the project and with the conclusions on which the details are based, but I have confidence in the commissions that have been appointed not only by President Hoover but likewise those that have been appointed by the present President of the United States.

Mr. DIETERICH. Mr. President, if the Senator from Montana will yield to me further, it is not necessary to work out many details when at Niagara there is a division of power rights in the ratio of 38,000 second-feet to Canada and 20,000 second-feet to the United States, and when we are charged with half the cost of the St. Lawrence development, and in the power rights developed on the St. Lawrence we are given 1,000,000 horsepower and Canada takes 3,000,000 horsepower, although we pay an equal amount for the development work. Does the Senator consider that safeguarding the interests of the United States?

Mr. WHEELER. Is that the only objection the Senator has to the treaty?

Mr. DIETERICH. No; there are others.

Mr. WHEELER. I want to know, is that the only objection the Senator has?

Mr. DIETERICH. I have indicated two objections—namely, the division of power at Niagara Falls and the division of power on the St. Lawrence River. I have another objection, and that is to limiting the diversion of water for the Lakes to the Gulf waterway to the terms of the decision of the Supreme Court, which never even passed on the question of the volume of water necessary to supply that waterway and make it commercially useful.

Mr. WHEELER. Let me say to the Senator——

Mr. DIETERICH. I have another objection, if the Senator will yield further.

Mr. WHEELER. I am glad to yield.

Mr. DIETERICH. That is, to making Lake Michigan an international basin and allowing Canadian vessels to ply from port to port there as against our ships that are now there.

Mr. WHEELER. Then I take it that the Senator feels that the President of the United States has completely betrayed the people of the United States in advocating the treaty.

Mr. DIETERICH. O Mr. President, I resent any inference of that kind.

Mr. WHEELER. Does not the Senator feel that it is a betrayal of the interests of the people of the United States?

Mr. DIETERICH. I have never said anything of that kind.

Mr. WHEELER. Then I beg the Senator's pardon.

Mr. DIETERICH. I have never said anything of that kind. I have never accused the President of the United States of betraying the interests of the people of the United States. He never has done that. He acts upon information he has received, and it is my honest judgment that the President of the United States has never received the proper information. It is further my opinion that when he shall receive the proper information he will reverse his attitude on the St. Lawrence waterway, not as a waterway but as to other matters in the treaty that are not even pertinent to the waterway.

Mr. WHEELER. Let me say, as I said a moment ago, and as I have been pointing out, that I think there is no man in the country who has given such complete and such close study to the project as has the President of the United States.

Mr. LONG and Mr. LEWIS addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Montana yield; and if so, to whom?

Mr. WHEELER. I will yield in just a moment. I repeat what I said a moment ago. I think the President of the United States has made a more complete study of the problem than any man in the United States, including the Senator from Illinois and the Senator from Louisiana.

Mr. LONG and Mr. DIETRICH addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Montana yield; and if so, to whom?

Mr. WHEELER. I will yield first to the Senator from Louisiana.

Mr. LONG. I just want to ask the Senator from Montana if he happens to know who is going to get the power that will go to Canada, embracing about 75 percent of the power?

Mr. WHEELER. No; I do not; but I do know that the propaganda that is being disseminated from one end of the country to the other at the present time is being put out by the Power Trust. Does the Senator deny that?

Mr. LONG. I do deny it.

Mr. WHEELER. Then, the Senator does not know the situation.

Mr. DIETERICH. Mr. President, will the Senator yield further?

Mr. WHEELER. When I shall have finished with the Senator from Louisiana.

The PRESIDING OFFICER. The Senator from Montana has the floor. To whom does he yield?

Mr. WHEELER. I yield further to the Senator from Louisiana.

Mr. LONG. Does not the Senator from Montana know that it has been disclosed on the floor of the Senate that $500,000 was spent directly in trying to put over the treaty?

Mr. WHEELER. No; I do not know anything of the kind. On the contrary, I know that the power interests are carrying on a campaign of propaganda from one end of the country to the other against the treaty, and every Senator on the floor who knows anything about the situation at all knows exactly the influences that are back of the opposition. I am not accusing any Senator in any way, but I do say that the Power Trust has sent out a great deal of misinformation. Senators rise here and say that the President of the United States is misinformed and that he is taking such misinformation as a basis for his attitude. I say he has been making a study of this question for the last 10 years, and I have sufficient confidence in him to believe that he knows what is for the best interests of the people of the United States and that he is going to protect our interests.

Mr. DIETERICH and Mr. LEWIS addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Montana yield; and if so, to whom?

Mr. WHEELER. I yield first to the junior Senator from Illinois.

Mr. DIETERICH. Does the Senator know who is supplying the funds for the Tidewater Association to scatter propaganda, or did he ever become acquainted with the Tidewater Association?

Mr. WHEELER. I did not know there was a Tidewater Association.

Mr. DIETERICH. Does not the Senator know it to be a fact that the Canadian Power Trust is supplying those funds in order to put through the provisions of a treaty that gives to Canada, as the Senator from Louisiana [Mr. LONG] said, about 75 percent of the power developed in the St. Lawrence waterway and at Niagara Falls?

Mr. WHEELER. I said I did not know there was a Tidewater Association, and I do not know anything about the facts the Senator has stated, if they are facts. I never heard of them before in my life. In other words, does the Senator think the power interests have deceived the President of the United States?

Mr. DIETERICH. I think the power interests of Canada are back of those provisions of this particular treaty, but we cannot investigate the power interests of Canada because they are across the Canadian border.

Mr. WHEELER. Does the Senator think they have misled the President of the United States?

Mr. DIETERICH. I do not say the proponents of the treaty have misled the President, but I do say they have not supplied him with the proper information that he should have had to act intelligently upon the matter, because I cannot conceive of the President being properly advised on it and then giving to a foreign country an advantage over the United States in the matter of power development.

Mr. WHEELER. Then the Senator does think that the President is being misled by the foreign power interests?

Mr. DIETERICH. I do not mean by the Senator who is speaking, because the Senator has not been so enthusiastic on this question until the present time.

Mr. WHEELER. I have been for the treaty for a long period of time, and so has my colleague the junior Senator from Montana [Mr. ERICKSON]. I spoke in favor of it in Montana long before the Senator from Illinois came here.

Mr. DIETERICH. That was before there was a treaty pending.

Mr. WHEELER. Yes.

Mr. DIETERICH. That was with reference to the St. Lawrence development proper and not with reference to the treaty.

Mr. LEWIS. Mr. President, will the Senator yield to me now?

The PRESIDING OFFICER. Does the Senator from Montana yield to the senior Senator from Illinois?

Mr. WHEELER. I am glad to yield.

Mr. LEWIS. I ask the attention of the Senator from Montana.

Mr. WHEELER. The Senator always has my attention.

Mr. LEWIS. I want not only the attention of the Senator from Montana but his reflection.

I want to invite the attention of the Senator to a statement he has just made in his speech that he may give it serious thought. The Senator said that they who are opposing the treaty, who profess to be devoted to the President and to support his policies, were willing to support the cutting down of the soldiers' pay and compensation otherwise, and such other things, but that when it comes to this matter they refuse to support the President because, as I gathered from my able friend from Montana, of the great influence of some power trust that is somewhere influencing those who in this particular instance do not follow the President. I ask my friend if he will not reflect on that statement and realize that he has been an advocate of a monetary policy called "16 to 1 for silver"?

Mr. WHEELER. Yes; and I still am.

Mr. LEWIS. Yes; and it is because the Senator still is that I wish to ask his serious consideration of a proposition he has just submitted. He has been an advocate of that measure, for which there is great support. The President of the United States has been compelled, in considering the monetary policy of the United States, to present matters to this body and to the Congress generally touching a gold basis that my eminent friend from Montana must esteem was inconsistent with the position he has been advocating of 16 to 1 with relation to silver.

Now, that he has been called on in the advocacy of the interests of his own State to give the support of his own honest convictions to the remonetization of silver at 16 to 1 as a current money, which is not the position of the President, will he contend it to be just or allow it to be said, because of the presentation of the views of the President on the matter of gold, that the silver interests or the silvermine owners are those who are influencing his action as against the monetary policy of the administration? Therefore, there is a parallel in the accusation he makes with reference to the power interests.

Mr. WHEELER. It is parallel because of the fact that the mining companies of my State have been openly opposed to my bill for the remonetization of silver at 16 to 1. I am not complaining because any man disagrees on conviction with the President of the United States. I have disagreed with him and I shall probably disagree in the future as to many matters. I have said, on the contrary, that a few of us have been reprimanded on the floor of the Senate for not standing by the President, and some of those who have reprimanded us for not standing by the President are now turn-

ing around and voting against him on one question in which he is vitally interested, which he has been favoring and for which he has been fighting for the last 5 or 6 years, as Governor of the State of New York, and in the campaign, and as President of the United States.

Mr. LEWIS. But the Senator will not forget that he intimated and clearly stated as to the opposition of those Senators who heretofore have been supporting the President and so continue to do, such as myself, that upon this proposition they must be influenced, unconsciously or consciously, by the power trust, that it is the power trust that is guiding their views and that now causes their opposition to the President.

I make the parallel that my able friend from Montana is in favor of remonetization of silver at 16 to 1. Does he think it is fair that the intimation be made that the silver mines of the Western States shall be charged with being the real source of the influence which causes him and his colleague to favor 16 to 1 as against the President in the fight which is now being waged by the Senator from Montana?

Mr. WHEELER. I think, in the first place, the Senator entirely misunderstood me.

Mr. LEWIS. That may be.

Mr. WHEELER. If the Senator understood me as saying that Senators here were fighting this treaty because of the fact that the Power Trust were opposed to it, he misunderstood my statement, because that was not what I intended to state. I did say that the power interests were opposing the treaty, that they had been fighting it continually, and they are fighting it today. They opposed the President of the United States as Governor of New York on this question; they opposed him in the convention at Chicago, as I shall point out; and they have repeatedly opposed him on this particular issue.

Mr. VANDENBERG. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. NEELY in the chair). Does the Senator from Montana yield to the Senator from Michigan?

Mr. WHEELER. I yield to the Senator.

Mr. VANDENBERG. I have no interest in questioning the motives of anybody in respect to his attitude upon this treaty. I am perfectly willing to concede thoroughly honest motives to everyone. I suggest that the rule might well be reciprocal.

It has been stated here repeatedly that the Great Lakes-St. Lawrence Tidewater Association is financed by some sort of sinister fund from the Canadian Power Trust; that it has some sinister source of supply. The truth of the matter is that the funds of the St. Lawrence-Great Lakes Tidewater Association are furnished by legislative appropriations in 23 States of the Union; and there never was a movement which had a more definite, clean source of supply than the fund to which I refer. It speaks for millions of our citizens by an authority little short of official.

Mr. LONG. Mr. President——

Mr. WHEELER. Let me say to the Senator from Michigan that I did not even know there was a Tidewater Association. I never heard of it until the Senator made his statement.

Mr. CLARK. Mr. President, will the Senator yield on that point?

Mr. LONG. Mr. President, let us get the thing straight.

Mr. WHEELER. Yes; I will get it straight.

Mr. LONG. My friend from Michigan speaks about 23 States. How much did those 23 States put up?

Mr. VANDENBERG. I shall be very glad to provide the complete balance sheet. For many years they have been making their annual appropriations. My own State has made an appropriation for at least 10 years. The appropriations are made in public. There is no question whatsoever about them.

Mr. LONG. The point I wish to make for my friend from Montana, who is ignorant on this matter of the Tidewater Association because he was not here the other day, is that there is a Tidewater Association, amply financed, that has not been, I am sure, paid money by the State of Michigan to carry on this fight; and if the domestic power interests of America are against this treaty the only difference in the power stand can be that the Canadian power interests are on one side of the issue and the American power interests are on the other side. I do not know whether they are or not; but if that is the case, let us just quit talking about the power part of this treaty at least. If we are not going to drive out the American power interests, if we are going to concede that they are lawful enough to stay in this country, then certainly we ought not to be trying here to ratify a treaty which is simply a case of power against power, and in the Canadian power interest in the proportion of 33 to 20, with America producing 65 out of 100 percent of the power.

That is the proposition we are facing here.

Mr. WHEELER. Let me say to the Senator that some of the power interests have not remained in this country. Some of them are hiding over in Greece, and a lot more of them, if they had their just dues, would be in the same place that Mr. Insull is, or they would be on their way to the penitentiary, because of the fact that they have robbed the American people. They have not only done that but they have likewise robbed their own bondholders, and their own stockholders, and their own directors, in some instances.

Mr. LONG. Will the Senator permit me to say that the Insull interests went one half to Greece and the other half to Canada; and the Senator is now advocating something that could be very well taken advantage of by the part of the Insull outfit that went to Canada.

Mr. WHEELER. Oh, no; I am not worrying about the part that went to Canada, and nobody else is. They do not amount to very much, either in Canada or here.

Mr. LEWIS. Mr. President——

Mr. WHEELER. I yield to the Senator from Illinois.

Mr. LEWIS. First, I desire to advert to the statement made by our eminent friend from Michigan, referring to the Tidewater Association, and the information accorded that the States have been making appropriations for that association for 16 years, or say for 10 years, of which the able Senator from Michigan is quite informed.

I beg to answer that those associations, to the degree that they were honest—some of them were not—were merely for the development of some water system that led through these States to tidewater. It was not this treaty that was involved. The treaty had no life. It did not exist. It was a manifest imposition, though unintended, to leave the impression that these States have been contributing for the enforcement of the particular treaty that is before us here. We have shown clearly once or twice before this body that the gentlemen who were paid salaries and who have been maintained by this fund had one interest, and the States wholly another.

I conclude this interruption now by saying that there never has been a contention—I must correct my able friend from Montana—that our able President was not informed on the power question. It has, to the contrary, been asserted that he was fully informed. We have always asserted, as to the power question, that what the President said in his message while Governor of New York, as well as in the communication read by the Senator, as to the arrangement between Ontario and the State of New York respecting that power, is something that can be done at any time, either through the body called the Power Authority, which was created by the President when Governor of New York, or in any other form. It does not go at all to the question of the rightfulness of this treaty as a treaty between this country and the Empire of Great Britain, pledging America to pay these vast sums of money, equaling what may be a billion of dollars, out of our pockets for the welfare of the Canadian interests on the one hand and for the development of the shipping of the British Empire on the other.

Mr. WHEELER. I have heard that speech before.

Mr. LEWIS. The Senator will hear it again, and will oftentimes have to meet it from his constituents when they learn the truth of it.

Mr. WHEELER. I appreciate, of course, that the Senator from Illinois is very much opposed to the portions of the treaty which would permit navigation; but the people of my section of the country and the entire Northwest took the President at his word, and took the Republican Party at their word, when they pledged that they were going to carry through this treaty. There was a pledge not only on the part of the Republican Party, as I shall show, but likewise repeatedly on the part of the President of the United States, to do that very thing; and the people voted for him upon that issue.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WHEELER. I yield to the Senator from Missouri.

Mr. CLARK. The Senator surely did not mean to say what he did say—that the Senator from Illinois is opposed to those portions of the treaty which permit navigation. What the Senator from Illinois is opposed to, and what I am opposed to, and what many other Senators are opposed to, are those provisions of the treaty which prevent navigation on the Lakes-to-the-Gulf project.

Mr. WHEELER. I think the Senator is entirely wrong, and my understanding is that engineers' reports will be in here in a short time which will show that the Senator is wrong with reference to that feature.

Mr. CLARK. Of course, the engineers' reports can be brought in at any time. The Senator never has known an instance where a President of the United States who took a definite position about any project could not get a report from the Corps of Engineers on that side of the question.

Mr. WHEELER. After all, we as laymen must depend upon engineers with relation to projects of this kind; and if we cannot depend upon the Army Engineers to furnish us with proper reports upon such matters, I do not know where we will go to get our information regarding them.

Mr. CLARK. Mr. President, will the Senator yield for just a moment further? Then I will not bother him any more.

Mr. WHEELER. I yield.

Mr. CLARK. If the Senator will examine the testimony of the most eminent of the Army Engineers, he will find great diversity of opinion as to the volume of water necessary for the Lakes-to-the-Gulf project. As eminent an engineer as General Jadwin, the late Chief of Engineers, testified on one occasion that 10,000 second-feet were necessary for a commercially successful Lakes-to-the-Gulf project, and on another occasion in the same year he testified that 5,000 second-feet were necessary.

Mr. WHEELER. Let me say to the Senator that my understanding is that the majority of the Army engineers upon whom the President is depending have concluded that this project is feasible. I have stood upon the floor of the Senate and advocated, as a matter of fact, the development of the Mississippi River and the Great Lakes, not because it would help my section of the country, but because it would benefit all the people of the United States. The Great Lakes-St. Lawrence Treaty, in my judgment, is not only going to benefit the Northwest, but it is going to benefit every section of the country. One thing that must be done, in my judgment, if we are going to have a return of prosperity in this country, is to have the vast Middle West and West settled; and I think the ratification of this treaty will help more in that respect than almost any other piece of legislation that could be accomplished.

Mr. LONG. Mr. President, will the Senator yield for just a moment?

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Louisiana?

Mr. WHEELER. I yield.

Mr. LONG. Since the Senator brings in the Army Engineers, who have vacillated on this matter, I wish to say that the President of the United States announced first what he wanted to do, and then sent word to the Army Engineers of his position, and asked, "What about it?"

Mr. WHEELER. I do not know anything about that.

Mr. LONG. That is not uncommon, if I might trace it for just a minute.

Mr. WHEELER. I will say to the Senator that I do not think that is a fair statement on his part, and I should have to dispute it, although I have not any basis for disputing it. I cannot conceive that the President of the United States said to the engineers that he wanted a certain specific report made, and I do not believe it.

Mr. LONG. I did not say he did. What the President said was, "We are for this treaty." Then he said to the engineers, "Now, give us a report on the feasibleness of it. I am going to advocate this treaty." That is what happened.

Mr. WHEELER. I should have to dispute that statement, although I do not know the facts in the matter, and I should like to know upon what the Senator bases his assertion.

Mr. LONG. I base it upon the simple fact that the President went out and said he was in favor of this treaty, and that was before the engineers ever were called on at all.

Mr. WHEELER. The Senator draws a very unfair conclusion from the mere suggestion that the President advocated the treaty. The Army engineers have said that this project is entirely feasible—at least, that is my understanding—and the President is for it; and the mere fact that the President of the United States came out and advocated it before some of the reports from the Army engineers came in is no excuse for the Senator's saying that the Army Engineers were influenced by that statement.

Mr. LONG. The point I want to make to the Senator is that when General Jadwin and his crowd made their survey for the Mississippi Valley floodway, they recommended certain things that were written into the law. General Jadwin passed on, and Mr. Hoover came in, and Gen. Lytle Brown has gone ahead executing that program, and has paid no attention to what the Army Engineers reported and what they have done; and Mr. Hoover told several of us that what they were going to do was to ignore the Boeuf spillway. They never got another opinion from the engineers about the Boeuf Spillway, but they went ahead after Mr. Hoover decided to go the other way, and the Army engineers went the other way.

Those Army engineers are just like an army mule. Wherever you pull a line, there is where the engineer goes. There is not any difference between them and anybody else bossed by a superior. [Laughter.]

Mr. WHEELER. I should have to disagree with the Senator with reference to that; but, speaking of campaign pledges and campaign promises which were made, as referred to by the senior Senator from Pennsylvania [Mr. REED], I call the attention of Republican Members of the Senate to the platform of the Republican National Convention assembled at Chicago on June 13, 1932.

The temporary chairman of the convention, who delivered the keynote speech, was the Senator from Iowa [Mr. DICKINSON]. The permanent chairman of the convention was Representative SNELL, of New York. Representative Wadsworth, of New York, the Secretary of the Treasury, Mr. Ogden L. Mills, of New York, and the little coterie of Republicans from the Atlantic seaboard, who have sought to dominate every Republican National Convention since the Civil War, were much in evidence.

The convention adjourned in 2 days, after hearing the keynote speeches and adopting the platform.

TREATY TERMS AGREED UPON BEFORE REPUBLICAN CONVENTION MET

At the time that convention met President Hoover had before him the final report of the joint board of engineers upon which the pending treaty is based. That report covered in detail all the works, whether for navigation or power development, embodied in the treaty.

The report had been agreed upon April 9, 1932, more than 2 months before the convention met, and the treaty itself had been drafted and submitted to the President, Mr. Hoover.

Is there anybody who wants to dispute that statement? I repeat it for the benefit of the Republicans in this body. At the time when the Republican convention met in the city of Chicago President Hoover had before him the final report of the Joint Board of Engineers upon which the treaty is based.

I should have liked to call the attention of the junior Senator from Illinois [Mr. DIETERICH] specifically to this, but I notice he is not in the Chamber at the present time. The report covered in detail all the works, whether for navigation or power development, embodied in the treaty. The report had been agreed upon April 9, 1932, more than 2 months before the convention met, and the treaty itself had been drafted and submitted to the President.

The platform adopted by the unanimous vote of the Republican National Convention in 1932 contained the following plank:

The Republican Party stands committed to the development of the Great Lakes-St. Lawrence seaway. Under the direction of President Hoover, negotiation of a treaty with Canada for this development is now at a favorable point. Recognizing the inestimable benefits which will accrue to the Nation from placing the ports of the Great Lakes on an ocean base, the party reaffirms allegiance to this great project and pledges its best efforts to secure its early completion.

Will the Senators on the other side of the aisle tell me how they are going to answer to the people of this country for that pledge, made to the people with full knowledge that the President of the United States, Mr. Hoover, had before him the report of all the negotiations, had before him all of the data, and that they themselves, in that platform, pledged themselves to this very treaty?

Mr. VANDENBERG. Mr. President, will the Senator yield?

Mr. WHEELER. I yield.

Mr. VANDENBERG. The able Senator can go even further. The Republican National Committee sent its representatives into the great Middle Northwest with the specific message that the Republican platform meant what it said, and that Republicans could be depended upon accordingly. I speak feelingly, because I happened to be one of those who went into that area on that mission at the specific request of the Republican National Committee.

Mr. WHEELER. I thank the Senator from Michigan, and I know that what he says is true, because not only were speeches made by men sent there by the national committee, but likewise the Republican newspapers throughout that section carried editorial after editorial seeking to get the voters to cast their ballots for Mr. Hoover upon the statement that Mr. Hoover and the Republican Party were committed to this treaty, and that the platform of the Democratic Party, as a matter of fact, did not contain as favorable a plank, or any plank whatever, upon that subject. But the Democratic candidate for the Presidency of the United States, Mr. Roosevelt, came out at the Chicago convention immediately after he was nominated in favor of this treaty, as I shall point out in a moment or two.

THREE REPUBLICAN PRESIDENTS HELPED NEGOTIATE TREATY

It is now being boldly stated in the public press that Republican Senators from New England and the States on the Atlantic seaboard are ready to furnish the votes to defeat this treaty. It is inconceivable that that report can be true. The completion of the Great Lakes-St. Lawrence project was advocated and promised by President Harding, President Coolidge, and President Hoover, and the first negotiations with Canada, initiated under President Wilson, were carried forward under the three Republican Presidents I have named.

The present Chief Justice of the Supreme Court, Mr. Hughes, conducted many of these negotiations while Secretary of State. Secretary Kellogg, of Minnesota, and Secretary Stimson, of New York, carried those negotiations to a conclusion.

Is there anybody in this Chamber who thinks that the Chief Justice of the United States of America, that Mr. Stimson, or that Mr. Kellogg, betrayed the people of the United States to the power interests of Canada? Is there anybody in this Chamber who thinks that President Hoover betrayed the people of this country to the power interests of Canada?

Will any Republican Senator across the aisle say to me that he feels that this treaty betrays the American people? If one shall do so, he will accuse his own Presidents, accuse his own Secretaries of State, accuse his own people of betraying the trust reposed in them.

Mr. LONG. Mr. President, will the Senator yield?

Mr. WHEELER. I yield.

Mr. LONG. How about taking a little of the Canadian facts on this subject? The Canadians say that this treaty has killed the Great Lakes-to-the-Gulf waterway forever and means that Canada will never be pestered by the danger of its commerce going down through the Mississippi Valley. That is the opinion in Canada, as I have heretofore said on the floor of the Senate. Are those Canadians just a bunch of ignoramuses? Do they not know anything at all about their own business? If they do not, who does? The people down in Louisiana think this treaty would have that effect, and the Canadians think it would.

Mr. WHEELER. I am not interested in what some Canadian propagandist says about it. I am perfectly willing to take our own Secretaries of State and our own Presidents, regardless of whether they are Democrats or Republicans, and put them alongside some Canadian propagandists.

Mr. LONG. We have had them acting for us before. They were the gentlemen who settled the war debts. That is about all the Secretaries of State can do. They are the men who put us in the condition in which we find ourselves right now. We have been following the treaties they drew ever since they have been ratified. We have ratified every one of them except that embodying the League of Nations, and they have both parties trying to get that ratified, so far as the party leaders are concerned. If the Senator from Montana will point out one case where the United States ever gained anything in a treaty with England, or even was able to collect anything after a treaty, where it was to the advantage of the American people, I will vote for this treaty, if he will show it. If the Senator will even undertake to show where the United States ever gained anything in a conference with England——

Mr. WHEELER. We got something a great many years ago, about 1776.

Mr. LONG. We did not have a conference then.

Mr. WHEELER. We had a treaty afterward, however.

Mr. LONG. No; they just quit. We whipped them. But in 1812 there was a war the Senator knows about, and in 1815 we entered into a treaty, and gave them the territory between the Mississippi River and the Rocky Mountains; and if Andrew Jackson had not whipped Pakenham's army at New Orleans before the Treaty of Ghent got back to the United States, that would have been carried out. It is just like taking candy away from a baby.

Mr. WHEELER. Let me ask the Senator a question. He has been talking a good deal.

Mr. LONG. I beg the Senator's pardon.

Mr. WHEELER. Does the Senator think that President Hoover and his aides betrayed the American people when they negotiated this treaty and assembled the data for it? Does he so think?

Mr. LONG. What does the Senator mean by "betraying" them?

Mr. WHEELER. Just exactly what I said. The Senator is familiar with the English language, and he knows what that term means.

Mr. LONG. I say that it just like taking candy away from a baby, and it always has been. They have never gotten us into one of those conferences over something we had and which they wanted that they did not wind up by taking everything they wanted to get. I am not just talking in my own language. The Senator knows that to be the fact.

Mr. WHEELER. No; the Senator is not going to put words into my mouth. I will do my own talking.

Mr. LONG. Very well.

Mr. NYE. Mr. President, will the Senator yield to me?

Mr. WHEELER. I yield.

Mr. NYE. Does the Senator from Montana feel that his challenge to Senators on this side of the Chamber has been answered?

Mr. WHEELER. Of course not. The other side of the Chamber has had to depend upon the Senator from Louisiana to defend them, and when they go out in the next campaign, let me say to them that they had better call upon the Senator from Louisiana to come out and defend them if they vote against this treaty, because they will not be able to do it themselves.

Mr. LONG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Louisiana?

Mr. WHEELER. I yield.

Mr. LONG. Do I understand now that the Senator from Montana has gone into holy wedlock with the Senator from North Dakota in upholding one of Mr. Hoover's treaties and Hoover's policies? Has that come about here?

Mr. WHEELER. Let me say to the Senator from Louisiana that the Senator from North Dakota and myself have been accused throughout the Northwest on many occasions of entering into unholy alliance, and I probably will be accused of that many times again, because I hope that the alliance between the Senator from North Dakota and some others of the progressive Republicans and myself will continue.

Mr. LONG. Is not this rather a late date for the Hoover policies to require such sponsorship? [Laughter.]

Mr. WHEELER. It is rather a late date for the Republican Party to have to depend for its defense upon the Senator from Louisiana, and I am glad to see that when he does defend them in this matter he takes a seat on the other side of the Chamber. [Laughter.]

Mr. VANDENBERG. Mr. President, will the Senator yield to me?

Mr. WHEELER. I yield.

Mr. VANDENBERG. We are happy to have the Senator from Louisiana on our side of the aisle temporarily, but if he is to be charged against us in respect to his attitude on the treaty, I will have to say, borrowing his——

(At this point Mr. LONG took a seat on the Democratic side of the aisle.)

Mr. VANDENBERG. I will continue to say what I was going to say, even though the Senator from Louisiana has somewhat relieved me of the necessity. If we are to be charged with his attitude on this treaty, I shall have to borrow his favorite authority and refer to the Bible, and say that his observations on the treaty remind me of nothing quite so much as the language in the thirteenth verse of the tenth chapter of Ecclesiastes; and I will leave it there. [Laughter.]

Mr. LEWIS and Mr. LONG addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Montana yield; and if so, to whom?

Mr. WHEELER. I still yield to the Senator from Michigan.

Mr. VANDENBERG. Mr. President, the favorite theme song of the Senator from Louisiana in respect to the treaty is to quote Canadians who boast of what a tremendous advantage they have gained over us. I agree with the Senator from Montana that we can well rely upon our own national authorities, and that it is not necessary to cross the line for authority; but if that sort of thing is going to be indulged in, I call the attention of the Senator from Montana to the fact that Quebec's Prime Minister stated in a public interview on January 16:

> I do not believe that the plan is in the interest of Canada, but if the majority of the other premiers are in favor of it we will have to bow to their will.

Let me quote Senator Casgrain, speaking in Montreal on January 17, 1934:

> The St. Lawrence River seaway project is not only an economic absurdity but also cloaks, under the terms of the treaty now awaiting ratification by Canadian and United States governing bodies, suspected hidden motives on the part of Uncle Sam, which may have as the end in view, ultimate exercise of American jurisdiction over the Canadian territory. * * *

Mr. President, it is to be seen that we have our Senator LONGS upon both sides of the international boundary, and I think we had better rely upon our own authorities.

Mr. WHEELER. I thought the British ships were coming up the canal, and they would take Chicago.

Mr. LEWIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Illinois?

Mr. WHEELER. I yield.

Mr. LEWIS. In the first place, I desire to refer to what has just been said by my friend the Senator from Michigan. The Senator from Michigan presumes to refer to Scripture—Isaiah, I believe?

Mr. LONG. Ecclesiastes.

Mr. LEWIS. He does not quote the passage; and I call the attention of the Senator to the fact that Shakespeare reminds us, with respect to such quotations, that—

> The devil can cite Scripture for his purpose.

The Senator has called attention to a speech made in Montreal. I know what the speech is to which he refers. He read only a part of it. It is a speech made by a senator of Canada before a club at noontime—either before their Rotary Club or its colleague—in which he not only says that he thinks there is some sinister design but concludes that in view of the vast amount of money they are getting out of the United States for Canada he reverses his opposition and supports the position which previously he had opposed.

Let that be read in connection with the portion of the speech which the Senator from Michigan quoted.

Mr. LONG. Mr. President, will the Senator from Montana yield for the purpose of having a Senator on this side of the aisle say a word?

Mr. WHEELER. I really think the Senator from Louisiana belongs on the other side of the aisle, since he is fighting the ratification of the treaty.

Mr. LONG. Since it is Hoover's treaty, perhaps I do.

Mr. WHEELER. It started out to be Wilson's treaty.

Mr. LONG. Mr. President, they only got the money out of Wilson. Wilson gave them only $12,000,000,000. Wilson gave them an army and $12,000,000,000; and our present President is going to give them about another billion dollars, so they will have the advantage of us in that respect.

I desire to ask the Senator from Michigan if he will give the date of the speech from which he quoted, and about which he spoke so volubly.

Mr. VANDENBERG. Some time in January of this year.

Mr. LONG. I had stood on the floor of the Senate prior to that time and pointed out what the treaty meant, and had quoted from Canadian statements and Canadian newspapers; and then, in order to get a little something to pacify just such men as the Senator from Michigan and the Senator from Montana, they got a little clique together, and made a little palavering speech up there to the effect that they were afraid they were liable to get stuck in this matter, and shot the speech down here by air mail, I suppose, to the Senator from Michigan; and of course he held his mouth open, and decided that probably there was something to it. Until we had exposed this iniquity, however—I had almost used another word—until we had exposed what they were doing here, and what they were writing in the editorials appearing in the newspapers in Canada, and that they were about to give a knighthood to the man who had come down here and put this thing across, even going to the extent of saying they had no idea that they were going to get half until we had exposed those editorials, everything was rosy, and it was a marvelous thing.

Permit me also to quote from Scripture for the benefit of the Senator:

> Having eyes, see ye not? and having ears, hear ye not? and do ye not remember?

Mr. WHEELER. Let me say to the Senator that in my humble judgment the statements that come from Canada, either for or against this treaty, should have little weight with any Member of the United States Senate. It seems to me it is the height of asininity for someone to get up and quote a Senator or a statesman from the other side of the boundary as to the effect that the treaty is going to have or is not going to have upon the American people. As I

said a moment ago, and I reiterate what I then said, this treaty was advocated by President Harding, by President Coolidge, and by——

Mr. LONG. Mr. President——

Mr. WHEELER. Mr. President, I refuse to yield for a moment—by President Harding, by President Coolidge, by President Hoover, and now by President Roosevelt.

Mr. LONG. Mr. President——

Mr. WHEELER. Just a moment.

Mr. LONG. Was not the World Court also advocated by most of those Presidents?

Mr. WHEELER. I am not going to be led astray to discuss the World Court at this particular time. There is room for some dispute with reference to that question.

The PRESIDING OFFICER (Mr. NEELY in the chair). In behalf of orderly procedure, the Chair invites the attention of the Senate to rule XIX, which, among other things, provides:

> No Senator shall interrupt another Senator in debate without his consent, and to obtain such consent he shall first address the Presiding Officer.

So long as the present incumbent occupies the chair, that rule will be rigidly enforced.

Mr. WHEELER. The Senator from Illinois asked me a moment ago, as I recall, whether or not the treaty had been signed at the time the Republican convention met. I have pointed out here that at the time the Republican convention met, President Hoover had before him the final report of the joint board of engineers upon which the pending treaty was based. The report covered in detail all the works, whether for navigation or power development, embodied in that treaty. The report had been agreed upon on April 9, 1932, more than 2 months before the convention met, and the treaty itself had been drafted and submitted to the President. The platform adopted by unanimous vote of the Republican convention contained a plank absolutely endorsing the treaty in every detail; and not only that, but let me say for the benefit of the Senator from Illinois that Republican speakers, as the Senator from Michigan [Mr. VANDENBERG] has said, went out into the Northwest and into the Middle West advocating this very plank, knowing the details that were in the treaty at that particular time.

Mr. DIETERICH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Illinois?

Mr. WHEELER. I yield.

Mr. DIETERICH. I desire to ask the Senator from Montana if it is not a fact that at the time the Republican convention met there were differences between the United States members of the Board and the Canadian or British members of the Board, and that those differences were not adjusted until after the convention met?

Mr. WHEELER. That is not my understanding. It is my understanding that there was no difference between them upon any substantial matter.

Mr. DIETERICH. My understanding is as I have stated. I do not want to be quoted as saying that is correct, but it is my understanding.

Mr. WHEELER. My understanding is that the Senator from Illinois is not correct on that point, but that the treaty had been agreed upon in substantial detail at that time and at the time the Republican platform was drafted.

Mr. DIETERICH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana further yield to the Senator from Illinois?

Mr. WHEELER. I yield.

Mr. DIETERICH. My understanding is that the United States engineers were in favor of a one-stage development, while the Canadian engineers were in favor of a two-stage development, and that they never agreed upon the two-stage development, as advocated by the Canadian engineers, until after the Republican convention met and until after the platforms were adopted.

Mr. WHEELER. The platform adopted at the Republican National Convention in 1932 is as follows:

> The Republican Party stands committed to the development of the Great Lakes-St. Lawrence seaway. Under the direction of President Hoover negotiation of a treaty with Canada for this development is now at a favorable point. Recognizing the inestimable benefits which will accrue to the Nation from placing the ports of the Great Lakes on an ocean base, the party reaffirms allegiance to this great project and pledges its best efforts to secure its early completion.

At the time that plank was adopted the President had before him the details, and the men who were responsible for that plank at the convention, including Mr. Mills, Mr. Dickinson, and the other leaders of the party, knew, in my judgment, exactly what the details were.

Mr. DIETERICH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana further yield to the Senator from Illinois?

Mr. WHEELER. I yield.

Mr. DIETERICH. When the Republican convention met they understood that in this treaty the division of power was to be in the ratio of about 75 percent for Canada and 25 percent for the United States. Is the Senator informed as to whether or not the Canadian Power Trust contributed anything to the Republican campaign fund?

Mr. WHEELER. Oh, that is so far-fetched a question that the Senator knows perfectly well that I have not any information about it. I do not believe they did anything of the kind, and the Senator himself does not believe they did, with all due deference to the Republican Party.

Mr. VANDENBERG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Michigan?

Mr. WHEELER. I yield.

Mr. VANDENBERG. Just one further statement, and then I shall subside. The statement which the Senator from Montana has challenged is no more absurd than the statement that this treaty divides the power in favor of Canada. So far as the power covered by the treaty is concerned, it is divided evenly, and the other power is Canadian power which Canada can develop on her own responsibility and with her own resources at any time when she sees fit, regardless of the treaty.

Mr. WHEELER. I thank the Senator.

Mr. LEWIS. Yes; but the Senator finds himself again in error——

The PRESIDING OFFICER. The Senator from Montana has the floor. Does the Senator from Montana yield to the Senator from Illinois?

Mr. WHEELER. I yield.

Mr. LEWIS. May I correct my able friend from Michigan? While ostensibly it is true that Canada has all this element described by my friend under the treaty and under the regulation, specifically it is assumed that the power Canada has is to go to the benefit of the United States and that the States along the Atlantic Ocean will enjoy it. But I challenge my able friend from Michigan, than whom there is no man better informed about this treaty, to show where there is any provision whatever that pledges Canada to supply power to the United States of America upon any terms whatever.

Mr. VANDENBERG. I do not think I follow the Senator's question. Canada is under no obligation to furnish her power to anybody over here. So far as the treaty division of power is concerned, it is even.

Mr. LEWIS. As to that we differ.

Mr. WHEELER. Mr. President, I said a moment ago that the present Chief Justice of the Supreme Court, Mr. Hughes, conducted many of these negotiations while he was Secretary of State, as did Secretary Kellogg, of Minnesota, and Secretary Stimson, of New York. If Republican Senators in this body, while conceding in their platform that it will benefit every section of the country, vote against this treaty, with no defense except that which has been made by the Senator from Louisiana [Mr. LONG], that it may divert a few tons of export tonnage from the ports on the fringe of the Atlantic coast, that act will wipe out the last vestige of the Republican Party in the great region from the Pennsylvania line to the Rocky Mountains.

Mr. FESS. Mr. President, will the Senator permit an interruption?

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Ohio?

Mr. WHEELER. I will be glad to yield.

Mr. FESS. I do not feel inclined to criticize anybody because of not following the platform of his party; neither do I feel justified in criticizing those who take one position at one time and later on change their position. I think obviously there may be reasons for such a change; but having myself, after long study, come to the conclusion that the treaty is justifiable and the construction of the project ought to be prosecuted, without some additional reason of which I did not know at the time I came to that conclusion I cannot now change my view.

I am receiving, as the Senator perhaps knows, letter after letter and resolutions adopted by chambers of commerce in my State, some of them stating, "We originally favored the St. Lawrence waterway, but we now, after further study, have decided that it is not justifiable", and asking me to vote against it. I have received a resolution of that kind from the Chamber of Commerce of Cincinnati; and if the Senator will permit me, I should like to state how I answered it.

Mr. WHEELER. I am very glad to yield further to the Senator.

Mr. FESS. I stated to the chamber of commerce of that city that I had somewhat reluctantly supported the piecemeal efforts to improve the Ohio River until we took up the project of the canalization of the river from its source down to Cairo. Then I voted for it without any hesitancy, and in so voting I was doing what the people of Cincinnati and the people all along the river wanted me to do. It was a navigation project, and the opposition of the railroads to that project was not a sufficient argument to induce me not to vote for it.

I voted also for the Mississippi River project, which was almost purely a flood-control measure. I voted for it without hesitancy, except for the fact that I could not ascertain how much money it would cost to achieve the result which it seemed to me to be so essential, and I did not hesitate very long.

I also voted for the Boulder Canyon project, because of the flood-control aspect which was involved. The opposition of those who did not want the power development, combined with the opposition of those who were opposed to irrigation, which would increase the number of acres of tillable land, did not seem to me to afford sufficient justification for my opposing it. If the flood-control item had not been involved, I probably would have voted against the Boulder Dam bill, but it seemed to me that the fact that 300,000 people in the Imperial Valley were constantly in danger of destruction justified the construction of the Boulder Canyon Dam, and the fact that power would be developed, or irrigation of additional acres made possible, as a secondary feature, was not a sufficient argument to cause me to vote against the project, although I probably would have voted against it as a power and irrigation project alone.

I may say the same thing as to the Columbia River project. That was a reclamation project; navigation was not involved and power was not involved. At this particular time, I do not see that I was justified in favoring that project.

However, coming to the St. Lawrence project, the opposition that comes to me is largely on the ground of its interference with rail transportation. That opposition has always been in evidence against water transportation. Also opposition comes from shippers, including coal operators—and that is a powerful opposition—but that does not justify my refusal to vote for a purely navigation project that will afford an outlet for the people of 23 States who live in a land-locked region and who are required to pay heavy transportation charges.

My answer to my friend in Cincinnati was that, regarding the St. Lawrence River, the only serious objection I had to it was that it might involve an indefinite outlay of money, and that, while that sum was known to be indefinite, I suspended my judgment and withheld my commitment; but when the Army Engineers, with the record they have made as to the accuracy of their estimates, gave us figures which were not exorbitant at all and showed a cost not anything like that involved in the construction of the Panama Canal, it seemed to me that the one objection I had had been removed. So I announced that I would vote for the St. Lawrence project and that I was going along with President Hoover.

Now I want to ask my friend what position would I be in, having come to this conclusion, not on impulse, not suddenly, but after a thorough study of the facts, if, when President Roosevelt recommends the treaty I should vote against it, while when President Hoover recommended it I advocated it? I could not retain my self-respect. Therefore, I am going to vote for the St. Lawrence project.

Mr. WHEELER. I thank the Senator very much, and I think he is following the only conscientious course that anyone under the circumstances could follow.

Mr. President, I have not always criticized people for not following their party platforms. The reason, however, that I specifically mentioned the matter this afternoon was because the distinguished senior Senator from Pennsylvania [Mr. REED] in a radio speech entitled "The New Deal", attacked the Democratic Party for what he claimed were violations of party pledges. Here is a party pledge made on the part of the Republican Party definitely and specifically, with all the information before it. Appeals were made by the Republican press in the Northwest and in the far West and by speakers upon the platform to the people of my section of the country and all through that region to vote for the Republican Party because it was definitely and specifically committed to the St. Lawrence Waterway Treaty, and criticizing the Democratic Party because it had no specific plank in its platform similar to the one which the Republican Party had adopted. It was only because the candidate for the Presidency on the Democratic ticket, now the President of the United States, Mr. Roosevelt, repeatedly during the campaign in speech after speech in various sections of the country and in radio talks, stated that he was for it, that he was able to hold the votes of many of the people in the Northwest who otherwise would have voted for Mr. Hoover.

So I say that for the eastern Republicans to oppose this treaty on such grounds would be to revive sectionalism in this country in its most vicious form. It would deprive the Republican Party for a generation to come of any pretense of being a national party. It would do an act that would never be forgiven or condoned, even by former members of the Republican Party throughout the great western section of the country.

DEMOCRATS PLEDGED ST. LAWRENCE PROJECT IN 1932

The Democratic Party, let me say, in the last campaign offered pledges for the completion of the Great Lakes-St. Lawrence project no less binding than that contained in the platforms adopted by the Republican Party. President Roosevelt has publicly stated on more than one occasion that through an oversight—that is the language used—that through an oversight the plank he submitted to the Democratic Convention on this subject was not read from the platform when the resolutions were formally adopted.

In his radio address summarizing the platform immediately after the convention, the Democratic nominee specifically included a pledge for the completion of this project among the planks to which he, as the standard bearer of the party, was bound.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WHEELER. I yield.

Mr. CLARK. The Democratic platform did not endorse this particular treaty with its limitation on the diversion of water.

Mr. WHEELER. But, as I pointed out a moment ago, it was the only treaty that could have been in contemplation, because of the facts before President Hoover at that time;

the Commission had made its report to him and the treaty was practically agreed upon.

Mr. CLARK. The provisions of the treaty were not publicly known.

Mr. WHEELER. I am not at all sure as to that.

Mr. CLARK. I will say to the Senator from Montana that there are hundreds of thousands of people in the United States who had always been in favor of the general St. Lawrence seaway project who, immediately the particularly provisions of this treaty became public, announced their opposition to it.

Mr. WHEELER. In his radio address summarizing the platform immediately after the convention, the Democratic nominee specifically included a pledge for the completion of this project among the planks to which he, as the standard bearer of the party, was bound. It was the only treaty that was considered, because at the time the Chicago convention met and 2 months before that time President Hoover had the information in his hands.

Mr. CLARK. The Senator does not undertake to give the impression that there was any binding effect on the Democratic Party because of something that might have been in President Hoover's mind?

Mr. WHEELER. I am convinced that the Republican administration knew it and I am confident likewise that Democratic Members knew it.

Mr. CLARK. If so, they can repeal the provisions of that treaty with remarkable dexterity.

Mr. WHEELER. The treaty was not signed at that time. All the information was in the hands of the President of the United States, Mr. Hoover at that time, and not a single Democrat in the United States, not a candidate for the Senate or for the House, challenged that address of the President of the United States or expressed his dissent from the position taken by the Democratic Party's nominee for the presidency.

Mr. CLARK. Mr. President, if the Senator will yield at that point——

Mr. WHEELER. Certainly.

Mr. CLARK. I should like to say that the Senator is entirely mistaken about that. As soon as the provisions of the treaty became public at all, I, as candidate for the United States Senate on the Democratic ticket, publicly announced that I would vote against the treaty if I was elected.

Mr. WHEELER. I am thankful for that. I did not know it. The Senator is the only man I know of who did publicly announce in his campaign that he was against it.

On July 9, 1932, in the first public statement he issued as the party nominee, Mr. Roosevelt addressed an open letter to President Hoover, urging "the immediate construction of the deep waterway as well as the development of abundant and cheap power", and expressed the hope that the treaty would be ratified as soon as it was formally submitted to the Senate.

In this letter Mr. Roosevelt said:

> May I respectfully point out that such action would hasten greatly the initiation of this vast project—one which means cheap transportation by deep waterway for the agricultural products of the West; cheap electricity from the State-owned and controlled resource, to be developed for the primary interest of homes, farms, and industry; and, of immediate importance, employment for thousands of workers. * * * Early and final action on this great public work * * * would be greatly to the public interest. It has already been too long delayed.

It has already been too long delayed, he said. How are Democrats going to stand up in the face of this statement of the President of the United States, and in the face of promises which he made during the campaign, and answer simply by saying that the President has been misinformed?

For months before the Democratic National Convention met at Chicago in 1932 the Power Trust tried to block the nomination of Franklin D. Roosevelt.

The agents of the trust in every State were busy in the primaries and the conventions, trying to elect delegates and get instructions for "favorite sons."

Why did the trust oppose Roosevelt? The whole country understood why. It was because the power and public-utility companies feared the policy of the public-power development the Governor had advocated on the St. Lawrence River in his own State.

Boulder Dam in California was an accomplished fact. The Senator from Nebraska [Mr. NORRIS] had twice put through Congress the bill for completion of the Muscle Shoals plant, and it was foreseen no President could veto that bill a third time. But most of all the power companies of the East, financed by J. P. Morgan & Co., feared this public power project on the St. Lawrence in the midst of the greatest market for electricity in the world. They knew Roosevelt was the leading advocate of that project and they determined to block his nomination for the Presidency.

I attended the convention at Chicago. The influence back of the stubborn effort made there to prevent Roosevelt's nomination was the power and public-utility companies and the great banks allied with the trust. The hotels and lobbies swarmed with their agents who boasted that they controlled enough delegates to prevent Roosevelt from getting a two-thirds majority of that convention.

History is repeating itself. The most servile organs of the Power Trust are saying now that this treaty will be beaten because the President cannot muster a two-thirds majority of this Senate.

At Chicago we beat the Power Trust simply because the Democratic Party could not be intimidated or controlled and because the Democrats who believed in Roosevelt and in the progressive principles he had advocated as Governor fought the issue out in the open and refused to trade or compromise.

SECTIONAL DOMINATION FROM THE EAST REJECTED BY DEMOCRATIC PARTY

One of the arguments used against this treaty is that New York is opposed to it. At the Chicago convention a majority of the New York delegation voted from the first ballot to the last against the nomination of Franklin D. Roosevelt. The delegates from several of the New England States joined with New York.

The rank and file of the delegates in the convention refused to yield to the domination of the Democratic Party by these forces. A clear majority of the 48 States had elected delegates instructed for Roosevelt and that convention repudiated sectionalism and gave the Democratic Party a chance to go before the people on national issues with a standard bearer who had a vision that reached beyond the Atlantic seaboard.

What happened? Roosevelt's first move as the party nominee was the issuing of a public statement reaffirming his demand that the St. Lawrence River be immediately developed for power and navigation. He issued that statement at Hyde Park on July 9 and he repeated it in an address at Portland, Oreg., on September 21, 1932. Not a Democrat in the Nation announced his opposition to the carrying out of that pledge, unless it was the Senator from Missouri [Mr. CLARK].

In the November election Roosevelt carried every State in the Union except Vermont, Maine, Connecticut, Delaware, and Pennsylvania. His determination to ratify this treaty and to carry out the St. Lawrence public power project was as well known before the election as it is now.

Mr. LEWIS. Mr. President, may I call to the attention of my able friend from Montana that he is falling into error through a misconstruction of phraseology? The President at no time in any of his speeches advocated the pending treaty. He advocated that which many thousands and many millions of our people are for, as they were then. He advocated a waterway, that which we all advocate, across the country, but he did not advocate, in any speech to which my able friend has referred, the ratification of the pending treaty in its present phraseology as now presented to the Senate.

Mr. WHEELER. It was generally known what the provisions of the treaty were, because it had been practically agreed upon 2 months before the meeting of the Democratic and Republican conventions in the city of Chicago, and

surely Mr. Roosevelt knew, before he came out and advocated the waterway, what was in the treaty. Before he came out and took a position in favor of the waterway, surely he knew what was in the treaty. Certainly the Senator cannot say that he did not know what was in it, because at that time and after his election he repeatedly advocated and is at the present time advocating this particular treaty with all its provisions. There can be no question that if he had known the identical provisions he would have advocated it at that particular time.

Mr. LEWIS. Mr. President, with the consent of my friend from Montana, I am alluding to the position he has been taking that there was a party platform declaration and that the attitude was that of the President and binding upon his party.

But I invite my friend's attention to the fact that the President never endorsed certain features of the treaty, such as turning over to Canada Lake Michigan as an American lake, nor other provisions in the treaty that would put upon us billions of dollars of expense for the benefit of Canada. I invite my able friend from Montana to note that President Roosevelt, then Governor of New York, addressed a letter to President Hoover protesting as to certain matters within the alleged report in the newspapers as to what the treaty contains as to power.

Mr. WHEELER. Let me call the Senator's attention to a fact. I called attention to a statement made by Mr. Roosevelt and sent to President Hoover to the effect that New York should not stand in the way of this treaty. I called attention to it earlier in the speech which I am making at this time.

In the November election, as I said a moment ago, Roosevelt carried every State in the Union except Vermont, Maine, Connecticut, Delaware, and Pennsylvania. His determination to ratify this treaty and to carry out the St. Lawrence public power project was as well known before the election as it is now. Yet he carried Massachusetts, Rhode Island, New Hampshire, New Jersey, and Maryland, and every other eastern seaboard State save those to which I have referred.

Certainly the people of the State of New York were familiar with Roosevelt's views on the St. Lawrence. He had been pleading for the development of the river for power and navigation for years. The approval by law of this project which he won from the legislature was his outstanding achievement as Governor of the State. Yet the people of New York gave him a majority of 600,000 votes.

Mr. DIETERICH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Illinois?

Mr. WHEELER. I yield.

Mr. DIETERICH. As I understand, the Senator now is directing his argument to trying to establish the fact that President Roosevelt's candidacy for President was successful, and he carried these States, by reason of the fact that he advocated the construction of the St. Lawrence waterway, and was in favor of the pending treaty. Is that correct?

Mr. WHEELER. No; that is not correct.

Mr. DIETERICH. Then, I misunderstood the Senator.

Mr. WHEELER. I said he carried all those States, and he advocated this treaty; but he carried all the States from which the greatest opposition to the treaty is coming at the present time.

Mr. DIETERICH. Mr. President, may I call the Senator's attention to the fact that the Democratic platform did not specifically mention this treaty. It stated that the Democratic Party was in favor of waterways. The Republican platform did specifically mention this treaty, and the Republican candidate carried scarcely a State in the Union.

Mr. WHEELER. Yes; I had called that to the attention of the Senate a moment ago; but I also desire to call attention to the fact that the President of the United States, Mr. Roosevelt, came out immediately after the convention and said that he was in favor of the St. Lawrence Waterway Treaty, and that in speeches in Portland, Oreg., and in Chicago, and in several other speeches throughout the United States, he advocated the ratification of this treaty.

ADMINISTRATION HAS BEEN GENEROUS TO ALL SECTIONS

Of course the President knew, when he sent his message to the Senate, that he would bring down upon his administration the vindictive resistance of the Power Trust and of the eastern trunk-line railroad corporations; but he has the vision and he has the courage to advocate the treaty because of its national benefit to every section. He is pledged to it, just exactly as the Republican Party is pledged to it; and the only difference between the Republican Party and the Democratic Party in this respect is that the Republican Party was more specifically pledged to it than was Mr. Roosevelt or the Democratic Party.

Mr. LONG. And therefore it lost.

Mr. WHEELER. Not at all. The only reason why the President was able to offset the propaganda put out by the Republican Party in the Northwest and in the West was because he came out specifically in his Portland speech stating that he was for this treaty.

Mr. LONG. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Louisiana?

Mr. WHEELER. I yield.

Mr. LONG. With Mr. Hoover representing a party that had pronounced in favor of this treaty, and having made the treaty, I was just wondering why it was, if the people wanted it so badly, that they could have been so ungrateful as practically to repudiate him in those States, and if it would not be a good plan to warn the Republicans—to whom my friend from Montana apparently is devoting about 75 percent of his speech—of the disaster that befell the candidate advocating the treaty on the platform after having made that deal with Canada.

Mr. WHEELER. If the Republican Party should repudiate the pledge they made, it would be a waste of time for them to come out into the Northwest and ask for votes on any platform. I say to the Senator from Louisiana that neither he nor any other man would be able to come out there and rehabilitate the Republican Party if they should violate the pledge they made in their Chicago convention in 1932.

Of course, I appreciate the appeal that the Senator has made in defending the Republican Party today. He has done a magnificent job; but he is the only man on the floor of the Senate today who has had the courage to stand up and defend some members of the Republican Party for their attitude on this question.

Mr. LONG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana further yield to the Senator from Louisiana?

Mr. WHEELER. I do.

Mr. LONG. I think the Senator entirely misunderstands my position so far as the Republican Party is concerned. First, I have no intention of going to the Northwest to try to rehabilitate the Republican Party, or to the South, either. Second, I was simply saying that inasmuch as the Senator is directing all his remarks to the Republican Party, these gentlemen probably have as good hindsight as they had foresight. Seeing a candidate of the Republican Party make a treaty, and seeing a candidate of that party running on its platform wholly repudiated within the bounds of that territory, certainly there ought to be such a thing as warning. Is there no such thing as a burnt child being afraid of fire in the Republican Party after the kind of repudiation that they received?

Mr. WHEELER. In other words, the Senator thinks the Republican Party ought to go back on the promises they made?

Mr. LONG. The Republican Party ought to say, "We asked the people of that part of the country, 'Do you want this treaty? Do you want the candidate who made this treaty?' and the people said, 'No; we would not have him on a bet.'" Are not the Republicans to take any notice of that kind of a stand on the part of the people?

Mr. WHEELER. There might have been quite a different story had it not been for the fact that the present President of the United States took a very definite and positive stand with reference to this very question in several of his speeches throughout the Northwest.

Mr. LONG. Will the Senator yield further?

Mr. WHEELER. I yield.

Mr. LONG. If the Senator will be fair with us, I think he will find that there was a great deal more of a Mother Hubbard character about the expression of our candidate than there was about the Republican platform. Almost anything could be read into the President's statement, because when he made it no treaty had been made, as I understand.

Mr. WHEELER. Oh, yes; all the facts were in the hands of the Democratic candidate for President of the United States. The Commission had practically agreed upon all the details of the facts at the particular time he made his speech at Portland, Oreg., and I have no doubt that he was entirely familiar with every detail of the matter.

The Tennessee River is today being developed for power, navigation, and flood control primarily for the benefit of the Southeast. About $100,000,000 has been allocated under the Public Works Administration for the development of the Mississippi River and its tributaries. The Fort Peck Dam has been authorized on the Missouri River to control and improve navigation on that mighty stream. Boulder Dam is being completed on the Colorado River for the benefit of the great Southwest. The Bonneville power project and the Grand Coulee development have been authorized for the benefit of the Northwest.

THE ST. LAWRENCE IS THE PRESIDENT'S PROJECT

Here is a project, embodied in the pending treaty, which was initiated and made possible by the efforts in his own State of Franklin D. Roosevelt while serving as Governor, and which will benefit not only the people of his own State, but 45,000,000 living in the area tributary to the Great Lakes. If the President is entitled to support on any issue, certainly this development in his own State heads the list.

Here is a project in the President's own State that has been very close to his heart for a great number of years, that he has been fighting for and urging upon the people of the United States for the benefit of his own State, and yet some of the Members of the Senate are going to turn down a project in which he has been vitally interested and for which he has been fighting for a number of years because they say Lake Michigan will become a Canadian lake, to which, of course, I cannot subscribe.

Mr. KING. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Utah?

Mr. WHEELER. I yield.

Mr. KING. I am inclined to think that my friend from Montana, who always tries to be accurate and usually is, made a statement that was a little too broad.

I do not understand that Mr. Roosevelt has committed himself at any time definitely and precisely to the terms of this particular treaty. We have here two Senators from the State of New York who are deeply interested in their State, and who now are seeking to carry out the wishes of the people of their State as they understand them. Both of them have given a great deal of attention to the questions involved in the treaty. That President Roosevelt and the Senators referred to have favored a treaty that would produce power is undoubtedly true; but these Senators believe, and others are of the opinion, that this treaty contains provisions that are inimical to the State of New York as a State, and to its sovereign rights, and disadvantageous to the best interests of the American people. I am not now indicating my approval of the treaty, but only wanted to point out that representatives of the State are opposed to the treaty.

If the Senator will pardon me still further, personally, I desire to say the States control the waterways within their borders, or contiguous to their borders, where they have interests therein, not only for the advantages which might be derived indirectly but for the advantages which would be derived from the production of power. I should like to see the States derive revenues from power developed by them, or under their direction, in order that the burden of taxation might be lifted from homes and real estate; and any measure that would injure any State by depriving it of the benefits to be derived from the utilization of streams passing through or along the same, and which would deprive them of the benefits that might result from the development of power and the revenues derived therefrom, I should oppose the same.

Mr. NORRIS. Mr. President——

Mr. WHEELER. I yield to the Senator from Nebraska.

Mr. NORRIS. I desire to call the attention of the Senator from Montana to the fact that this treaty, as I see it, does just exactly what the Senator from Utah says any treaty ought to do in protection of the rights of the States with regard to power. Specifically, it gives all of the power to the State of New York. That is what the Senator was contending in speaking of the interests of the State of New York, that they ought to have the power; and in this particular case every kilowatt of power is given to the State of New York.

Mr. WHEELER. Let me correct the Senator from Utah by saying that the President of the United States is not only in favor of a treaty but he is in favor of this particular treaty, and desires to see this particular treaty ratified.

Mr. KING. Mr. President, will the Senator yield?

Mr. WHEELER. I yield.

Mr. KING. I am not sure that I understood the Senator. I did not mean to say, and I did not say, that President Roosevelt was not in favor of a treaty with Canada. I stated that he was. I did state that I did not understand that he was definitely committed by the platform to this particular treaty. I interpolate that.

Mr. WHEELER. Not at all; but he is definitely committed to this treaty at this time, if I understand the English language, as is evidenced by the messages which have been sent to the Senate. Not only that, but let me say to the Senate that, as I have repeated again and again on this floor, the Republican Party was committed to this particular treaty in their platform; and then the present President of the United States, with that information in mind and with the knowledge, as he must have had it, that the commissioners had practically agreed upon the details of the treaty, came out in his Portland speech advocating this waterway project.

Mr. DUFFY. Mr. President, will the Senator yield to me?

Mr. WHEELER. I yield.

Mr. DUFFY. My information is that the details as to what was contained in the treaty became public knowledge on or about July 18, and certainly it was after that time that the radio talks and other speeches were made by then Governor Roosevelt in his political tour, in which he committed the Democratic Party upon this subject. There could have been no other treaty in contemplation and no other terms except those contained in the pending treaty. It seems to me, if the Senator will permit, that it is rather a specious argument to try to draw a distinction, certainly after that date.

Mr. WHEELER. I thank the Senator. As I stated a moment ago, here is a project embodied in the pending treaty which was initiated and made possible by the efforts of Governor Roosevelt in his own State.

If the Democratic Party, with 60 votes in this Chamber, should supply the margin necessary for the rejection of this treaty, no Senator who participated in that effort could go back to his constituents as a friend and supporter of this administration. How could he claim that on one of the chief policies of President Roosevelt he had upheld and supported him by his vote in this body?

For 4 years as Governor of New York Franklin D. Roosevelt fought through one session of a hostile legislature after another to prevent the power resources of the St. Lawrence River from falling into the hands of the Aluminum Co., the Dupont interests, the General Electric, and other combinations dominated by J. P. Morgan & Co., which constitute the Power Trust in the East.

PROGRESSIVES SUPPORT THE PRESIDENT ON PUBLIC POWER RECORD

It was his valiant and successful fight against these interests which won for Franklin D. Roosevelt the support of progressives of both parties throughout the West and resulted in his nomination and election to the Presidency. I say in the presence of the distinguished Senator from Nebraska [Mr. NORRIS] that Mr. Roosevelt won the confidence and support of that Senator, and the millions of progressive Republicans and independents who followed him primarily because of his record on this issue, which endeared him also to the rank and file of Democrats throughout the country.

By the same token, the party, or the faction, or the pretended leaders of any group in this Chamber, who provide the votes to reject this treaty will have to flout the overwhelming sentiment of the Nation, and place that responsibility upon the party, or group, or faction which they represent.

OPPONENTS CHARGE CONSPIRACY WITH A FOREIGN NATION

I have listened with amazement to many of the statements which have been made here, apparently in the effort to befuddle and confuse the minds of Senators as to the basic facts of cost, maintenance, capacity, and the simplest matters regarding the physical characteristics of the project provided by the treaty. If we are to accept some of these statements as true, this treaty is nothing better than a bold conspiracy to betray the interests of this country to a foreign nation and to lay waste our Atlantic seaboard for the benefit of Canadian ports.

Indeed, one Senator in his opening speech against the treaty seriously contended that the opening of this great natural highway to the profitable exchange of goods with ports on the Atlantic, Gulf, and Pacific coasts and with the markets of the world, would close every factory in the Middle West.

He went on to state that the removal of existing obstacles to navigation would provide a channel through which British battleships might invade our country and bombard Detroit, Cleveland, Milwaukee, and the other Great Lakes ports which have so long pleaded with the Federal Government to complete this seaway.

The Senator made this statement soon after putting forth the contention that the waterway was utterly inadequate to permit use by ocean-going vessels, implying that only barges and shallow craft could navigate the depth of 27 feet provided from Duluth to the sea.

CONFUSED CHARGES OF ENEMIES OF TREATY ANSWERED BY THOMAS J. WALSH

In this maze of misinformation, uncertainty, and confusion in which the opponents of this treaty have enveloped themselves, it is refreshing to turn to the statement of one who will not be charged with lack of experience with this problem or want of devotion to his country and its service.

I have heard no better description of the character and effect of the project provided by the treaty than the following epitome of its terms:

> Under the treaty the cost of the improvement is to be borne equally by Canada and the United States, each country to receive credit for expenditures made toward the end sought, a channel of 27 feet depth * * *.
>
> From motives of economy, the works to be installed will serve not only the purpose of navigation but the development of electrical energy as well, to the amount in the international section in which the contracting parties share equally of 2,200,000 horsepower.
>
> The State of New York claims to be entitled to one half of the power developed in that section of the river, and your committee is of the opinion that it should be accorded the same upon the payment of so much of the total cost of the improvement therein as is justly allocatable to power development * * *. New funds required of this country will amount to $257,992,000 (hearings, p. 11), including the sums to be provided by the State of New York on account of power, which the engineers of that State and those of the War Department have agreed should be $89,000,000 * * *.

Mr. LEWIS. Mr. President, will the Senator yield?

Mr. WHEELER. Let me finish this quotation.

> The figures given are all based on unit costs used in the 1927 report of the joint board * * *. The opinion is confidently expressed that were the work undertaken at once it could be accomplished at a very substantial sum less than the estimate. The part of the work now being prosecuted in the neighborhood of Detroit under the supervision of Colonel Markham, in charge of river and harbor work in that district, is costing less than the estimates by from 25 to 50 percent * * *.
>
> The enterprise is in the very strictest sense national in its scope. It would be to take an unjustifiably narrow view of it to consider it as of concern only to those States whose traffic passes through commercial centers on the Great Lakes. Governor Goodrich spoke of the reasonable probability of lumber and canned fruit, among other products, going from the Pacific coast by the all-water route to the land-locked interior, a region that is now laboring under a heavy handicap in competition in consequence of the opening of the Panama Canal route * * *.
>
> New England is not without a very direct interest in the project. A map submitted to the committee showing the region within which the power to be developed in the St. Lawrence can be economically transmitted indicated that Boston and Portland, Me., are within the area that may be served. * * * The products of the Northwest would, as shown by indubitable testimony before the subcommittee, go in enormous quantities by the water route to New England, and its products, manufactured and unmanufactured, go westward in like manner. * * *
>
> Whatever loss may ensue (to Atlantic ports) will be more than compensated by the betterment of conditions through the new waterway in the vast hinterland upon whose welfare their prosperity so vitally depends. In other words, they will share in the benefits of any great national development such as that under consideration. * * * To view the project provincially is to disregard the intelligent self-interest of the communities of which such ports are the center.

That statement was the last public utterance of my former colleague in this body, Senator Thomas J. Walsh. He had given years of study to this project and its effect, not only upon the State of Montana and the great Northwest but upon all the sections of the Union, to which his service in the Senate was devoted.

Now I yield to the Senator from Illinois.

Mr. LEWIS. I want to say to the able Senator from Montana, now speaking, that he previously alluded to the fact that in the debate which opened the opposition to the treaty one Senator had referred to the intimations of disaster to the United States in the event of a conflict by virtue of turning over to the British Empire the proposed waterway. I beg my able friend to amend his speech, and, instead of saying "one Senator" please refer to the Senator specifically. It was myself. The senior Senator from Illinois, Mr. LEWIS, said that, but Mr. LEWIS did not say or use the word "battleships." He referred specifically to the prospect of danger to the country from the use of such agencies as the British Empire could employ in the waters in our country when she owned them, and I now call the attention of my able friend to the fact that in the late debate on the naval construction bill the Senator from Utah [Mr. KING] brought the attention of the Senate to the vast number of small cruisers being built, particularly those in Britain, the small cruisers which are ostensibly used for commercial ships but are so made that they can be at once converted in aid of the navy in warfare. Therefore I would have my able friend understand that I do not wish any mask, I do not wish any disguise, I do not wish to be exempt from complete and full responsibility for the utterances I gave, as I expect to repeat them in many places besides this honorable body.

Mr. WHEELER. I have no doubt that the Senator will repeat them, but I hope that no man in the Senate will be influenced in his vote by the belief that Great Britain might send some warships up this channel and destroy the various ports. If she could do that, then certainly there is not a seaport on the Atlantic coast that is safe from destruction by Great Britain.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. WHEELER. I yield.

Mr. NORRIS. The Senator ought to add, I think, that if that is true when these little boats are being built over there we had better shut off the Mississippi River, because they will come sailing up the Mississippi River and destroy all the cities along that stream.

Mr. WHEELER. Of course; they will destroy St. Louis, and New Orleans, and Chicago, all of the cities along that stream.

Mr. LEWIS. Oh, no——

Mr. LONG. Mr. President——

The PRESIDING OFFICER. The Senator from Montana has the floor, and he is entitled to have his rights protected. Does the Senator from Montana yield; and if so, to whom?

Mr. WHEELER. I yield to the Senator from Louisiana for a question, though I should like to finish my remarks.

Mr. LONG. Apropos of what my friend the Senator from Nebraska said, that we might better shut off the Mississippi River, I wish to tell the Senator from Nebraska that the British thought of that before he did, and that is what this treaty does. It cuts off the Mississippi River. It provides for internationalization of Lake Michigan, as the Canadians have very properly said, so that we cannot have a navigable Mississippi River. So it may be that is what they had in mind in this treaty.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Nebraska?

Mr. WHEELER. I yield.

Mr. NORRIS. We have a navigable Mississippi River now, and it may be that all the cities along the river are destroyed this very minute. I am not sure about that. It may be that the Senator from Louisiana will find that he has no home to go to when he leaves here.

Mr. WHEELER. We certainly had better not do anything further for the Mississippi River.

Mr. NORRIS. No.

Mr. WHEELER. Because I am sure that if we enlarge the channel and deepen it the British will certainly send their battleships up the river and will destroy New Orleans and St. Louis and the other big cities on the river.

Mr. NORRIS. They are now building the battleships in England.

Mr. WHEELER. Yes; as the Senator from Nebraska says, they are building them now for that very purpose.

Mr. LONG. Well, go ahead.

Mr. WHEELER. Mr. President, on February 23, 1933, as the last act of his long public life, in the final days of his service in this body, Senator Walsh obtained a majority report from the Committee on Foreign Relations recommending the ratification of this treaty by a vote of 9 to 2. This is the same treaty which has been condemned here as a betrayal of American interests and a profligate waste of public funds.

NEW YORK CITY AND CHICAGO COUNSEL FOR THE WHEAT FARMER

I do not rest my vote for this treaty upon its benefits alone to the State of Montana. But, since the Senator from New York [Mr. COPELAND] and the Senator from Illinois [Mr. LEWIS] have undertaken to prove that they understand our problem better than the wheat farmers of the Northwest, I wish to touch upon one phase of the seaway.

The Senator from New York, where little or no wheat is raised for export, said the seaway would injure rather than benefit the wheat farmer. The Senator from Illinois, where wheat is consumed rather than produced, made a similar statement. He said after the wheat was shipped from Montana or the Dakotas to the lake head by rail all the savings in transportation by water to Liverpool or Atlantic ports would be lost. That was the basis for his conclusion that it would, therefore, be a good thing to compel the western farmer to continue to ship the entire distance to seaboard by rail or to reload his products and imports from barges to sea-going vessels in addition to the rail haul.

ENGINEERS SHOW SAVINGS ON WHEAT ALONE WILL AMORTIZE COST OF PROJECT

In the report of the Corps of Engineers submitted to the Senate by the President this absurd argument is disposed of.

Wheat produced in Montana was traced from Helena, Mont. by rail to Duluth, and thence to the markets at Liverpool. This study shows that from Helena to New Orleans, by way of Minneapolis, the present rail cost per ton is $11.86, and the actual vessel cost from New Orleans to Liverpool is $2.93 per ton, making a total of $14.79 per ton, by the present route.

To ship the same wheat, after the seaway is completed, it is shown that the cost by rail from Helena, Mont., to Duluth, plus the cost from Duluth to Liverpool, would be $11.70 per ton, or an indicated net saving per ton of $3.09.

On the basis of the wheat production for export of this region in a single normal year, it is shown that the transportation saving would amount to $8,089,620, or within about $1,000,000 of the amount necessary to maintain, operate, and completely amortize the Great Lakes-St. Lawrence project in a period of 50 years.

CHEAP POWER FOR THE EAST—CHEAP NAVIGATION FOR THE WEST

I will freely concede that when any project is proposed here that involves one community in a single State, the views of the Senators from that State, on account of their familiarity with conditions, are usually entitled to greater weight than the opinions of Senators from other States.

I am willing to apply that principle to the pending treaty. What is the situation here? This project provides for a public power project in one State—the State of New York—and for a navigation project that affords cheap transportation for the bulk products and imports of 18 States.

Where do the Senators from New York stand on the only phase of this project that directly concerns New York? They have stated repeatedly that they favor the public power project on the St. Lawrence. In campaign after campaign in New York they have stood on the same platform with Smith, Roosevelt, and Lehman urging the development of the St. Lawrence in order to provide cheap electricity for the benefit of their constituents.

PUBLIC POWER PROJECT BLOCKED IF TREATY FAILS

Everyone recognizes that that power cannot be developed without a treaty with Canada. The President stated it in his message. Both Senators from New York have conceded it to be true. New York cannot get cheap electricity without a treaty for the development of the St. Lawrence, and it is in the International Rapids section of that river in New York that we find the bottle-neck obstruction that blocks off 18 States in the Great Lakes area from deep-water navigation and direct access to the sea.

The Senators from New York have declared again and again the power development on the St. Lawrence will benefit the people of their State. I agree with them.

"But", they say, "You Senators from Wisconsin, Indiana, Ohio, Michigan, and the great Northwest do not know what is good for you as respects navigation. Some of our railroad and port interests in New York fear that traffic will be diverted from our ports if you are permitted the same access to salt water which we enjoy today on the Atlantic seaboard."

It is true no one has yet been able to show any sound basis for such a fear. It is true the President, a native New Yorker, has denied it and submitted a report showing it will help rather than injure our ports. Nevertheless, we are afraid of the navigation project and we are opposed to it since we are not sure we will get the major benefits from it. We strongly favor the power project, and we concede both the navigation and power can be provided more cheaply if both jobs are done simultaneously and the dams are built for these dual purposes. But since we are afraid New York won't get the major benefits of both we will give up cheap electricity and you Senators from the West can not have cheap navigation.

That is, in substance, the argument that has been made.

Was a more preposterous proposition ever offered to the Members of this body? Against that position I place the statement of another New Yorker—the President:

This great project involves two objectives of equal importance, and cannot in public justice accomplish one without the other. I am deeply interested in the immediate construction of the deep waterway, as well as in the development of abundant and cheap power. * * * This project * * * means cheap transportation by deep waterway for the agricultural and other products of the West; cheap electricity for the State owned and controlled resource, to be developed for the primary interest of homes, farms, and industries; and, of immediate importance, employment for thousands of workers. * * * It has already been too long delayed.

And in his message on this treaty the President said:

I call your attention to the simple fact that Canada alone can, if desired, build locks at the Lachine Rapids and at the international sector, and thus provide a seaway wholly within Canadian control without treaty participation by the United States. * * *

I want to make it very clear that this great international highway for shipping is without any question going to be completed in the near future and that this completion should be carried out by both nations instead of by one.

I am sending you herewith a summary of data prepared at my request by governmental agencies. This summary, in its relation to the economic aspects of the seaway, shows from the broad national point of view, first, that commerce and transportation will be greatly benefited and, secondly, local fears of economic harm to special localities or to special interests are grossly exaggerated. It is, I believe, a historic fact that every great improvement directed to better commercial communications, * * * have all been subjected to opposition on the part of local interests which conjure up imaginary fears and fail to realize that improved transportation results in increased commerce benefiting directly or indirectly all sections.

For example, I am convinced that the building of the St. Lawrence seaway will not injure the railroads or throw their employees out of work; that it will not in any way interfere with the proper use of the Mississippi River or the Missouri River for navigation. * * *

Here is the President of the United States speaking upon the subject, having given it more careful attention than any man in this body; who has been familiar with it, not this year, not last year, but who has studied it personally for a period of 6 or 7 years, both as Governor and as the President of the United States. He said:

* * * As you know, I have advocated the development of four great power areas in the United States, each to serve as a yardstick and each to be controlled by government or governmental agencies. * * * The St. Lawrence development in the Northeast calls for action. This river is a source of incomparably cheap power located in proximity to a great industrial and rural market and within transmission distance of millions of domestic consumers. * * *

Power in the international sector of the St. Lawrence cannot be developed without a treaty between the United States and Canada. On the other hand, Canada can develop a huge block of new power at the two other rapids which lie wholly within Canadian territory. Here again, as in the case of navigation, it is better in every way that we should maintain the historic principle of accord with Canada in the mutual development of the two nations.

That states the practical condition that exists, the sound principle and the broad national ground upon which Members of this body of both parties can safely rest their votes for ratification of this treaty.

Mr. President, I apologize to the Senate for having taken so long a time in the discussion of this subject, but I conclude by repeating what I said a moment ago, that I feel that no man in the Senate is so well grounded in the economics of this proposition, is so familiar with the facts in the case, as is the President, and I hope the treaty will be ratified.

Mr. KING obtained the floor.

Mr. McNARY. Mr. President, will the Senator yield for just a moment?

Mr. KING. I yield.

Mr. McNARY. I promised to suggest the absence of a quorum at the conclusion of the speech of the Senator from Montana.

Mr. KING. I merely wish to speak for a few moments, and then I will yield to the Senator.

Mr. McNARY. Very well.

Mr. PITTMAN. Mr. President——

Mr. KING. I yield to the Senator from Nevada.

Mr. PITTMAN. Mr. President, I desire to give notice that, as soon as I may obtain the floor tomorrow morning, I intend to discuss one feature of the pending treaty, and I believe that I will be in a position at that time to prove, by incontrovertible evidence, that the development of navigation on the Mississippi River and its tributaries is not dependent in any way whatever upon the Great Lakes, and never has been, and never has been considered to be so dependent. Later on I intend to take up the question of sovereignty, which I do not consider to be such a controversial question, for I think most lawyers admit that that question is not involved. I also intend to demonstrate, as I believe I can, that the railroads will not be injured by the adoption of the St. Lawrence waterway project, and certainly the employees of the railroads will in no way be affected by it.

Mr. President, I ask unanimous consent that a statement by a group of distinguished mayors who are now visiting our city may be published in the RECORD as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MILWAUKEE, WIS., *February 8, 1934.*

DEAR SENATOR: We present to you herewith copy of a petition from the mayors of Great Lakes Basin communities, appealing to the Senate to ratify the pending Great Lakes-St. Lawrence Deep Waterway Treaty.

We respectfully ask your consideration of this appeal and your favorable action so that these cities and countless others not on the immediate water front may have the economic freedom to which they are entitled, but of which they are now deprived, due to navigation obstacles in the present waterway.

We consider it to be imperative to the future welfare of our people and our cities that the pending treaty be ratified and the seaway completed at the earliest possible moment. Our cities have direct investments in port facilities, and their success depends on the efficiency of a complete and modern waterway to the ocean.

We sincerely trust that the treaty will receive your support so that our Great Lakes Basin may have a healthy interchange of business with the peoples of all other sections of our country and the rest of the world.

Very truly yours,

GREAT LAKES HARBORS ASSOCIATION,
D. W. HOAN, *President.*

PETITION OF GREAT LAKES CITIES TO THE UNITED STATES SENATE ASKING RATIFICATION OF ST. LAWRENCE TREATY

FEBRUARY 8, 1934.

To the Senate of the United States:

We, the undersigned mayors of American cities in the littoral of the Great Lakes, urge the immediate ratification of the pending Great Lakes-St. Lawrence Deep Waterway Treaty so that construction of the seaway may be started at once as a part of the very necessary Federal Public Works program.

No other Public Works project has been proposed which insures such vast benefits to the entire Nation. Construction of the seaway will give employment to countless thousands immediately, and its completion will add a new coastline of approximately 3,500 miles. It will permit our citizens in the great industrial and consuming centers of the Great Lakes to exchange products with the Atlantic, Gulf, and Pacific ports in the coastal and intercoastal traffic which comprises more than 80 percent of the ocean shipping of the United States.

The opening of our home markets by this means to the full enjoyment of all sections alike is the key to national recovery. It will stimulate the growth of new industry which will absorb labor and raw materials, create new rail tonnage which will give added employment to railroad workers, revive domestic commerce and open up rich markets to the shipping and industry of our Nation.

A 27-foot channel entirely adequate for ocean cargo ships today exists throughout the length of the Great Lakes and the St. Lawrence River, save only for the deepening of the connecting channels.

The seaway is thus already more than 90 percent complete. The pending treaty merely provides for finishing the balance of less than 10 percent—the removal of obstacles to ocean navigation which today block our access to the sea and deprive 45,000,000 American citizens of their birthright.

The construction of the Panama Canal, 2,500 miles from the National Capital, conferred inestimable transportation benefits upon the Atlantic, Gulf, and Pacific coasts. The Middle West did not share in these benefits. In fact, we suffered a decided injury. Our condition can be improved—and should be—by the removal of the obstacles to navigation which today block off the fourth seacoast of the United States.

The communities we represent have always given sympathetic aid and support to the development of all other waterways. We have adhered, year in and year out, to the broad national principle that useful and necessary public works should be given generous support, not upon local or sectional grounds but for the ultimate benefit to the entire Nation.

We refuse to believe that we have been wrong in giving our cooperation. But we are becoming alarmed at the actions of sectional groups who upon unsound grounds are endeavoring to deprive us of the seaway which means our future economic freedom.

Our representatives in Congress have cooperated in voting the total now fast approaching the $2,000,000,000 mark—already expended, allocated, or recommended—for water transportation throughout the Nation. The Great Lakes and St. Lawrence River have received only 10 percent of this sum, although this area furnishes approximately 90 percent of the ton-mileage of the Nation's inland water-borne commerce.

We ask your good offices so that our great country may obtain the great benefits of the seaway. We ask you to remove the obstacles which now hinder the Middle West and penalize 45,000,000 of our citizens.

We pray you to see to it that the Great Lakes-St. Lawrence Seaway Treaty is ratified at an early date.

Respectfully submitted.

Mr. LEWIS. I desire to announce, Mr. President, following the announcement of the able Chairman of the Foreign Relations Committee [Mr. PITTMAN], that he will address the Senate tomorrow upon the treaty and in support thereof; that on Monday next, following the addresses that may be delivered by others already announced, I shall assume the liberty of replying to the speech of my eminent friend, the Chairman of the Committee on Foreign Relations.

NOMINATION OF D. D. MOORE—CHANGE IN AGREEMENT

Mr. BARKLEY. Mr. President, on yesterday a unanimous-consent agreement was entered into to consider the nomination of Mr. D. D. Moore, to be collector of internal revenue for Louisiana, on the 16th of March. I ask unanimous consent that that date be changed to the 23d of March.

The PRESIDING OFFICER (Mr. MCKELLAR in the chair). Is there objection? The Chair hears none, and it is so ordered.

INCLUSION OF CATTLE AS A BASIC INDUSTRY

The Senate resumed the consideration of the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes.

Mr. CONNALLY. Mr. President, since announcements seem to be in order, I wish to announce that I hope to get a vote on the so-called "cattle bill." [Laughter.]

The PRESIDING OFFICER. The Chair also hopes it may be done.

Mr. KING. The Chair is supposed to be nonpartisan.

Mr. CONNALLY. I should like to ask the Senator from Oregon at this point if he would entertain a request to fix a time to vote on the so-called "cattle bill"?

The PRESIDING OFFICER. The Chair, in his capacity as a Senator, will suggest that we proceed until the pending bill shall have been passed. There are two other bills of very great importance which are to follow right after the pending measure, and it is necessary for them to be acted upon.

Mr. KING. I do not think that it is the function of the Chair to suggest the course of legislation.

Mr. CONNALLY. Let me suggest to the Chair that the trouble about his suggestion is we do not seem to be able to proceed. The Senator from Texas is perfectly willing to proceed. I want to inquire of the Senator from Oregon if he would have any objection to an agreement to take a vote on the cattle bill tomorrow?

Mr. MCNARY. Mr. President, I had hoped that we could adjourn this evening until Monday, so that we might have Friday and Saturday for office work.

Mr. CONNALLY. That would be entirely agreeable to me, and I should like to vote tonight if we can adjourn over until Monday.

Mr. KING. May I say to my friend from Texas and to my friend from Oregon that I am advised that, in addition to the peanut amendment, a number of Senators intend to offer other amendments, to include rye, flax, and other commodities. There are many agricultural and other commodities produced in the United States, and I understand that we are to make this blanket as broad as the productive capacity of the United States. So I do not see any chance now of getting an agreement.

Mr. SHIPSTEAD. Mr. President, in view of the amendments that are to be offered, I am confident that we cannot finish this bill tonight. There are some very important amendments to be offered, which will undoubtedly lead to considerable debate.

Mr. KING. I was prompted to make the statement I made a moment ago by reason of information which has been conveyed to me, which is just corroborated by the Senator from Minnesota and by statements made to me by the distinguished Senator from North Dakota [Mr. FRAZIER], who states that requests will be made that a number of commodities be included within the boundaries of this bill which has now descended to the peanut stage.

Mr. CONNALLY. Mr. President, will the Senator yield to me to suggest the absence of a quorum?

Mr. KING. I do not yield now for that purpose. I desire to make a few observations, and then I will yield.

NAVAL CONSTRUCTION

Mr. KING. Mr. President, I shall take but a few minutes for the purpose of calling the attention of the Senate to a dispatch which appears in this afternoon's edition of the News which, by the way, is very alert in securing news of importance to the public.

When the naval construction bill was under discussion I stated—and similar statements were made by other Senators—that if we passed the so-called "Vinson Navy bill", the object of which was to authorize an appropriation of no one knows how much, perhaps a billion or a billion and a half dollars, there would be immediate repercussions among various nations of the world, nations that would be glad to materially reduce both naval and land armaments, and whose course would be influenced, if not determined, by the military program and policies of the United States. It was obvious that if the United States authorized the expenditure of the stupendous sum called for by the Vinson bill they would immediately feel compelled to revise their budgets so as to provide larger appropriations for the construction of additional war vessels.

So we find, Mr. President, immediately following the action of the Senate of the United States, the following telegram coming from Tokio:

Admiral Mineo Osumi, Minister of Marine, announced today that because of the $750,000,000 Vinson Navy bill, passed by the United States Senate Tuesday, Japan must build additional warships.

His announcement seemed concrete evidence that Japan did not intend after next year to accept the 5–5–3 ratio of the expiring naval treaties.

Osumi said that at the end of 1939 Japan would have slightly over 60 percent of ships as compared to the United States.

He cited tonnage figures as of that time on the basis of present programs as Japan 735,063, United States 1,135,240. That gives Japan 65 percent as many ships as the United States instead of the present treaty ratio of 60 percent, even without the building program he said would be necessary.

Osumi estimated that at the end of 1939, on the basis of programs, the United States would have 195 ships, Japan, 150. He classified the projected number of larger ships as:

Battleships—United States 15; Japan 9.
Aircraft carriers—United States 6; Japan 6.
Cruisers (8-inch guns)—United States 18; Japan 12.
Cruisers (6-inch guns)—United States 19; Japan 19.
Destroyers—United States 97; Japan 69.
Submarines—United States 40; Japan 35.

Following the Tokio dispatch the News contains this additional statement:

The day the Vinson bill passed the Senate, 65 to 18, Great Britain announced that she would increase her fleet. Previously the French had indicated the same projected course.

With the definite assurance of Japanese expansion, which had been expected, the "big navy" groups throughout the world have precipitated a naval armament race that bids fair to exceed anything previously known in the world's history.

Mr. President, this is an ominous statement, but we ought to have realized that, with the naval program which we were projecting and demanding should be carried out, ministerial declarations of the character emanating from Japan would inevitably result. We cannot authorize naval construction costing a billion or more dollars immediately following a naval bill appropriating for the ordinary expenses of the Navy for the ensuing year over $300,000,000, without arousing fears and apprehensions upon the part of other nations.

The United States Senate, Mr. President, in my opinion, committed a grave blunder in passing the Vinson bill. We know that at the expiration of the period fixed in the Washington Treaty there is to be a naval conference unless the signatories to the treaty avail themselves of the provision which continues in force the treaty for a further period of 2 years. Instead of waiting until the treaty expires, and opportunity is afforded the governments signing the same to confer with the view of reducing naval armaments, our Government by this measure commits itself to the expenditure of hundreds of millions of dollars for additional ships of war. We should wait for the treaty to terminate, and in the meantime exert the powerful influence of the United States to secure an agreement among nations to bring about important reductions in military and naval armaments.

It follows as the night follows the day, when the most powerful nation in the world, with the greatest resources, appropriates or authorizes the appropriation of a billion or more dollars for naval expansion and naval development, that other nations not so favorably situated financially or otherwise will inquire as to the reason for such important naval activities upon the part of the United States, and fear will be engendered in their minds that notwithstanding the avowals of our desire for world peace, there lurks behind peaceful words sinister purposes affecting other nations. It is natural that huge military expenditures by any nation will occasion fear, apprehension, perhaps animosity, and lead other nations to increase their military expenditures.

Mr. SHIPSTEAD. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Minnesota?

Mr. KING. I yield.

Mr. SHIPSTEAD. The Senator will remember that at London when we agreed to the London Treaty and later when it was ratified by the Senate, we put our stamp of approval on it. We had an opportunity to disagree to this increase in armament. It was very clear at the time we ratified that treaty that the next logical step would be to spend a billion dollars to increase our Navy. In view of that fact, it seems that to call another conference may have the result the London Conference had, of increasing the Navy another billion dollars, and selling it to the country in the name of peace and disarmament, as the London Treaty was sold.

Mr. KING. Mr. President, I do not wish to discuss at this time the conduct of any government at the Conference to which the Senator refers; but, as the Senator knows, and as I have put in the RECORD on two occasions, at that Conference representations were made, either in plenary session or in preliminary discussions, that Great Britain was ready to reduce naval armaments and would favor the ultimate abolition of battleships. Great Britain was ready then and there by treaty to prolong the life of battleships to 30 years and also to add to the length of life of other naval craft. Our Government declined to discuss anything but cruisers.

Mr. President, we waived or repulsed the opportunity for entering upon a program which in my opinion would have led to material reduction in naval armaments. Not only did Great Britain, speaking through MacDonald, indicate a desire for a reduction of armament but France indicated that she was willing to abolish battleships and submarines. Signor Grandhi, upon a former occasion as well as then, indicated that Italy was willing to enter into treaty relations for a reduction of the naval armaments of the world.

I call attention again, as I have upon previous occasions, to the attitude of Soviet Russia. We have been critical of the Bolshevist regime, but Russia, in one of the preliminary conferences as well as at the Geneva Conference, submitted a concrete proposal which in effect was that it was willing to abolish all naval craft as well as all land armaments. What was the result? The Soviet representatives, Litvinoff, was treated with derision by representatives of Christian nations.

Can it be possible that this Soviet Government, which we have criticized and, indeed, at times denounced because of its declared purposes to introduce bolshevism into this and other countries, and because of what we consider its antisocial and antireligious declarations, shall now carry the torch throughout the world for the limitation of armament and for the ultimate abolition of the weapons of human destruction? It would be a strange situation if Christian nations, professing to follow the cross of Christ, should abdicate their high mission and surrender to a government, the leaders of which avow their opposition to all forms of religion and to all forms of capitalistic governments, the task of bringing about world disarmament.

Mr. SHIPSTEAD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Minnesota?

Mr. KING. I yield.

Mr. SHIPSTEAD. The Senator's very apt remarks, while they may be ironical, remind me of the man who found a community of Christians who were always quarreling among themselves. He said, "If those people were only heathens, they could live together like Christians." [Laughter.]

Mr. KING. Mr. President, I do not wish to pursue the thought any further. I rose only to challenge attention to the statements made by the two able Senators from North Dakota [Mr. FRAZIER and Mr. NYE], as well as one or two other Senators, in the discussion of the naval construction bill, to the effect that the passage of the Vinson so-called "preparedness bill" would provoke legislation upon the part of other nations and lead to enormous appropriations by them, the result of which then would be developed a mad competitive naval race that would burden the peoples of other lands and add to the already overwhelming burdens that are breaking the backs of the American people.

Mr. WALSH. Mr. President, I ask to have published in the RECORD at this point a statement from the Washington News of March 3, 1934, in reference to France's attitude toward disarmament. Let it be noted that this publication was of March 3, and the vote in the Senate was not had until March 6.

The headline is as follows:

France inaugurates new defense plans as holiday lapses. Agreement with Italy terminates as Paris decides to build more air, sea units.

There follows a statement of the French program in building up its new Navy.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

[From the Washington News, Mar. 3, 1934]

FRANCE INAUGURATES NEW DEFENSE PLANS AS HOLIDAY LAPSES—AGREEMENT WITH ITALY TERMINATES AS PARIS DECIDES TO BUILD MORE AIR, SEA UNITS

By United Press

PARIS.—France, terminating its 1-year naval holiday with Italy, embarked today on a defense program that showed clearly its despair of a disarmament agreement.

The program envisages (1) construction of a battleship-cruiser, a destroyer and two submarines, (2) expenditure of 3,000,000,000 francs ($197,490,000) on an air expansion program, (3) continuation of construction of frontier and coastal fortifications that will hem the country within a steel and concrete wall believed capable of holding the strongest artillery.

Mr. KING. Mr. President, permit me to add by way of supplement to the statement of the Senator from Massachusetts that the Vinson bill was under discussion for a long time in the House, hearings were had upon it, and it passed the House before the date of the newspaper item which the Senator has just placed in the RECORD.

RECIPROCAL TARIFF TREATIES

Mr. HATFIELD. Mr. President, the subject which is all-absorbing to American industry today, and especially so to the industries which this week in Washington have been notified that no longer are they free agents but henceforth are controlled by governmental dictum, is the question whether the Senate of the United States will abdicate its constitutional powers in treaty making, placing in the hands of the President the sole power to control the prosperity or failure of 95 percent of all American industry.

The subject of reciprocal trade treaties, upon which hearings are now being held before the Ways and Means Committee, will, I assume, be the subject of considerable discussion on this floor in the near future.

As one who believes that we can do more for Americans through legislation which insures the American market for the products of American labor, American industry, and American agriculture, it is my hope to participate in the discussion of this question when it comes before the Senate.

Strange as it may seem and despite the great importance of this subject to American employers of labor, apparently their troubles have been so multiplied by the administration of the N.R.A. that they have either been unable to focus their attention upon this question or perhaps they have been lulled to sleep by the promises which so often have failed of fulfillment.

However, it was with considerable pleasure yesterday that I read in the New York Times of a presentation on this question from the viewpoint of labor, and I have succeeded in obtaining a copy of that presentation. I desire first to have incorporated in the RECORD as a part of my remarks an address delivered by Hon. Matthew Woll dealing with the subject of the tariff as viewed by labor.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

(The following presentation was made at the hearing of the Commission of Inquiry on National Policy in International Economic Relations on Tuesday afternoon, Mar. 6, at the Bar Association, New York City.)

OUR TARIFF AND EARLY POLICY AS VIEWED BY LABOR

(By Matthew Woll, vice president American Federation of Labor, chairman America's Wage Earners' Protective Conference, president the Union Labor Life Insurance Co.)

Our old national economic objectives were modeled largely upon those of Old England, which was a mother country for ships, for colonists, for traders; which gathered raw materials from the ends of the earth, turned these into manufactured goods, first for her own rather limited range of buying power and then for the expanding world market. Developing the first great factories of the world, she needed more food and fabrics than her own soil produced. She became a great free-trading nation. Her obligations were imposed upon the ends of the earth, and she was creditor to all of them. Export was the life of her labor, her market, her world policy. With a total population of Great Britain and Ireland of 46,000,000, her total foreign trade in 1929 amounted to over £2,000,000,000. That would be about $1,000 of foreign trade for each family. Applied to this country, that would mean a total foreign trade of approximately $30,000,000,000. The people of Great Britain cannot live at their level of civilization on any other terms than those of a foreign trade measured in some such amount and proportions. And for that trade Great Britain has been fighting increasingly during the last 15 years, not only with the old European industrial nations and with the United States, but also, and to an increasing degree, with her own colonial domains and with the awakening industrial set-ups of the Asiatic peoples, including Japan, China, and India. This explains in great part the tightening of the Britisher's financial and industrial belt since the World War, the increasing unemployment, and the necessity for what has been called the "dole."

Quite different have been the factors entering into the American side of the economic problem since the World War closed. At the peak of the war market, when we were emptying our laps of all imaginable commodities into the hungry places of the earth, our total foreign trade, exports and imports, went a little over $9,000,000,000, and in the following first year of peace we increased this to only a little over $13,000,000,000. That was an average of about $700 per American family of the total foreign trade in 1920. This dropped to about half that volume in succeeding years, and only in the peak years of 1928 and 1929 did it climb even to a total foreign trade of $10,000,000,000. But our production capacity, set at the rate which produced for the feeding and furnishing of a world at war, could now find no adequate outlet. Plenty—more than plenty—floods of plenty, now stared us in the face, within our own shores. We did not know what to do with it. For a while we gave it away in billions of dollars. In the years from 1915 to 1920 our total excess of exports over imports amount to more than $15,000,000,000. In the 10 years following we gave away another $7,000,000,000. The total excess of imports from 1911 to 1930 was almost $26,000,000,000. But the flood of wheat, of steel, of meat, and of cotton still piled up on our shores, while the dwindling army of labor found it more and more difficult to maintain its loosening handhold upon the means of living.

We had opened the floodgates of production to meet a world demand. And when the gates were closed in our faces we almost strangled in the swirling depths of wealth.

Here was presented a problem so unheard-of, so different from anything the world had ever seen, that all our old charts and maps, all our adages of wisdom and doctrines of thrift, served only to confuse and confound the wisdom of our wisest men. We could not believe the all-too-evident meaning of the phenomenon. Our own people were more and more idle, more and more homeless and wandering, more and more hungry and unclothed. And we had millions of bales of cotton, hundreds of millions of bushels of wheat, and tons upon thousands of tons of meat and lard. And the world did not want it all, finally, unless we continued to give it away. What is to be said in explanation of all this?

Before 1914 nations were content to rely on other countries for things which could be produced better and cheaper abroad. During the war the Central Powers, ringed by fire and steel, turned to self-containment. England and France, threatened with starvation by the submarine, learned the fear of economic strangulation. Thus the world became honeycombed into trade-tight economic departments. Tariffs, import quotas, domestic substitutes, and other trade barriers or subsidies are symptoms of a universal fear of the imminence of war. They are the ultramodern bulwarks of national defense. The quicker we realize and recognize that, the more competent we shall be to deal with this world development.

Incidentally we will also be well advised not to delude ourselves in the thought that a development of our foreign trade will tend toward ending the period of depression. It will be better if we shape our home economic policy without making further vain sacrifices at the expense of our people.

During the war we mobilized agriculture and industry. Labor-saving machinery was only one of the many expedients. Engrossed in production we neglected the problem of distribution, especially the equally distributing buying power throughout our population. Instead we entered an era, not of "overproduction" as a correlative to "underconsumption", but in the development of excess productive capacity.

There are those who hold that it is impossible to restore economic equilibrium to the United States while the rest of the world is either in the throes of internal disruption or upon the verge of bankruptcy and that, therefore, economic as well as political isolation are more and more an anachronism. It is they who are most vociferous in their declamations that the cure for the present depression and for unemployment is the development of the export market.

Our attention is constantly directed to the estimated loss of $2,000,000,000 a year due to our reduced foreign trade. Varying and conflicting statements are prescribed as to the number of workers that would be reemployed, if exports were encouraged. But what are the facts?

In 1929 the Ways and Means Committee of the Congress issued a report showing that there were some 45,000,000 American workers gainfully employed and interested in or affected by tariff legislation. This report also made it very clear that there were but some 600,000 industrial workers actually employed in peak times in producing manufactured goods for export.

The United States Tariff Commission, in a report recently sent to the United States Senate, states: "The number of factory workers engaged in producing articles for export fell from about 658,000 in 1929 (the peak year) to 364,000 in 1931, a decrease, in round numbers, of 300,000."

After referring to the total number of persons engaged in industrial and agricultural production for export employed in 1929 who were unemployed in 1931, the Tariff Commission further states: "The aggregate decrease in employment resulting from the reduction in all exports (both agricultural and manufacturing) between 1929 and 1931 was, therefore, in the neighborhood of 500,000."

In other words, the Tariff Commission's investigation indicated in effect that if our exports were increased to the amount having prevailed before 1929, but 500,000 would be reemployed in both industry and agriculture. This represents less than 4 percent of our industrial workers who have been unemployed. Wage earners of America may therefore be rightly alarmed at the urgency of the proposal made to increase our exports, when it is self-apparent that increased exports must necessarily be accompanied by an

increase of imports and therefore a consequent and perhaps greater loss of domestic employment due to an enhanced foreign competition in our home market.

Workers are also aware of the fact that our manufactured goods for export are produced mainly in mechanized mass-production factories operated by concerns known for their indifference or hostility to labor, and where labor costs are relatively small. The report of the Tariff Commission evidences that of the 294,000 industrial workers employed in 1929 in production of manufactured goods for export who were unemployed in 1931, 175,000, or 48 percent, were formerly employed in the production of metals, machinery, and automobiles. I need not dwell on the type of working conditions or the wages paid to these workers. The employers in the class just referred to are conspicuous for their evasion, if not denial, of the right of workers to organize and to bargain collectively—industrial relations made mandatory under the N.R.A.

Then, too, we read considerable about the necessity of exporting wheat, cotton, and tobacco. Little, if any, emphasis, is laid upon the beneficial and protective legislation which has secured to the American farmer complete control of the richest market in the world—America—with its nearly 50,000,000 consuming industrial workers and their families.

Government figures for 1932 evidence that there are only two products of which we export 50 percent or more of our yearly production. The census figures show that, of $650,000,000 worth of cotton raised in 1932, we exported some $345,000,000 worth. The same figures show that, of the $110,000,000 worth of tobacco raised, we exported $65,000,000 worth. Of the $370,000,000 worth of fruits and nuts we produced we exported $77,000,000 worth, and of the $254,000,000 worth of wheat produced we exported some $50,000,000 worth. If we eliminate these four items from our calculations, we find that of the billions of dollars' worth of farm products which we produce yearly, we export but a fraction of 1 percent of the balance.

Theorists who are advising the American people today what legislation is essential for our success and recovery from the depression overlook or disregard the fact that, since 1920, millions, billions of bushels of wheat are raised yearly in Canada, Rumania, Russia, and other European countries at prices which make it almost impossible for our American-raised wheat to compete.

If it be argued that it is possible for American-raised wheat to compete in the world markets, why, then, is it essential to maintain a tariff of 42 cents per bushel on foreign-raised wheat which might otherwise seek entry into the American market? Possibly it may be said that in view of the small amount of imports of wheat that the tariff rate quoted is but a political gesture to the American farmers. If such claim be urged, then why was it necessary for the Tariff Commission to find, after a public hearing and after a full investigation and with the approval of the President, an increase in the duty on imports of wheat of from 30 cents to 42 cents per bushel was essential? (Such increase was made effective Apr. 6, 1924.)

That which is true of wheat is also true of corn. Why is it necessary to retain a tariff duty of 15 cents per bushel on imports of corn? Seventy percent of the world's corn crop is produced in the United States. Yet unless the American farmer had this protection of 15 cents per bushel it would be possible for imports of corn from Argentina to be delivered in the rich markets along the Atlantic, Pacific, and Gulf coasts at prices which would force down the price now received by the corn raisers of the Western States.

The tobacco raisers were not forgotten by the Congress when tariff legislation was under consideration. It is true that we export about 50 percent of our yearly production of tobaccos. In order to insure the American market for the products of American tobacco raisers, Congress imposed tariff rates which amount to more than three times the export value per pound of our exports for the year 1932.

That which is true of wheat, corn, and tobacco is also true to a much greater extent of other favors shown the American farmers in the framing of tariff legislation in recent years.

America's industrial workers have never appeared before Congress or before the Tariff Commission seeking reduction in tariff rates or in opposition to other legislation which is considered beneficial to the farmers of our country. We realize that the American farmer is to a great extent the purchaser of the products of American labor.

A careful examination of the reports of the Tariff Commission to the United States Senate reveals the interesting fact that an average increased purchasing power of 12 percent to America's industrial workers during the past 10 years would have equaled in purchasing and consuming power the total value of our average exports during that period. With the possible exception of cotton, of which we export 50 percent of what we produce, all of the other exports could be consumed by America's industrial workers had they the purchasing power to do so.

The carrying out of the suggestion that all tariff duties be eliminated on those articles of which we export more than we import must be of particular interest to America's farmers. In effect this will mean that the American farmer will lose as much as will American industrial workers. Some of the articles which now carry high import duties of which we export larger quantities than we import, are pork products, and of these we export 40 times more than we import, but which carry a protective tariff duty in the interest of American farmers. Lard, of which we export 600,000,000 pounds and import none, has a tariff duty equal to half the export pound value. Due to import taxes, we export 50 times more milk than we import. Shall we continue this recital?

Facts and figures clearly indicate that farmers will lose the purchasing value of hundreds of thousands of industrial workers employed in the production of all types of machinery, petroleums, and metals—all of which we export in greater quantities than we import. If we are to remove these taxes, which procedure is being urged by those insistent upon a new tariff policy, then the American market will be flooded with products of foreign workers produced at total landed cost much less than actual American costs of production. Is it necessary to dwell upon the resultant and demoralizing consequences?

The exigencies of the Recovery Act have focused more and more attention upon the proposal of arriving at reciprocal agreements whereby detailed and selected concessions are made in return for similar ones. These agreements are sought through bilateral treaty negotiations rather than multilateral arrangements. To date only one such treaty has been signed. Colombia has agreed to certain concessions on American goods in return for our promise to retain coffee and bananas on the free list. While this treaty has been signed it must, of course, receive the required legislative ratification before it goes into effect.

This policy of reaching reciprocal agreements is one which may not be inconsistent with the Recovery Act. By a studied selection a number of commodities can be found which are not produced in important quantities in the United States and which are regularly supplied in considerable quantities by foreign countries. Similarly, we ship certain articles to other countries without competing with important domestic industries within their borders. In this field, though greatly limited, trade may be fostered without injury to domestic industries of the contracting States. Indeed, the furthering of reciprocal trade treaties is not a new or untried proposal. Congress on a previous occasion did propose reciprocal trade treaties based upon a bargaining flexibility of 20 percent of then prevailing tariff duties. However, the experiment failed of any substantial results.

What is now proposed is not alone the authorization of the President to enter into reciprocal trade treaties based on a bargaining flexibility of 50 percent of the present tariff duties, either upward or downward, but the consummation of such treaties without previous hearing to domestic parties and interests affected and without the necessity of approval by Congress. Thus it is proposed, first and foremost, to alter our constitutional division of power by having Congress abdicate its duty and responsibility under the Constitution to approve or disapprove treaties entered into with other nations with respect to trade relations.

Is America prepared to take this step? Are we willing that hereafter exclusive control over our imports or exports shall rest solely with the President? It is, of course, argued that with imports and exports of European and Asiatic nations largely a matter of exclusive government control, to be exercised not through parliamentary channels but by order in council and like methods, that we can no longer trust such matters to our Congress. Are we ready to admit, as well as accept, the doctrine that democracy in international relations has failed and that the logic and force of events in Europe and Asia will compel us to alter our form of government and of institutions within its borders?

If it be the judgment that for practical efficiency Congress must no longer be trusted with joint treaty-making power in the matter of trade relations, why ought not sole authority be delegated to the President in dealing with agreements relating to international public debts, disarmament, and the like? Are we not thus hastening a time when power to be exercised by the President will be greater than the power of former kings, czars, and emperors?

Labor has implicit confidence in the present incumbent of the Presidency of the United States and has implicit faith and confidence in his humanitarian instinct and in his desire to maintain and hold secure our democratic ideals, ideas, and institutions. We are confident he is actuated solely by a desire to get our people and our institutions out of the terrible chaos into which we had drifted. But labor is without knowledge of the certainties of life and who may succeed him or when. In addition, powers of government should not be granted because of faith in any one individual temporarily in authority. Power once delegated is difficult to limit, regulate, or annul. Are we not thus building a dangerous structure for the future, even if it be confined to reciprocal trade treaties? Who knows what the future has in store and to what end we are building a permanent structure on the basis of meeting an emergency by devices of expediency?

Then, too, it must be clear that the motive underlying is to promote foreign trade by holding forth bargaining opportunities to foreign manufacturers in the American market. This involves not alone a change of principle that has been the foundation stone of our foreign-trade policy—the protection of home industries and safeguarding of the home markets, but it likewise raises the issue of American capital invested abroad being granted the opportunity of competing in our home market free from all the restraints, limitations, regulations, and requirements demanded at home under our taxing laws, N.R.A. requirements, and other legislative provisions.

Prior to the World War, America was one of the few Nations possessing high-powered machine production plants. Today the industrial nations of Europe and Asia have adopted American methods and means of production. Indeed, one nation in Asia is possessed of the most modern of industrial equipment. In addition, a number of the highly modernized plants in foreign countries are either owned or were financed by American surplus wealth

and American skill. Those foreign American-owned plants are today, in part, supplying the world markets, thus precluding to that extent possible export trade on our part. Indeed, in a number of instances they have invaded our domestic market with the product of their foreign factories to the distinctive loss of employment of American workers.

The rapid development of American-owned and controlled foreign plants may be attributed to the selfish spirit of gain, to restrictive legislation on the part of other nationals, the subsidizing of industry by foreign nationals, and the fact that in other lands the wages received are considerably lower and working hours considerably longer than those that prevail in our own land. The lower cost of production and of distribution abroad may therefore be fairly assigned as one of the principal causes for this movement of American capital abroad.

Labor has always viewed the transfer of American capital to other lands with great apprehension. It has realized that as a result we have had an ever-increasing pressure on the part of this capital to destroy the barriers which safeguard American standards of life and work. American labor has not been without experience in feeling the loss of employment opportunities through this process of the internationalization of American capital.

It is a tragic commentary upon the lack of our industrial foresight, which permits foreign nationals and domestic, as well as foreign private, interests to acquire a monopolistic sales control throughout our Nation by our patent laws and yet not require a single commodity entering into that production to be carried on in our land.

Many years ago we established a national policy for the protection of the employment opportunities of America's industrial workers by restricting the entry into our country of the overflow of workers from European and Asiatic countries. We also set forth a national policy, subscribed to by both political parties, that tariff rates would be imposed which would equalize the difference in cost of production of manufactured articles.

President Roosevelt, some 9 months ago, inaugurated the National Industrial Recovery Act, which has sought to reduce unemployment among the ten or eleven millions of unemployed industrial workers by reducing the daily and weekly hours of labor. He has just urged that industry reduce the work hours to less than 40 hours per week and increase wages so that a real enlarged purchasing power would not only start the wheels of industry everywhere, but absorb the nine millions as yet admitted to be without employment.

Is it possible that those who favor entering into reciprocal-tariff treaties with foreign nations expect that those nations, where weekly hours exceeding 50 and 60 per week are not uncommon, are going to permit Americans to dictate to them what legislation or laws they shall enact for their people?

Unless this can be done is it reasonable to suppose the products of American industries, with America's industrial workers producing for not more than 30 or 35 or even 40 hours per week, with wages which will permit of their retaining the American standards of living, can compete in the American market with products of foreign countries?

Unless it is intended to scrap the N.I.R.A. and force America's industrial workers to compete on an almost equal footing with the low-wage workers of Europe and Asia, then is no possible benefit to accrue from the fundamental change of government and new tariff policy proposed and involved.

In venturing into and applying the method of process of trade treaties with foreign governments, it is essential that workers should have an opportunity to be heard. It is equally important that participation of labor, as at present made possible and available, through an appeal to Congress and through direct representation on the Tariff Commission, should in no way be lessened, but be increased.

Labor realizes that unfortunate delays are encountered in the present method of adjusting tariff rates through the Tariff Commission with the approval of the President. However, we believe much of the unnecessary delay is due entirely to restrictive rules and requirements of law which could and should be corrected so as to permit the rendering of decisions in a shorter space of time.

One of the causes for delay on the part of the Tariff Commission is the necessity, under the present rules, to make investigations in foreign countries. Several foreign nations resent our investigators seeking information. In other cases, due to the limited appropriations at the disposal of the Tariff Commission, conditions have so changed by the time the investigation is concluded and a decision reached, that the industry in question has been irreparably injured.

That is not said in criticism of the personnel or the work of the Tariff Commission. Indeed, situations referred to are due solely to a procedure made mandatory by law. Many workers believe that great good would come by freeing the Tariff Commission of restrictive rules now in force. Certainly that method should be tried before any other procedure is followed and which may result in great apprehension, confusion, and doubt.

America's workers are also aware of the fact that our present tariff policy confers the greatest benefits upon those countries, especially the Asiatics, where labor conditions are the most repressive and intolerable. American labor favors a tariff policy wherein imports will be valued on the basis of the value of the imported article in the United States—a policy better known as the "American valuation"—and not upon the depreciated as well as manipulated values of foreign countries.

Many foreign countries have monopolized industries. More are doing so. Soviet Russia has monopolized all industry and agriculture. Its government is the sole producer and distributor of all things. Japan and other nations have monopolized the match industry of their country. They prevent the entry into their countries of matches made in America. Japan, also, holds the world-wide monopoly on natural camphor. Germany holds a monopoly on many chemicals. These are but a few of many illustrations.

Indeed, the tendency toward State or national control of imports as well as exports is rapidly increasing, and to such an alarming extent that the question may well be raised as to whether or not reciprocal trade treaties do encourage and strengthen foreign cartels and trusts and as against our national attempt to prevent monopolization at home.

As against all these urgencies for increased export trade, reciprocal trade treaties and other devices urged to that end, America's wage earners raise the more important issue of enlarging our domestic purchasing power and of increasing and protecting our home markets.

Government statistics clearly indicate that more than 93 percent of the products of American labor and American agriculture are consumed in America. While this is an average figure of all commodities and include such important commodities as cotton, which is widely exported, it does indicate how great a domestic market we have in our own free-trade area. This great American consumption of American goods is largely due to the high standards of life and work which prevail in our country and have been established in the main through the untiring efforts of American organized labor. Our present problem is rather that of extending this home consuming power in view of the constant losses which our producers of cotton, wheat, lumber, and other products have suffered and will increasingly suffer in the world markets by reason of a constantly growing competition from other nations.

There is little hope of recovery of our lost foreign trade whether or not there is a change of political and governmental attitudes which have been or hereafter may be assumed on questions of foreign debts, tariff duties, allotment of domestic content, patent laws, and other devices used to regulate international as well as domestic trade and commerce.

Regardless of how we balance advantages and disadvantages, the fact remains that the foreign market is not so desirable as the home market—either for capital or for labor. Goods exported must be sold at world prices in competition with goods produced by poorly paid, pauper, and even forced labor—and the certain result of large exports is always that labor of the chief exporting countries, such as England and Germany, is forced to accept lower wages in order to be able to compete effectively in the foreign market. In other words, the predominance of the foreign over the home market totally destroys the benefits of the protection of labor. What the Nation needs and is beginning to know it needs, is not great economic dependence upon the foreign market, but exactly the opposite—greater economic independence.

Labor's interest in tariff legislation and the proper administration of our customs laws is solely for the purpose of assuring opportunities of employment for American workers at fair wages. To assure American workers of an opportunity of employment at fair wages it is essential that we maintain an American protective tariff policy and avoid the dangers of entangling alliances with nations abroad.

Mr. HATFIELD. Mr. President, I now ask permission to have printed as a part of my remarks a newspaper clipping on the subject, taken from the New York Journal of Commerce of March 8, which contains news that I know will be read with considerable interest by many of the Democratic members of the Finance Committee.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Journal of Commerce, Mar. 8, 1934]

COALITION IN SENATE ORGANIZING TO BLOCK PRESIDENT ON TARIFF—HOUSE INQUIRY OPENS TODAY WITH PLAN FOR BRIEF HEARING AND VERY SPEEDY PASSAGE—HARRISON, KING, GEORGE, WALSH, THOMAS PROTEST—CONNALLY ALSO OPPOSES STEP—AMTORG BID REPORTED FOR COTTON CONDITIONED ON CREDIT AID

By Clarence L. Linz

WASHINGTON, March 7.—Creation of a new tariff bloc in the Senate, antagonistic to the administration's tariff program, of proportions comparable to that which logrolled high duties into the present law, may lead to an earnest plea to the President not to insist upon this legislation at the present session of Congress.

With the House Ways and Means Committee inaugurating brief public hearings tomorrow, with the evident intent of House Democratic leaders to secure passage of the Doughton bill within the next fortnight or so, Senate Democratic leaders propose to test sentiment in the Senate on giving the President the broad powers he asks.

REVOLT IN MAKING

From such casual inquiries as have thus far been made it appears that not only will there be desertions from the Democratic ranks but that a majority of the progressives will go along with the regular Republicans in opposition to the legislation.

The leaders foresee the possibility that the Senate will write into the legislation all sorts of prohibitions, and even may write increases of rates now in the Hawley-Smoot Act. Of course, the effort would be made to eliminate these through Senate-House conference action, but that might bring about a deadlock which would keep Congress in session well into the summer.

It was indicated in informed circles today that the President would favor adjournment of the Congress about May 15, hardly regarded possible if the tariff and war debts are to be injected into the agenda of the Senate.

Individual Senators are endeavoring to acquaint themselves with the proposal, its antecedents, and its future effect, receiving many letters of inquiry from constituents who want to know what will be the basis of the proposed bargaining for trade.

WIDE INTEREST SHOWN

Great interest is shown in the plan before the commercial policy committee, an interdepartmental group in the Government, which contemplates classification of all industries in the United States into six groups for consideration in the awarding or withholding of tariff protection.

Tentatively, Friday, March 16, has been fixed as the date for the holding of a Senate Democratic conference for the consideration of both the tariff and the revenue bill. At this session a program of action will be worked out.

The authority to be vested in the President, as asked for by Mr. Roosevelt, transcends that which is at present conferred upon him by the Hawley-Smoot law in the flexible-tariff provisions. These latter were vigorously opposed by a group of Democrats on the ground that the proposal "strikes at the very roots of constitutional government." The protest was signed by Senator PAT HARRISON (Democrat), Mississippi, now Chairman of the Senate Finance Committee, and who is to pilot the administration's measure through the Senate, and Democratic Senators KING, Utah; GEORGE, Georgia; WALSH, Massachusetts; BARKLEY, Kentucky; THOMAS, Oklahoma; and CONNALLY, Texas.

OPPOSITION IS VOICED

"Whatever could be advanced during the war and immediately following for delegation of the taxing power to the Executive unquestionably no longer exists", this group said, "in the hope of arousing the people, regardless of party, to take a broad and public view of this important public question" to the end that the flexible provisions might be abandoned.

"To incorporate in the law any recognition of a right of the Executive to impose taxes without the concurrence of the legislative branch is without justification.

"Authority to the Executive to make the laws that govern the course of commerce through taxation is especially objectionable. It is an entering wedge toward the destruction of a basic principle of representative government for which the independence of the country was attained and which was secured permanently in the Constitution.

"There is no issue here as to the integrity of any Executive who has had or may have extended to him the exercise of this power. The issue is one of taxation by one official, be he President or monarch, in contrast to taxation by the representatives of the people elected, intrusted exclusively with the power to seize the property of the citizen through taxation.

SECRET ACTION HIT

"The principle is", they continued: "Are taxation laws and their application to be made virtually in secret, whatever may be said about a limiting rule, or are they to be enacted by the responsible Representatives of the people in Congress, where public debate is held and a public record made of each official's conduct?

"The arbitrary exercise of the taxing power, all the more dangerous if disguised and not obvious, in its basic character is tyranny. * * * An issue of this importance should not be associated with the opinions or necessities of those interests, States, or sections that directly profit by some rate schedule in the body of the tariff act. With respect to the principle here at stake, any trading or logrolling is especially unjustifiable and indefensible."

In conclusion, it was given as their "solemn judgment that hereafter all taxation through the tariff and regulation of commerce thereby will be made by the President."

OUT TO STIFLE ISSUE

"It is the inherent tendency of this tariff-changing device and the apparently conscious purpose of its proponents to use it to keep the tariff out of Congress, where it is such an embarrassing business, as everybody knows, to the party that profits politically by it."

It is learned that there will be a real effort on the part of some Senators so to amend the legislation as specifically to provide that its provisions shall not be applicable to the products of agriculture, the forests, or the mines.

Western Senators were relieved today upon learning through the National Lumber Manufacturers' Association that official Russian advices declare the Russian Government does not consider the United States a large potential market for its lumber, but rather as one of its main competitors.

The administration, it is said, has been seeking to develop what commodities might be favored by tariff-rate reductions to permit of the piling up of a trade balance here that would enable Russia to buy more American goods.

FARRELL REPORT CITED

This program for additional trade, dealt with in a report from the National Foreign Trade Council by James A. Farrell, stirred great interest locally.

"Any exceptional arrangement with Russia that diverts trade in particular commodities from other countries must in the end prove disadvantageous for the United States", he said.

"Our objections to the Ottawa trade agreements were based largely on this artificial diversion of trade from the United States. Viewed from this standpoint, fundamentally there is no essential difference between trade agreements of this kind based on barter and a trade agreement that introduces the quota system."

It was learned here today that Peter Bogdanov, chairman of Amtorg, has entered proposals for the purchase of 500,000 bales of American cotton, conditioned upon a grant of credit by the Export-Import Bank. The matter apparently is under consideration by the directorate of the bank, of which George N. Peek is the head.

INCLUSION OF CATTLE AS A BASIC INDUSTRY

The Senate resumed the consideration of the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Virginia [Mr. BYRD].

Mr. CONNALLY. Mr. President, I am willing to have a vote, but if we cannot have a vote at this time I wish to discuss the question briefly.

Mr. KING. Mr. President, the Senator from Oregon [Mr. MCNARY], the leader on the other side of the Chamber, desired to call a quorum a little while ago and I asked him to delay to enable me to submit a few observations. In view of that fact I think there should be a quorum call.

Mr. CONNALLY. Very well. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Couzens	Johnson	Reed
Ashurst	Cutting	Kean	Reynolds
Austin	Davis	Keyes	Robinson, Ark.
Bachman	Dickinson	King	Robinson, Ind.
Bailey	Dieterich	La Follette	Russell
Bankhead	Dill	Lewis	Schall
Barbour	Duffy	Logan	Sheppard
Barkley	Erickson	Lonergan	Shipstead
Black	Fess	Long	Steiwer
Borah	Fletcher	McAdoo	Stephens
Brown	Frazier	McCarran	Thomas, Okla.
Bulkley	George	McKellar	Thomas, Utah
Bulow	Gibson	McNary	Thompson
Byrd	Glass	Metcalf	Townsend
Byrnes	Goldsborough	Murphy	Trammell
Capper	Gore	Neely	Tydings
Caraway	Hale	Norris	Vandenberg
Carey	Harrison	Nye	Van Nuys
Clark	Hastings	O'Mahoney	Wagner
Connally	Hatch	Overton	Walcott
Coolidge	Hatfield	Patterson	Walsh
Copeland	Hayden	Pittman	Wheeler
Costigan	Hebert	Pope	White

Mr. LEWIS. I desire to announce that the Senator from South Carolina [Mr. SMITH] is necessarily detained from the Senate, and that the Senator from Washington [Mr. BONE] and the Senator from Kansas [Mr. MCGILL] are detained by severe colds.

The PRESIDING OFFICER. Ninety-two Senators having answered to their names, a quorum is present. The question is on the amendment of the Senator from Virginia [Mr. BYRD].

Mr. CONNALLY. Mr. President, I desire to propose a unanimous-consent agreement.

I request that at the conclusion of the address to be delivered by the Senator from Wyoming [Mr. CAREY] no Senator shall speak more than once or longer than 10 minutes on the bill or any amendment thereto, and that the Senate shall vote on the bill not later than 2 o'clock tomorrow.

Mr. LONG. Mr. President, if there is no objection, why not vote now?

Mr. CONNALLY. There are objections, as I understand.

The PRESIDING OFFICER. The proposed agreement provides for a vote on tomorrow; and in that situation, under the rules as the Chair understands them, there will have to be a quorum call.

Mr. CONNALLY. We have just had a roll call. I thought that was sufficient.

The PRESIDING OFFICER. The necessity of another roll call may be waived by unanimous consent.

Mr. McNARY. Then, Mr. President, I ask unanimous consent that a second calling of the roll be waived.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

Mr. McNARY. I did not understand the exact nature of the proposal made by the Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas will please restate his unanimous-consent proposal.

Mr. CONNALLY. I asked unanimous consent that at the conclusion of the address of the Senator from Wyoming [Mr. CAREY] debate shall be limited to 10 minutes on the bill and 10 minutes on any amendment, and that no Senator shall speak more than once, and that not later than 2 o'clock tomorrow a vote shall be had on the bill and all pending amendments thereto.

The PRESIDING OFFICER. Is there objection?

Mr. LA FOLLETTE. Mr. President, I do not feel that I can discuss in 10 minutes the amendment which I intend to offer. I shall feel constrained, therefore, to object.

Mr. CONNALLY. Then I modify the proposal to 15 minutes on the bill and 15 minutes on any amendment.

Mr. LA FOLLETTE. Mr. President, my understanding is that the Senator from Nevada [Mr. PITTMAN] has given notice that he expects to speak tomorrow, and I feel that I could not agree to the suggestion of the Senator from Texas at this time. I think we should go along this afternoon until a reasonable hour, and then have some debate on the bill tomorrow. So far as I am concerned I have no disposition to delay the measure; but, as the Senator from Texas knows, there has been debate on other subjects this afternoon.

Mr. CONNALLY. That is why the Senator from Texas is making the request. There will be debate on other subjects tomorrow, and there will be debate on other subjects the next day, and the next day. The Senator from Texas hoped we could have a recess over the week-end; but it is his purpose to keep the Senate in session until a vote may be obtained on this bill whether we have any recess over the week-end or not.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Texas, as modified?

Mr. KING. I think objection was made.

Mr. McNARY. Mr. President, all possibility of a hoped-for adjournment over the week-end is at an end, in view of the statement made by the Chairman of the Foreign Relations Committee, the Senator from Nevada [Mr. PITTMAN], that he desires to speak on the treaty tomorrow. I was advised a few moments ago that the able Senator from Nebraska [Mr. NORRIS] may also desire to speak. In view of these contemplated speeches, I think it would come within the rules of propriety if the Senator should wait until tomorrow and ascertain how long a time the speeches will occupy, the nature of the debate, and what may occur, and then propose his unanimous-consent agreement.

Mr. CONNALLY. The Senator from Texas has anticipated the Senator from Oregon, and has done that today. He has observed the debate today. He knows just exactly what is going to occur. If Senators do not want a recess over the week-end, if they desire to devote all the time to talking about something other than the pending bill, the Senator from Texas is perfectly willing to stay here and try to conduct the bill through the Senate; but the Senator from Oregon knows, as other Senators do, that those who desire to speak on the bill have had opportunities to do so today, and they have not improved them.

Mr. McNARY. The situation in that respect does not differ from others. The Senator must be patient when he has a bill in charge.

Mr. CONNALLY. The Senator from Texas is trying to be patient.

Mr. McNARY. I have had similar experiences during the course of a great many years. I recall at one time having a farm bill up here, the debate on which extended into the fourth month. I did not ask for a unanimous-consent agreement with regard to it after 2 days of speech making.

Let me suggest to the Senator that the quickest way to pass this bill is to proceed in the usual way. In view of the fact that we are going to meet tomorrow, and speeches will be made on the treaty, I appeal to the Senator again to be a little patient, and tomorrow the situation may develop itself in such a fashion that he may get an agreement or a vote during the afternoon.

Mr. CONNALLY. Was there objection to my proposal, Mr. President?

The PRESIDING OFFICER. Is there objection to the unanimous-consent agreement proposed by the Senator from Texas as modified?

Mr. FRAZIER. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. CONNALLY. Mr. President, I desire to propose another unanimous-consent agreeement. I ask unanimous consent that when the Senate concludes its session this afternoon, it take a recess until 11 o'clock tomorrow morning.

The PRESIDING OFFICER. Is there objection?

Mr. KING. I object to that.

The PRESIDING OFFICER. Objection is heard.

Mr. KING. The Finance Committee and several other committees will meet tomorrow, and Senators must be in attendance upon those meetings.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Virginia [Mr. BYRD].

The amendment was agreed to.

Mr. CAREY obtained the floor.

Mr. LONG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from Louisiana?

Mr. CAREY. I yield.

Mr. LONG. The bill is not to be voted on tomorrow under the unanimous-consent agreement, is it?

The PRESIDING OFFICER. There is no agreement about when the bill is to be voted on.

Mr. LONG. I want to give notice that, while I shall not be here tomorrow, on Monday I shall move to write into the bill as basic commodities cucumbers, sassafras, and several other allied products. [Laughter.]

Mr. CAREY. Mr. President, I realize that the hour is late, and I will try to be as brief as possible in my remarks.

Senators will recall that the Agricultural Adjustment Act as originally written included cattle as a basic commodity. They will also recall that, largely through the efforts of my late colleague, Senator Kendrick, cattle were taken from the act. I do not know what his position would be if he were here today, but I believe that he would be with me in opposing the pending measure. No man has served in the Senate who had as long and as varied an experience in the cattle business as had Senator Kendrick. He came to my State following a trail herd from Texas. He continued in the cattle business until he became one of the largest owners of cattle in Wyoming. I feel that he knew the business and knew what was good for those who are engaged in it.

I have had some experience in the cattle business. My father was one of the pioneer cattlemen of Wyoming. He went there in the very early days and engaged in the livestock business. He founded a business which is still in operation. This business is probably the oldest cattle company in Wyoming, and our cattle bear the oldest registered brand in the State. I have grown up in the business. I have devoted my life to it, and I do not believe there is a man on this floor more interested in the cattleman and the cattle business than I am. They are my friends, and we speak the same language. Anything that would help them would help me, and I am for anything that would help them.

We hear much about cycles in the cattle business, how the price of cattle goes up at one period, and at the end of that

period goes down. That has always happened; it happens in any industry, that when the product of the industry is bringing a good price, people engage in that business, and continues until there is an overproduction. Officials of the Department of Agriculture speak of cycles in the cattle industry. I have been through cycles that they know nothing about. I have fought blizzards and have seen thousands of cattle perish. I can remember one winter when half the cattle in my State died. I can also recall the winter of 1919 and 1920, when the greater part of the livestock was shipped out of Wyoming in order to obtain feed for the winter. They went to Texas, to New Mexico, to Nebraska; some of them went to Old Mexico. The cattlemen then fought their own battles; and they did not call to Washington for help. It was their fight, and a hard one. Some of the best men in my State never recovered from that winter.

I realize the condition of the business. There has never been a time since the nineties when cattle were bringing a lower price, and I would support any program which I thought would help the cattle industry. But I do not believe that an appropriation of $200,000,000 will make up for the damage that would be done to the cattlemen by placing a processing tax on cattle.

Mr. President, both during the summer and since my return to Washington I have conferred with the Secretary of Agriculture regarding some plan to help the cattle business. I must admit that neither he nor I had any plan which we could call a cure-all for the ills of that industry. Frankly, I do not think that by legislation we can furnish the relief which we should like to give to it.

I asked the Secretary of Agriculture on numerous occasions to call together a group of livestock men to discuss this problem, and try to work out something that would be satisfactory to them. After several conferences with the Secretary wires were sent inviting representatives of various livestock and dairy associations to come to Washington. There was a very representative meeting, and some 53 organizations of beef raisers and dairymen were represented.

A committee was appointed to work out a plan and submit it to the Secretary of Agriculture. That plan contained numerous suggestions. The cattlemen who were here, who I feel were representative, were willing that cattle should be made a basic commodity under the conditions set forth in this plan. They recommended that as soon as the bill shall be passed and become a law, the producers of dairy and beef cattle, or their representatives, again come together to prepare detailed plans covering the suggestions embodied in these recommendations.

They recommended the elimination of diseased dairy and beef cattle, believing that such elimination would be desirable in the interest of public health and in the interest of the welfare of the entire dairy and cattle industry. It is estimated that today there are 600,000 tubercular cattle being used in the dairy industry. They felt that to kill off these cattle would mean not only that there would be less cows to breed in this country but also that it would be beneficial in protecting the health of the people who are drinking milk produced by these cows.

Further than that, the offspring of old dairy cows which are shipped on the market are having a very depressing effect upon the beef-cattle industry, and the killing of 600,000 cows would relieve that situation materially.

They further insisted that the indemnity payments, while they should be paid out of the $200,000,000 appropriation provided in this bill, should not be charged against the cattle industry through processing taxes. They made this recommendation for the reason that in previous campaigns for the eradication of disease in livestock the expense has been borne by the Federal Government and the States, and not by the cattle producers.

They also recommended the elimination, by purchase, of other dairy and beef cows, and that the cattle so purchased should be distributed and used for relief purposes. I might say that the emergency relief administration has been purchasing large quantities of food products, but have purchased very few cattle.

They asked for a packers' code. I might say, in connection with such a code, that last August there was a meeting here of cattlemen and representatives of the packers. Following that gathering a meeting was held in Chicago. Nothing more was done about it, I think largely on account of the indifference of the Department of Agriculture.

More recently another meeting has been held with the packers. Under the proposed plan there would be set up a board to manage the code, composed of representatives of both the producers and the packers, with the Secretary of Agriculture having the right to approve any rules or regulations which might be established by the board. On this board the producer was to have equal control with the packers, with the Secretary of Agriculture having a veto power.

Much could be done through such a code on account of the packers being able to eliminate many extravagances in their business and therefore being able to pay better prices to the producers. It would do away with dumping, which is largely done today in the packing industry. One of the best things it would do would be to prevent the chain stores from buying cattle at the prices at which they have been purchasing them. There is nothing that has depressed the price of livestock so much as have the chain stores. They are large buyers. They will go to a packer and ask for prices. They will shop around. They will buy as cheaply as they can. The packers, realizing the size of their orders, will cut prices to them and then will have to go on the market and buy the cattle at lower prices in order to meet the prices they have quoted to the chain stores.

There are numerous other problems which could be worked out through a code agreement which would guarantee better prices to the producer. There is no question that the selling end of any business must be coordinated with the purchasing end, if livestock men are to receive fair prices.

The difficulty in agreeing to such a code has been caused by the demand of the Department that the Department have free access to the books of the packers. My understanding is that the packers do not object to the inspection of their books from the time the code agreement is entered into, but they do object to the Department's going in and digging back into their books from the year 1 to date.

This committee asked for an excise tax on certain vegetable oils. There has been a constant increase in the imports of vegetable oils. In 9 months of 1932 the imports amounted to 453,688,061 tons. In 1933 the quantity imported was 589,572,659 tons. There was an increase of 25 percent in importations.

Mr. VANDENBERG. Mr. President, would the Senator tell me to what extent that imported oil comes from the Philippine Islands?

Mr. CAREY. A great part of it is coconut oil. I have not the exact figures. There has also been a great increase in stocks of foreign fats and oils on hand in this country; and, furthermore, the increase of domestic fats and oils has been constantly becoming larger, which demonstrates that there is not a market for domestic fats and oils.

In September 1932, of domestic fats and oils there were on hand 766,654,476 tons. In September of this year that amount had increased to 1,151,213,562 tons. I could give the Senate other figures, but I am not going to take the time. The stock of creamery butter in this country has increased. The amount of lard on hand in this country is almost three times what it was a year ago.

It was for these reasons that the representatives of the cattle and dairy interests recommended that an excise tax be placed upon foreign oils. They also recommended that the tax on canned meats be increased. The present tax is 6 cents a pound; and if Senators should try to buy canned meat, they would find at nearly every store in Washington that the storekeepers would hand them imported rather than domestic meats. In fact, both the Army and the Civilian Conservation Corps have purchased foreign canned meats during the present year.

The importation of canned meats has increased from 18,118,531 pounds in 1931, which is equivalent to 73,304 head of cattle, to 39,177,193 pounds, in 11 months last year,

which is the equivalent of 157,010 head of cattle. As a matter of fact, most of the American packers were producing canned meat in South America and shipping it into the United States. There have recently been started plants in this country to process meat on account of the fact that the Army and the other agencies have refused to make further purchases of imported meats.

By keeping out the foreign meats it would mean that at least 157,000 head more cattle would be used in this ccuntry for canned meat, and the killing-off of tubercular cattle would mean a further reduction of 600,000 cattle. If these two things were done, it would reduce the cattle supply by three quarters of a million.

That, briefly, was the plan suggested by these stockmen. There has been no intimation by the Department of Agriculture as to whether or not this plan met with its approval. I do not believe that the Department approves, as there has been read on two occasions during this debate a statement made by the Secretary of Agriculture that he thought it might be well to make cattle a basic commodity and then let the cattlemen stew until such time as they would accept a processing tax. Also, attention has been called to the statement made at the Senate hearing by Mr. Chester Davis, head of the A.A.A., that it would be necessary to levy a processing tax if cattle were included as a basic commodity.

I am fearful of a processing tax, and my reason for feeling as I do is because of what has happened in the case of hogs. That question has been pretty thoroughly discussed here, so I will not discuss it in any detail, except to say that, in spite of all the money that has been expended, in spite of all the effort that has been made, the price of hogs has been raised but 12 cents per 100 pounds since the 1st of July. The Department of Agriculture expended originally some $30,000,000 for the purchase of hogs, and, since that time, there have been additional expenditures of, I believe, some $5,000,000.

The Emergency Relief Administration also has purchased $12,000,000 worth of hogs up to some time last month. That means approximately $45,000,000 has been expended by the Government to boost the hog market. The total amount the Government has raised the price since July is but 12 cents a hundred, and the people of this country today are paying a processing tax on those hogs of about $2.25 a hundred. I feel that if that processing tax had not been imposed, most of that $2.50 per hundred would be going to the man who is now shipping the hogs to market.

The corn program of the Department of Agriculture has had a most depressing effect upon the cattle market. Under that plan the Secretary of Agriculture has advanced the farmers 45 cents a bushel on their corn. This has absolutely destroyed the feeder market for livestock. It has forced cattle which were placed on feed back on the market, as it has also forced the hog grower to ship his hogs onto the market. No man can feed either cattle or hogs with 45-cent corn when the livestock are bringing the low prices they are bringing today. This destruction of the feeder market has been most harmful, particularly to cattlemen in the Western States, who depend upon the feeders to purchase a large part of their livestock. It has also hurt the man in the Corn Belt who has had cattle on feed. He could not afford to keep them with this high-priced corn, and he, too, has been obliged to put them on the market or, if he kept them, to sustain a loss.

It is interesting to note that one kind of livestock, with no processing tax, has been constantly increasing in value, and that is sheep. The price of fat lambs increased from $6.98 a hundred on October 14 of last year to $9.36 on February 24 on the Chicago market.

Hogs have decreased from $4.75 on October 14 to $4.44 on February 24. They have actually decreased in price despite the processing taxes and Government purchases.

There has been no processing tax on cattle. The total decrease in cattle prices for top cattle on the Chicago market since October 14 is from $7.35 a hundred to $6.75. There is no processing tax on cattle.

I do not think that the program carried out in the case of hogs makes a very good showing. The price of hogs would be lower today than it has been for years if the Government was not in the market buying and constantly trying to peg the market.

In the month of January, 8 percent of all the Federal-inspected hogs were purchased by the United States Government and for the Government. They are pegging the market to put over their program and make it appear that the program is working.

There seems to be some dispute as to the attitude of the cattlemen regarding this bill. The cattlemen are in a desperate situation. They, naturally, want help, and, naturally, they will turn to anything they think will help them; but I think I can truthfully say that a majority of cattlemen are against a processing tax. Naturally, they would like to have an appropriation for their benefit, but I feel certain that they would rather not have this appropriation than to pay a processing tax. Many cattlemen fail to realize that any benefits they may receive by this act must be paid back by them to the Federal Treasury through processing taxes.

I have here a telegram from the secretary of the Colorado Stock Growers and Feeders' Association, Dr. B. S. Davis, which reads:

We have this day wired our Senators, ADAMS and COSTIGAN, requesting they oppose bill that would make cattle a basic commodity.

I have a telegram from the president of the Wyoming Stock Growers' Association, reading as follows:

Wyoming Stock Growers' Association oppose inclusion of cattle as basic commodity under Agricultural Adjustment Act.

D. R. WHITAKER, *President.*

I have a letter from the secretary of the Western South Dakota Stock Growers' Association, written to Mr. Russell Thorp, secretary of the Wyoming association. I will read a part of this letter:

We wired our Representatives in Washington, also the committee chairmen, our strong protests against making cattle basic commodity, and Mr. Abbott, one of the committee of five, told me last evening in Denver that he had had a message from Secretary Wallace saying that everything will be done for the cattlemen's interest as soon as the cattlemen let them know their wishes. Mr. Abbott said that the message was most encouraging.

Since that letter was written, the cattlemen have made known their wishes, but they have never had an answer from the Department as to whether those wishes would be carried out.

I have a telegram from the Governor of Wyoming, who, by the way, is a good Democrat. This telegram is addressed to Secretary Wallace under date of December 22. He says as follows:

The sentiment of stockmen in Wyoming is absolutely against processing or compensatory or any other kind of tax on cattle. This in the belief that in any case the producer will have to bear the tax. The price of choice prime beef and good steer beef at the present market is cheaper than the bids to Government for canned cow meat. Would suggest that relief committees buy dressed meats through local markets.

I have a letter from the State of Montana, from the State veterinary surgeon, who also is secretary of the Livestock Sanitary Board, in which he says:

STATE OF MONTANA LIVESTOCK SANITARY BOARD,
Helena, January 17, 1934.

Hon. ROBERT D. CAREY,
United States Senate, Washington, D.C.

DEAR SENATOR CAREY: You probably will be surprised to hear from me, but I am interested in the cattle industry and so are you. I trust you also realize we in Montana look upon the Senators from Wyoming as also representing Montana interests, and especially the beef industry interest.

I enclose you a short brief that we have drawn up protesting a processing tax on cattle and also wool. We realize that this is only one argument, but it is an argument that, so far as we know, has not at this time been presented.

We trust that reading this short brief will be of interest to you and that the argument presented meets with your favor.

With kindest regards, I am, yours very truly,

W. J. BUTLER,
State Veterinary Surgeon.

I have a letter from Mr. C. B. Abbott, of Hyannis, Nebr., a man who owns some 17,000 cattle, and I think is feeding 2,000 or 3,000 this winter. A part of his letter is as follows:

For one I should like to remain outside the bill as far as being named a basic commodity is concerned. If we could be assured of the marketing agreement, I would be willing to let them go on a reduction program if it was fair. But if they intend to levy a processing tax first thing and then try to pay us back in benefits, I am afraid that whole new deal will be forgotten before we are ever paid.

The Nebraska Stock Growers' Association had meetings in several sections of the State. At a number of those meetings resolutions were adopted. I will read the resolution adopted at the meeting at Valentine:

If a processing tax comes within and under the provisions of the Jones bill, known as House Roll 6133, we deplore it for the reason that we feel and believe that the cattle industry at this time is unable to absorb any processing tax but do not object to making cattle a basic commodity.

At another meeting held at North Platte, Nebr., the Nebraska Cattle Growers' Association adopted these resolutions:

Whereas reports from Washington indicate that the beef industry will be classed as a basic commodity by the administration and supporters in Congress;

Whereas it is suggested by the administration and the Secretary of Agriculture that a processing tax be imposed on the beef industry to repay the appropriation and the machinery set up;

Whereas, if adopted, the administration proposes to appropriate $200,000,000 to purchase breeding cows for slaughter to lower production: Therefore be it

Resolved, That the stock growers of Lincoln County and vicinity in Nebraska earnestly protest against putting this wholly unnecessary and unjustifiable handicap of processing tax on the producers of an essential food; and be it further

Resolved, That we appeal to friends of agriculture in Congress to defeat any attempt at imposing the processing tax on the beef industry, which tax has proved a failure to the pork producers.

Mr. THOMPSON. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from Nebraska?

Mr. CAREY. I yield.

Mr. THOMPSON. I have the resolutions which were adopted at the North Platte meeting. The Senator from Wyoming read only section 3. If he will permit me I should like to read section 4 as follows:

We approve that part of the Jones bill known as "H.R. 6133", wherein from the Treasury of the United States is appropriated the sum of $200,000,000 for the immediate relief of the cattle industry, to be divided equally between dairy and beef cattle. We suggest and recommend to those charged with the enforcement of said act, if enacted into law, that not less than 5,000,000 breeding and producing beef and milch cows be bought immediately; that these cows be purchased on the open markets by the Government in competition with the packers and all other buyers; that the meat processed from these cows be by the Government sold either as fresh, canned, or corned beef abroad to those countries needing meat products, but unable to pay cash therefor, on long-term credits if necessary, to be first assumed by governmental agencies, and when paid to be credited upon the cost of purchase and processing before any consideration be given to levying a process tax therefor.

Does the pending bill cover that section of the resolutions, in the opinion of the Senator from Wyoming?

Mr. CAREY. Frankly, I do not believe the pending bill covers anything except that cattle shall be made a basic commodity, that a processing tax may be levied, and that we are to appropriate $200,000,000 to start something. I think this resolution could be carried out if the Secretary would agree to it.

Mr. THOMPSON. I notice that thus far in the discussion the Senator is, in a way, criticizing the bill. Has he a substitute measure to offer in its stead?

Mr. CAREY. I have no plan which is a cure-all. I have not introduced a bill, but I think there are certain things that might be done to help the livestock industry.

Mr. THOMPSON. But the Senator is not offering any amendment?

Mr. CAREY. No; this bill could not be amended satisfactorily. I should prefer to send the pending measure back to the committee and have the entire bill rewritten. I may offer certain amendments to the pending measure.

Mr. THOMPSON. I also have a telegram from Alliance, Nebr., which I should like to read, as follows:

Cattlemen in all western Nebraska believe that the cattle industry at this time is unable to absorb any processing tax, but do not object to making cattle a basic commodity. Please see that the bill pending makes no provision for a processing tax.

NEBRASKA STOCKGROWERS' ASSOCIATION.
ROBERT GRAHAM, *President*.
F. M. BROOME, *Secretary*.

Mr. CAREY. I think the Senator is aware that the Agricultural Adjustment Act makes it mandatory that a processing tax be imposed if cattlemen are to have any benefits.

Mr. THOMPSON. I do not think there is any doubt about it.

Mr. CAREY. I think the average cattlemen, or most of the cattlemen, in adopting these resolutions were not aware of the provision of the act that a processing tax is mandatory if they are to receive benefits.

I want to read a letter from a packer which I received with reference to the processing tax. This was written by Mr. A. C. Young, president of E. M. Todd Co., who are packers at Richmond, Va. The letter reads as follows:

RICHMOND, VA., *January 25, 1934*.

Senator ROBERT D. CAREY,
Washington, D.C.

MY DEAR SENATOR: I noticed in the papers, a few days ago, that the Senate adopted a resolution offered by you requesting the Secretary of Agriculture to report on the money spent in the corn-and-hog program, seeking to know the amount of the processing taxes collected, and the cost of administration.

I have been in the packing-house business for over 40 years, and I think the processing taxes are doing more harm to the farmer than good, and that the prices on hogs would be higher if the processing tax was not required.

It is natural that Secretary Wallace opposes any attempt to do away with the processing taxes, because the expense of carrying out his plan has to be paid out of these taxes, but who knows how much the farmer will get of the amount of processing taxes collected.

I saw a statement the other day that Secretary Wallace reported at the end of November that the administration had paid out $44,701,650 more in benefits to farmers than it had collected taxes, but had expended $135,000,000 to persuade farmers to reduce cotton, wheat, corn, and tobacco production, and you realize there is no way to tell how much good this expenditure amounted to.

I can but feel that the return in dollars and cents, to the farmers, will be a very small proportion of the amount of processing taxes collected by the Government, and therefore the project is costing the people of the United States an enormous amount of money, by the Government taking such a large proportion of these processing taxes to pay the cost of the experiment.

As you know, the price of hogs has been declining all the winter on account of these processing taxes, as there is no way for packers to assume that loss.

If these processing taxes were abandoned, I am satisfied the farmer will be getting as much or more in the price of the hogs as he sells them, instead of having to wait possibly for a long time to get back a portion of the amount collected in the way of a return for the farmer.

The plan certainly has not been a success so far and is going to cost the Government (and taxpayers) a whole lot more before they get through with this experiment.

Yours very truly,

E. M. TODD CO., INC.,
A. C. YOUNG, *President*.

I am not going to detain the Senate much longer; but the Senator from Nebraska [Mr. THOMPSON] asked me what I would do if I were introducing a bill for the benefit of the cattle industry.

Previously I stated that I had no cure-all for the ills of the industry, that I wished I had, or I wished someone else had been able to find a way to solve their problems. I think, however, there are some things that could be done which would materially help the cattlemen and would not necessitate the imposition of a processing tax.

First. I think that governmental agencies in purchasing supplies for relief could give the cattlemen the same consideration they have given hog producers in making hog purchases. A short time ago I learned that the Emergency Relief Administration had expended some $12,000,000 for the purchase of hogs in addition to the purchase of $35,000,000 by the Department of Agriculture. The purchases of beef amounted to about $250,000, nearly all of which has been canned beef costing 16 cents a pound, so that only a very

small part of what they paid went to the producer. When the Government paid the packer 16 cents a pound for canned meat it paid more for the can than for the meat.

Second. If excise taxes were placed on the importation of canned meats it would keep from the American market an amount of meat equal to 157,000 cattle produced in foreign countries.

Third. The destruction of tubercular cattle would eliminate some 600,000, mostly cows, and would reduce the surplus to that extent.

Fourth. Excise taxes on vegetable oils and fats which would reduce importations would materially help both the producer of beef cattle and the dairyman.

Fifth. Of the various things that have been suggested I think the most important is a packers' agreement or code. More can be accomplished through this than by any one thing, as much of the waste and extra cost in the packing industry could be reduced, which would make it possible for the packers to pay better prices for livestock. With a code prices could be fixed, thereby assuring the livestock producers of a fair price for their products.

None of these would require the levying of a processing tax which must be paid by the producer.

Mr. KING. Mr. President, will the Senator permit an interruption?

Mr. CAREY. Certainly.

Mr. KING. The Senator may have answered the question I am about to propound. He has just stated that there were 600,000 head of cattle, as I understand, that were alleged to be tubercular.

Mr. CAREY. Yes, sir.

Mr. KING. Who is to pay for those cattle if they come in under this basic agricultural-commodity theory?

Mr. CAREY. I think the usual custom has been for the States and the Federal Government to cooperate in paying for such cattle; but with the present low price of cattle I think these cattle could be eliminated from the market now for a great deal less money than at any other time. The way cattle are selling, it will not take a great deal of money—certainly not $200,000,000—to get these cattle out of the way. At $20 apiece, the expenditure will amount to about $12,000,000.

Mr. KING. I assume from what the Senator has just stated, then, that the owners of the cattle are to sustain no part of the loss, but that the Government, out of his $200,000,000 is to pay for the entire value of the cattle, whatever value is attributed to them. Is that true?

Mr. CAREY. Either the Government or the Government and the States cooperating. I think the practice has been for most of the States to cooperate.

Mr. KING. Does not this bill contemplate the abrogation of that plan and place upon the Government the entire burden of paying for the cattle out of this $200,000,000?

Mr. CAREY. I do not know of any plan in the bill, as I have previously said. It simply makes cattle a basic commodity and appropriates $200,000,000. What the Department officials are going to do if the bill passes, I do not know. I know what might be done, but I do not know what the Department is going to do. I never have been able to find out.

Mr. KING. Are we to pass the bill without knowing what disposition is to be made of the $200,000,000, what it is for, whether it is to buy tubercular cattle or whether it is to enable the Department to go into the cattle business, or what? What is the plan?

Mr. CAREY. I have always been advised that the Department could not work out a plan until cattle were made a basic commodity. I do not know why their heads cannot work before cattle are made a basic commodity, but the fact remains that they cannot.

Mr. KING. If we are going to authorize the expenditure of $200,000,000, or, indeed, appropriate that amount, to be turned over to the Department of Agriculture, we ought to know what is going to be done with it.

Mr. CAREY. Possibly it will be used for the payment of benefits, as in the case of hogs. They might advance money to cattlemen to induce them to reduce the number of their cattle. The Department officials might also go into the market and buy a lot of cattle and destroy them and throw them away, as they did with hogs. I do not know, and I do not think they know what they are going to do.

Mr. VANDENBERG. This is part of the lottery.

Mr. CAREY. One man's guess is as good as another's. I do not know.

Mr. ADAMS. Mr. President, may I suggest that on yesterday an amendment was adopted, as I understand, providing that this money could be used to balance the markets, whatever that may mean.

Mr. CAREY. That is what they have been doing with hogs. They have been pegging the market every day to keep up the price. How long they can do that I do not know. They can do it for a long while if they do not run out of money.

The last thing, and I think perhaps the most important thing, is the packers' agreement which I have previously mentioned. If those things which I have suggested were done, I think they would materially help the livestock business; but I cannot say that they would place the cattleman on "easy street."

Mr. President, I ask unanimous consent to have inserted in the RECORD at the conclusion of my remarks a letter written by a committee representing the American National Livestock Association, addressed to the Secretary of Agriculture, and urging upon him the necessity of the adoption of the packers' code or agreement.

Mr. KING. Mr. President, may I ask the Senator whether the organization to which he has just referred endorses the pending bill, which would put cattle in the category of basic agricultural commodities?

Mr. CAREY. At the meeting in Albuquerque the American National Livestock Association took no action, largely for this reason: The Texas cattle growers are a very important factor in that association, and that group were desirous of having cattle made a basic commodity, while many other cattlemen were opposed to it, and the matter was not brought before the convention for the reason that they thought they would get into a fight which might wreck their association.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Wyoming that the letter he has offered be printed in the RECORD?

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

To the SECRETARY OF AGRICULTURE.

DEAR MR. SECRETARY: In accordance with the request of your Mr. Christgau, we are hereby filing this statement setting forth some of the benefits to be derived from a marketing agreement between the packers and the producers.

We are representatives of the beef-cattle industry. Our industry, combined with the dairy industry and the hog producers, converts the crop of over 70 percent of the entire acreage of the United States into pork and beef and cattle products. Our representatives, together with the representatives of the dairy industry and some of the representatives of the hog industry, held a national conference in Washington during the past week, and passed among other recommendations one in which we stated that we favored the immediate working out of a satisfactory marketing agreement with the packers.

We feel that our industry is one of the most fundamental of industries; and, while cattle are not as yet included in the Agricultural Adjustment Act as a basic commodity, however, this act does provide for marketing agreements whereby processors and producers of other than basic commodities can enter into a monopolistic marketing agreement without violating the antitrust laws of the United States. We wish to again bring to your notice that as early as last August we of the beef-cattle industry held a meeting, elected a committee, and took part in a hearing in Washington early in September. This hearing was the forerunner of hearings a week later in Chicago. At the Chicago hearings we did develop a marketing agreement which was acceptable to all of the committees of our industry represented in every provision except the paragraph pertaining to the examination of the packers' books. We feel that this matter should be left to the Secretary, and we urge immediate action.

We have been told by you and others of your office that you have little faith in a marketing agreement and that you could not help the producers more than about 15 percent in this manner. We feel that an agreement wherein the packing industry can unify its control and remove its product from a buyer's market and place it in a seller's market will in itself react to the benefit of the industry more than 15 percent. We know that you are

aware of the demoralizing influences that rebates, advertising allowances, premiums, unduly easy credit terms and extra deliveries can bring on any merchant. At present we think that the packing industry is subject to all of these evils and to a worse evil than any of these, that of dumping. We know that you are aware that some packers who have accumulated surpluses which they could not sell in their regular consumer channels have in times past shipped huge quantities to certain large city markets and have dumped these accumulations for any price that they would bring, thereby demoralizing the market. We cannot help but feel that certain large buyers, who retail tremendous quantities of meat, are thus enabled to buy at prices which are unwarrantedly low and which must be completely reflected in the producer's price.

We cannot help but remind you in this connection of the case in which one of our large chain stores set up one of their buyers as a broker. Being a broker this man was entitled to an extra rebate on meats, which rebate, he admitted in a hearing before your Department, was refunded to the great chain store that employed him and which had set up his brokerage office. Although your Department issued a cease-and-desist order, he is still able to do business by appealing the order. We feel that through a marketing agreement we could eliminate all of the industry's wasteful practices relating to merchandizing (one of which this example illustrates, and we remind you that a 15-percent rise in the cattle markets would be a much-needed beginning.

There are many more ways in which a marketing agreement can coordinate the various branches of our industry. We could obtain sufficient money to carry on a comprehensive advertising campaign. While advertising beef as a food will not of itself solve all the difficulties besetting the livestock business, yet most informed producers and processors agree that we could materially increase the per capita consumption by judicious advertising. Our industry has no machinery at the present time to handle this problem or any other problem. There is no organization which represents us as a whole or is supported by us as a whole. We cannot but feel that your Department and the processors would be incalculably benefited by having three or four dynamic committees, representing its various branches, to coordinate and establish a policy of unity and good will. This is possible for the first time since the enactment of the antitrust legislation by the passage of the Agricultural Adjustment Act. We feel that the organization of such machinery and the announcement of our cooperation would create a confidence which in itself would strengthen the price of meat products.

We are reminded that Denmark through cooperation and by being able to tell their producers through their cooperatives and cooperative packing plants the kind and quality of the product needed, has thereby been enabled to capture 60 percent of the British market. Cooperation through a marketing agreement can make this sort of planned production possible without ownership of the packing industry. It will go farther to produce orderly marketing in both the raw material and the meat product to the consumer than any other plan. It does not make any difference what kind of a plan of controlled production we may finally arrive at, it will have to have the cooperation of the processor. Unless we have this cooperation, we will not be able to determine our surplus production. When we are producing more than our domestic market will consume at fair prices, we would under this agreement be enabled to levy a subsidy on the meat products which could be sold at fair prices in order that the remainder could be disposed of.

The selling end of any business should be coordinated with the producing end and should try to sell the production. This brings us to a discussion of the two possible methods which we believe might be utilized in controlling supplies. One might be called limited production and the other limited utilization. We feel that production control, so far as the livestock industry is concerned, may be made effective either in controlling production of the animal or of the meat product. Thus production of meat products might be regulated by discarding the meat of inferior animals in sausage and canning and replacing with meat of better quality. In this manner we would have a reservoir to draw from in the event any emergency arose such as has arisen at a number of periods in our history. During the years 1917 and 1918 the Government was asking us to produce at greater and greater volume and insisting that the American public observe their program of meatless days. This reservoir which saved the Nation during the war seems to us a national necessity, yet it is the very thing which produces demoralized markets in times such as these. We feel we should be entitled to the cooperation of your Department in utilizing every available means until we reach parity price. The marketing agreement submitted to you at the Chicago conference provided this cooperation.

We are not of the opinion that our foreign markets cannot be regained. We feel that if we were permitted to cooperate under a marketing agreement we would be enabled to trade enough of our surplus which is perishable, for some commodity not produced in the United States in sufficient volume which is unperishable. We could in this way cooperate to the extent that we would not demoralize our domestic market. At least we could get greater consideration for our industry when quotas of exports and imports are being fixed by our own Government.

We must again remind you that our industry is in dire distress. Our feeders have been compelled to purchase corn at or near the Government loan value. Our range producers must sell their feeding cattle at a price which the feeder is justified in paying, giving consideration both to the present beef market and the price of corn. The cattle marketed in Chicago each week are losing upward of a half million dollars in actual money out by the owners in spite of the fact that both the packer and retailer are handling the same product at a profit. We feel that a marketing agreement will reduce this spread between the consumer's cost and the producer's price. We feel that it will operate as a permanent plan and tend to stabilize the market. We remind you again that it creates a monopoly, with the producers having a voice through their committee, with yourself as supreme governor and in our belief will restore meat products to parity prices and that it, coupled with a production-control program, either inaugurated separately by you or by its monopolistic provisions, will effectually accomplish the provisions of the Agricultural Adjustment Act.

CHAS. COLLINS.
ELMER BROCK.
HUB. RUSSELL.
THOS. COBLE.
C. J. ABBOTT.

Mr. FRAZIER. Mr. President, I offer an amendment, which I send to the desk and ask to have read.

The PRESIDING OFFICER (Mr. BANKHEAD in the chair). The clerk will read.

The LEGISLATIVE CLERK. It is proposed to insert the following new section at the end of the bill:

SEC. 4. Section 11 of the Agricultural Adjustment Act, as amended, is amended by adding after the word "wheat" a comma and the words "rye, flax, barley."

Amend the title so as to read: "An act to amend the Agricultural Adjustment Act so as to include cattle, rye, flax, and barley as basic agricultural commodities, and for other purposes."

Mr. FRAZIER obtained the floor.

Mr. CONNALLY. Mr. President, as far as I am concerned, I am willing to accept the amendment, and let it go to conference.

Mr. FRAZIER. Mr. President, I understood there were two or three Senators who desired to speak briefly on the amendment, and I think their remarks will be very important.

The PRESIDING OFFICER. The Senator does not accept the suggestion of the Senator from Texas?

Mr. FRAZIER. I am perfectly willing that the amendment should be agreed to, but I know there are two or three Senators who desire to speak on it briefly.

Mr. CONNALLY. Of course, if the Senator wants to make a speech, I withdraw the suggestion.

Mr. FRAZIER. There is no objection to it being agreed to, of course.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from North Dakota.

Mr. KING. Mr. President, I should like to ask the Senator who has just submitted this omnium gatherum amendment, or partially such an amendment, where he expects the money to come from with which the plan is to be executed? Is it to be part of this $200,000,000?

Mr. FRAZIER. Oh, no. The money would be raised by assessing a processing tax upon these products.

Mr. KING. My recollection is that a day or two ago the able Senator from Ohio singled out oats, which had not been wrapped in the beneficent robes of the agricultural organization here, and had not been placed in the category of favored commodities, and the Senator stated that oats were higher, relatively, than the other commodities which had been placed under the control of the Department of Agriculture. I was wondering whether the Senator was now striking at that commodity, because it would seem, if we are to judge by the effect of the work of the Department of Agriculture with respect to hogs, that he may find a very material reduction in the price of oats if he places them in the category of basic agricultural commodities. I suggest that he may be doing the producer of oats a disservice by submitting them to the tender embrace of those in the Department of Agriculture.

Mr. FRAZIER. Mr. President, I am not including oats in this amendment. It includes rye, flax, and barley.

Mr. KING. I thought the Senator included oats.

Mr. FRAZIER. No.

Mr. KING. May I ask the Senator whether flax and barley have not fared better, so far as prices are concerned,

than the two commodities which were placed in the category of favored commodities?

Mr. FRAZIER. I think the effect was about the same as the effect on the price of wheat. Of course, I know that there is a great deal of controversy and dissatisfaction over the price of hogs, but the price of wheat, I should say, is about on a parity with the prices of barley and flax and these other grains.

Mr. KING. It seems to me that, with the limited information we have with respect to a matter that is so important, we ought to have further discussion and ought to have a fuller attendance of the Senate. As I recall, the committee, after very elaborate hearings, if I recall correctly the statement made by the Senator from Nebraska [Mr. NORRIS], rejected the inclusion of any commodity except cotton and wheat, and the incorporation of hogs within this favored group was against the protest of a number of the members of the committee.

Mr. FRAZIER. Mr. President, the objection that was raised by the Department at that time was that they wanted to try the plan out on two or three products as a sort of experiment, to see how it worked. They say now that they are satisfied that the experiment is going to work, that it is going to be of benefit to the farmers, and, therefore, a number of us think that, if we are to continue the processing tax on wheat and hogs, we should also have a processing tax on beef cattle, on rye, barley, and flax.

Mr. ADAMS. Mr. President, may I inquire whether or not flax is a surplus commodity?

Mr. FRAZIER. No; it is not; nor is rye.

Mr. ADAMS. None of the three commodities included in the Senator's amendment is a surplus commodity?

Mr. FRAZIER. No; I do not think any of the three would be called a surplus commodity.

Mr. ADAMS. I am curious, then, as to how the Senator expects to benefit the flax producers by having flax made a basic commodity.

Mr. FRAZIER. If these articles are made basic commodities, and a processing tax is placed upon them, any imports of the products, when they are processed, would pay the processing tax. Therefore, it would have the effect of putting a higher tariff on these products.

Mr. KING. Are there any imports?

Mr. FRAZIER. Oh, yes. Over 8,000,000 bushels of rye have come into the United States during the last 6 months. There is a tariff of 15 cents.

Mr. KING. How many bushels have we exported?

Mr. FRAZIER. I think practically none of rye during that period.

Mr. VANDENBERG. Mr. President, if the Senator can protect flax, I advise him to do so, because that is one of the two commodities for which the Secretary of Agriculture has signed a prospective death warrant. The two, he has announced, are inefficient, and ought to disappear from our American agriculture.

Mr. FRAZIER. Is the Senator from Michigan sure of that? There was a statement in the press, which someone sent to me, to the effect that some $12,000,000 was to be used by the Department of Agriculture to stimulate the production of flax where it had not previously been grown. I called the Department, and they stated they knew nothing about it, and did not know the source of the statement.

I cannot see why flax should be one of the products to be excluded from production in the United States, inasmuch as we do not raise anywhere near enough to supply the domestic needs, and there is no question that we could raise enough flax in the United States to supply our full domestic demand if there were a sufficient price to give the farmers cost of production for that product.

Mr. VANDENBERG. Mr. President, I read from the booklet entitled "America Must Choose", by the Secretary of Agriculture. In his discussion of what he calls "approach to a world neighborhood", he suggests that this requires a radical reduction of tariffs which might seriously hurt certain industries, "and a few kinds of agricultural businesses, such as sugar-beet growing and flax growing. It might also cause pain for a while to woolgrowers and to farmers who supply material for various edible oils. I think we ought to face that fact. If we are going to lower tariffs radically, there may have to be some definite plan whereby certain industries or businesses will have to be retired."

The only examples the Secretary gives in that aspect are sugar beets, flax, edible oils, and wool. Can the Senator contemplate a successful agriculture in his area with those products eliminated?

Mr. FRAZIER. Mr. President, I must say that I cannot agree with the Secretary of Agriculture as to eliminating either flax or sugar beets. They are both important products in my section of the country.

Mr. VANDENBERG. How about wool?

Mr. FRAZIER. I cannot agree as to eliminating wool, either.

Mr. FESS. Mr. President, that is in line with the philosophy of doing away with any article of which we do not produce any large amount in proportion to our need, or saying that if we are not producing sugar beets to anywhere near our demand we would better discontinue producing them.

That runs all through the argument. So that, notwithstanding the fact that the Dakotas are very much concerned in the production of flax, the quantity produced in proportion to the demands of the whole Nation is regarded as rather inconsequential. I think there is no doubt that flax is one of the articles which must go when we enter upon the tariff bargaining plan, because we cannot possibly get an advantage coming without losing some advantage going. The question is, What are we going to sacrifice of our own production in order to get the advantage in the matter of imports?

Mr. FRAZIER. Mr. President, if we take flax and sugar beets and perhaps some other farm products out of the picture, what are the farmers going to do with the land that has been used in the production of those commodities in the past?

Mr. FESS. Let others answer the question. I cannot imagine what they are going to do.

Mr. VANDENBERG. The farms will be made subsistence farms, with furniture factories in the middle of them, and then the Government will work the furniture factories.

EXECUTIVE SESSION

Mr. ROBINSON of Arkansas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

THE CALENDAR

The PRESIDING OFFICER. Are there any reports of committees? There being none, the calendar is in order.

Mr. ROBINSON of Arkansas. Mr. President, the first nomination on the calendar goes over under a unanimous-consent agreement that was made today and entered of record.

DIPLOMATIC AND FOREIGN SERVICE

The legislative clerk read the nomination of Frank P. Corrigan, of Ohio, to be Envoy Extraordinary and Minister Plenipotentiary to El Salvador.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The legislative clerk read the nomination of Carl deG. MacVitty, of Illinois, to be secretary in the Diplomatic Service.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The legislative clerk read the nomination of H. Earle Russell, of Michigan, to be consul general.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

CUSTOMS SERVICE

The legislative clerk read the nomination of Bernice Pyke to be collector of customs, collection district no. 41, Cleveland, Ohio.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

POSTMASTERS

The legislative clerk proceeded to read sundry nominations of postmasters.

Mr. McKELLAR. Mr. President, I ask unanimous consent that the nominations of postmasters may be confirmed en bloc.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the nominations are confirmed en bloc.

That completes the calendar.

INCLUSION OF CATTLE AS A BASIC COMMODITY

The Senate resumed the consideration of the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes.

RECESS

Mr. ROBINSON of Arkansas. I move that the Senate now take a recess until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 5 o'clock and 33 minutes p.m.) the Senate took a recess until tomorrow, Friday, March 9, 1934, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 8 (legislative day of Feb. 28), 1934

ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY

Frank P. Corrigan to be Envoy Extraordinary and Minister Plenipotentiary to El Salvador.

SECRETARY IN THE DIPLOMATIC SERVICE

Karl deG. MacVitty to be secretary in the Diplomatic Service.

CONSUL GENERAL

H. Earle Russell to be consul general.

COLLECTOR OF CUSTOMS SERVICE

Bernice Pyke to be collector of customs for customs collection district no. 41, Cleveland, Ohio.

POSTMASTERS

ARKANSAS

Bess M. Nobles, Dierks.

NEBRASKA

Albin E. Rodine, Stromburg.
Eric Fredrickson, Wakefield.
Richard H. Schwedhelm, Westpoint.

NEW YORK

Joseph W. Cain, Adams.
Leo W. Pike, Belmont.
John A. Holland, Brushton.
Bertha Sagendorph, Claverack.
James D. George, Gardiner.
Frank L. Egger, Larchmont.
Robert E. Purcell, Philadelphia.
Elmer R. Chaffer, Point Pleasant.
Harold D. Ashline, Rouses Point.
George O. Fountain, Scarborough.
May A. Cupernall, Thousand Island Park.
Charles R. Frank, Yorkville.

SOUTH CAROLINA

Marion G. Anderson, Conway.
Hattie J. Peeples, Varnville.

SOUTH DAKOTA

John E. Dunn, Elkton.
J. Russell Anderson, Irene.
John W. Hoven, Selby.
Daisy E. Berther, Wentworth.

HOUSE OF REPRESENTATIVES

THURSDAY, MARCH 8, 1934

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D.D., offered the following prayer:

All praise and glory be unto Thee, our Heavenly Father. Love and mercy never pass by the boundaries of Thy heart. As we tread the crowded pathways of life lead us, we pray Thee. May we be converted to humility, to self-sacrifice, to unfailing kindness, and to the love that casteth out fear. Earnestly persuade us that the finest type of manhood lies not in outward honor and glory but in the hidden soul. There is no work so great and so high as the creation of character; all other things are dim and stationary. Almighty God, the judge of all men, be with the whole race of humankind; cleanse its dark and forbidding passageways and stop its thundering cries. Come Thou, O come to our own country, to our President, our Speaker, and this Congress; O make them abundantly equal to every emergency. May they bind up wounds and not make them, may they quench the fires of war and not kindle them. Blessed Lord, give us all that power that lifts us above all wrath and revenge. In the name of our divine Elder Brother. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Horne, its enrolling clerk, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 5632. An act to supplement and support the Migratory Bird Conservation Act by providing funds for the acquisition of areas for use as migratory-bird sanctuaries, refuges, and breeding grounds, for developing and administering such areas, for the protection of certain migratory birds, for the enforcement of the Migratory Bird Treaty Act and regulations thereunder, and for other purposes.

The message also announced that the Senate had passed, with amendments, in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 6604. An act to establish the composition of the United States Navy with respect to the categories of vessels limited by the treaties signed at Washington, February 6, 1922, and at London, April 22, 1930, at the limits prescribed by those treaties; to authorize the construction of certain naval vessels; and for other purposes.

The message also announced that the Senate insists upon its amendments to the foregoing bill, requests a conference with the House thereon, and appoints Mr. TRAMMELL, Mr. WALSH, Mr. TYDINGS, Mr. HALE, and Mr. METCALF to be the conferees on the part of the Senate.

BOARD OF VISITORS, UNITED STATES MILITARY ACADEMY

The SPEAKER laid before the House the following communication, which was read:

MARCH 1, 1934.

Hon. HENRY T. RAINEY,
Speaker of the House of Representatives,
The Capitol, Washington, D.C.

MY DEAR MR. SPEAKER: Sometime ago I sent you the names of the persons appointed by me to constitute the members of the Board of Visitors to the United States Military Academy on behalf of the Committee on Military Affairs.

I am now requested by the Honorable W. FRANK JAMES to accept his resignation as a member of that committee, and do hereby substitute in place of Mr. JAMES the Honorable CHARLES A. PLUMLEY, a member of the Committee on Military Affairs, from the State of Vermont.

With great respect, I am, yours sincerely,

J. J. MCSWAIN, *Chairman.*

NAVAL CONSTRUCTION

Mr. VINSON of Georgia. Mr. Speaker, I ask unanimous consent to take from the table the bill (H.R. 6604) to establish the composition of the United States Navy with respect to the categories of vessels limited by the treaties signed at Washington, February 6, 1922, and at London, April 22,

1930, at the limits prescribed by those treaties; to authorize the construction of certain naval vessels; and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The SPEAKER. The gentleman from Georgia asks unanimous consent to take from the Speaker's table the bill H.R. 6604, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate. Is there objection?

There was no objection.

The Chair appointed the following conferees: Mr. VINSON of Georgia, Mr. DREWRY, Mr. GAMBRILL, Mr. BRITTEN, and Mr. DARROW.

THE COUNTRY NEEDS THE REPUBLICAN PARTY

Mr. MARSHALL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting therein a speech delivered by the gentleman from Kansas [Mr. McGUGIN] at Lancaster, Ohio, March 6.

The SPEAKER. Is there objection?

There was no objection.

Mr. MARSHALL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech of Hon. HAROLD MCGUGIN, of Kansas, before the Fairfield County Republican Club, Lancaster, Ohio, on March 6, 1934:

No scheme has yet been devised whereby legislative forms of government can survive other than by the two-party system. Three or more parties mean that no party is in the majority and can take the responsibility. In such a situation, in order to obtain a majority, minority blocs and factions always committed to some selfish interests, form a coalition based upon each minority faction entering the coalition supporting the selfish interests of other minority factions. In the end, legislation is enacted which is not for the general welfare and never had the support of an honest majority. This means intolerable government. The result is that parliamentary government breaks down under the bloc system. This accounts for the failure of legislative government in continental European countries.

One-party government always leads to dictatorship because there is no agency at hand to restrain the majority from practicing all kinds of excessive encroachments upon the liberties of the people.

In two-party government, one party must be the majority party to bear the responsibility of government. The other party must be the minority party to point out the mistakes and errors of the majority party. In the two-party system, the minority party has an indispensable function to perform.

At the present time the Democratic Party is in the majority. It is its responsibility to take the leadership and carry out a governmental program. The Republican Party is the minority party. It is its function and responsibility to criticize constructively and to point out to the public the mistakes which the Democratic majority is making. It is inevitable that this Democratic majority, the same as any other majority party, will make mistakes. This administration and this Democratic majority in Congress comprise a human institution and mistakes are inevitable. They will be made world without end.

Since the Civil War the Republican Party has been the majority party during the greater part of the time and the Democratic Party has been the minority party. During this long experience as a minority party the Democratic Party has developed into the world's best minority party because it became a criticizer par excellence. It very largely forgot how to meet responsibility as a legislative party in control of Congress. It is now a matter of history that the Democratic Party has been unable to function in a constitutional manner in control of legislation. With a Democratic President and with a Democratic Congress virtual dictatorship on the part of the President is inescapable. In the light of this record the people of this country must be content with practically a dictatorship rather than traditional legislative government when we have a Democratic President and a Democratic Congress.

This would seem to be a partisan statement on my part if it were not for the fact that the record substantiates this statement.

Grover Cleveland was the first Democratic President after the Civil War. He could not depend upon his Democratic Congress and had immeasurable trouble with it.

Woodrow Wilson was the second Democratic President. Even in the most far-reaching legislation of his two terms as President he could not depend upon his Democratic Congress. The Speaker, Champ Clark, opposed the draft. Senator Stone, Chairman of the Foreign Affairs Committee in the Senate, opposed the Wilson war program.

In the House of Representatives, Claude Kitchin, Chairman of the Ways and Means Committee, likewise opposed the draft. Hubert Dent, Chairman of the Military Affairs Committee in the House, refused to introduce the draft bill. This bill was introduced and carried through the House of Representatives under the leadership of Julius Kahn, the ranking Republican member on that committee. When it came to meeting the legislative responsibilities, Mr. Wilson had to depend upon the Republican leadership to carry out his war program. In order for Mr. Wilson to have a semblance of order in government, he had to go to the extreme of disciplining Democratic Members of Congress by going into senatorial and congressional primaries and opposing their renomination.

Franklin D. Roosevelt, the third Democratic President since the Civil War, has found that he cannot depend upon a Democratic Congress to meet the responsibility of legislating in the usual manner. The result is, he has been demanding and receiving of his Congress legislation which does not legislate on a particular subject but merely transfers the constitutional responsibility of Congress to legislate to the President to carry out his program by Executive orders.

The Constitution provides that appropriations shall be made by the lower House of Congress. The reason for this provision in the Constitution was that the people's money should not be expended except under the guiding hand of their chosen representatives. At present, for all intents and purposes, this provision of the Constitution is destroyed. Lump-sum appropriations are being made in the amount requested by the President, and the President is expending the money as he sees fit. The function which Congress is performing in this respect is a mere formality. So far as actual results are concerned, the President might as well make his own appropriations.

The Congress is abrogating its responsibilities. It is conferring upon the Executive step by step the full control and power of government. It is doing piecemeal what the German Reichstag recently did in one fell swoop. For the moment this may meet with the approval of the people, yet the fact remains their liberties are being transferred to the Executive. The great struggle for American independence was to take the power of government from the Executive and place it in the hands of the chosen representatives of the people. The purpose of this was to establish and to preserve the rights and liberties of the people as a whole. Since the 4th of March 1933 we have day by day given over to the Executive that which our forefathers gained at the price of blood and treasure.

When legislation is enacted invariably gag rules are passed in the House of Representatives so that the legislation cannot be amended when it is being considered on the floor of the House. These gag rules are not employed in order to keep a hostile Republican minority from wrecking administration legislation; 114 Republican Congressmen cannot outvote 315 Democratic Congressmen. The only purpose in the world for these gag rules is to keep a Democratic Congress from wrecking the legislation of its own administration. The only possible excuse for this conduct can be attributed to the fact that a Democratic Congress will not meet its responsibility of standing up and enacting legislation. There is equally as much responsibility as there is privilege in being a majority party and having control of government. No constructive legislation can be enacted which does not step on someone's toes and bring criticism upon those who enact it. Election-conscious legislators shrink from this responsibility.

Whatever may be said for the new deal, this much is certain, we are not getting it for nothing. One of the prices which we are paying is that the pages of history are being turned back over 150 years and the people's liberties are being daily transferred from their chosen representatives to the Executive department of the Government. Practically every piece of legislation which is a part of the new deal has carried with it a repudiation of some section of the Constitution.

The proposed granting of powers to the President to make foreign-trade agreements by changing tariff provisions changes two sections of the Constitution. First, tariff legislation is a revenue measure and under the Constitution should originate in the House of Representatives. From Magna Carta until now, the very cornerstone of free government has been that the revenues which shall be collected from the people shall be prescribed by the representatives whom they elect at frequent intervals. It is in this manner that the people have something to say about how much of their money shall be spent and for what it shall be spent. The most unbearable tyranny that mankind has suffered has been found in an executive collecting such tribute from the people as he deems advisable.

The second section of the Constitution which is being overridden by this provision is that treaties or agreements with foreign countries shall not become effective until they have been ratified by a two-thirds vote in the United States Senate. Yet the legislation which is now being considered places in the hands of the President power to make these foreign-trade agreements, which are treaties, without their being ratified or considered by the Senate. The Executive making treaties and arrangements with foreign countries without any approval of the representatives chosen by the people is another intolerable tyranny which the writers of the Constitution intended to make impossible in the United States.

It is true that the public cannot suffer from the Executive's collecting revenues and making treaties with foreign powers unless he abuses that power. Let us assume that Mr. Roosevelt will not abuse that power. The people of this country may be willing to reelect him time after time, yet the fact remains that he will not live forever and cannot always be the President of the United States. Much of this legislation transferring congressional

responsibilities to the Executive is in the form of permanent legislation which confers that authority upon the President for all time. When we talk about repealing it at some future date, we must remember that it cannot be repealed without the consent of the President except that such repeal should pass over his veto. That would require a two-thirds vote in each House. So, under the present arrangement, this Congress is day after day delegating its constitutional powers, which means delegating the people's constitutional liberties, by a majority vote, while these powers and liberties can only be regained at some future date by a two-thirds vote.

This should not be done unless we are ready to concede that the time has come when constitutional government is wholly impractical in the United States.

Let us discuss what has been done by the Roosevelt administration since it has come into power. In the first place, it would be far more partisan than wise or truthful to charge Mr. Roosevelt with all the economic and social ills from which the people of the United States are now suffering in common with the rest of the people of the world. We are in the midst of a world-wide depression. We do not serve ourselves and our country if we do not recognize this fact, but on the contrary merely heap abuse upon the man who may be President at this time. I choose to be more charitable with Mr. Roosevelt, a Democratic President, than the Democrats were with Mr. Hoover, a Republican President. Mr. Hoover was President when this depression came on to the world. The Democrats grasped the depression as a golden opportunity to destroy confidence in Mr. Hoover and bring about a Democratic political victory. In that they made a mistake. I doubt very much if the Democrats today or of the future will be particularly proud of the record which the Democratic Party made during the Hoover Administration when the entire world was in the grip of the greatest depression of modern history.

Surely now everyone will concede that Mr. Hoover did not have the power to meet the depression and that the Democratic Congress under Mr. Garner would not give him the power. When Mr. Hoover went out of office on the 4th of March and Mr. Roosevelt came into office, Mr. Roosevelt then and there received every power which Mr. Hoover had with which to meet the emergency. Mr. Roosevelt did not turn his hand to meet the depression or the emergency until he first asked and received from Congress unheard-of powers. It is now clear that Mr. Roosevelt is not meeting the depression with the same tools that were in the hands of Mr. Hoover, a Republican President.

The principal accomplishments of the Roosevelt administration to date have grown out of an unparalleled expenditure of public money. We must not lose sight of the fact that there is far more humanitarianism involved in these accomplishments than social and economic recovery. The cost of the first year is about ten and one half billion dollars. Our total Government income is about $3,500,000,000. The deficit is about $7,000,000,000. These accomplishments will not be paid for unless and until our children pay for them. Until they are paid, it is yet a debatable question whether or not in the long run the people have been saved from distress and that there is not greater distress ahead. There can be no permanent recovery until the Government is able to balance its expenses and revenue. No government can long survive which is not a solvent government. It cannot safely be said that any government is a solvent government which for 5 years has spent more than twice the amount it has taken in and offers no reasonable promise of balancing its expenses and revenue in the future.

The two outstanding efforts of the administration for recovery are to be found in the N.R.A. and the A.A.A, neither one of which has yet proved its established and permanent merit. They have accomplished some good purposes but they have brought forth so many new evils and complications that it is yet a most debatable question whether in the end they are going to bring about economic recovery or greater economic despair. The way that they are now being administered, if there is any hope for their permanent success, it would seem that we would have to pay the price of giving up many of our liberties under the Constitution.

Up to date the N.R.A. is playing into the hands of monopoly and giving advantage to the large institutions, all to the detriment of the smaller institutions.

The A.A.A. is monopolizing agriculture. It is giving benefits to the large producers while it is collecting processors' taxes from the products of the smaller producers largely to furnish bonuses for the producers of agricultural products which producers are largely responsible for bringing about our present condition of an oversupply of farm products.

For instance, the wheat allotments, based upon the last 3 years' production, give a monopoly on wheat to those who have been constantly increasing their acreage. This is largely at the expense of the smaller producers, who during the last 3 years have been decreasing their acreage. The corn, hog, and dairy programs have shown the same situation to exist. Allotments based upon the last few years of production give advantage to those who have been increasing their production during that time and discriminates against those who have been reducing their production during the same time. The allotment plan fails to give fair consideration to the young man who wants to enter into the business of agriculture and who has no past production upon which to base an allotment. It likewise raises an economic and discriminating bar before the man who is returning from the ranks of industrial unemployment to the farm where he hopes to make a living at that most ancient and most honorable of occupations.

This program is leading to complete governmental control and domination of the land. Were I alone in making this statement I should be subject to the criticism that my statement was based upon partisanship; however, Rexford G. Tugwell, the Assistant Secretary of Agriculture, and the dominating personality in the agricultural program, has openly declared what is the purpose of the Government's program. In a recent speech in Philadelphia, Pa., he said:

"We are now engaged in a drastic program of controlling agriculture products for the emergency. This in itself means that we are trying to control the entire utilization of all agricultural land. * * *

"Private control has failed to use wisely its control of land. * * * For the first time the Government is thinking of the land as a whole. For the first time we are preparing to build a land program which will control the use of that greatest of all natural resources, not merely for the benefit of those who happen to hold title to it, but for the greater welfare of all the citizens of the country."

This program is not in keeping with the free, independent American program we have known. It is more in keeping with the philosophy of Stalin and Marx. Communistic Russia has prepared a land program not for the benefit of those who happen to hold title to the land but for what the Soviet thinks is for the greater welfare of all the citizens of Russia. The Star of Bethlehem pointed to the birthplace of a Savior and to a better day for mankind. There is no star of Russia which points to a better day for the American farmer. The people of the United States must make the choice of whether or not they want to make this change.

Whatever may be said of the Roosevelt administration to date, it has not given us something for nothing. For the relief measures which it has given to us we are paying the price of having gone in debt an additional $58 for each man, woman, and child. For the recovery measures which it has put into effect we must pay the price of giving up liberties and rights which were obtained in the first instance at an awful price and which for generation after generation we have cherished dearly.

My judgment is that we are moving too rapidly into this new world. It seems to me that it would be wise in the coming election to elect at least enough Republican Congressmen to check this headlong plunge into a new experiment. I do not suggest the election of a Republican Congress for the purpose of tying the hands of President Roosevelt. If the people should elect a Republican House of Representatives in the next election and if the Republicans would use that majority to deny to Mr. Roosevelt any opportunity of a reasonable constitutional leadership, then they would not be serving their party or their country, but a Republican majority in Congress which would cooperate with the President on constitutional ground will, in my judgment, be a blessing to the American people. At least, a sufficient increase in the Republican Membership of Congress for the minority to be able to make itself felt would be a most stabilizing influence at a time when we are moving too rapidly into new and uncharted seas.

MANAGEMENT OF THE GOVERNMENT PRINTING OFFICE

Mr. GLOVER. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. GLOVER. Mr. Speaker, ladies and gentlemen of the House, more than 1 year has passed since the Democrats have assumed control of the governmental affairs, and many responsible positions that should have been filled by the winning party are still held by those of the opposite party that are not in sympathy with the present administration.

As far as I can learn, it has not been the custom to furnish employees of any office with copies of the CONGRESSIONAL RECORD. But, it is said, that on the morning after an attack on the new deal was made in another body a large pile of RECORDS lay on a foreman's desk under a sign inviting everybody to take one.

I am informed that one is still reigning supreme in the Government Printing Office, notwithstanding the fact that he secured the place about 1 month after the late President Harding was inaugurated, and has held that place since that time.

There are Democrats now working in that Department that are being demoted instead of promoted that are thoroughly capable of holding this position with credit to the administration.

We hope those having the power to make these changes will immediately give their attention to these matters and make the necessary changes, which is nothing but fair and right.

This is only one instance in many that could be cited where changes should be made.

NAVAL APPROPRIATION BILL, 1935

Mr. AYRES of Kansas. Mr. Speaker, I call up the conference report upon the bill (H.R. 7199) making appropriations for the Navy Department and the Naval Service for the fiscal year ending June 30, 1935, and for other purposes, and ask unanimous consent that the statement be read in lieu of the report.

The SPEAKER. The gentleman from Kansas calls up a conference report and asks unanimous consent that the statement be read in lieu of the report. Is there objection?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7199) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1935, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 4, 14, 19, and 20.

That the House recede from its disagreement to the amendments of the Senate numbered 8, 9, 11, 12, 16, 21, 24, and 25, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$65,000"; and the Senate agree to the same.

Amendment numbered 2: That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$62,000"; and the Senate agree to the same.

Amendment numbered 3: That the House recede from its disagreement to the amendment of the Senate numbered 3, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,176,482"; and the Senate agree to the same.

Amendment numbered 5: That the House recede from its disagreement to the amendment of the Senate numbered 5, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$15,542,000"; and the Senate agree to the same.

Amendment numbered 6: That the House recede from its disagreement to the amendment of the Senate numbered 6, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$13,662,200"; and the Senate agree to the same.

Amendment numbered 7: That the House recede from its disagreement to the amendment of the Senate numbered 7, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$10,545,600"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment as follows: At the end of the matter inserted by said amendment insert the following: ", who, if above the rank of lieutenant, shall not be entitled to receive increased pay for making aerial flights at a rate in excess of $1,440 per annum, all of such nonflying officers or observers"; and the Senate agree to the same.

Amendment numbered 17: That the House recede from its disagreement to the amendment of the Senate numbered 17, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$7,559,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 13, 15, 18, 22, and 23.

Managers on the part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7199) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1935, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

On amendments nos. 1, 2, 3, 5, 6, 7, 17, 19, 20, and 21: Appropriates $65,000 for continuance of naval training station, Newport, R.I., in a bare maintenance status and $62,000 for continuance of naval training station, Great Lakes, Ill., in a bare maintenance status, instead of opening the latter, at an added expense of $376,697, and continuing the former in its present status upon an appropriation of $46,813, as proposed by the House, and instead of opening Newport, at an added expense of $247,200, and continuing Great Lakes in its present inoperative status upon an appropriation of $38,778, as proposed by the Senate. The Senate included $70,464, in addition to the amount added for opening Newport, for hospitalization at Great Lakes in the event the bill as finally agreed to made provision for reopening the Great Lakes station.

On amendment no. 4: Strikes out the proposal of the Senate to establish as one fund the several subappropriations of the appropriation "Training, education, and welfare, Navy."

On amendments nos. 8, 9, 10, 11, 12, and 16: Increases the amount of $1,170,297 proposed by the House for increased pay of officers for making aerial flights by $119,473, or to $1,289,770, as proposed by the Senate, and makes provision for 56 gunnery observers to be in a flying pay status, as proposed by the Senate, modified, however, so as to prevent any such observer from receiving an increase of pay for flying at a rate in excess of $1,440 per annum.

On amendment no. 14: Strikes out the Senate amendment to the House provision with respect to the employment of enlisted men or civilians in the capacity of servants in the residences or quarters of officers on shore, as such amendment might be construed as countenancing exceptions other than those permissible under amendments nos. 13 and 15.

On amendments nos. 24 and 25: Appropriates $250,000 under the transportation subhead of the appropriation "General expenses, Marine Corps", as proposed by the Senate, instead of $195,000, as proposed by the House.

DISAGREEMENTS

The committee of conference have not agreed on the following amendments of the Senate:

On nos. 13 and 15: Making exceptions to the provision prohibiting the employment of enlisted men or civilians in the capacity of servants in the residences or quarters of officers on shore.

On no. 18: Relating to printing historical and naval documents.

On nos. 22 and 23: Relating to the reemployment of civilian instructors at the Naval Academy.

W. A. AYRES,
GLOVER H. CARY,
M. J. HART,
J. HOWARD SWICK,
JOHN T. BUCKBEE,
Managers on the part of the House.

Mr. AYRES of Kansas. Mr. Speaker, I move the previous question on the adoption of the conference report.

The previous question was ordered.

The conference report was agreed to.

The SPEAKER. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Amendment no. 13: Page 23, line 23, insert "except for messes temporarily set up on shore for officers attached to sea-going vessels, to aviation units based on sea-going vessels, and to landing forces and expeditions."

Mr. FISH. Mr. Speaker, will the gentleman yield for a question for information?

Mr. AYRES of Kansas. Yes; I yield.

Mr. FISH. Do any of these amendments in disagreement cover the dispute in the other body about taking over control of the munition plants in the country?

Mr. AYRES of Kansas. No. Mr. Speaker, I move that the House recede and concur with an amendment which I send to the desk.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

In lieu of the matter inserted by said amendment, insert the following: "except for the public quarters occupied by the Chief of Office of Naval Operations and messes temporarily set up on shore for officers attached to sea-going vessels, to aviation units based on sea-going vessels, and to landing forces and expeditions."

The SPEAKER. The question is on the motion of the gentleman from Kansas to recede and concur with an amendment.

Mr. AYRES of Kansas. Perhaps I should make a statement as to this amendment, which will apply also to amendment no. 15.

At the last session we wrote into the bill a provision prohibiting the employment of enlisted men or civilians in the quarters of officers on shore in the capacity of household servants. At that time there were some 60 naval officers assigned to various posts who were using enlisted men as servants in their quarters. The number of servants ranged from 1 to 5. Some 200 men were so employed.

In an interpretation of that provision the Comptroller General, and properly so, I have no doubt, ruled that officers attached to submarines based on shore, like at New London and Coco Solo, could not use the enlisted cooks and mess attendants of their vessels to cook and serve their meals while the ships were tied up at the docks and the officers, as a matter of convenience, had set up a general mess on shore.

Of course, we had no intention of disturbing that practice.

The same is true of aviation units attached to sea-going vessels. When away from their ships the practice is to take their cooks and mess attendants along to take care of the temporary messes set up wherever the units might be.

Another interpretation, which amendment no. 15 is designed to set aside, runs against the practice of officers at various shore establishments buying their noon meals at messes prepared and served by enlisted men primarily for the benefit of such enlisted men as may be on duty at a particular shore establishment. I am sure none of us intended to interfere with practices such as these amendments are intended to permit to be continued.

In connection with amendment no. 13, we are proposing also to except the Chief of Naval Operations. This officer, as you all know, has been assigned as quarters a great big pretentious establishment out here within the Naval Observatory circle grounds. It means the employment of not less than five servants properly to take care of the place. The Admiral is assigned the quarters and has no choice but to occupy them and it is not right that under such circumstances he should be required to go into his own pocket to pay for servants that he would not require and would not employ if he were free to occupy quarters or rent quarters of his own choosing.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Amendment no. 15: Page 24, line 11, after the word "Government", insert "nor the sale of meals to officers by general messes on shore as regulated by detailed instructions from the Navy Department."

Mr. AYRES of Kansas. Mr. Speaker, I move that the House recede and concur in the Senate amendment.

Mr. BRITTEN. Mr. Speaker, will the gentleman yield?

Mr. AYRES of Kansas. Yes; I yield.

Mr. BRITTEN. Will the gentleman be good enough to state whether there was a complete agreement among the conferees concerning the Great Lakes training station?

Mr. AYRES of Kansas. There was.

Mr. BRITTEN. And there was no attempt made to hold it in the bill by the House conferees?

Mr. AYRES of Kansas. Oh, yes; there was an attempt to hold it in. Also the same as to Newport; but, of course, the final agreement was unanimous, or practically so, that they both go out.

Mr. BRITTEN. Newport was put in by the Senate, and the Great Lakes was taken out by the Senate action?

Mr. AYRES of Kansas. Yes.

Mr. BRITTEN. So that when the bill came before the conference it had nothing for the Great Lakes but did have Newport?

Mr. AYRES of Kansas. Oh, no. It had both.

Mr. BRITTEN. My impression is that Great Lakes had been left out by the Senate.

Mr. AYRES of Kansas. That is right. It was left out by the Senate. The gentleman is right about that; but both matters were open for consideration by the conferees, and we discussed the matter for some days, and this was the final agreement we came to, to leave them both out. I wish to state that the Navy Department did not hesitate to say that they did not want either one of the training stations opened, but simply wanted to put them in a closed-down condition, and increase the maintenance amount.

Mr. BRITTEN. Will the gentleman yield for a further moment?

Mr. AYRES of Kansas. I yield.

Mr. BRITTEN. I appreciate the embarrassing position of the conferees when the Navy Department itself says that it has no use for Great Lakes, but my impression is that the best station of the three in the United States today, the one at Norfolk, the one at San Diego, and the one at the Great Lakes, is the Great Lakes station, and it has always turned out the best men for the Navy.

Mr. AYRES of Kansas. The gentleman will get no argument out of me on that question.

Mr. BRITTEN. I am sure of that, because the gentleman knows the Great Lakes as well as I do. During the war we had 55,000 boys in training at one time at Great Lakes station, and they were the finest manhood in the world, and they did their part during the war. They manned our merchant ships and our convoys at a time when the Navy Department was clamoring for men and could not get them any place. When the Shipping Board fell down in its training facilities and could not get men for the merchant marine during and after the war, they always resorted to the Great Lakes, and that station never failed them. Not only did we have 55,000 boys, but we had music for every ship that wanted it. We had a thousand musicians under John Philip Sousa. The Navy Department is making a great mistake in not reopening the Great Lakes station.

The buildings are permanent. They are thoroughly heated. They are the best type of training-station buildings

in the Nation, and they should be used. Standing in disuse is not economy. If the gentleman will pardon me for just a moment—and I am doing this for a purpose—I am trying to call to the attention of the Navy Department itself the fact that it is making a great mistake in refusing to acknowledge what the Great Lakes has done, and what the Great Lakes still stands for. Recruiting and training in the Midwest can be done more economically and more efficiently than in any other American locality. This is short-sighted economy.

Mr. AYRES of Kansas. I wish to state to the gentleman that we will have to try this out next year, and I am hoping we can succeed in convincing the Navy Department that we should have the Great Lakes Training Station, and I assure the gentleman that everything was done on the part of the committee to reach that kind of agreement, but it was impossible at this time in view of the fact that the Navy Department said that at this particular time they did not want either of these training stations opened. That is, Newport and the Great Lakes, and they said they could not use them; that the two stations at San Diego and Norfolk were all that could possibly be used at this time.

Mr. BRITTEN. I will take a little consolation from the words which the gentleman has used, "particularly at this time", and I hope next year the Navy Department will use better judgment.

Mr. AYRES of Kansas. I hope so myself.

Mr. SWICK. Will the gentleman yield?

Mr. AYRES of Kansas. I yield.

Mr. SWICK. Is it not a fact that the administration has seen fit to close both of these stations as an economy measure during the past year?

Mr. AYRES of Kansas. Oh, yes. There was an appropriation carried this fiscal year for that purpose, and the administration closed both Newport and the Great Lakes and asked that we not appropriate for them for 1935.

Mr. SWICK. Also we have their assurance that in the event there is necessity, those stations will be opened, especially the Great Lakes station?

Mr. AYRES of Kansas. Yes.

Mr. CONDON. Will the gentleman yield?

Mr. AYRES of Kansas. I yield.

Mr. CONDON. Did the committee receive assurance from the Department that the money appropriated for Newport would enable them to keep the station in such condition that training could be readily resumed if necessary?

Mr. AYRES of Kansas. No; but there was appropriated $65,000 for Newport and $62,000 for the Great Lakes; and they did say that if occasion should arise where they felt it was necessary to open the station, they could do so. That is the best we could do. We could not very well insist on the Navy Department taking on this expense of over $1,000,000 when they said they did not need those two stations. I assure the gentleman from Rhode Island that we did our very best for both Newport and the Great Lakes.

Mr. CONDON. May I say to the gentleman that I hope he will try to convince the Department that Newport should be opened up next year when he is convincing the Department that the Great Lakes should be opened?

Newport, as the gentleman well knows, is the oldest training station in the country, and is recognized as one of the best, if not the best, places to train boys for the Navy.

Thousands of them have been trained there not only during the World War emergency, but for many years before when it was the only training station anywhere in the country. These boys trained at Newport have borne an excellent reputation in the Navy as any officer of the fleet will testify.

This is a station that from any point of view, even that of economy, ought to be kept open and in operation. The fine modern plant in existence there is a source of great expense without a corresponding return to the Government when not actually in use for training, and it is difficult to understand the attitude of the Navy Department as reported by the gentleman here today. However, it is reassuring to hear the gentleman say he is going to attempt to convince the Department to change its policy with regard to these stations next year, and I hope that means he will do as much for Newport as for the Great Lakes.

Mr. AYRES of Kansas. I certainly will do so.

Mr. BLANCHARD. Will the gentleman yield?

Mr. AYRES of Kansas. I yield.

Mr. BLANCHARD. Am I right in my understanding that the Navy Department made the recommendation that neither Newport nor the Great Lakes be made use of during the coming year, and that the recommendations of the Navy Department were followed in that respect?

Mr. AYRES of Kansas. Yes; that is correct.

The SPEAKER. The question is on the motion of the gentleman from Kansas [Mr. AYRES].

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Page 30, line 1, amendment no. 18: "*Provided*, That the cost of printing historical and naval documents, including composition, clerical copying in the Navy Department, and other preparatory work shall be charged to the 'naval supply account fund' not to exceed $10,000 at any one time, and this fund shall be reimbursed from the receipts therefrom when copies are sold to the public by the Superintendent of Documents and from applicable appropriations when copies are issued to the several departments and establishments: *Provided further*, That the Superintendent of Documents is hereby authorized to sell copies to the public at the prorated cost, including composition, clerical work of copying in the Navy Department, and other work preparatory to printing without reference to the provisions of section 307 of the act approved June 30, 1932 (U.S.C., supp. VI, title 44, sec. 72a); and that the 'usual number' for congressional distribution, depository libraries, and international exchanges shall not be printed."

Mr. AYRES of Kansas. Mr. Speaker, I move that the House recede from its disagreement to Senate amendment no. 18 and agree to the same with an amendment.

The Clerk read as follows:

In lieu of the matter inserted by said amendment insert the following: "*Provided*, That in addition to the appropriation herein made for the Office of Naval Records and Library, there is hereby appropriated $10,000 to begin printing historical and naval documents, including composition, clerical copying in the Navy Department, and other preparatory work, except that the 'usual number' for congressional distribution, depository libraries, and international exchanges shall not be printed, and no copies shall be available for free issue: *Provided further*, That the Superintendent of Documents is hereby authorized to sell copies at the prorated cost, including composition, clerical work of copying in the Navy Department, and other work preparatory to printing without reference to the provisions of section 307 of the act approved June 30, 1932 (U.S.C., supp. VI, title 44, sec. 72a)."

Mr. BRITTEN. Mr. Speaker, will the gentleman yield?

Mr. AYRES of Kansas. I yield.

Mr. BRITTEN. As I understand the amendment just read it materially changes the language of the Senate amendment, which in itself provides no appropriation out of the Treasury, but allows other Navy Department funds to be used; whereas the gentleman's amendment makes a direct appropriation for this object.

Mr. AYRES of Kansas. Yes; and the reason for it is that we want the specific appropriation made instead of having a revolving fund.

Mr. BRITTEN. So the item will not be in the nature of a revolving fund; and money received from the sale of documents hereunder will be covered directly into the Treasury.

Mr. AYRES of Kansas. Yes; that is right.

Mr. BRITTEN. And each year an appropriation will be made. The idea back of the amendment is to control the amount of money used for this purpose by appropriating for it each year instead of allowing a large revolving fund to be built up.

Mr. AYRES of Kansas. The gentleman's statement is correct.

The SPEAKER. The question is on the motion of the gentleman from Kansas.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Amendment no. 22: Page 38, line 25, strike out "$176,040" and insert "$238,410."

Mr. AYRES of Kansas. Mr. Speaker, I move that the House recede and concur.

Mr. BRITTEN. Mr. Speaker, will the gentleman yield for a question?

Mr. AYRES of Kansas. Certainly.

Mr. BRITTEN. Will the gentleman from Kansas be good enough to indicate what brought about this increase of some $50,000 or $60,000? I am interested in the pay of the professors at the Naval Academy—not only the pay but some of them were discharged.

Mr. AYRES of Kansas. I may say to the gentleman from Illinois that I will explain that in connection with the next amendment, no. 23.

The SPEAKER. The question is on the motion of the gentleman from Kansas.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Amendment no. 23: On page 39, line 5, strike out "June 30, 1933" and insert "June 27, 1933, and the Secretary of the Navy is authorized to reinstate the civilian instructors released subsequent to such date, and so much of the above amount as may be necessary for the payment of the instructors so reinstated shall be immediately available."

Mr. AYRES of Kansas. Mr. Speaker, I move that the House recede from its disagreement to Senate amendment no. 23 and agree to the same with an amendment.

The Clerk read as follows:

Amendment no. 23: In lieu of the matter inserted by said amendment insert the following: "June 27, 1933, except that the Secretary of the Navy is authorized to employ eight additional civilian instructors."

Mr. BRITTEN. The language just read provides for eight additional civilian instructors.

Mr. AYRES of Kansas. That is correct.

Mr. BRITTEN. Are they the instructors who have been discharged? Will the instructors who were discharged be reinstated, or will new instructors be appointed?

Mr. AYRES of Kansas. I may say to the gentleman from Illinois that 12 were discharged. Four have been reinstated and are being paid out of the athletic fund. Provision is made in this amendment for eight additional.

Mr. BRITTEN. Then the entire 12 who were discharged will be reinstated?

Mr. AYRES of Kansas. Of the eight others who were discharged not necessarily the same ones will be reemployed; but eight additional professors have been provided for.

Mr. BRITTEN. And if the Naval Academy authorities desire, they may reappoint the original instructors who were discharged?

Mr. AYRES of Kansas. The gentleman is correct.

Mr. BRITTEN. And is the House amendment in line with the recommendation of the Navy Department?

Mr. AYRES of Kansas. That is my understanding. To be more specific, as already stated.

This amendment and amendment no. 23 are related. It will be recalled that when we went to the four-appointment basis the number of civilian employees and civilian professors and instructors at the Naval Academy were increased. Since we reverted to three appointments we have been endeavoring gradually to get back to the former number of such classes of civilian assistants. We had arrived at the point of stabilizing the civilian professors at the former level last year, which meant dispensing with 12 of them, when it was urged that owing to employment conditions generally more time should be allowed these men to make connections with other institutions of learning. On the strength of that argument we appropriated to carry these 12 professors during the present fiscal year. After the bill became law the economy program of the administration made necessary their release and 12 others besides—24 all told. Four of the 24 have since been reemployed. The Senate proposed to provide for the reemployment of the remaining 20. Only eight of them are needed to bring the number up to the number we had before we went on the four-appointment basis, and the amendment I have offered makes provision, and it is not mandatory, for the reemployment of the eight.

The SPEAKER. The question is on the motion of the gentleman from Kansas.

The motion was agreed to.

LILLIAN D. WALD

Mr. CELLER. Mr. Speaker, I ask unanimous consent to proceed for 3 minutes.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. CELLER. Mr. Speaker, on Saturday next, the 10th of March, Lillian D. Wald, of my city, will be 67 years of age. I desire in this historic Chamber to give recognition to the anniversary of her birth because of her eminent attainments.

Lillian D. Wald is a social worker of international fame. In 1893 she founded the Henry Street Settlement in New York, one of the most powerful centers of its kind in the country. She has been a leader in numberless movements to improve our city civilization. She organized the public health nurses; she originated the idea of the United States Children's Bureau; she sent nurses into the public schools; she has helped educate thousands of problem children; she has taken boys and girls off the streets of my city and elsewhere and helped them to become proficient in the arts and crafts.

Her vision and courage have been largely responsible for the legislation resulting in the minimum wage, workmen's compensation, the protection of women and children in factories, and the abolition of child labor.

I draw attention to the fact that she has just completed a book called "Windows on Henry Street." It is indeed the story of an epoch in American civilization and the summation of a noble career. It will be published on her birthday, this Saturday. It will be the autobiography of a great lady.

The Governor of the State of New York, Herbert Lehman, says of her the following:

Miss Wald is, by character and achievement, one of the outstanding women of our time. Her career has been one of rare nobility; her life has been marked by broad philanthropic and civic interests.

She ranks with such personages as Jane Addams, Susan B. Anthony, Florence Nightingale, Frances Willard, Harriet Beecher Stowe, Elizabeth Cady Stanton, Lucretia Mott, Emily Dickinson, and other great benefactresses of modern times.

If I may use the words of the great Biblical prophet Micah, she does justice, loves mercy, and walks humbly before her God; and, indeed, her nobility of character, and her initiative, courage, and vision are ample and sufficient answer to the mendacious and insidious Nazi propaganda now being spread on this side of as well as on the other side of the Atlantic. She is of the race of Abraham, Isaac, and Jacob. [Applause.]

THE LIFE OF MISS LILLIAN WALD

Mr. DICKSTEIN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of Miss Lillian D. Wald.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. DICKSTEIN. Mr. Speaker, in the midst of our legislative duties and while considering appropriations for our Government, let us pause for a moment to contemplate the life and work of an esteemed, honorable woman, who has given her life so that the poor and down-trodden may find their lot happier and less burdensome.

Forty years ago Lillian Wald founded the Henry Street Settlement in New York, which was the beginning of other similar social centers throughout the country. From the organization of this settlement there arose other public movements inspired by this indomitable woman, who con-

tinued for all these years as the head and brains of this movement. She organized the system of public-health nursing; she originated the idea of children's bureaus in our Government. In the garden behind Henry Street, where the settlement was founded, she built the first playground in the New York tenements; she sent trained nurses into the public schools; she sent the poor and undernourished children of the East Side of New York to summer camps; she took the boys and girls off the streets and helped them to become proficient in the arts and the crafts.

The Henry Street Settlement is of particular interest to me, because of the fact that it is situated in my congressional district, and so many of the residents of my district owe to it the substance that they have become useful and law-abiding citizens. The settlement has forever played a more than ordinary part in the life of my community. Thither have come many men and women who in years to come were to make their mark in our public and social life. The Henry Street Settlement helped them to become independent and proficient.

The personality of Lillian Wald is such as to call for a comparison with another great American woman, Jane Addams, who in another sphere of social activity has likewise done so much to make the world a better place to live in. It is women like Miss Wald and Miss Addams who stand in the forefront of social work in this country, and whose influence is felt in nearly every home, be it in the city or on the farm, and whose devotion to duty are forever a shining example as to what can be done for the uplifting of humanity if one but devotes his life, energies, and all the best in him to the task.

A recent book by Miss Lillian Wald entitled "Windows on Henry Street" depicts vividly the philosophy which animated Miss Wald who has been looking out through the windows of her house on Henry Street and observing the world as it was passing by her window.

Henry Street may be a narrow thoroughfare on the lower East Side of Manhattan, but with all that it presents more than a growing section of American life in all of its ramifications and stages. Miss Wald's observations have been reflected in this book of hers through years of service on Henry Street and has emerged a marvelously understanding woman.

Twenty years ago Miss Wald compiled another book dealing with the life of the people of her own life on Henry Street. The House on Henry Street told the story of what she and her associates were trying to accomplish 2 decades ago, but the book which was now published shows the changes which have been wrought by the work of Miss Wald in the last 2 decades which followed. The book is not only a monument to the untiring zeal and energies of Miss Wald but is a decisive and unstinting record of the efforts of a noble character to build up a humane civilization on Henry Street. Each page of the book vibrates with the thrill of a unique personality. Miss Wald says that she is not writing an autobiography, particularly since she believes that no autobiography is wholly true, but she has captured the spirit of an era and anyone who will in later years be called upon to write the history of New York's East Side will have occasion to use Miss Wald's book as a documented historical essay which will throw a new light on the facts and conditions with which the world has become familiar.

As has been said before, the object of Miss Wald's book was to demonstrate in tangible form what changes have taken place on Henry Street since the World War. She describes at some length how the settlement has influenced the mothers of the neighborhood and through them the homes and the children. She tells very vividly of the many notables from other countries who have come to Henry Street to observe its methods and study its influence on the environment which the settlement is called upon to serve. There are scores of anecdotes and tales of incidents scattered throughout the book about Henry Street, its neighbors, its fixtures, its gifts, and its well-wishers. Also the history of those who did not appreciate the effort of the founders of the settlement because of a lack of vision or because the lack of an appropriate background and who have since come to see the error of their ways and how interesting the community has been made through the efforts of the Henry Street Settlement.

In addition to the settlement on Henry Street, which organization is now pretty much established in social service, Miss Wald's achievements consist of having established a visiting nurses' service, which is an important feature of the settlement, not duplicated elsewhere. This service is open to rich and poor alike, but, of course, it is the poor who get its lasting benefits. It is the visiting nurses' service which has been developed with a large degree of efficiency and which has become a model for similar service, not only in the city of New York but elsewhere in the United States, and, in fact, in other countries of the world, which like England and France stress a great deal the relationship of the individual to the community.

Miss Wald was not opposed to prohibition at the time the prohibition mania was taking hold of the American public and the eighteenth amendment was being written into the Constitution of the United States. In fact, Miss Wald found that prohibition was helpful to the masses, but now that prohibition has been repealed Miss Wald feels that in the duty of keeping the American people free from the excesses of inordinate drinking a campaign should be courageously conducted by agencies interested in the cause of temperance.

Miss Wald's whole life and her career, both individually and in collaboration with the many able organizers she has assembled around her on Henry Street, have been noble, unflinching, and capable of emulation. Since her work on Henry Street began, 40 years have rolled across the American scene, a new generation, in fact two new generations have grown up around Miss Wald, each generation different from the preceding one with new problems and new methods of attacking them. Through it all Miss Wald stood serene and confident that the organization to which she had given her life, while it may change its form and while it may call for different efforts with the changing passage of time, still remains essentially unimpaired by all that the world has had to offer since. The organization of Miss Wald will go on in spite of the many changes in the American scene and the difference in outlook by successive generations of Americans.

In the years of Miss Wald's activities many changes have come over the East Side of New York. From being a home for immigrants from many European countries the district has become more American in the last 40 years. The stock which remained on the East Side has all the virtue and vices of an American community found anywhere from Portland, Maine, to Portland, Oreg. The men and women are no better than they are anywhere else, nor are they worse. Mostly hard-working individuals who spend their time in daily toil accustomed to a genuine and unqualified home life, these inhabitants of the East Side have become the real backbone of the country. As a type they are sturdier, more devoted to the interests of their fellow men, and more helpful to their neighbors. Miss Wald has been through it all; through years of immigration from Europe and years when immigration from Europe has virtually come to a standstill. Miss Wald has toiled with men and women of many races, and she was called upon to solve the problems of many men and women. Her work now is given to a population which is more homogeneous than at any time in the history of the East Side; her unflinching courage and great devotion to duty will remain unimpaired in the service of humanity, irrespective of race, creed, or nationality.

WAR DEPARTMENT APPROPRIATION BILL, FISCAL YEAR 1935

Mr. COLLINS of Mississippi. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H.R. 8471) making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1935, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H.R. 8471, the War Department appropriation bill for the fiscal year 1935, and for other purposes, with Mr. LANHAM in the chair.

The Clerk read the title of the bill.

The Clerk read as follows:

AIR CORPS

AIR CORPS, ARMY

For creating, maintaining, and operating at established flying schools and balloon schools courses of instruction for officers, students, and enlisted men, including cost of equipment and supplies necessary for instruction, purchase of tools, equipment, materials, machines, textbooks, books of reference, scientific and professional papers, instruments, and materials for theoretical and practical instruction; for maintenance, repair, storage, and operation of airships, war balloons, and other aerial machines, including instruments, materials, gas plants, hangars, and repair shops, and appliances of every sort and description necessary for the operation, construction, or equipment of all types of aircraft, and all necessary spare parts and equipment connected therewith and the establishment of landing and take-off runways; for purchase of supplies for securing, developing, printing, and reproducing photographs in connection with aerial photography; improvement, equipment, maintenance, and operation of plants for testing and experimental work, and procuring and introducing water, electric light and power, gas, and sewerage, including maintenance, operation, and repair of such utilities at such plants; for the procurement of helium gas; for travel of officers of the Air Corps by air in connection with the administration of this appropriation, including the transportation of new aircraft from factory to first destination; salaries and wages of civilian employees as may be necessary; transportation of materials in connection with consolidation of Air Corps activities; experimental investigations and purchase and development of new types of airplanes, helicopters and balloons, accessories thereto, and aviation engines, including plans, drawings, and specifications thereof, and the purchase of letters patent, application for letters patent, licenses under letters patent, and applications for letters patent; for the purchase, manufacture, and construction of airplanes and balloons, including instruments and appliances of every sort and description necessary for the operation, construction (airplanes and balloons), or equipment of all types of aircraft, and all necessary spare parts and equipment connected therewith, and during the fiscal year 1935, subject to the approval of the Chief of the Air Corps, transfers may be made from this appropriation to the appropriations contained in this act, entitled "Signal Service of the Army" and "Ordnance Service and Supplies, Army", for the procurement of aircraft radio equipment and aircraft armament, respectively; for the marking of military airways where the purchase of land is not involved; for the purchase, manufacture, and issue of special clothing, wearing apparel, and similar equipment for aviation purposes; for all necessary expenses connected with the sale or disposal of surplus or obsolete aeronautical equipment, and the rental of buildings, and other facilities for the handling or storage of such equipment; for the services of not more than four consulting engineers at experimental stations of the Air Corps as the Secretary of War may deem necessary, at rates of pay to be fixed by him not to exceed $50 a day for not exceeding 50 days each and necessary traveling expenses; purchase of special apparatus and appliances, repairs and replacements of same used in connection with special scientific medical research in the Air Corps; for maintenance and operation of such Air Corps printing plants outside of the District of Columbia as may be authorized in accordance with law; for publications, station libraries, special furniture, supplies and equipment for offices, shops, and laboratories; for special services, including the salvaging of wrecked aircraft, $22,396,453: *Provided*, That from the amount herein appropriated and the amount herein authorized for obligation not to exceed $3,150,206 may be expended for pay of civilian employees other than those employed in experimental and research work; not exceeding $10,000 may be expended for the procurement of helium from the Bureau of Mines, of which sum such amounts as may be required may be transferred in advance to that Bureau; not exceeding $3,848,824 may be expended for experimental and research work with airplanes or balloons and their equipment, including the pay of necessary civilian employees; not less than $8,486,600, which shall be available immediately, shall be expended for the production or purchase of new airplanes and their equipment, and accessories, of which $6,365,100 shall be available exclusively for combat airplanes, their equipment, and accessories; not less than $8,091,089 shall be expended, other than for pay of civilian employees, for aviation fuel and oil and for the repair and maintenance of airplanes and their equipment, spare parts, and accessories, and of such sum not exceeding $155,582, for expenditure for like objects, shall be transferred to the National Guard subappropriation contained in this act, entitled "Arms, Uniforms, Equipment, etc., for Field Service, National Guard", on account of 76 airplanes of the observation type, which shall be transferred from the Regular Army to the National Guard during the fiscal year 1935; and not more than $6,000 may be expended for settlement of claims (not exceeding $250 each) for damages to persons and private property resulting from the operation of aircraft at home and abroad when each claim is substantiated by a survey report of a board of officers appointed by the commanding officer of the nearest aviation post and approved by the Chief of Air Corps and the Secretary of War: *Provided further*, That in addition to the amounts herein provided for the procurement of new airplanes and for the procurement of equipment, spare parts, and accessories for airplanes, the Chief of the Air Corps, when authorized by the Secretary of War, may enter into contracts prior to July 1, 1935, for the procurement of new airplanes and for the procurement of equipment, spare parts, and accessories for airplanes to an amount not in excess of $3,000,000, and his action in so doing shall be deemed a contractual obligation of the Federal Government for the payment of the cost thereof: *Provided further*, That the sum of $101,560 of the appropriation for Air Corps, Army, fiscal year 1932, shall remain available until June 30, 1935, for the payment of obligations incurred under contracts executed prior to July 1, 1932.

Mr. BULWINKLE. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it seems to me that this House and this Congress should take some steps to stop the recurrence of events which has transpired in the last few years in regard to the purchase of airplanes. I think it is a rather pitiful proposition for the newspapers of this country to carry news dispatches that the contractors or the men from whom the War Department purchased airplanes felt so sorry for the way they treated the War Department they gave them 50 extra planes at $1 apiece.

Mr. VINSON of Georgia. That was the Navy Department.

Mr. BULWINKLE. Well, it applies to both. However, in both of these services there is no competitive bidding.

The Chief of the Air Corps of the Army can purchase when he pleases and where he pleases regardless of the price or the character of the machines. These investigations that are now before the Military Affairs Committee will show some of the disgusting contracts that have been let by these departments.

Mr. Chairman, I have an amendment in my pocket, but I know that under the rules of the House a point of order will lie against it and it will go out, but may I ask the chairman of the subcommittee why, in order to protect the United States Government and the Service, he does not propose some legislation which would open this bidding to the public? There are airplane concerns that would enter competitive bidding and furnish the War Department the machines that should be furnished. Nothing is done by them except to allow some officer upon his whim to buy airplanes.

Mr. MARTIN of Oregon. Will the gentleman yield?

Mr. BULWINKLE. I yield to the gentleman from Oregon.

Mr. MARTIN of Oregon. I know the gentleman from North Carolina wants to be absolutely fair. The gentleman knows, I am sure, that the Chief of the Air Service has nothing to do with the purchase of airplanes.

Mr. BULWINKLE. Who has?

Mr. MARTIN of Oregon. The Assistant Secretary of War.

Mr. BULWINKLE. Who makes the recommendation to the Secretary of War?

Mr. MARTIN of Oregon. Congress provided that the purchase should be in the hands of civilians and placed this matter absolutely in the hands of the Assistant Secretary of War. On yesterday I made a speech covering the point completely and I hope the gentleman will read it. The Chief of the Air Service has nothing to do with the matter. The Assistant Secretary of War has jurisdiction over the entire situation.

Mr. VINSON of Georgia. Will the gentleman yield?

Mr. BULWINKLE. I yield to the gentleman from Georgia.

Mr. VINSON of Georgia. For the information of the House and the gentleman from North Carolina, I may state that all airplane engines, accessories, and everything connected with them are procured under the 1926 procurement law.

Mr. BULWINKLE. The gentleman is Chairman of the Naval Affairs Committee?

Mr. VINSON of Georgia. Yes. I had a voice in writing the bill, together with the Chairman of the Military Affairs Committee, and, as far as the Navy is concerned, the contracts have been let in accordance with that law. I grant that a condition has arisen whereby the manufacturers are taking advantage of the situation. To correct this a bill

passed the Senate yesterday requiring one fourth of all the Navy planes to be built in navy yards or manufacturing plants established for this purpose in an effort to bring about sharp competition.

Mr. BULWINKLE. But the other three fourths may be bought from anyone?

Mr. VINSON of Georgia. The gentleman is mistaken. They must be bought in accordance with the act of 1926.

Mr. BULWINKLE. Then how was it they had such sympathy for the Navy Department that they sold them 50 airplanes at $1 apiece?

Mr. McFARLANE. That was the Consolidated Aircraft.

Mr. FITZPATRICK. The law of 1926 made it competitive, but specifications were drawn so that only a couple of companies could bid.

Mr. VINSON of Georgia. The gentleman is clearly mistaken.

Mr. COLLINS of Mississippi. Mr. Chairman, I rise in opposition to the amendment.

A bill was passed by Congress in 1926 that provided for two methods of purchasing airplanes. The two methods were by negotiation and by competitive bidding, and were entirely different and dissimilar. Most of the planes have actually been purchased through negotiation instead of by competitive bidding, and this fact has been well known to the Congress every year since 1926 because the hearings of every appropriation subcommittee since that time have disclosed that fact.

The right to legislate is not within the province of the Appropriations Committee and should not be within the province of this committee. If corrective measures are to be presented to this House there is not a man here who will support such proposals any more enthusiastically than I will. However, may I say that this subject should not be taken up until it has been very carefully considered, because I have a fear that if we begin to buy planes through competitive bidding we will find that every single plane that we purchase will be of a type that has been obsolete 2 years before purchased. That is something that we are going to collide with when we begin to purchase planes through competitive bidding.

Here is the military and the naval problem. We want to buy planes in the military and naval service that are capable of making at least 250 miles an hour at 20,000 feet and that will excel that measure of performance, if practicable. I have used the seeming present maximum. Through negotiation a manufacturer or an individual can make an extensive improvement in an airplane——

Mr. BULWINKLE. Will the gentleman yield now?

Mr. COLLINS of Mississippi. Let me finish my statement—I have no disposition to argue with the gentleman.

An individual can invent a plane that is capable of attaining a higher speed at a higher altitude than any previously developed, and then the Army or the Navy can experiment with it and if they find it is the type that is needed to put us in the forefront of the nations of the world or that it is better than anything we have today, then they can buy them in quantity through negotiations. What would be the sense of putting out an advertisement for a plane of that particular type since there is but one source of supply, one manufacturer? None whatever.

Mr. BULWINKLE. Who says there is just one concern?

Mr. VINSON of Georgia. Will the gentleman yield there?

Mr. COLLINS of Mississippi. I have only 5 minutes.

Mr. VINSON of Georgia. Before the negotiated contract is made, there has been design competition?

Mr. COLLINS of Mississippi. Absolutely.

I will yield now to the gentleman from North Carolina.

Mr. BULWINKLE. The Comptroller General does not pass upon that contract.

Mr. COLLINS of Mississippi. That is the fault of the law. I think as does the gentleman——

Mr. BULWINKLE. Since it is the fault of the law, will the gentleman agree for me to introduce an amendment now and not raise a point of order against it?

[Here the gavel fell.]

Mr. BRITTEN. Mr. Chairman, I ask unanimous consent that the gentleman may have 5 additional minutes.

Mr. KELLER. Make it 10 minutes. I want to know about this matter.

Mr. COLLINS of Mississippi. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. BULWINKLE. Will the gentleman agree not to raise a point of order against such an amendment?

Mr. COLLINS of Mississippi. I have no objection to the gentleman offering an amendment.

Mr. BULWINKLE. I am not asking the gentleman to violate the rules of the House where it would do the House or anybody else any harm.

Mr. COLLINS of Mississippi. The Appropriations Committee gets in bad favor every time it proposes legislation on an appropriation bill. We have a most efficient Naval Affairs Committee and a most efficient Military Affairs Committee. They are both going into this subject now and I am certain that there will be legislation forthcoming in line with the gentleman's views as well as my own.

Mr. BULWINKLE. The gentleman admits this amendment should be in the bill?

Mr. COLLINS of Mississippi. I think the Comptroller General ought to have some say in such matters, I will say to the gentleman.

Mr. BULWINKLE. Then why not give him that say-so?

Mr. COLLINS of Mississippi. I have no objection to that.

Mr. VINSON of Georgia. But the gentleman does not admit that the Government should be required, in view of the constant improvement in aviation, to accept the lowest contract?

Mr. COLLINS of Mississippi. I do not want the Government to become committed to a policy under which we would buy airplanes under a system that would mean that we could get airplanes 2 years out of date when we get them. That is the situation I fear. This country ought to have as swift and as effective airplanes as any country in the world.

Mr. BULWINKLE. Has it got them?

Mr. COLLINS of Mississippi. And we will never get them under a competitive system of procurement, I will say to the gentleman.

The committee, in the consideration and presentation of this bill, has not been unmindful of the recently alleged irregularities respecting airplane procurements actually made and projected, as well as other classes of procurement. These matters are under investigation by the appropriate agencies of the Government—legislative, executive, and judicial. The committee, of course, could exercise its right under the rules and offer some restrictions of a remedial character to the appropriation now proposed, but it has not done so because it is confident that the appropriate legislative committee will present to the House such remedial legislation as it may determine to be appropriate and wise and in time to become law before the appropriations proposed in the accompanying measure may be obligated. Moreover, that is the appropriate and more effective way to legislate. The committee's first impulse was to withhold the presentation of the accompanying bill until the investigation of Army procurement matters by the local grand jury had been concluded. However, in view of the active and aggressive inquiry that has been launched by the Military Affairs Committee, such a course would not now appear to be justified.

What is the most appropriate course for the procurement of airplanes is a highly controversial question. The Government must be protected against the payment of unreasonable prices, but, at the same time, in our zeal to attain that end we should guard against taking steps that might prevent equipping the defense arms with the best airplanes it may be practicable to obtain. Airplanes are weapons, just as much so or potentially so as any yet evolved, and we would do national defense irreparable harm should we

make it impracticable to procure the best that science and industry may be able to produce.

As to aeronautical accessories not integral parts of planes or engines, and not actually and necessarily of a proprietary nature, as well as all other classes of procurement, the committee feels that purchases should be made in accordance with the procedure established generally by law for the making of procurement contracts. Moreover, it is of the opinion that to the greatest possible extent regular commercial products should be bought without requiring the embodiment therein of special features beyond such as the using branches may determine to be essential in a strict military sense and not merely to satisfy the whim or fancy of some individual. It is hoped and expected that such legislation as may be proposed will include appropriate provision touching such classes of procurement.

Mr. BLANTON. Mr. Chairman, I do not blame our friend from North Carolina for getting off of his system that which rested upon it heavily. Every one of us has on his system right now just what was bothering the gentleman. We all want to stop dishonest contracts from being imposed upon this Government—every one of us—but my distinguished friend from North Carolina has been here a long time and knows that the Committee on Appropriations is not a legislating committee. It cannot legislate.

Mr. BULWINKLE. Will the gentleman yield?

Mr. BLANTON. I will yield in just a moment, after I have completed what I was saying.

We cannot put one single word on this bill or any other appropriation bill that in any way changes existing law unless it comes within the Holman rule or is put on as a limitation. We cannot change the law in any particular, because this is an appropriating committee strictly, and any legislation would be subject to a point of order. Every bit of legislation that affects the War Department must come through the committee presided over by our distinguished friend the gentleman from South Carolina [Mr. McSWAIN].

I now yield to the gentleman from North Carolina.

Mr. BULWINKLE. If someone offers such an amendment, will the gentleman from Texas and the gentleman from Mississippi not raise a point of order against it?

Mr. BLANTON. My friend knows that it is the duty of the Appropriations Committee, as a servant of this House, to obey the rules and keep legislation out of this bill, and if the Committee on Appropriations allow legislation to be offered from the floor, or should come in here and attempt to disobey the rules and attempt to put legislation on an appropriation bill that my friend did not agree with, he would be the first one to raise the point of order. The gentleman would be the first to censure the committee and would say that the servant is disobeying the orders of the master.

Mr. BULWINKLE. The House is the master.

Mr. BLANTON. Certainly. And it has given its orders to this committee. The Committee on Appropriations is nothing in the world but the servant of the House, limited in power under House rules, and the House has seen fit to provide its legislating committees, and prevents them from appropriating. The Committee on Naval Affairs is ably presided over by our friend from Georgia [Mr. VINSON] and his committee is the only committee that has the right or the power to bring in legislation affecting the Navy Department.

Mr. TABER. Will the gentleman yield?

Mr. BLANTON. Directly, I will gladly yield to my friend from New York. If you will look in the hearings on this bill, on page 738, you will see where the distinguished chairman of the subcommittee called attention to the fact that the very thing which is inveighed against by the gentleman from North Carolina, and which every Member of this House is likewise against, was then, and is now being investigated by the grand jury here under the direction of high officials of this Government; and that our chairman called attention to the fact that until that grand jury made a thorough investigation we should not report this bill, and we did not report it until such investigation was made.

You will further find on page 739 where the present Speaker on the floor called attention to the fact that it was his belief that the committee ought to go into that matter from top to bottom with its own investigation.

Only the other day we passed a resolution here giving carte blanche authority to Mr. McSWAIN's committee to investigate this entire subject. We appropriated the next day $10,000 and turned it over to his committee to make a thorough investigation of all irregularities in the War Department; and when Mr. McSWAIN gets through with the investigation not even my friend from North Carolina will object. Now I will yield to the gentleman from North Carolina.

Mr. BULWINKLE. If the entire Membership of the House, which you say is but the servant of the people, agrees to place an amendment on the bill——

Mr. BLANTON. I will make no point of order against it.

Mr. MARTIN of Oregon. I will make a point of order against it.

Mr. BLANTON. I am willing to safeguard the bill by any kind of legislation that will stop such transactions in the War Department.

[Here the gavel fell.]

Mr. BLANTON. Mr. Chairman, I ask for 5 minutes more.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. OLIVER of Alabama. Will the gentleman yield?

Mr. BLANTON. I yield.

Mr. OLIVER of Alabama. I think the gentleman from Texas will agree to the correctness of this statement: The attitude of the Appropriations Committee has been not to violate the rules of the House in putting legislative riders on an appropriation bill, but they have sometimes made this exception, that if the appropriate legislative committee, acting through its chairman, should ask that a rider be put on, and such rider is deemed proper and wise, we have not raised an objection and would probably not now as to the rider suggested, if offered by the Chairman of the Committee on Military Affairs.

Mr. BLANTON. That is a fact. If Mr. McSWAIN, by direction of his committee, should get up and ask that such a rider should be placed on the bill, I am sure there would be no objection, but it ought to come straight from the committee and not from my friend from North Carolina.

Mr. VINSON of Georgia. Will the gentleman yield?

Mr. BLANTON. I yield.

Mr. VINSON of Georgia. Let me say that the Committee on Naval Affairs has been making an investigation of the exorbitant cost of contracts with the Government. It is our intention and that of the Military Affairs Committee to formulate legislation bearing on this identical question.

Mr. BLANTON. I am glad to hear that. I am glad to hear that there is legislation to be brought in to stop these dishonest contracts. Everybody ought to be in favor of it; and I want to say that the matter is having careful investigation by the Military Affairs Committee. The gentleman from North Carolina, if he examines the RECORD for the last 17 years, will find that I have knocked out hundreds of legislative riders on appropriation bills by points of order.

Mr. BULWINKLE. And I dare say the gentleman has offered hundreds of riders to appropriation bills.

Mr. BLANTON. I may have offered some when they were particularly urgent. We have no right to put them on any appropriation bill, however, unless authorized by the House. The gentleman would censure us tomorrow for what he is asking us to do today.

Mr. HILL of Alabama. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. HILL of Alabama. As the gentleman has so well said, a subcommittee of the Committee on Military Affairs, by authority of a special resolution passed by this House a few days ago, is investigating this matter, going into it fully, spending hours every day at it.

Mr. BLANTON. Yes; and it is one of the ablest committees of this House.

Mr. HILL of Alabama. I thoroughly agree with the gentleman on that. The gentleman and this House may rest assured that that investigation will be expedited and that legislation will be brought to this floor just as soon as possible to correct the situation.

Mr. BLANTON. I know that the action of that McSwain committee when it comes on the floor will meet with the approval of the gentleman from North Carolina [Mr. BULWINKLE].

Mr. BULWINKLE. The gentleman is not willing for the press of the country to tell the public of the shameful condition existing?

Mr. BLANTON. All of us agree that the conditions are shameful. Is the gentleman letting the press get on his nerves?

Mr. BULWINKLE. Not at all; but the press gives information to the public. The press gave information to the public about an airplane concern that sold planes to the Navy Department and that then felt so sorry for the way they had cheated that they made a present of 50 planes to that Department at $1 apiece.

Mr. BLANTON. The press is not getting on my nerves. I want the press to let the public know all about such shady transactions when they exist, for that is the only way to stop it. I want the sunlight of truth thrown on all transactions of that kind, and I want to stop all such transactions.

Mr. VINSON of Georgia. Mr. Chairman, just to keep the RECORD straight, I want it understood that the sale was made to the War Department and not to the Navy Department, and then that concern gave the Navy Department so many planes at $1 each.

Mr. BLANTON. Be that as it may, the Government was cheated. If what has been going on in the Office of the Assistant Secretary of War for the last few months continues——

Mr. MARTIN of Oregon. Now, I say to the gentleman that he must not say the Chief of Staff or the General Staff.

Mr. BLANTON. If what has been going on in the Office of the Assistant Secretary of War for the last few months continues, then I shall want to abolish that Office. It has no business existing at all. Specifications have been redrawn in that Office that have permitted no competition whatever in the purchase of big supplies.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. TRUAX. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended 5 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. TRUAX. Mr. Chairman, will the gentleman yield——

Mr. BLANTON. Yes.

Mr. TRUAX. To ask the gentleman whether this House would not be justified in following the example set by the President of the United States and by Postmaster General Farley; when they found that there was collusion and fraud, they did not wait to apply regular procedure, but they acted, and they canceled those contracts.

Mr. BLANTON. And they did right under the light before them.

Mr. TRUAX. Then, would not this House be justified in doing likewise?

Mr. BLANTON. Certainly, but this House must move according to rules and precedents which are very ancient, that go back for 150 years.

Mr. TRUAX. But they did not move by precedent and tradition.

Mr. BLANTON. Oh, yes, they did. The President of the United States never does anything unless he is authorized by law to do it.

Mr. TRUAX. That is true, but he has done a great many unprecedented things under the new deal.

Mr. BLANTON. That is because he thinks for himself and not through commissions, but he has always tracked the law of the land.

Mr. TRUAX. And the Congress does not think for itself?

Mr. BLANTON. Oh, yes; we do. I have been here a good many years, and I have found out that it is best to have rules and regulations and precedents. I guarantee to my friend that every time this House does something, he will find some precedent authorizing it. When the Speaker the other day, on his own motion, sent the independent offices appropriation bill back to the committee, our friend from Oregon [Mr. MOTT] criticized him and said there was no precedent for it. I went to the library and got the RECORD and showed him where his own Republican Speaker, Mr. Longworth, had done that same thing. You will always find a precedent for what is done.

Mr. TRUAX. Mr. Chairman, will the gentleman yield again?

Mr. BLANTON. And I am very glad to remember a very important speech that our able colleague from Maine [Mr. BEEDY], a former distinguished prosecuting attorney of his State, made when he called attention to the necessity for moving according to law and according to rules and precedents. The safest plan in the world with any organization is to have rules and to have the right to do something. These legislative committees are going to do things. You do not have to depend upon an appropriating committee to bring out this legislation. Mr. MCSWAIN'S committee will bring out some legislation, and the Naval Affairs Committee will, under the direction of Mr. VINSON of Georgia, bring here some proper legislation; and if the situation is emergent, they will go to the Rules Committee and bring it out there under a rule immediately, and have debate upon it and pass it and let it become law. We can move swiftly in this House when we want to, but we can move swiftly according to law and to rules and precedents. We do not have to violate the rules. I yield to the gentleman from Ohio.

Mr. TRUAX. I want to make clear to the gentleman from Texas that I am heartily in accord with everything that the President of the United States has done. His acts have been upheld by the United States court, and I think that this House of Representatives should also establish some precedents by making right situations out of wrong ones.

Mr. BLANTON. Is that the gentleman's announcement for the United States Senate in Ohio? [Laughter.] I would rather have him make his announcement speech in his own time and not in my time. [Laughter and applause.] Announcing support of the President ought to be popular in Ohio.

Mr. TRUAX. Does the gentleman think that would be a good announcement to make?

Mr. BLANTON. I think it would be a pretty good announcement.

Mr. BROWN of Kentucky. The gentleman will have occasion on Monday to display his loyalty to the President.

Mr. BLANTON. Yes; and so will the gentleman from Kentucky and all the rest of us.

Mr. Chairman, I withdraw the pro forma amendment.

Mr. FISH. Mr. Chairman, I offer an amendment, which is at the desk.

The Clerk read as follows:

Amendment offered by Mr. FISH: On page 34, in line 3, strike out "$22,396,453", and insert in lieu thereof "$23,396,453."

Mr. FISH. Mr. Chairman, this is the amendment which I stated just before we adjourned last night that I proposed to introduce. It is an absolutely nonpartisan amendment. It calls for an additional million dollars in order to extend the flying time of the pilots of the Army Air Corps from 33 minutes per day to 41 minutes per day. In other words, from 200 hours per year to 250 hours per year. The approximate average of the commercial flyers and private-company flyers is 1,200 hours per year. My appeal is to Members on both sides of the House because the efficiency of the Army Air Corps and Army air-mail flying may be a political issue when you get back home in your own districts, either in the primaries or on election day. This is to give an opportunity to any Member who so desires, on either side of the House, to be able, when they ask you, "What did you do about it?" to say, "I voted the only time I

had an opportunity to promote the efficiency of the Army Air Corps and to get them up in the air and not keep them down on the ground with 30 minutes' flying per day."

This is purely a nonpartisan issue. There is no reason in the world why any Member of the House on either side should not support this amendment. There is no reason why they should follow the committee, after all the discussion we have heard in regard to the Army Air Corps and the efficiency or inefficiency of the Army pilots, even from the Speaker of the House, who deplored their lack of training in a public statement to the press.

Mr. O'CONNOR. Will the gentleman yield to me?

Mr. FISH. I yield, because last evening the gentleman made the statement that the Army Air Corps flyers did not want any additional time, or words to that effect.

Mr. O'CONNOR. I did not even indirectly say that. What I said was that for years the Rules Committee has been holding hearings about flying pay, and we have found in those hearings that some officers—I will not say all officers—went up in the air only during the minimum of the time required to secure the pay. There was also testimony that they could fly planes at other times if they so desired. There was also testimony that many of those officers made their minimum of flying time as passengers, not as pilots, and often on pleasure jaunts. That indifferent conduct was criticized openly at those meetings. In other words, it appeared to be apparent that some officers did the very minimum of flying and no more, just to get the flying pay, when there was in fact an opportunity to fly during some other time. Let me now ask the gentleman, How does the gentleman figure these minutes of available flying about which he is talking? I imagine the computation takes into consideration the cost of the operation of the planes during a year.

Mr. FISH. I got my information from the Army Air Corps. The present appropriation provides for 200 hours per year. My amendment provides for 250 hours. I understand the lady from Massachusetts [Mrs. ROGERS] intends to offer an amendment to my amendment, requiring 300 hours.

Now, I would like to answer the gentleman's other statements, if I may. The gentleman wants the House to believe that the Army Air Corps pilots only want to go up in the air the minimum amount of time. The gentleman asked that question last night, and I called up one of the high officials of the Army Air Corps today, and he stated to me that every pilot wanted more time to fly.

[Here the gavel fell.]

Mr. FISH. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. FISH. He stated that if you asked the pilots in the Air Corps, individually, they would all come before any committee of the House as a united front and say that they wanted and needed more time in order to be more efficient flyers. The Army Air Corps itself has no right to come before the Congress, under the rules and regulations of the Budget, but a high official of the Air Corps told me today, and I took his words down over the telephone and I have them before me, that the minimum required for efficient flying is 300 hours, and that every single pilot wanted more time to fly.

Mr. HILL of Alabama. Will the gentleman yield?

Mr. FISH. I yield.

Mr. HILL of Alabama. Would the gentleman mind stating who this high official was?

Mr. FISH. He gave me that information in confidence, and he explained to me that he was not able, under the Budget rules and regulations, to ask for more flying time; but I said to him, "Have you any objection to my taking your statement down and giving it to my stenographer as you gave it to me, so that I can use it in the House?" He said, "I have no objection to your taking it down, but you must not use my name." Therefore I do not want to embarrass any Army officer under those circumstances, and I hope the gentleman will not press for his name.

Mr. HILL of Alabama. I will not insist; but the gentleman speaks about Army pilots wanting to fly more. Of course, Army pilots love to fly as some gentlemen love to talk.

Mr. FISH. The truth is very often disagreeable to some gentlemen, but I am talking the truth on a nonpartisan basis.

Mr. HILL of Alabama. I want to ask the gentleman when he speaks about them wanting to fly——

Mr. FISH. Does the gentleman know any pilots in the Army who do not want to fly?

Mr. HILL of Alabama. Of course, they want to fly.

Mr. FISH. Then, that is the answer.

Mr. HILL of Alabama. But is it based on need or is it just because the pilots want to fly?

Mr. FISH. One of the best informed and one of the highest ranking officers in the Army Air Corps told me this morning that they need 300 hours' minimum time for flying, and that every pilot needs more time to fly; and I am giving an opportunity to the House to vote for 250 hours. The gentlewoman from Massachusetts [Mrs. ROGERS] will propose an amendment raising the time to 300 hours.

Mr. O'CONNOR. Mr. Chairman, will the gentleman yield?

Mr. FISH. I yield.

Mr. O'CONNOR. I rise merely to correct an impression the gentleman might have given the committee. I am not taking any partisan part in this controversy. I want to give the pilots all the time they will use and make them efficient; but I want them to use all the time available and not merely the minimum to obtain the 50-percent additional pay.

Mr. FISH. Mr. Chairman, I cannot yield further. The gentleman has made that statement twice in the last few minutes. The Air Corps authorities have said they need more time. They need a minimum of 300 hours; and this is contrasted with the 1,200 hours for the private pilots.

My amendment does not increase the pay of any of the Army air pilots. If they fly a minimum of 4 hours a month, or 3 hours a month, and make 10 landings, they are qualified to receive the 50-percent increase. My amendment does not affect that situation. That is done by Executive order; and the order already exists. My amendment seeks to prevent the Army Air Corps from being crippled and paralyzed by not having sufficient oil and gas to fly the planes more than half an hour a day. My amendment seeks to build it up to what it should be, one of the best air corps in the world; but unless adequate fuel and gasoline is provided, the Army air pilots will not have adequate time to fly and maintain their efficiency.

Mr. O'CONNOR. Mr. Chairman, will the gentleman yield?

Mr. FISH. Yes.

Mr. O'CONNOR. If the gentleman's amendment were adopted, would the 250 hours' flying time be mandatory; would it be a minimum, the noncompliance with which would not entitle the flyers to the increased pay? If it is mandatory, I shall vote for it.

Mr. FISH. I asked that question. I told the officer I referred to in the Army Air Corps that I intended to introduce an amendment to raise the flying time to 250 hours. He said, "Give us more than 250 hours; we need a minimum of 300 hours." I said, "Will you use every bit of 250 hours?" He said, "We will." "Could you use 300 hours?" He said, "We certainly could."

The Army air pilots need this additional time. That is the only question involved. If you are in favor of developing the Army Air Corps and making it efficient, vote for this amendment. Then when you go back home, and this whole question breaks out, you will at least be able to say, "I did my duty. I believe in an efficient Army Air Corps, and I voted to increase the appropriation by $1,000,000 to make the Army Air Corps at least 25 percent more efficient by providing that much more actual flying time."

[Here the gavel fell.]

Mr. MARTIN of Oregon. Mr. Chairman, I move to strike out the last word.

The gentleman from New York wants to take politics out of this subject. I shall join him in it; I shall vote for his amendment.

It is a notorious fact that the Air Corps, both the Regular Army Corps and the Reserve Corps, cannot perform their functions because we have pinched off on their gasoline and oil. I think probably every Member of this Congress, especially if he has any flyers in his district, has been told how ridiculous it is that they cannot fly because they cannot get the little gasoline and oil required. All that is involved in this is giving these flyers some more gasoline and some more oil.

Mr. FORD. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Oregon. Yes; I yield to the gentleman from California. We are going to use more California oil and gasoline.

Mr. FORD. Why was such objection stirred up last week when they were given this opportunity to get more flying experience through flying the air mail?

Mr. O'CONNOR. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Oregon. I yield.

Mr. O'CONNOR. I understand that by flying 4 hours a month the Army pilots get a 50-percent increase in pay under the flying pay law.

Mr. MARTIN of Oregon. This will not affect that at all.

Mr. O'CONNOR. That is what I am getting at. I am for giving them more time to fly if they will use it for that purpose; but there is nothing mandatory about this. We heard testimony to the effect that they flew as passengers just to put in flying time and get the increase in pay, but that is not flying. Now, if it is made mandatory that the Army air pilots must fly this additional number of hours, something will be accomplished.

Mr. MARTIN of Oregon. I read a letter the other day from that young boy in Ohio who wanted to fly. Half an hour a week is not flying time; he was forgetting how to fly. This situation applies to all of them. My God, what an unwise policy it is to pinch them off with such little gasoline and oil that they cannot get into the air! You criticize the efficiency of these men. Do not retard their becoming efficient by giving them too little material with which to work.

Mr. OLIVER of Alabama. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Oregon. I am very glad to yield to the gentleman from Alabama.

Mr. OLIVER of Alabama. I am very much in sympathy with the suggestion made by the gentleman from New York because of the fact the distinguished gentleman from Oregon who is so very familiar with the need of the Service states that additional funds are necessary to enable pilots to fly a greater number of hours which he thinks important to provide for. Without violating the rules of the House a proviso can be inserted in this bill providing that no pay shall be given to any man in the flying service who does not meet these minimum requirements.

Mr. MARTIN of Oregon. Certainly; and that should be done.

Mr. KELLER. What is the law at the present time?

Mr. O'CONNOR. Four hours a month.

Mr. McFARLANE. Mr. Chairman, will the gentleman yield?

Mr. MARTIN of Oregon. I yield.

Mr. McFARLANE. I think we should put a proviso in the amendment or in the bill limiting the flying time to not less than 10 or 12 hours per month.

[Here the gavel fell.]

Mr. COLLINS of Mississippi. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, this committee has been exceedingly liberal with the Air Corps. Every year for the last 2 or 3 years we have put a provision in this bill expressly providing that not less than the amount appropriated should be used for the purpose of purchasing gasoline and fuel for flying these planes.

Now, let us see what the situation is, because in our enthusiasm we do not want to do things that are utterly foolish. The situation with reference to planes is that we will have 958 planes at the end of the next fiscal year as against 1,375, estimated as the number that will be on hand at the end of the present fiscal year. In other words, we will have a considerably lesser number of planes in operation than will be operating during this fiscal year of 1934.

The result will be that, instead of having an average of 134 flying hours, the number this year by budgetry restriction, the amount in this bill will provide not for 200 flying hours but, in my judgment, for an average number well above 200. However, disregarding my personal views, using the Department's own figures, this bill provides for 200 hours for 1,247 commissioned officers; 200 hours for 6 commissioned Regular Army pilots other than Air Corps; 200 hours for 200 commissioned officers of the Organized Reserves on extended active duty; 40 commissioned Regular Army students, 265 hours; 188 Regular Army cadets, 265 hours; 2 warrant officers, 200 hours; and 25 enlisted pilots, Regular Army, 200 hours. There are in these categories many officers who fly two or more in a plane; and whenever that is done, it is tantamount to doubling up on flying. In addition quite a number of the 1,247 officers are not pilots but engage in flying under orders for one reason or another. I have known of Army officers who have flown as much as 25,000 miles in the course of a year. The difficulty with the gentleman from New York is that he seems to assume that a plane carries but one man. Frequently a plane carries as many as a dozen. All you have to do in order to draw flying pay is to fly a minimum of 3 hours per month; and so far as the nonflyers in the Army are concerned, there are many drawing flying pay who, through choice and because they are not pilots, actually fly but the minimum 3 hours. Of course, whenever flyers or nonflyers do not fly any more than enough to draw flying pay, it makes more money available for the other flyers.

[Here the gavel fell.]

Mr. COLLINS of Mississippi. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. KELLER. Will the gentleman yield?

Mr. COLLINS of Mississippi. I yield to the gentleman from Illinois.

Mr. KELLER. What does the gentleman mean by a flyer? Does he mean a man who sits in the plane and lets someone else do the work?

Mr. COLLINS of Mississippi. A doctor, for instance, in the Medical Corps draws flight pay whenever he is assigned to Air Corps duty and given flight orders.

Mr. KELLER. Is there not some way of having a man know how to fly before he is called a flyer?

Mr. COLLINS of Mississippi. Frequently a doctor has to go in the air; and if the real necessities of his work do not require him to be in the air as much as 3 hours, all he has to do to get his flying pay is to fly with somebody else for the length of time necessary to make up 3 hours.

Mr. KELLER. Why should a doctor go up in the air?

Mr. COLLINS of Mississippi. I cannot yield further.

Let me call attention to the further fact that the number of flying hours for which we provide corresponds with the number provided for the Navy. We are in exact agreement. This is approximately the same amount or perhaps a little more than the flyers of other countries receive. Last of all, the Chief of the Air Corps and his associates who appeared before the committee are satisfied with it, and frankly I am justified in saying that they do not want this amendment added to the bill.

Mr. MARTIN of Oregon. I take issue with that statement.

Mr. COLLINS of Mississippi. I have a letter that will come up here shortly saying that.

Mr. MARTIN of Oregon. I should like to see the letter.

Mr. FISH. I should like to see the letter, too.

Mr. COLLINS of Mississippi. They do not want it. They have not asked for it, and neither of these services have asked this committee for the amendment, but upon the military advice of one Member of this House, and only one Member, we are asked to insert in this bill something that the Air Corps of the Army has not asked for or the Chief of the Air Corps of the Navy has not asked for.

[Here the gavel fell.]

Mr. OLIVER of Alabama. Mr. Chairman, I ask unanimous consent that the gentleman be allowed to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. OLIVER of Alabama. Mr. Chairman, the gentleman has made a very interesting statement, and I regret that all Members could not have heard it. I recognize how difficult it would be to hurriedly draw an amendment to absolutely require that everyone drawing flight pay fly 250 hours a year, since, as the gentleman has pointed out, there are many in the Army who are not pilots but who draw flight pay. They are only required to fly the minimum time, whereas the pilots, by reason of the minimum time allowed to new flyers, are permitted to fly 2,000 hours in some cases. I understand there are some pilots in the Army who fly probably 2,500 hours. It seems that the head of the Service feels that the amount in this bill will permit these pilots to be adequately trained in flying if he is given the sum recommended, because he will distribute such sum on a fair basis between the flyers who are pilots and the flyers who are drawing flight pay but who cannot fly.

Mr. COLLINS of Mississippi. That is right.

Mr. Chairman, this committee has treated the Air Corps just as well as we feel we should and we think is necessary. We have added a million dollars to the Air Corps of the Army and we have added it at the place they say they can best use it. There are many other places in this bill that a million dollars could be expended and with greater profit than at the place indicated by the gentleman from New York. So when we consider these matters for the benefit of the Air Corps, let us consult the Air Corps about them before we go ahead and make changes.

[Here the gavel fell.]

Mrs. ROGERS of Massachusetts. Mr. Chairman, I offer a substitute amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mrs. ROGERS of Massachusetts as a substitute for the amendment offered by Mr. FISH: On page 34, line 3, strike out "$22,396,453" and insert in lieu thereof "$24,396,453."

Mrs. ROGERS of Massachusetts. Mr. Chairman, this amendment would provide for 300 flying-hours for our pilots. When you contrast this with the number of hours that the commercial flyers are allowed per month, 75 to 100 hours, the 300 hours a year per pilot is really a very small number of hours. We know that flying is very hazardous. We know that only recently our Army pilots have been called upon to perform a very hazardous duty in winter weather. As a result, six aviators went to their death and several hundred thousand dollars' worth of equipment was destroyed.

My mind goes back some years ago to the floods in New England and Vermont, when my constituent, Lt. Richard Cobb, was asked, and he was delighted to do so, to fly Gen. Preston Brown over the Vermont mountains in the ice and snow in order to help the people in the flooded area. He should have been decorated for great bravery and skillful flying. There were no landing fields, and General Brown said that this man seemed to land almost on the side of a hill. We who have flown over the Vermont mountains and their narrow valleys can therefore realize the value of practice. Lieutenant Hagenberger has taught and is teaching air navigation. He has twice been decorated for extremely distinguished service. He has taught hundreds of men air navigation, but they must have practice in utilizing that knowledge.

How can our fliers really learn air navigation and the use of air instruments if they do not have the necessary practice? They need a great deal of practice to become perfect in night flying. This they cannot now have. Our Army fliers must be considered pilots after only 200 hours in the air, when no commercial pilot is accepted for commercial flying until he has had 2,000 hours in the air.

Let us go back to 1915, when I saw in San Diego the only airplane which the Army owned that would leave the ground, piloted by Captain Taliferro with great difficulty. The following week that airplane crashed with Captain Taliferro, not because he was a poor pilot but because we had only an obsolete airplane for him. It was scandalous at that time, because our pilots were given such bad planes and so little training.

You all know that during the war practically not a single American airplane went to France, and our pilots had to fly French airplanes, a humiliation for the richest country in the world and unfair to the French, who needed their own planes.

You all know that after 1921 the appropriations were somewhat increased, as Congress felt it was not fair to require men to fly without proper equipment, proper airplanes, and sufficient training. It may interest the House to have the list of appropriations for Army aviation since 1921. It is as follows:

Appropriations for the Air Corps

1921	$35,124,300
1922	25,298,333
1923	12,865,000
1924	12,426,000
1925	13,258,044
1926	17,850,000
1927	15,900,000
1928	22,191,300
1929	26,435,157
1930	32,440,758
1931	38,043,877
1932	31,479,635
1933	25,439,131
1934	[1] 26,324,185

To answer the gentleman's statement that the Army airmen do not want to fly, I know that time after time I have asked the men who are on duty at their desks here in Washington if they could perform some duty, such as coming to Massachusetts to speak, or to do something in connection with air activities there, and their reply has been, "We cannot leave our desks; we do not have enough flying hours." This was not said to me for the sake of securing added appropriations, but was simply said as a statement of fact. Reserve pilots have told me the same thing.

The whole country, as we know, is aroused over the death of the pilots in connection with the Army's carrying the air mail. It is up to the Members of Congress to give the Air Service the money in order that it may have the necessary amount of oil and gas in order to practice flying. Practice counts more than anything else in this very hazardous service we expect our men to give.

Mr. Chairman, I know there is not a man here who would willingly send any other man's son to his death because he was not properly equipped, and I earnestly hope you will support this amendment.

Mr. HILL of Alabama. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I think all of the members of the committee want to provide sufficient funds for the Air Corps of the Army to have the necessary flying to reach the maximum efficiency and to provide also the maximum amount of safety for our pilots. It seems to me that the question is how much flying is needed to meet these conditions.

The gentleman from New York [Mr. FISH] has offered an amendment increasing the appropriation by $1,000,000 to provide 250 hours of flying per annum for each pilot in the Air Corps. The gentlewoman from Massachusetts has introduced an amendment to provide sufficient money so that each pilot would have 300 hours of flying each year.

[1] Of this amount only $11,599,672 could be used, as the difference was impounded under the economy measure

The gentleman from New York [Mr. FISH] has referred to a conversation he had with a high-ranking officer of the Air Corps, but does not give us the name of the officer. I find in the hearings before your subcommittee on the War Department appropriation bill the testimony of General Foulois, Chief of the Air Corps, which, I think, throws light on the subject and will certainly warrant the committee in adopting the amendment offered by the gentleman from New York [Mr. FISH].

On page 448 of the hearings we find this testimony of General Foulois:

General FOULOIS. It is desired to again point out to the committee certain pertinent facts in connection with annual flying hours and fatal aircraft accidents. In the past years that aircraft-accident studies have been conducted, it has been obvious that there is a pronounced relation between the hours flown and the number and rate of aircraft accidents and fatalities. Since 1928 all aircraft-accident studies have been conducted in accordance with a standard method developed by the National Advisory Committee for Aeronautics. This method is also followed by the Navy and Commerce Departments, and a frequent comparison of the results obtained by these three Departments, as well as the results obtained by the Air Corps over this period of years, indicates that the method used is very reliable.

It is a noticeable fact in studies made since January 1929 that, as the flying hours increased, the fatal-accident rate and fatalities decreased, and, conversely, when the flying hours decreased, as of the fiscal year 1932, the fatal-accident rate and fatalities increased, and in the fiscal year 1933, when the flying hours increased, the fatal-accident rate and fatalities decreased.

Mrs. ROGERS of Massachusetts. Will the gentleman yield?

Mr. HILL of Alabama. Yes.

Mrs. ROGERS of Massachusetts. Is it not also true that this really is a matter of economy, because it is extremely expensive to lose a plane?

Mr. HILL of Alabama. It is the best economy in the world, not only because it involves human life, but it involves property that costs this Government thousands of dollars.

General Foulois goes on to state:

The studies made indicate that increased flying hours are a vital factor in the reduction of the aircraft-accident rate and the number of fatal accidents. Personnel errors are originally responsible for more than half of all accidents, and therefore it is obvious that in the efforts being made to reduce further aircraft-accident rates and the fatality rate they should be directed along the lines of improving the flying judgment and tactics of the personnel.

Of course, the only way to improve the flying judgment and tactics of the personnel is by providing more flying hours for the personnel.

In view of this statement by General Foulois, emphasizing the fact that accidents and fatalities are in direct proportion to the number of flying hours, I think the committee ought to adopt the amendment offered by the gentleman from New York, provide the additional $1,000,000 for fuel and oil, so that the pilots in the Air Corps of the Army can get at least 250 hours of flying time every year, and I hope the amendment will be adopted. [Applause.]

The CHAIRMAN. The question is on the substitute amendment offered by the gentlewoman from Massachusetts.

The question was taken; and on a division (demanded by Mrs. ROGERS of Massachusetts) there were 17 ayes and 47 noes.

So the substitute was rejected.

The CHAIRMAN. The question is on the amendment of the gentleman from New York [Mr. FISH].

The question was taken; and (on a demand for a division by Mr. FISH) there were 48 ayes and 49 noes.

Mr. FISH. Mr. Chairman, I ask for tellers.

Tellers were ordered, and the Chair appointed Mr. FISH and Mr. COLLINS of Mississippi as tellers.

The Committee again divided; and the tellers reported that there were 64 ayes and 80 noes.

So the amendment was rejected.

The Clerk read to page 38, line 14.

Mr. COLLINS of Mississippi. Mr. Chairman, I ask unanimous consent to return to page 28, to the paragraph for the construction and repair of hospitals which was passed over by unanimous consent on yesterday.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

The Clerk read as follows:

For construction and repair of hospitals at military posts already established and occupied, including all expenditures for construction and repairs required at the Army and Navy Hospital at Hot Springs, Ark., and for the construction and repair of general hospitals and expenses incident thereto, and for additions needed to meet the requirements of increased garrisons, and for temporary hospitals in standing camps and cantonments; for the alteration of permanent buildings at posts for use as hospitals, construction and repair of temporary hospital buildings at permanent posts, construction and repair of temporary general hospitals, rental or purchase of grounds, and rental and alteration of buildings for use for hospital purposes in the District of Columbia and elsewhere, including necessary temporary quarters for hospital personnel, outbuildings, heating and laundry apparatus, plumbing, water and sewers, and electric work, cooking apparatus, and roads and walks for the same, $379,136: *Provided*, That no part of this or any other appropriation contained in this act shall be available for any expense on account of the Fitzsimons General Hospital beyond such an amount as may be necessary for the care of such hospital on a bare maintenance basis.

Mr. LEWIS of Colorado. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 29, line 5, after the word "same" strike out the balance of the paragraph and in line 5 strike out the figures "$379,136" and insert in lieu thereof "$429,521."

Mr. LEWIS of Colorado. Mr. Chairman, ladies and gentlemen, I rise on a matter not of partisanship but of humanity.

For some 60 years Denver has been a health resort, particularly for those who are afflicted with tuberculosis. There are maintained in Denver a number of sanitariums by various national organizations. I could give you many examples of persons who have gone to Denver and have recovered their health. I shall not say that they were cured, because I believe that of the great white plague, tuberculosis, there is no such thing as a cure but only an arrest of the disease.

Mark you this: Having once recovered their health or had the disease arrested, if they go back to another climate, say, to the sea level, or to a moist climate, they break down and that is the end. It is essential that they remain at the place where their disease was arrested.

At the beginning of the World War there was a commission appointed by the War Department who went out and investigated all over the country seeking a proper place for the erection of an Army hospital, particularly for the treatment of tuberculosis, and Denver was chosen for many reasons.

Now, it is proposed to abolish this hospital, and I am offering this amendment which restores fifty thousand-odd dollars which was in the Budget, and a motion to strike out this proviso at the end of the paragraph on page 29, so that the excellent work carried on by Fitzsimons General Hospital may be continued.

I think that all will agree that Mr. Douglas, of the Bureau of the Budget, is not very lavish with money; but I will say that the Budget did not recommend the abolition of this hospital. I say further that the War Department did not recommend this, and I say further that the President of the United States did not recommend it. If I had the time I could go through these figures and show in detail that the proposal in the bill as presented by the committee to close Fitzsimons Hospital would not be a measure of real economy. In the 6-month period from July 1 to December 31, 1933, the cost of maintaining the hospital and the patients at Fitzsimons Hospital in Denver was the lowest per patient per day of any Army hospital. With the permission of the House, I shall insert in the RECORD the elaborate table furnished to me by the War Department.

WAR DEPARTMENT,
OFFICE OF THE SURGEON GENERAL,
Washington.

Cost per patient-day, fiscal year 1934, 6-month period, July 1–Dec. 31, 1933, based on reports furnished this Office by hospitals indicated

	Walter Reed	Fitzsimons	Letterman	Army and Navy	Wm. Beaumont	Fort Sam Houston	Total
Patient-days	139,065	130,151	79,780	27,418	23,918	68,437	468,769
Officers:							
Pay	$0.7185	$0.6255	$0.8168	$0.9164	$1.5061	$0.9149	$0.7898
Rental	.1691	.0562	.1587	.2000	.2219	.2433	.1513
Subsistence	.1067	.1022	.1219	.1447	.2454	.1513	.1239
Nurses, regular:

M. and H.D	.0160	-------	.0455	.0730	.0881	.0339	.0262
Q.M.C	.2403	.2127	.1320	.2737	.2390	.0837	.1932
S.S.A	.0158	.0077	.0044	-------	-------	-------	.0076
C.C.C	.2740	.0483	.2077	.4344	.0920	.1281	.1788
Laundry, including operatives	[1] .0747	[1] .0810	[1] .0984	[1] .1022	[1] .1030	.1250	.0909
Subsistence, all	.5669	.7608	.4662	.6209	.5863	.5305	.6024
Blood transfusions and specialists	.0032	.0010	.0003	.0009	-------	.0095	.0027
Medical supplies and equipment	.4534	.2895	.3195	2.6423	.7083	.5754	.5439
Transportation of supplies	.0046	.0288	-------	.0675	.0201	.0004	.0144
Utilities	.2372	.3093	.2079	.3943	.3563	.0527	.2406
Construction and repair of hospital	.2653	.2119	.2626	.4348	.6771	.1015	.2572
Total	4.6422	4.0537	4.5357	7.8801	7.5169	4.3537	4.7536

[1] Laundry—No new equipment reported as issued and amount of supplies greatly reduced.

From this table it will be seen that the cost per patient per day at Walter Reed Hospital was $4.6422; at Letterman Hospital, San Francisco, $4.5357; at the Army and Navy Hospital at Hot Springs, Ark., $7.8801; at William Beaumont Hospital, at El Paso, Tex., $7.5169; at Fort Sam Houston, $4.3537; and at Fitzsimons Hospital, Denver, $4.0537. In short, this is not a measure of economy. The mere moving of these patients from Fitzsimons General Hospital would cost more than the $50,385 which I have asked to be restored here in accordance with the recommendations of the Budget.

The CHAIRMAN. The time of the gentleman from Colorado has expired.

Mr. HEALEY. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended for 5 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. COLLINS of Mississippi. Mr. Chairman, will the gentleman yield to me to present a request for unanimous consent?

Mr. LEWIS of Colorado. Yes.

Mr. COLLINS of Mississippi. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in 30 minutes, the time to be equally divided between those favoring and those opposing the amendment.

The CHAIRMAN. The 30 minutes to include those now being consumed by the gentleman from Colorado? The debate to continue on this paragraph and all amendments thereto for 30 minutes after the gentleman has concluded?

Mr. COLLINS of Mississippi. That is correct.

The CHAIRMAN. The time to be equally divided among those favorable to and those opposed to the amendment?

Mr. COLLINS of Mississippi. Yes; including the time used by the gentleman from Colorado.

The CHAIRMAN. That would mean 20 minutes for those who are opposed to the amendment, and 10 minutes for those opposed after the gentleman from Colorado has concluded. Is there objection?

There was no objection.

Mr. LEWIS of Colorado. Mr. Chairman, on the 7th of March the Surgeon General of the Army sent me a statement showing the following number of patients during the week ending March 3 at Fitzsimons General Hospital: Army personnel, 267; Navy personnel, 4; Veterans' Administration patients, 468; C.C.C., 49; other civilians, male, 62; female, 41; beneficiaries of soldiers' home, 23; total, 914. I am further informed by the Surgeon General's Office this morning that the other civilians referred to are all dependents of the Army, so that the Army personnel and their dependents amount to 370 out of the numbers stated.

I have already shown that this is not a measure of economy, as far as the cost of operation is concerned, and have shown also that this is not a measure of economy as far as the closing of the hospital is concerned, because the cost of moving the patients would be as great as the $50,385 for which I am asking.

However, Mr. Chairman, this is something that transcends a matter of mere dollars and cents. We are here dealing with human lives. There are now 914 patients there. The greater portion of them are tuberculosis patients, probably 70 percent.

I wish I had the time to give you the statistics showing the remarkable record of cures which have been effected at Fitzsimons. I wish I could describe for you the excellent personnel, the excellent technique in treatment which has been developed there. I wish I could take you to Denver and go with you through the wards and have you see and talk to these men. I wish you could go with me, as I went on the Saturday before Christmas, through that hospital. I wish we could visit the various wards, and see those fellows who reached out to me with fevered hands and said in hoarse whispers, "LEWIS, for God's sake, are they going to take us away from here, are they going to break this hospital up and send us hither and yon to climates where we will not be able to live? Are you going to let them do that to us?" I said, "My friends, I will do the best I can, and I believe that the Members of the House of Representatives will stand by you."

Mr. Chairman, in Denver this afternoon 900 people, approximately 700 of them tuberculosis patients, are lying in hospital beds there wondering what the House of Representatives is going to do. Are you going to send them to hospitals in places and in climates not suitable for the treatment of tuberculosis? Are you going to send them to hospitals not specially equipped for this purpose? What are you going to do? I believe that you are going to adopt this amendment.

Mr. COCHRAN of Missouri. These are our men.

Mr. LEWIS of Colorado. Yes; these are our men. From practically every district represented in this House somebody has gone to Fitzsimons General Hospital, and is there right now, because these patients are drawn from all parts of the country. Men and women, you who are interested in the veterans of the World War, there are over 400 World War veterans there this afternoon. They are wondering what you are going to do to or for them. I plead, Mr. Chairman, I beg, I implore the subcommittee to accept this amendment. I beg of them to do this in the name of humanity. I believe they will. But if not, then I am convinced the Members of this House of Representatives of the United States will adopt this amendment because, remember, we represent, not some bureaucrat who comes up secretly before a committee and says he wants such and such done, but we represent the people at home and these poor boys that I have been describing. [Applause.] Further, I think it about time that we asserted ourselves and let some of these bureaucrats down here know that we represent, not they but the people at home.

Mr. COCHRAN of Missouri. Mr. Chairman, will the gentleman yield?

Mr. LEWIS of Colorado. Yes.

Mr. COCHRAN of Missouri. The gentleman is entirely correct. There are 12 men from my district in Fitzsimons General Hospital today and St. Louis is probably 800 miles away from this hospital. You are fighting for our veterans as well as your own.

The CHAIRMAN. The time of the gentleman from Colorado has again expired.

Mr. STUDLEY. Will the gentleman yield for a question?

The CHAIRMAN. The time of the gentleman from Colorado has expired.

Mr. STUDLEY. I ask unanimous consent that the gentleman have 1 additional minute to answer my question.

The CHAIRMAN. The time has been fixed for debate on this amendment and cannot be extended.

Mr. PARKS. Mr. Chairman, who is controlling the time on this side?

The CHAIRMAN. No request was made by the gentleman from Mississippi [Mr. COLLINS], further than that there should be 10 minutes more debate favoring the amendment and 20 minutes' debate opposing the amendment.

Mr. LEWIS of Colorado. May I have control of the time on this side?

Mr. PARKS. That is entirely agreeable to us, if it is satisfactory to the Chair.

The CHAIRMAN. That permission has not been extended by the committee, and the Chair would not be authorized, without some direction, to designate some Member to control the time. Under the request of the gentleman from Mississippi, it would be in the discretion of the Chair how the time shall be disposed of.

Mr. PARKS. May I ask the Chair how he intends to control this time?

The CHAIRMAN. The Chair intends to recognize, with no specification of person, those favoring the amendment for 10 minutes and those opposed to the amendment for 20 minutes. If some Member will now rise who is opposed to the amendment, unless the Chair receives other direction from the committee, the Chair will recognize that gentleman in opposition to the amendment.

Mr. THOMASON rose.

The CHAIRMAN. Is the gentleman from Texas [Mr. THOMASON] opposed to the amendment?

Mr. THOMASON. I am.

The CHAIRMAN. The gentleman is recognized for 5 minutes.

Mr. THOMASON. Mr. Chairman, I entertain the highest regard for our distinguished friend the gentleman from Colorado, Mr. LEWIS. He is one of the finest and most able men in this body. Likewise, I have a very great admiration for the splendid work that has been done at the Fitzsimons Hospital in Denver for so many years. Let it be understood that I am not asking for the abandonment of that hospital. We need more tubercular hospitals all over the country. I know something about tuberculosis hospitals myself. I know something about them from personal experience, because I went West many years ago and have been a patient in a tubercular hospital. I know the game and sympathize with the situation of my friend. However, let us not go off at a tangent about this amendment. This is no attack, as I understand it, on Fitzsimons Hospital. Certainly I would be the last one to engage in it if it were. As far as I know after reading the report and the hearings, this does not necessarily mean that Fitzsimons Hospital will be closed.

The reason I oppose the amendment is this affects Army patients and not veterans. The gentleman offers an amendment to increase the appropriation by $50,000 only. Does anyone think that would operate a hospital like that? No. That hospital is today almost full of veterans, and the Veterans' Bureau pays for the upkeep and maintenance of that hospital, with the exception of perhaps a comparatively small number. I thoroughly sympathize with the gentleman from Colorado, because last year I had the cry raised on me, "Follow the committee. Follow the committee." The claim is made that the committee has studied these questions and also that it acts on the recommendation of the War Department.

Last year I had Fort D. A. Russell in my district abandoned almost overnight. Then when the economy bill was passed there was the William Beaumont Hospital in my city that was then almost filled with patients, and many of them were veterans. That is an up-to-date, modern hospital. That is an Army hospital and is only about one third filled at this time. The veterans were moved out and sent to Albuquerque and other hospitals. The only thing this bill does is to say that the Army patients in the Fitzsimons Hospital at Denver shall be taken back to the place where it was provided they should be taken, which is William Beaumont Hospital in El Paso, Tex. We are not asking for a single veteran to be taken back there. I want no injustice done Fitzsimons. Let it be taken over by the Veterans' Administration or handled in the way the committee and the War Department think best. I only ask that the Army patients be sent back to William Beaumont Hospital, which is now exclusively an Army hospital. The committee says the buildings at Fitzsimons are not modern or permanent and that $5,000,000 will have to be spent there if it is to be made a modern hospital.

Mr. LEWIS of Colorado. Will the gentleman yield?

Mr. THOMASON. I yield.

Mr. LEWIS of Colorado. Does not the gentleman know that the Army has been maintaining this place, and this provides that the hospital shall be placed on a maintenance basis, which simply means a caretaker is provided?

Mr. THOMASON. But you are not foreclosed from dealing with the Veterans' Bureau just as you have been doing in the past. Ninety percent of your money today comes from the Veterans' Bureau, and I see no reason why you cannot continue to deal with them.

Mr. LEWIS of Colorado. Will the gentleman yield further?

Mr. THOMASON. Certainly.

Mr. LEWIS of Colorado. Does not the gentleman know that although the Veterans' Bureau has been maintaining this hospital in part by contributions, that there are patients from other bureaus of the Government?

Mr. THOMASON. Oh, yes.

Mr. LEWIS of Colorado. And does he not know further that the appropriation for the Veterans' Administration is contained in the independent offices appropriation bill?

The CHAIRMAN. The time of the gentleman from Texas [Mr. THOMASON] has expired.

Mr. THOMASON. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. The time has already been allotted.

Mr. PARKS. If there is no objection, I will be glad to have the gentleman use 5 minutes more.

The CHAIRMAN. If, by unanimous consent, the gentleman is allowed to consume more of the time allotted in opposition, that is perfectly agreeable to the Chair.

Mr. PARKS. Cannot the Chair extend the gentleman's time?

The CHAIRMAN. The gentleman's time can be extended only by the Committee.

Mr. PARKS. Then, Mr. Chairman, I ask unanimous consent that the gentleman be allowed to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. THOMASON. I am afraid the gentleman from Colorado was not here at the opening of my remarks. This is nothing personal against the gentleman from Colorado, whom I admire very much, or against the Fitzsimons General Hospital. I would like to see them keep the veterans, but the Army patients taken from a strictly Army hospital should be placed there. It is a modern hospital and should be filled. Fifty thousand dollars will not support this hospital. It must still get help from the Veterans' Bureau.

It is practically no appropriation for an Army hospital but it can continue as a veterans' hospital. When the economy bill was passed last year all but about 146 of the patients

were taken out of the William Beaumont Hospital, and all veterans were removed except emergency cases.

Now, if you are going to say that the William Beaumont Hospital at El Paso shall not be a veterans' hospital, you ought to make it what the law intended—an Army hospital—and bring back the Army patients to William Beaumont Hospital. Keep the veterans in your hospital but bring the Army patients back to William Beaumont.

Mr. MAY. Mr. Chairman, will the gentleman yield?

Mr. THOMASON. I yield.

Mr. MAY. Do not the authorities agree that the climate at El Paso is very suitable for tubercular patients?

Mr. THOMASON. It is not nearly so severe in winter as Denver; perhaps it is a little hotter in summer, but the doctors all over the country now say that El Paso, Tucson, Phoenix, Albuquerque, Denver, anywhere in that high, dry region is conducive to health and to the cure of tuberculosis.

Let Denver, Albuquerque, and the other places serve the veterans as they have in the past. This committee has studied the subject and the House was told only yesterday by the chairman that the bill came in with the unanimous support of the committee. Not only that, but if you read the hearings, you will see that General Patterson, Surgeon General, put his unqualified endorsement on it, speaking for the War Department. [Applause.]

Mr. LEWIS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. THOMASON. I yield.

Mr. LEWIS of Colorado. Did the gentleman ever hear of the report and the resolution adopted by the Federal Board of Hospitalization?

Mr. THOMASON. I very frankly say to the gentleman that I have not. I contend that Beaumont Hospital should have the Army patients and the veterans can be taken care of at the various veterans' hospitals. They are entitled to the best. Let us follow the law and the recommendation of the committee. The law made it an Army hospital. What I am asking is only what the committee unanimously agrees, and what the War Department says, ought to be done. Frankly, I think veterans should be admitted to William Beaumont Hospital. There are many sick World War and Spanish War veterans in and about El Paso who need hospitalization. They have no money and their families live in El Paso. I only want this fine modern hospital in El Paso filled when good men are begging to get in it.

[Here the gavel fell.]

Mr. COCHRAN of Missouri. Mr. Chairman, I wish to proceed in favor of the amendment.

Mr. Chairman, I cannot conceive why these hospitals should be called either Veterans' Bureau hospitals or Army hospitals; they are all Government hospitals.

The Fitzsimons Hospital houses not only the constituents of the gentleman from Colorado who has presented the amendment, but it houses your constituents and mine, sent there on account of the climate.

I want the chairman of the committee to tell me if it is not a fact that the Army has always claimed it can take care of a patient cheaper than the Veterans' Bureau. Further, the Army has shown that it has and can do so. Has not the Army always made this claim?

Mr. COLLINS of Mississippi. I think that is true, both in the Army and the Navy hospitals.

Mr. COCHRAN of Missouri. Yes; and it is a fact also they are now taking care of these men at this hospital for $3.25 a day. That is what General Patterson said in the hearings. See if the Veterans' Bureau can do it for a like amount.

The chairman of the subcommittee put the answer in his mouth when he asked the Surgeon General the question about closing the Fitzsimons Hospital.

The Surgeon General answered as it seemed to me the chairman desired him to answer judging from the way the question was put.

My district in St. Louis is about 1,000 miles away from the Fitzsimons Hospital, but boys from my district are being cared for at that place and they are satisfied with the treatment and with the present personnel. They are as happy as men in their condition could possibly be.

Now, I am not interested as to what patients the gentleman from Texas wants housed in his district; I want my veterans taken care of, and it does not seem to be in the interest of a real sick man to move him 500 miles or more. If these men can be cared for in Colorado as cheap as or cheaper than they can in Texas, let us keep them in Colorado where they are contented.

Mr. THOMASON. They are all veterans are they not?

Mr. COCHRAN of Missouri. This hospital should be kept open. It does not make any difference whether they are Army hospitals or Veterans' Bureau hospitals. It is admitted the Army hospitals are run at less expense to the Government than the Veterans' Bureau can run hospitals, Nobody will deny this statement. There is not a Veterans' Bureau hospital in the United States that is run as cheaply as an Army hospital; and the Army gives them just as fine treatment and food as the Veterans' Bureau ever did.

Now, do not overlook this fact: The law says "hospitalization will be granted if beds are available." That clause places the Veterans' Bureau in the position where it can only hospitalize a certain number of men, and that number is based upon the number of beds available. Close Fitzsimons General Hospital and you will cut the hospital facilities about 1,000 beds. Do you want to do that? Of course you do not.

All the letters we receive from taxpayers who are opposed to certain benefits being paid veterans always read that they want us to take care of the sick veteran who cannot take care of himself. All Members have received hundreds of such letters. It indicates even the hard-boiled who are opposed to paying veterans pensions favor taking care of the disabled.

If you adopt this amendment you will serve notice on the Army that you want this hospital continued.

I am not in favor of letting the Army say it no longer wants to take care of the World War veteran at Fitzsimons Hospital. I am in favor of telling them to take care of those veterans. This amendment means, if adopted, that it is notice to the Army to continue as you have in the past at this hospital. I hope the amendment will be adopted. [Applause.]

Mr. MARTIN of Colorado. Mr. Chairman, I wish to speak 3 minutes in support of this amendment.

Mr. Chairman, there is an old saying that no question is ever settled until it is settled right, but it has been my experience and observation down here during the past year that the saying has about twice too much language in it. The saying should be shortened to, "No question is ever settled." It seems to be a question here very largely of whose ox is gored, and in this respect I have considerable sympathy for the gentleman from Texas, because I happen to have a situation with respect to a veterans' hospital where I have been kept in hot water ever since the passage of the Economy Act. It looks as if just as soon as a status is set up and fixed and you turn your back somebody comes along and kicks it over. So much has gone on to disturb, upset, and demoralize the veterans' hospital in my district that sometimes I wish it was in somebody else's district.

If this was a case in which on the score of efficiency and economy a large number of these hospitals were being closed, a man might reconcile himself as being subjected only to the common lot, but when I look through this large bill, carrying two or three hundred million dollars and the long section devoted to hospitals, I find only one hospital, Fitzsimons Hospital, singled out, and from that hospital there is to be chiseled the lousy sum of $50,000.

The gentleman from Texas says it is only for taking the Army patients out of this hospital. What I fear is that it is the intrusion of the camel's nose into the tent, to be followed by the abandonment or the closing down of the hospital, because the Surgeon General of the Army, whom the gentleman from Texas quotes on the floor, made that recommendation many months ago, to close the hospital down.

I can add nothing to the able showing made by my colleague [Mr. LEWIS], but I want to say that it looks to me as if there were some people down here in Washingon in high places who are obsessed with the notion that the United States is bounded on the west by the Missouri River. We out there are made to feel as if we were only step-children of this great Republic. I do not mean to classify the able chairman of the subcommittee in that category, but I would like to remind the gentlemen on this side of the House that that territory west of the Missouri River saved the last Democratic President of this country in 1916 and it is not too much of a conjecture that it might be called upon to save the present President. It is decidedly unfortunate that this hospital, singled out for such treatment, should be located adjacent to the capital city of the Rocky Mountain region, where there are exceptional publicity facilities for the purpose of making the most, and by that I mean the worst, of this proposition to close Fitzsimons Hospital, and if this amendment goes through, which may prove to be only the start of a plan to close this hospital, the most unfavorable publicity will be given to the proposition throughout this entire western area.

Mr. FISH. Is Denver the very best place to have such a hospital?

Mr. MARTIN of Colorado. I have in mind one better place in my district that now has a Government hospital, so that I could not make such an admission in the RECORD. [Applause.]

[Here the gavel fell.]

Mrs. McCARTHY. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, the statement has been emphatically made that this hospital is not to close. However, I call attention to the statement of General Patterson himself, when he appeared before the committee. The question was asked him why this hospital had not been transferred to the Veterans' Administration, if he was objecting to the Army maintaining it. He said that he would be delighted to transfer it to the Veterans' Administration but had been unable so far to do so. Later in his testimony, when he was asked if there were any other hospitals he wanted closed, he stated no. He said:

We have no hospitals we want to close except the Fitzsimons Hospital.

So, Mr. Chairman, there is not any question in the world but what this hospital is going to be entirely closed if this appropriation is not granted.

I am also interested in a large veterans' hospital at Wichita, Kans. We have a large, brandnew veterans' hospital there, but I would not be so selfish as to stand up here today and in order to get more veterans into that hospital at Wichita try to have another hospital in an adjoining State closed. This would not be fair to the veterans. [Applause.]

There are many veterans in the Fitzsimons Hospital who are not in condition to be moved. It would be an injustice to them. This Fitzsimons Hospital is needed as it never has been needed before. Prior to the time the benefits to the veterans were cut they were able to pay for their own hospitalization, but now this hospital is an extreme necessity. It ill-behooves us at this time for a pitiful sum of $50,000 to close this hospital. The fly in the ointment is that the Army does not want to have the $50,000 chalked up to them. They want it chalked up to the Veterans' Administration. Perhaps this can be done eventually, but until this is done we should take care of the veterans until the transfer can be made. [Applause.]

Mr. Chairman, I yield back the balance of my time.

Mr. LEWIS of Colorado. Mr. Chairman, I rise again in further support of the amendment.

Mr. Chairman, something has been said here about the supposedly careful investigation being made by the Surgeon General of the Army. May I call attention to the fact that there is a Federal Board of Hospitalization in this country composed of the Administrator of Veterans' Affairs and the Surgeons General of the Army, of the Navy, of the Public Health Service, and others, whose names I shall put in the RECORD. May I say further that last summer I appeared before this Hospitalization Board and in a resolution, joined in by all members including the Surgeon General of the Army, it was resolved on July 25, 1933, that Fitzsimons General Hospital should be used for all tuberculous beneficiaries of the Federal Government until the entire hospitalization situation could be studied by this Hospitalization Board. Mr. Chairman, may I further say that this resolution was approved on August 1, 1933, by the President of the United States.

The resolution was as follows:

RESOLUTION ADOPTED BY THE FEDERAL BOARD OF HOSPITALIZATION, WASHINGTON, D.C., JULY 25, 1933

Whereas the War Department since 1918 has operated the Fitzsimons General Hospital at Denver, Colo.; and

Whereas the Veterans' Administration prior to the act of March 20, 1933, made extensive use of this facility by reason of the relatively large ex-service population in the area served by it and the lack of Veterans' Administration facilities in the same general area; and

Whereas regulations issued pursuant to the act of March 20, 1933, authorize the Veterans' Administration to use War, Navy, Public Health, and Interior Department hospitals in emergency cases only for beneficiaries suffering from service-connected disabilities; and

Whereas the War Department has advised the Federal Board of Hospitalization that neither its present nor prospective load at that location is adequate to insure economical operation of that facility; and

Whereas it has been determined that the estimated hospital load of the War Department and that of the Veterans' Administration for all classes of patients is sufficient at that location to enable that facility to be operated on an economical basis; and

Whereas the Federal Board of Hospitalization is now making a survey of all Government hospital facilities, which survey has not, however, reached the point where a definite determination is warranted; and

Whereas this survey is expected to result in the submission to the President of definite recommendations to insure the maximum possible use of Government hospital facilities: Therefore, be it

Resolved, That the Federal Board of Hospitalization recommends to the President that the Fitzsimons General Hospital at Denver be used for all tuberculous beneficiaries of the Federal Government until such time as the findings of said Board in connection with the above survey have been communicated to the President.

FRANK T. HINES, *Chairman.*

Approved:

FRANKLIN D. ROOSEVELT.

AUGUST 1, 1933.

The following is the Federal Board of Hospitalization:

Brig. Gen. Frank T. Hines, Chairman, Administrator of Veterans' Affairs.

Maj. Gen. R. U. Patterson, Surgeon General United States Army.

Rear Admiral P. S. Rossiter, Surgeon General United States Navy.

Surg. Gen. H. S. Cumming, United States Public Health Service.

Dr. William A. White, Superintendent St. Elizabeths Hospital.

Hon. J. Crawford Biggs, Solicitor General of the United States.

Col. George E. Ijams, Assistant Administrator of Veterans' Affairs.

Gen. George H. Wood, special representative of Administrator on matters pertaining to national homes.

It is too bad that debate on a matter of this importance must be closed in 30 minutes. Before I conclude, may I not take you back again to Denver? Take you back to the four or five hundred men with pallid lips and hectic cheeks, lying in their beds, whispering hoarsely one to the other: "What is the Congress of the United States going to do to us?" What is Congress going to do? Are we going to turn out those boys who lost their health in the service of our country—turn them out like worn-out horses—to die? Are we going to cast them aside like old gloves, like old shoes, which have served our purpose? It is an old adage that republics are ungrateful. Is the American Republic going to be ungrateful? I believe by our votes we shall disprove that adage by adopting this amendment, as I pray God that we do.

Mr. COLLINS of Mississippi. Mr. Chairman, the insertion of this language in the bill is solely because of the War Department's recommendation that this hospital should be

closed because it is not needed and that it would be in the interest of economy to close it. They do not recommend economies very often, but here is an instance when they have. They recommend that this institution be closed and placed in a stand-by condition and the committee has acted in accordance with their recommendation.

General Patterson, the surgeon general, is not the only individual in the War Department who has recommended the closing down of this institution. On three different occasions the Inspector General of the Army has recommended the closing of Fitzsimons Hospital.

Here is the situation there. They have 156 buildings of war-time construction, not one of which is closer to the other than 200 feet, and only 2 of the 156 buildings are of permanent construction. The administration building and the officers' club are of permanent, fireproof construction.

We are face to face with one of two alternatives. We must either close this institution or we must appropriate approximately $5,000,000 for the purpose of building a new hospital, which neither the Veterans' Bureau nor the Army needs. If you want to accept the responsibility, in spite of the recommendations of the War Department, of continuing to hospitalize Army and Veterans' Administration patients in buildings such as are available at Fitzsimons, the responsibility is yours.

I have here a letter from General Patterson on this subject. He says many things in this letter. He states that there are 914 patients at the Fitzsimons Hospital, 466 of whom are veteran patients, 267 Army patients, and 4 Navy patients. There are C.C.C. boys there and civilians to the extent of 62 males and 41 females, and beneficiaries of the soldiers' homes to the extent of 23.

The third paragraph of the letter states that the average maintenance cost of Fitzsimons General Hospital for the past 10 years has been $307,333. At the Beaumont General Hospital, $96,000 is the cost. Maintenance cost means upkeep and repair of buildings, utilities, and so forth.

The Quartermaster General's Office estimate that at the present time the maintenance cost of Fitzsimons General Hospital is $230,000, and adding the upkeep of the Beaumont Hospital of $96,000, shows a total maintenance cost of both institutions of $326,000. If the patients are removed to the Beaumont General Hospital, the maintenance cost will be increased there somewhat, bringing the cost up to $105,000. Therefore there would be an average maintenance-cost saving, if the Beaumont General Hospital were used for tubercular patients and the Fitzsimons General Hospital closed, of $221,896.

Do not be deceived by the $50,000 proposal which the amendment proposes to restore to the bill. Fifty thousand dollars is just a drop in the bucket, and, furthermore, every one of the doctors and nurses and enlisted men now on duty at Fitzsimons General Hospital will be transferred to other hospitals where their services are needed; and if they are not transferred, we will have to employ additional medical officers, nurses, and other civilians to take their places.

There are other points in General Patterson's letter which, if I have the time, I shall refer to shortly; but here is the situation with reference to this hospital. I have a statement furnished me this morning by General Hines on this hospital:

As to the home States of patients hospitalized there, Alabama has 2; Arizona, 1; Arkansas, 7; California, 2; Connecticut, 1; District of Columbia, 1; Florida, 1; Georgia, 4; Illinois, 4; Iowa, 4; Kansas, 2; Kentucky, 3; Maine, 1; Maryland, 1; Massachusetts, 1; Michigan, 3; Minnesota, 9; Missouri—that my friend JACK COCHRAN is so solicitous about—has 5; Nebraska has 3; New Jersey, 3; New York, 9; North Carolina, 1; Ohio, 4; Oklahoma, 4; Oregon, 1; Pennsylvania, 9; Rhode Island, 1; South Dakota, 2; Texas, 6; Utah, 1; Virginia, 2; West Virginia, 4; Wisconsin, 2; Wyoming, 3; and outside of the United States, 3.

General Hines also furnished a statement of Veterans' Administration facilities showing the unoccupied beds as of February 24, 1934. This statement sets out the tuberculosis hospitals and the ones to which would be sent the Veterans' Administration patients who are now in the Fitzsimons Hospital.

The first one of these TB hospitals to which these patients would be sent is Albuquerque, N.Mex., where there are vacant beds to the extent of 36; Boise, Idaho, has vacant beds to the extent of 9; Fort Bayard, N.Mex., has vacant beds to the extent of 125; Fort Harrison, Mont., has vacant beds to the extent of 21; Hot Springs, S.Dak., has vacant beds to the extent of 45; Legion, Tex., has vacant beds to the extent of 34; Livermore, Calif., has 13 vacant beds; Los Angeles, Calif., has 45 vacant beds; Oteen, N.C., has 143 vacant beds; Outwood, Ky., has 144 vacant beds; Rutland Heights, Mass., has 16 vacant beds; San Fernando, Calif., has 3 vacant beds; Walla Walla, Wash., has 71 vacant beds; Whipple, Ariz., has 199 vacant beds; making a total of 1,371 beds, and the Veterans' Bureau has at Fitzsimons Hospital now but 468 patients.

Mr. MARTIN of Colorado. I think the gentleman wants to be fair, and I should like to have him yield right here.

Mr. COLLINS of Mississippi. I resent the imputation that I am not fair. If the gentleman——

Mr. MARTIN of Colorado. I want to comment on the kind of argument the gentleman is putting across here to the House to induce the Members to vote with the committee.

Mr. COLLINS of Mississippi. I resent the imputation; and, for that reason, I will not yield.

Mr. MARTIN of Colorado. I want to say to the gentleman that we can fill those beds before we get through with the Economy Act.

Mr. COLLINS of Mississippi. I want to say in connection with that remark that Colonel Ijams told me that the Economy Act had nothing whatever to do with tubercular patients. He said that they were stable and would remain stable and had been stable for the last few years, and that the provisions of the Economy Act had nothing whatever to do with a lesser number of beds or a lesser or greater number of tubercular patients.

Mr. MOTT. Will the gentleman yield?

Mr. COLLINS of Mississippi. Yes; I yield.

Mr. MOTT. I just want to contradict that statement.

Mr. COLLINS of Mississippi. I do not yield for that purpose.

Mr. MOTT. Then I will ask the gentleman from his own personal knowledge——

Mr. COLLINS of Mississippi. If the gentleman wants to ask a question, I will yield.

Mr. MOTT. I will ask the gentleman if he does not know of his own knowledge and from what he has read of the hearings on the economy bill that the passage of the Economy Act threw thousands of tubercular patients out of veterans' hospitals?

Mr. COLLINS of Mississippi. Colonel Ijams told me and the gentleman from Ohio [Mr. BOLTON] that it had not thrown a single tuberculosis patient out of a hospital.

Mr. MOTT. The colonel is mistaken, and the record will show it.

The CHAIRMAN. All time has expired, and the question is on the amendment offered by the gentleman from Colorado [Mr. LEWIS].

The question was taken; and on a division (demanded by Mr. COLLINS of Mississippi) there were 70 ayes and 22 noes.

Mr. COLLINS of Mississippi. I ask for tellers.

Tellers were ordered, and the Chair appointed as tellers Mr. LEWIS of Colorado and Mr. COLLINS of Mississippi.

The Committee again divided; and the tellers reported that there were 74 ayes and 51 noes.

So the amendment was agreed to.

The Clerk read as follows:

No part of the appropriations made in this act shall be available for pay, allowances, or traveling or other expenses of any officer or enlisted man of the National Guard who may be drawing a pension, disability allowance, disability compensation, or retired pay (where retirement has been made on account of physical disability or age) from the Government of the United States: *Provided*, That nothing in this provision shall be so construed

as to prevent the application of funds herein contained to the pay, allowances, or traveling expenses of any officer or enlisted man of the National Guard who may surrender said pension, disability allowance, disability compensation, or retired pay for the period of his service in the National Guard: *Provided further*, That present adjutants general who may be drawing such emoluments may be continued in a federally recognized status without pay under this act.

Mr. DONDERO. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the War Department appropriation bill, H.R. 8471, now before the House, carries with it a total appropriation of $279,541,505 for the fiscal year 1934–35, or approximately $2.25 per capita, for every man, woman, and child in the United States.

I am not a pacifist. I believe that if you have anything worth defending that it should be defended; that our country should be defended and an adequate national defense maintained is a duty which the Congress owes to the country under existing world policies.

As long as the civilized nations of the world continue under the present policy, the expenditure of these huge sums of money which we appropriate for national defense will continue and must be exacted from the people.

The world today is groaning under the merciless heel of taxation for purposes of war, to pay for the destruction caused by war and as the direct or indirect result of war. It is a rebuke to civilization itself that this is so, and well might we ask the question: When will the people of the world, imbued with a sense of justice and right, turn from the present policy of expenditure of enormous sums of money, to protect themselves from nothing but fear of each other?

It is interesting to note that the total tax revenue of the United States Government for the fiscal year 1933 was $1,855,174,208 and that we expended for national defense and military pensions the great sum of $1,501,738,000, or 80.9 percent of all the tax money received. The national defense alone cost $636,765,000, or 34.3 percent of the total amount received, and less than 20 percent of all tax money received by the Government of the United States is left to be used for the constructive purposes of peace and progress.

Great Britain for the same year received $704,654,000 in tax revenue and spent for her Army, Navy, and air forces $102,990,000, or 14.6 percent, and her combined expenditure for Army, Navy, and air forces and war pensions was $150,-190,000, or 21.3 percent of her total tax revenue, compared with 80.9 in the United States.

France for the same year received in tax revenue 35,610,-896,000 francs and provided for military expenditure 11,910,-400,000 francs, or 33.4 percent of her total tax income. In addition to that amount she expended for military pensions 2,077,600,000 francs, or a total of 13,988,000,000 francs, or 39.3 percent of her total tax income, as compared with 80.9 percent in the United States.

I present these figures and comparative expenditures for war and the result of war to the attention of the House and the country that the people might know the price we pay for the most barbaric art in existence after 2,000 years of the Christian era. We all look forward to the time when the other nations of the world will follow the leadership of this Government in its endeavor to outlaw war by treaty and to make war impossible by world disarmament. [Applause.]

The pro forma amendment was withdrawn.

The Clerk read as follows:

No appropriation contained in this act shall be available for any expense for or on account of a larger number of mounted and medical units, and military police, wagon, and service companies of the National Guard than were in existence on June 30, 1932.

Mr. COLLINS of Mississippi. Mr. Chairman, I ask unanimous consent that the gentleman from Kansas [Mr. AYRES] be permitted, when he returns to the Chamber, to offer an amendment at this point. Mr. AYRES has been called to the White House, and could not be present at this time, otherwise he would have been here to offer his amendment.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent that the gentleman from Kansas [Mr. AYRES] be permitted to offer an amendment at this point upon his return, and that no other amendment be permitted to be offered. Is there objection?

Mr. BULWINKLE. Reserving the right to object, I wished to offer an amendment to a paragraph that has been passed over. I was looking over a manuscript when it was passed and did not notice where the Clerk was reading. I would, of course, not object to a request like this by the gentleman from Mississippi, but I ask unanimous consent to return to that paragraph.

Mr. COLLINS of Mississippi. I shall have to object to that.

Mr. WADSWORTH. I reserve the right to object.

Mr. COLLINS of Mississippi. Let me say that the nature of the amendment to be offered by the gentleman from Kansas is to put the Naval Reserve and the Marine Corps on the same status as to drills as the National Guard.

Of course, his amendment will be subject to a point of order, but as far as I am concerned I shall not make it.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

Mr. KVALE. Mr. Chairman, I reserve the right to object. The chairman, of course, does not intend to preclude any member of the committee from offering an amendment to the amendment of the gentleman from Kansas in case he so desires—just as a matter of principle.

Mr. COLLINS of Mississippi. Only such amendments as may be germane to the Ayres amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi as stated?

There was no objection.

Mr. OLIVER of New York. Mr. Chairman, I move to strike out the last word. I rise to pay my personal tribute to the chairman of the subcommittee, the gentleman from Mississippi [Mr. COLLINS], which brings in this bill. For over a year now I have read in the newspapers, in the mail, and heard from many people, statements denouncing Ross COLLINS, of Mississippi, as a pacifist. Bravely and boldly, brilliantly, he stood up against that fire. I do not know any man who has shown a greater genius for marking out a course and policy and charter for the Army than Ross COLLINS, of Mississippi. Motorization and machinization have become words in the Congress of the United States well understood because of his brilliant elucidation of their meaning in warfare. The old order of the Army is passing away under the sledge-hammer blows of Ross COLLINS, and the future will find us able to stand up against any foe with the most modern equipment, owing to the fact that he has persisted in that course which we are now adopting as a national policy.

I compliment him upon his heroism, on his individuality in thinking. I compliment him for standing up against all tradition. I compliment him for standing against the press of the country, against every bit of propaganda that has attempted to swerve him from the magnificent work that is now so successful. I compliment Ross COLLINS for his industry, for his marvelous ability to portray his objective, so that all are persuaded that the course he advocates is the course that will bring greatest security to America. He is not a pacifist, except that he wants America to have the peace of victory in the event of war. He is not a pacifist, except that he wants to put America in such a state of preparedness that no nation will dare to wage war against her.

I rise to make these few remarks as a humble Member of Congress and in compliment of a man who has shown as a Congressman all of the qualities of a soldier, all of the brave, heroic, intellectual qualities that we should have in the Army of the United States. [Applause.]

The Clerk read as follows:

ORGANIZED RESERVES

For pay and allowances of members of the Officers' Reserve Corps on active duty in accordance with law; mileage, reimbursement of actual traveling expenses, or per diem allowances in lieu thereof, as authorized by law: *Provided*, That the mileage allow-

ance to members of the Officers' Reserve Corps when called into active service for training for 15 days or less shall not exceed 4 cents per mile; pay, transportation, subsistence, clothing, and medical and hospital treatment of members of the Enlisted Reserve Corps; conducting correspondence or extension courses for instruction of members of the Reserve Corps, including necessary supplies, procurement of maps and textbooks, and transportation and traveling expenses of employees; purchase of training manuals, including Government publications and blank forms, subscriptions to magazines and periodicals of a professional or technical nature; establishment, maintenance, and operation of divisional and regimental headquarters and of camps for training of the Organized Reserves; for miscellaneous expenses incident to the administration of the Organized Reserves, including the maintenance and operation of motor-propelled passenger-carrying vehicles; for the actual and necessary expenses, or per diem in lieu thereof, at rates authorized by law, incurred by officers and enlisted men of the Regular Army traveling on duty in connection with the Organized Reserves; for expenses incident to the use, including upkeep and depreciation costs, of supplies, equipment, and matériel furnished in accordance with law from stocks under the control of the War Department, except that not to exceed $308,400 of this appropriation shall be available for expenditure by the Chief of the Air Corps for the production and purchase of new airplanes and their equipment, spare parts, and accessories; for transportation of baggage, including packing and crating, of Reserve officers ordered to active duty for not less than 6 months; for the medical and hospital treatment of members of the Officers' Reserve Corps and of the Enlisted Reserve Corps, who suffer personal injury or contract disease in line of duty, as provided by the act of April 26, 1928 (U.S.C., supp. VI, title 10, secs. 451, 455), and for such other purposes in connection therewith as are authorized by the said act, including pay and allowances, subsistence, transportation, and burial expenses; in all, $3,986,859; and no part of such total sum shall be available for any expense incident to giving flight training to any officer of the Officers' Reserve Corps unless he shall be found physically and professionally qualified to perform aviation service as an aviation pilot, by such agency as the Secretary of War may designate: *Provided*, That not to exceed $100,000 of this appropriation may be used for establishment and maintenance of divisional and regimental headquarters.

Mr. LAMNECK. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. LAMNECK: Page 52, line 7, after the word "all", strike out "3,986,859" and insert in lieu thereof "6,000,000."

Mr. LAMNECK. Mr. Chairman, this is the same old fight we have every year about providing enough money to properly train Reserve officers. We have 86,000 Reserve officers now, and in case of emergency the Reserve will be required to furnish 70,000 Reserve officers, the Regular Army 12,000 Reserve, and the National Guard 12,000. This appropriation is $2,460,352 less than the last 4-year average. In 1933 we trained 21,000 Reserve officers. In the year that will close June 30, 1934, we will have trained only about 10,000, and in this appropriation bill we provide for the training of about 14,000 officers. In other words, it would take 6 years to train the entire personnel in the Reserve Corps for only one 2-week period. I claim that if the Reserve officers are worth five cents, they are worth at least a sufficient amount of training each year to make them worth something to the National Army. Therefore, I offer this amendment and hope it will be adopted. The Army say they ought to train at least 30,000 officers each year, and this appropriation provides for the training of only 14,000.

Mr. COLLINS of Mississippi. Does the gentleman know how many assignable Reserve officers there are?

Mr. LAMNECK. Eighty-six thousand.

Mr. KINNEY. And these Reserve officers are of great value to the Army; and is it not because of them that in large measure the United States is better prepared for war than it ever was?

Mr. LAMNECK. I think the gentleman is correct. That is all I have to say. I hope the amendment will be adopted.

Mr. COLLINS of Mississippi. Mr. Chairman, the situation this year with reference to the Reserves is entirely different from what it has been in the past. This bill carries 15 days' training for 14,405 Reserve officers. Counting rotation or turnovers, so to speak, we will have, I should say, approximately 10,000 Reserve officers on active duty in connection with C.C.C. activities. I don't want anyone to get the impression that we have, or will have, that many Reserves at any one time with the C.C.C., but there is a turnover among the men on duty with C.C.C. outfits, and it has been estimated by reliable parties that the aggregate number will reach 10,000. In addition to that, we have 7,200 R.O.T.C. graduates that take active-duty training every year. So, counting the 14,405 in this bill, the 7,200 that receive training through the R.O.T.C. summer camps—a 42 days' training course—and those in the C.C.C., we will have 31,605 Reserve officers next year getting training.

It has been the policy of the War Department to give some measure of training to Reserve officers at least once in every 3 years. There are only 58,373 assignable combat Reserve officers. Assignable Reserve officers are those who have taken not less than the minimum requisite of training during their current enrollment to indicate a degree of interest worthy of continued recognition. A Reserve officer need take little or no active training to qualify as an assignable Reserve officer. His training may consist of a correspondence course. So, with the amount carried in this bill for training through the medium of the 15-day camps and the Reserve Officers' Training Corps in conjunction with those to be trained with the Citizens' Conservation Corps, more than 50 percent of the assignable combat officers of the Officers Reserve Corps will receive training next year.

I just want to say this to you: The concern of this Congress should be with regard to those Reserve officers who have come into the Service since the war. Those who came in after the war are rather too old, in my opinion, to have very much worth, except in administrative jobs, in the next war.

Mr. Chairman, the committee has brought you this provision just exactly as it came to us from the Budget, and I assume it came to the Budget in exactly this form from the War Department. At any rate, not a single individual who has testified from the War Department has complained of this provision; and if it had not been satisfactory to them, I am confident that they would have managed to convey that information to at least one member of the committee.

I just want to make this plea to you. We have tried to give you the very best War Department bill possible, and I plead with you to stand by the committee on this. We have tried to allocate the funds to the very best military advantage, and I do hope that the amendment will be defeated.

Mr. Chairman, I move that all debate on this paragraph and all amendments thereto do now close.

The motion was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio [Mr. LAMNECK].

The amendment was rejected.

The Clerk read as follows:

CITIZENS' MILITARY TRAINING

RESERVE OFFICERS' TRAINING CORPS

For the procurement, maintenance, and issue, under such regulations as may be prescribed by the Secretary of War, to institutions at which one or more units of the Reserve Officers' Training Corps are maintained, of such public animals, means of transportation, supplies, tentage, equipment, and uniforms as he may deem necessary, including cleaning and laundering of uniforms and clothing at camps; and to forage, at the expense of the United States, public animals so issued, and to pay commutation in lieu of uniforms at a rate to be fixed annually by the Secretary of War; for transporting said animals and other authorized supplies and equipment from place of issue to the several institutions and training camps and return of same to place of issue when necessary; for purchase of training manuals, including Government publications and blank forms; for the establishment and maintenance of camps for the further practical instruction of the members of the Reserve Officers' Training Corps, and for transporting members of such corps to and from such camps, and to subsist them while traveling to and from such camps and while remaining therein so far as appropriations will permit, or, in lieu of transporting them to and from such camps and subsisting them while en route, to pay them travel allowance at the rate of 5 cents per mile for the distance by the shortest usually traveled route from the places from which they are authorized to proceed to the camp and for the return travel thereto, and to pay the return travel pay in advance of the actual performance of the travel; for expenses incident to the use, including upkeep and depreciation costs, of supplies, equipment, and matériel furnished in accordance with law from stocks under the control of the War Department; for pay for students attending advanced camps at the rate prescribed for soldiers of the seventh grade of the Regular Army; for the payment of commutation of subsistence to members

of the senior division of the Reserve Officers' Training Corps, at a rate not exceeding the cost of the garrison ration prescribed for the Army, as authorized in the act approved June 3, 1916, as amended by the act approved June 4, 1920 (U.S.C., title 10, sec. 387); for medical and hospital treatment until return to their homes and further medical treatment after arrival at their homes, subsistence during hospitalization and until furnished transportation to their homes, and transportation when fit for travel to their homes of members of the Reserve Officers' Training Corps who suffer personal injury in line of duty while en route to or from and while at camps of instruction under the provisions of section 47a of the National Defense Act approved June 3, 1916 (U.S.C., title 10, sec. 441), as amended; and for the cost of preparation and transportation to their homes and burial expenses of the remains of members of the Reserve Officers' Training Corps who die while attending camps of instruction as provided in the act approved April 26, 1928 (U.S.C., supp. VI, title 10, sec. 455); for mileage, traveling expenses, or transportation, for transportation of dependents, and for packing and transportation of baggage, as authorized by law, for officers, warrant officers, and enlisted men of the Regular Army traveling on duty pertaining to or on detail to or relief from duty with the Reserve Officers' Training Corps; for the maintenance, repair, and operation of motor vehicles, $3,108,701, of which $400,000 shall be available immediately: *Provided*, That the Secretary of War is authorized to issue, without charge, in lieu of purchase, for the use of the Reserve Officers' Training Corps, so many horses now belonging to the Regular Army as he may consider desirable: *Provided*, That uniforms and other equipment or material issued to the Reserve Officers' Training Corps in accordance with law shall be furnished from surplus or reserve stocks of the War Department without payment from this appropriation, except for actual expense incurred in the manufacture or issue: *Provided further*, That in no case shall the amount paid from this appropriation for uniforms, equipment, or material furnished to the Reserve Officers' Training Corps from stocks under the control of the War Department be in excess of the price current at the time the issue is made: *Provided further*, That none of the funds appropriated in this act shall be used for the organization or maintenance of an additional number of mounted, motor transport, or tank units in the Reserve Officers' Training Corps in excess of the number in existence on January 1, 1928: *Provided further*, That none of the funds appropriated in this act shall be available for any expense on account of any student in Air Corps, Medical Corps, Dental Corps, or Veterinary units not a member of such units on May 5, 1932, but such stoppage of further enrollments shall not interfere with the maintenance of existing units: *Provided further*, That none of the funds appropriated elsewhere in this act, except for printing and binding and pay and allowances of officers and enlisted men of the Regular Army, shall be used for expenses in connection with the Reserve Officers' Training Corps.

Mr. BIERMANN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BIERMANN: Page 57, line 13, after the colon, insert "*Provided further*, That none of the funds appropriated in this act shall be expended for or on account of any educational institution not essentially a military school which does not leave the election of military training to all students enrolled therein, and this appropriation shall be available, in accordance with law, to such institutions as maintain elective military training courses."

Mr. BIERMANN. Mr. Chairman, the purpose of this amendment is to make military training in colleges that receive money benefit from the United States Government elective instead of compulsory. When this system of Government aid to colleges for military training was established in the sixties, I believe, for some reason or other there developed a mistaken idea that those courses had to be compulsory, but the Supreme Court of the United States, in a case that went up from the University of Wisconsin, decided that the colleges can make military courses elective.

There is no one in this House who would seriously propose that we should vote to make military training in the United States compulsory on all young men between the ages of 18 and 20 years. But under this bill it is possible—in fact, the idea goes with the bill—that if those men happen to go to an educational institution of higher learning, then they must take military training. My amendment makes it mandatory that those colleges shall make military training elective. I do not think there is anyone here who would seriously contend that military training is an essential of a higher education. It is not one of those fundamentals that a student in a college should have before he gets a degree. The tendency of higher education has been for a number of years to make more and more election. A student has his choice among several languages and several sciences. My amendment is to give him a choice as to whether or not he will take military training, and not make it possible for the faculty to say to a man when he comes to an institution which is supported by the taxpayers' money, "You must take military training whether you want to or not."

Mr. EDMISTON. Will the gentleman yield?

Mr. BIERMANN. I yield.

Mr. EDMISTON. In all of the universities, is that not only compulsory for the first 2 years, for the freshman and sophomore years?

Mr. BIERMANN. I think that is correct.

Mr. PARKS. Will the gentleman yield?

Mr. BIERMANN. I yield.

Mr. PARKS. In the case of the University of Maryland last year, in which some students refused to take military training, did not the court hold at that time that they could not be compelled to take that training?

Mr. BIERMANN. I am not familiar with that decision.

Mr. PARKS. I do not know that it went to the higher court, but that was the decision of the lower court.

Mr. BIERMANN. I have in my hand an excerpt from a newspaper showing the picture of five young men in the Ohio State University who are facing expulsion because they would not take military training that is a compulsory course in the Ohio State University.

There is no one who contends seriously that the amount of military training that is given at a university is of any value physically. I think there is no one here who would contend that you could not get as much out of 30 minutes' swimming or boxing or rowing as you could out of 2 weeks' military training. I do not think there is anyone here who would contend that there is much military value to it. I think the gentleman from Oregon, General MARTIN, would agree that any of his sergeants could teach these young men more military training in 30 minutes than they could get in 3 weeks of this college training.

Mr. WADSWORTH. Will the gentleman yield?

Mr. BIERMANN. I yield.

Mr. WADSWORTH. It is the very sergeants of the former major general of the United States Army, the gentleman from Oregon [Mr. MARTIN], who are giving this training in the R.O.T.C.

Mr. BIERMANN. Yes, that is true; but I want to remind the gentleman that these men who take this training are in entirely different surroundings and conditions than those of a military camp.

Mr. WADSWORTH. I thought the gentleman said 30 minutes.

Mr. BIERMANN. I did; and that is not very much of an exaggeration. Pardon a personal illustration, but I may say I took a year and a half of military training in the university and got absolutely no physical benefit out of it. I believe I am accurate, too, when I say that when I entered an officers' training camp in March 1917, I did not carry with me one single, solitary thing of benefit from that year and a half military training in the university.

Mr. POWERS. Mr. Chairman, will the gentleman yield?

Mr. BIERMANN. I yield.

Mr. POWERS. How would the gentleman's amendment affect such institutions as the Virginia Military Institute, the Norwich University in Vermont, the Pennsylvania Military College at Chester, the New Mexico Military Institute, and similar institutions which are solely and entirely military colleges?

Mr. BIERMANN. The amendment exempts purely military institutions; they are not affected. My amendment merely makes elective with the student body military training at those colleges that are not essentially military institutions.

Mr. WADSWORTH. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I do not question for one moment the purity of motive of the gentleman from Iowa in offering and espousing this amendment, but I detect in it that initial step which has been attempted so many times during the last 10 years toward breaking down the whole Reserve Officers' Training Corps system, to be followed later on by the break-down of the Reserve system. The attempt has been

made from many directions to discipline, by indirection, through an act of Congress or by public clamor, any university or college whose faculty and trustees decide that it is for the best interests of their students to have a compulsory course in military training.

This amendment is an attempt to interfere with the discretion of the faculty and trustees of colleges and universities and to say to them, in effect, "If you do decide that military training must be given for a stated period of time in your institution, you may not have a cent from the United States Government in support of the Reserve Officers' Training Corps." I think this is a fair estimate of the final effect of this amendment. It is a direct interference with the freedom of action and discretion of the faculty and trustees of colleges and universities which today are maintaining Reserve Officers' Training Corps units; and when this is done it is the beginning of the break-down of the whole system.

Mr. BIERMANN. Mr. Chairman, will the gentleman yield?

Mr. WADSWORTH. Certainly.

Mr. BIERMANN. Is it not a fact that every system of Federal aid—for example, roads—has strings and conditions attached to it?

Mr. WADSWORTH. Yes; strings of various kinds.

Mr. BIERMANN. I think every one of them has. Then why should we not say that if the United States Government allots some money to a college that that college shall be run as an American institution and not as a Prussian institution?

Mr. WADSWORTH. Now, the gentleman is embarking upon an argument I had not trod upon.

Mr. BIERMANN. It might be well for the gentleman to tread upon it.

Mr. WADSWORTH. I am not willing to admit for 1 minute that the National Defense Act of 1920, which coordinated all the military activities of the Federal Government in conjunction with the States, and with the universities and colleges sought to make of it a Prussianized instrument. This is one of the phases of the national defense system of the United States; and the analogy which the gentleman from Iowa seeks to draw with respect to Federal aid to roads I think is scarcely an accurate one. In the matter of road building we say we will expend $100 in a State if the State will put up $100 for the same purpose; but in doing this we are not compelling the State to abandon any of its practices. The analogy is not complete, as I am sure the gentleman will see. The gentleman's amendment states to the college or the university: "If you do things that you heretofore thought were right in the management of your students, then by indirection the Federal Government will order you to stop doing it."

Mr. BIERMANN. Mr. Chairman, will the gentleman yield?

Mr. WADSWORTH. Certainly.

Mr. BIERMANN. Military training is compulsory in some of the colleges and universities; and they are the only places in the United States of America where a young man is compelled to take military training whether he wants to or not.

Mr. WADSWORTH. That is the business of the college or the university, and not ours.

Mr. BIERMANN. Does the gentleman think it is better to preserve the so-called "right" of a few men, the faculty, rather than to preserve the right of the students to make an election?

Mr. WADSWORTH. That is for them to decide, not for us.

Mr. KVALE. Mr. Chairman, will the gentleman yield?

Mr. WADSWORTH. I yield.

Mr. KVALE. Does the gentleman feel it more important to preserve the freedom of action of a few trustees than to preserve the freedom of action of the entire student body?

Mr. WADSWORTH. In the last analysis, a college or university must be governed by its trustees and faculty, not by its students; and it is up to the trustees and faculty to determine these matters, not for the Congress.

[Here the gavel fell.]

Mr. COLLINS of Mississippi. Mr. Chairman, I move that all debate on the paragraph and all amendments thereto do now close.

The motion was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa.

The question was taken; and on a division (demanded by Mr. KVALE) there were—ayes 15, noes 31.

So the amendment was rejected.

The Clerk read as follows:

For the preservation and maintenance of existing river and harbor works and for the prosecution of such projects heretofore authorized as may be most desirable in the interests of commerce and navigation; for survey of northern and northwestern lakes, and other boundary and connecting waters as heretofore authorized, including the preparation, correction, printing, and issuing of charts and bulletins and the investigation of lake levels; for prevention of obstructive and injurious deposits within the harbor and adjacent waters of New York City; for expenses of the California Debris Commission in carrying on the work authorized by the act approved March 1, 1893 (U.S.C., title 33, sec. 661); for examinations, surveys, and contingencies of rivers and harbors; and for printing, as may be authorized by the Committee on Printing of the House of Representatives, either during a recess or session of Congress, of surveys under House Document No. 308, Sixty-ninth Congress, first session, and section 10 of the Flood Control Act, approved May 15, 1928 (U.S.C., supp. VI, title 33, sec. 702j), and such surveys as may be printed during a recess of Congress shall be printed as documents of the next succeeding session of Congress, and for the purchase of motor-propelled passenger-carrying vehicles and motor boats, for official use, not to exceed $122,417: *Provided*, That no funds shall be expended for any preliminary examination, survey, project, or estimate not authorized by law, $23,702,645: *Provided further*, That no appropriation under the Corps of Engineers for the fiscal year 1935 shall be available for any expense incident to operating any power-driven boat or vessel on other than Government business: *Provided further*, That authority is granted for the purchase of motor-propelled passenger-carrying vehicles and motor boats, not to exceed $52,900, to be paid from available funds for "Flood control, Mississippi River and tributaries", and not to exceed $2,250 to be paid from available funds for "Flood control, Sacramento River, Calif.", for official use in connection with such works.

Mr. COLLINS of Mississippi. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. COLLINS of Mississippi: On page 65, line 19, after the word "printing", insert a comma and the words "including illustrations."

Mr. COLLINS of Mississippi. Mr. Chairman, the purpose of this amendment is to comply with the wishes of the Joint Committee on Printing. The chairman of that committee has recommended this amendment in order that illustrations may be included in these printed reports.

Mr. BOLTON. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Mississippi. I yield.

Mr. BOLTON. This would allow them to print maps.

Mr. COLLINS of Mississippi. Yes; otherwise it would be unlawful to print them.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Mississippi.

The amendment was agreed to.

Mr. OLIVER of New York. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OLIVER of New York: Page 66, line 7, before the colon, insert a comma and the following: "of which sum $25,000 shall be available for conducting a survey of Governors Island, N.Y., to determine its usefulness and adaptability as an airport and the cost of accomplishing all work incidental to effecting the change."

Mr. COLLINS of Mississippi. I have no objection to the amendment, I may say to the gentleman from New York.

Mr. OLIVER of New York. Then I shall save the gentleman's time by not making an argument.

The CHAIRMAN. Does the gentleman desire to be heard on his amendment?

Mr. OLIVER of New York. No.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York.

The amendment was agreed to.

The Clerk concluded the reading of the bill.

Mr. COLLINS of Mississippi. Mr. Chairman, I ask unanimous consent to return to page 48, line 22, and in behalf of the gentleman from Kansas [Mr. AYRES] and for the gentleman from Kansas I offer an amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. COLLINS of Mississippi for Mr. AYRES of Kansas: On page 48, line 22, before the period, insert a colon and the words: "*Provided*, That the appropriations contained in the Naval Appropriation Act for the fiscal year 1935 for drills for members of the Naval and Marine Corps Reserve forces shall be available for the conduct of 42 drills for each of such forces."

Mr. WADSWORTH. Mr. Chairman, I rise in opposition to the amendment. The money will come from the deficiency bill?

Mr. COLLINS of Mississippi. Yes.

Mr. WADSWORTH. This is not in the naval appropriation bill?

Mr. COLLINS of Mississippi. No.

Mr. WADSWORTH. So this would be ineffective unless it is taken care of in the deficiency bill?

Mr. COLLINS of Mississippi. The naval appropriations involved are lump sums and will take care of the situation until a deficiency or supplemental appropriation is made available.

The amendment was agreed to.

Mr. COLLINS of Mississippi. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill, as amended, do pass.

The motion was agreed to.

Accordingly the Committee rose; and Mr. BYRNS having taken the chair as Speaker pro tempore, Mr. LANHAM, Chairman of the Committee of the Whole House on the state of the Union, reported that that Committee, having had under consideration the bill (H.R. 8471) making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1935, and for other purposes, had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill, as amended, do pass.

Mr. COLLINS of Mississippi. Mr. Speaker, I move the previous question on the bill and all amendments thereto to final passage.

The previous question was ordered.

The SPEAKER pro tempore. Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

Mr. PARKS and Mr. FISH rose.

Mr. PARKS. Mr. Speaker, I offer a motion to recommit.

The SPEAKER pro tempore. Is the gentleman opposed to the bill?

Mr. PARKS. In its present form, I am.

The SPEAKER pro tempore. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. PARKS moves to recommit the bill to the Committee on Appropriations with instructions to report the same back forthwith amended as follows: On page 48, line 1, before the word "armory", insert "42."

The motion to recommit was rejected.

The question was taken, and the bill was passed.

A motion to reconsider was laid on the table.

The SPEAKER resumed the chair.

CAMP MERRITT, "THE ARISTOCRAT OF AMERICA'S MILITARY CANTONMENTS"—MEMORIES IT REVIVES

Mr. KENNEY. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the RECORD by including therein an address delivered by me last Memorial Day at the site of Camp Merritt, N.J.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. KENNEY. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following address delivered by me last Memorial Day at the site of Camp Merritt, N.J.:

It is an honor and a high privilege, given by you to me, to attend these memorial exercises. To you, veterans and friends of veterans, I have come home saddened by the thought that the veteran and his dependents have been called upon to make further sacrifices for our country. To maintain the credit of the Nation the veterans of America, ever patriotic, ever loyal, have been asked to forego their allowances, and they have contributed the greatest share. Not a murmur, not a protest, has come from any veteran in my district. Oh, I know the need, the dire necessity in some cases; and it is my purpose, as it is the aim of Congress, to intervene in all deserving cases to the end that no disabled veteran shall unduly suffer, and that every veteran and his dependents shall get simple justice. When the adjustments are finally made, there will be found in them, we can expect, the humanity that characterizes our trusted President, Franklin D. Roosevelt.

Nine years ago many whom I recognize were here, as I was in a vast throng like this, about the monumental shaft that marks this historic site. General Pershing was here. The great embarkation camp had gone. In its place had arisen the granite spire that was that day unveiled. Reaching up to the heavens, it stands to remind us of the gallant and vibrant youth that passed through here to fight our battle overseas, or those who died that we might live, of our disabled and afflicted veterans—our living dead—of the boys who returned to us, who, nevertheless, were ready and willing to lay down their lives for our country and for us.

This monument is the last vestige of the camp which bore the name of that distinguished soldier, Gen. Wesley Merritt, whose widow did so much to make camp life comfortable here. Here it was that fully one half of the American Expeditionary Forces made ready to sail for the battlefields of France. To this place many of them returned after the armistice. The veteran cherishes this familiar ground. It is enshrined in the hearts of veterans. All of us look upon it as sacred ground, grateful as we are to the legions of brave young men who remained with us a little while and then embarked overseas to defend and preserve the liberties of the world. I, and you with me I know, hope that some day this place will be dedicated to their fond memory and will become, as it deserves, a national shrine.

In the light of the suffering, sacrifices, and losses that now confront us, well may we ponder the greater hardships of the boys who passed over and along these roads.

It would be well, too, if we would meditate upon the rigors and trials of the boys and men of older days, who traversed these fields, fighting as they went, in the great Revolutionary War, which gave us our country. The patriotic men and women of the Colonies made the first great sacrifices for this great and glorious Nation. Undaunted they fought and carried on with courage and with faith, looking forward to a better day. No suffering, no defeat, no hardship could crush their indomitable spirit. Finally it prevailed, and this Government was established under Washington. We like to think of him as the Father of our Country; but the men and women of his time, imbued with the principles he exemplified, were indispensable in carving out this Nation.

Other sacrifices had to be made. Our great Nation became endangered. The spirit that made this Nation saved it. The Grand Army of the Republic responded, and out of the conflict of the Civil War emerged a greater Nation—an indissoluble Union. Our hearts are grieved by the memories it revives of hardships, sacrifices, and toll of lives. Veterans of that war, few in number but rich in years, are still alive and here to pay their respects to their departed comrades to whom this day is especially dedicated. They know the sacrifices that were made to preserve the Union. And we know they made them. Their courage, faith, and devotion to their country and to mankind made victory certain. Lincoln realized this, and he immortalized them at Gettysburg. The great figure, the savior of our Nation, symbolizes the humble, sturdy, and unquenchable spirit of the service men of that time.

The American soldier was again summoned to make untold sacrifices in the Spanish-American War, and it is the history of our country that our men have never faltered when they could contribute to her progress and her welfare.

The boys of the World War brought to that conflict the selfsame unconquerable spirit. At the cost of their lives and limbs they valiantly invaded foreign lands making war against war. These boys of yesterday, who underwent the tortures that are fresh in our minds, are the World War veterans of today, who, victorious in their turn, exercise such a potent influence in the life of our Nation and who stand ready to carry on unselfishly that this great land for which they fought and offered their lives shall continue to be the best place in all the world.

Life is filled with hardships, sacrifices. We are today beset with them on every side. A different people, our spirit might be crushed. But we realize that sacrifices are the normal rather than the abnormal thing. And when our burdens are the heaviest, we recall that sacrifices are but the stepping stones to success, that victory is usually the result of many long sacrifices.

So it is that we have faith in ourselves and in each other and in our country. We are determined to keep our faith and to go on fighting courageously no matter how dark the days or trying, for by so doing we know that we shall emerge victorious. Our President is fighting with vigor and with vim, and he wants us to fight with him, and to fight, as he does, with a smile; and we are going to fight and keep on fighting, and soon a new day will dawn for our Nation and for us.

GORMLEY *v.* GOSS

Mr. GAVAGAN, from the Committee on Elections No. 2, submitted a report (Rept. No. 893) in the contested-election case of *Martin E. Gormley* v. *Edward W. Goss,* which was referred to the House Calendar and ordered printed.

THE PRESIDENT'S CONSERVATION PROGRAM

Mr. CHASE. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in augmentation of the President's conservation program and with particular reference to the three wild-life bills which this House passed this week.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. CHASE. Mr. Speaker, from all over Minnesota, and from many other States, there have been coming to me for the past month telegrams and letters urging immediate and favorable consideration of the three conservation bills, and active support for all of them.

As a Member of the House, of your Committee on Agriculture, and of the subcommittee of said Committee on Agriculture, to which these bills were referred, it has been my privilege to comply with those numerous requests and to support actively the three measures which the sportsmen and nature lovers of Minnesota so heartily and unanimously approve.

The North Star State was blessed to the fullest extent with the bounties of nature; it has passed through the distressing period of prodigal waste, wanton destruction, and criminal depredation. Its sportsmen, its sportsmen's organization, and the public generally, are aware of the crimes committed and the waste condoned, and are in accord on the necessity for united reconstruction effort.

The sportsmen, the women's clubs, and all lovers of scenic beauty and wild life, acting singly, in groups, and as organizations, directly and through State and local official bodies, have established definitely a local Minnesota precedent for this national conservation plan.

There is nothing in the plan harmful to Minnesota or its interests. On the contrary, the work already done there will coordinate easily and naturally with the great national program.

The three companion bills just approved by the House include the duck stamp bill, introduced by the gentleman from Texas [Mr. KLEBERG]. This bill provides that every migratory-waterfowl hunter must purchase a $1 stamp at a convenient post office. This stamp shall be affixed to his State hunting license. Minors under 16 years of age are not required to purchase a stamp.

The second measure of the trio in this national program is known as the "coordination bill" and calls for cooperation between Federal agencies engaged in conservation work. In the future, public works will be planned with proper and adequate consideration for the interests of our wild-life resources.

A third measure is the Robinson bill, creating in the national forests and the public domain fish and game sanctuaries by Executive order, with the consent of the States within which they are proposed.

Taken together, these three bills constitute a well-ordered, well-thought-out plan for national conservation.

They provide the sanctuaries and the money with which to maintain them.

They provide cooperation and coordination between departments engaged in their administration.

They give to the lover of outdoor America the hope and a growing conviction that our wild life will not further decline or its numbers diminish.

Conservation has made great forward steps in the past few months. Never before in the history of our country has there been such a pronounced interest on the part of the people in the preservation of our wild life. Even the depression has brought to us the realization of the value, material and esthetic, which we as a nation should place upon the creatures of our wilderness areas.

Many forget that game birds, animals, and fish are important factors in the daily lives of millions of people, as well as constituting a valuable national and natural resource. When we remember that 6,000,000 adults in the United States annually take out a hunting license, and 7,000,000 take out a fishing license, the importance of conservation becomes apparent. The most conservative estimate is that these 13,000,000 hunters and fishermen spend more than $650,000,000 every year in the pursuit of game. This sum includes the money spent for ammunition, guns, fishing tackle, outdoor clothing, boats, transportation, and the other items that enter into week-end or longer vacations in the forests, along streams, and in the field. What a mighty force for conservation these 13,000,000 people will make when they give united effort and a single voice for their cause!

Today we are on the verge of a new social era. Whatever may be the outcome of this depression, it is certain that those who live in the tomorrow will have more freedom and more leisure in which to enjoy the out-of-doors. Every tendency of modern thought is to decrease the weekly periods of work and to provide longer periods for mental and physical recreation.

Good roads and the automobile have changed the trend of our lives. Never again shall we go back to covered-wagon days. The lure of the out-of-doors is inherent in all, a heritage from our pioneer ancestors.

Development of National and State park systems has been a boon to the American people. Records are incomplete, but those which have been made are fairly accurate. They show that last year more than half of the population of this country visited one or more times one or more of our parks.

With this love of the out-of-doors in our hearts, and increased time afforded us to indulge this love, it is highly important that we not only conserve the resources we already have but restore those which have been destroyed. It is one of the shames of the century that we have wasted, or ruthlessly destroyed, the wild life with which a benign providence blessed this continent.

In the mad hurry of this industrial age, invention after invention has made life easier and travel speedier. But with all our progress we have been destroying instead of building. We have boasted that nowhere in the world is there so high a standard of living for those who labor; nowhere are there such advantages for the wage earner and his family as this great country of ours affords. But while we plunged headlong into the industrial age, we trampled under foot the priceless heritage of our forests, streams, and fields.

Today we are trying to rebuild our shattered economic and social structure, to correct our mistakes, to restore our national resources.

We have come to the realization that the out-of-doors is something more than a place in which to indulge our leisure hours. It is an asset which means much to the future welfare of our Nation. No nation can survive which does not have a strong and sturdy people. Men must brush the cobwebs from their brain, and this cannot be done in the stuffy workshop or office or on a city street. The pure, fresh air of field and forest, the sparkling water of lakes and streams, clear the intellect and strengthen bodies. The recreational advantages of the out-of-doors are incidental to their more permanent value in rebuilding the physical, mental, and spiritual fiber of the American people, strengthening the race and insuring the future.

To attain this objective all agencies, industrial and agricultural, social and political, Federal, State, and local, are uniting now in a strong and determined effort to restore wild-life resources of America.

A vast program has been launched; millions of acres of submarginal lands are to be removed from commercial agriculture. The policy will fit admirably in the plan of restoring our waterfowl, our upland game birds, our fish, and our four-footed game animals and fur bearers. The dollars that will be spent to place agriculture on a sound economic footing will benefit the nature lover through this restoration program, and thus serve a twofold purpose.

This program cannot be completed within 1 year or 2 or 10, but each year will see increasing improvement, and most of you who have aided the cause of conservation will live to see realized your hopes of a restored wild-life population. The Federal and State agencies of conservation, the unofficial organizations and individuals, are unitedly bending their efforts and their resources to this fulfillment.

It has been the good fortune of sportsmen of Minnesota to pioneer in this work. The men and women of the Northland who love nature and its beauties, and who have talked and worked for the protection of wild life and scenic beauty, will soon see builded a conservation structure destined to restore to America its forests and waters and its wealth in the wild life which once graced it.

However partisan views may differ on fiscal programs and tariff policies, there should be no divergence in this conservation plan.

Led by President Roosevelt, sponsored by the administration, this program of conservating and restoring natural resources should appeal to women and men of all parties; and all organizations should unite in supporting this national conservation movement, to survey the soils and put lands to their best use, to retire marginal lands from cultivation, to protect America's heritage of lakes and streams, rapids and waterfalls, to eliminate erosion and control floods, to restore and maintain breeding and feeding grounds and waters for all animal life.

That the wild-life portion of the conservation program will be financed by the sportsmen, rather than by the taxpayers, should commend it to the latter.

That it is coordinated with the Departments of Agriculture and the Interior, and provides for cooperation between governmental agencies, Federal, State, and local units of government, public officials and departments and private organizations, shows a definite and rather complete understanding of the problem and its solution.

Speaking politically, it is a Democratic program which every Republican can esteem it a pleasure and a privilege to support.

It is fair to assume that this conservation program, protecting the remainder of the country's wild life, is only one link in a general plan which President Roosevelt has, and which, judging by the interest which he showed when Governor of New York State and since becoming President, is very near to his heart.

I am happy in the thought that, as a Representative of Minnesota and its sportsmen, I have been privileged to have a small part in the initiation of a movement which I regard as important, and which the sportsmen of my State so enthusiastically approve.

THE PAY CUT

Mr. SWICK. Mr. Speaker, I ask unanimous consent to extend my remarks and to include an address by my colleague, Mr. ISAAC H. DOUTRICH.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. SWICK. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by my colleague, Hon. ISAAC H. DOUTRICH, of Pennsylvania, at a dinner of the Railway Mail Association, Harrisburg, Pa., March 5, 1934:

This is probably not the time to make what might be considered a political speech. Many of the railway-mail clerks are Democrats, many Republicans; some are Roosevelt Republicans. I should just like to talk about that which I think might interest you.

First of all I want to refer to what interests you particularly, and that is the matter of the restoration of the pay cut. As matters have developed, I think most men in Congress today feel it was a mistake ever to cut the pay of Federal employees. At the time, of course, President Roosevelt put up a great argument that there must be some reductions made in order, as they then said, to balance the Budget.

At that time, of course, everybody was feeling and thinking that the President should be supported in whatever legislation he proposed. It was only in this way that he was ever given the authority to do as he sees fit in this matter.

Since then it has developed that the administration really has made little or no effort to actually balance the Budget.

The administration is trying to force all business people to shorten hours, to employ more people, and to increase wages, and it is just as hard to understand why private industries should be forced to increase wages while the Government reduces wages—and it seems almost impossible to force them to restore this wage cut.

I presume, of course, that you all know that the independent offices appropriation bill, when it came to the House, was brought in to that body with a rule of such a character that no amendments could be offered to the bill and just a very limited debate was allowed.

In the face of the support of the Democratic leaders of the House, when this rule was brought in it was almost defeated. Practically all the Republicans voted to defeat the rule as well as many of the Democrats. Had the rule been defeated and the bill brought in to the House in the regular way, then surely the House would have voted and would have restored the pay cut. Of course, under the rule that could not be done.

You all probably know what happened in the Senate last week. That body added an amendment to that same bill restoring 5 percent of the pay cut effective as of February 1, and the full 15 percent effective July 1 next. Ordinarily the bill would have been brought back to the House and the House Membership would have been allowed to vote on this amendment.

Instead of that, the administration leaders in the House sent the bill back to the committee, where they will make every possible effort to kill it. There is a possibility that it may be forced out of committee sometime during this session, maybe soon, and maybe not until late in the session.

The Democratic leaders are trying to maneuver in every possible way to prevent the House from voting on this particular question. If the House gets an opportunity, and the Republican leadership will try to force an opportunity, to vote on it, then surely the House will vote in favor of restoring this pay cut.

I think what I have just mentioned will be of more interest to you at this time than any other subject I might discuss, as this is a question which vitally affects each and every one of the railway-mail clerks as well as all other Federal employees.

So far as I am concerned I am 100 percent in favor of restoring the pay cut in full.

I really do not see how times can ever really get good again until in some way—through wages—money is again put into the pockets of the buying public.

I want to conclude my remarks by offering my best wishes to your general superintendent, your superintendents, and your chief clerks, in whose honor this dinner is being given, and to thank you for giving me the opportunity of being with you.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. DEEN, for 3 days, on account of illness.

Mr. BYRNS. Mr. Speaker, I move the House do now adjourn.

ORDER OF BUSINESS

Mr. RANSLEY. Will the gentleman withhold that motion for a moment?

Mr. BYRNS. I withhold it.

Mr. RANSLEY. Will the gentleman tell the House what the program is for the balance of the week?

Mr. BYRNS. It is expected that the rule making in order the cotton production bill of the gentleman from Alabama [Mr. BANKHEAD] will be taken up the first thing tomorrow unless something intervenes. This will consume the balance of the week.

JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. PARSONS, from the Committee on Enrolled Bills, reported that that committee did on this day present to the President, for his approval, a joint resolution of the House of the following title:

H.J.Res. 290. Joint resolution to provide an appropriation to carry into effect the act entitled "An act to provide for loans to farmers for crop production and harvesting during the year 1934, and for other purposes", approved February 23, 1934.

ADJOURNMENT

Mr. BYRNS. Mr. Speaker, I move the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 2 minutes p.m.) the House adjourned until tomorrow, Friday, March 9, 1934, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

371. A communication from the President of the United States, transmitting a supplemental estimate of appropriation for the District of Columbia for the fiscal year 1935 in the amount of $3,750, which is to supplement the amount of the estimate in the Budget for the fiscal year 1935 of $11,250, to provide for the vocational rehabilitation of disabled residents of the District of Columbia (H.Doc. No. 274); to the Committee on Appropriations, and ordered to be printed.

372. A letter from the Secretary of War, transmitting a letter from the Chief of Engineers, United States Army, dated March 3, 1934, submitting a report, together with accompanying papers and illustrations, on a preliminary examination and survey of Beaver, Shenango, and Mahoning Rivers, Pa., and Ohio, authorized by the River and Harbor Act approved July 3, 1930 (H.Doc. No. 277); to the Committee on Rivers and Harbors and ordered to be printed with 17 illustrations.

373. A letter from the Secretary of War, transmitting a letter from the Chief of Engineers, United States Army, dated February 27, 1934, submitting a report, together with accompanying papers and illustration, on a preliminary examination and survey of Maurice River, N.J., with a view to improvement of the entrance channel, authorized by the River and Harbor Act approved March 3, 1925 (H.Doc. No. 275); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

374. A letter from the Secretary of War, transmitting a letter from the Chief of Engineers, United States Army, dated March 3, 1934, submitting a report, together with accompanying papers and illustration, on a preliminary examination and survey of Savannah Harbor, Ga., with a view to securing such increase in depth and width and such other improvements as may be found necessary, including an adequate turning basin, authorized by the River and Harbor Act approved July 3, 1930 (H.Doc. No. 276); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII,

Mr. SMITH of West Virginia: Committee on Mines and Mining. S. 2313. An act providing for the suspension of annual assessment work on mining claims held by location in the United States and Alaska; without amendment (Rept. No. 890). Referred to the Committee of the Whole House on the state of the Union.

Mr. MILLIGAN: Committee on Interstate and Foreign Commerce. H.R. 6898. A bill authorizing the city of Atchison, Kans., and the county of Buchanan, Mo., or either of them, or the States of Kansas and Missouri, or either of them, or the highway departments of such States, acting jointly or severally, to construct, maintain, and operate a free highway bridge across the Missouri River at or near Atchison, Kans.; without amendment (Rept. No. 891). Referred to the House Calendar.

Mr. KELLY of Illinois: Committee on Interstate and Foreign Commerce. S. 2592. An act granting the consent of Congress to the State of Minnesota, and Scott County and Carver County, in the state of Minnesota, to construct, maintain, and operate a bridge across the Minnesota River at or near Jordan, Minn.; without amendment (Rept. No. 892). Referred to the House calendar.

CHANGE OF REFERENCE

Under clause 2 of rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H.R. 8322) granting a pension to Maggie G. Herrod, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. McREYNOLDS: A bill (H.R. 8539) to authorize the attendance of the Marine Band at the United Confederate Veterans' 1934 Reunion at Chattanooga, Tenn.; to the Committee on Naval Affairs.

By Mr. BACHARACH: A bill (H.R. 8540) to reduce the rate of interest to 2½ percent on loans to veterans on their adjusted-service certificates; to the Committee on Ways and Means.

By Mr. BOILEAU: A bill (H.R. 8541) to provide for the enrollment of members of the Menominee Indian Tribe of the State of Wisconsin; to the Committee on Indian Affairs.

By Mr. GRIFFIN: A bill (H.R. 8542) to amend the World War Adjusted Compensation Act as amended, and to provide for immediate payment to all veterans desiring same of the adjusted compensation in the said act of May 17–19, 1924 (Public, No. 120, 63th Cong.), with interest from November 11, 1918; to the Committee on Ways and Means.

By Mr. YOUNG: A bill (H.R. 8543) to restore deposits and confidence by payment to depositors of closed banks and fulfillment of the implied guaranty by the United States Government of deposit safety in banks; to the Committee on Banking and Currency.

By Mr. McKEOWN: A bill (H.R. 8544) making receivers appointed by any United States courts and authorized to conduct any business, or conducting any business, subject to taxes levied by the State the same as if such business were conducted by private individuals or corporations; to the Committee on the Judiciary.

By Mr. BROWNING: A bill (H.R. 8545) to authorize the Secretary of War to appoint any enlisted man of the Army, Navy, Marine Corps, or Coast Guard who served as an enlisted officer in the same during the World War as a warrant officer of the Army, Navy, Marine Corps, or Coast Guard of the United States, and for other purposes; to the Committee on Military Affairs.

By Mr. OLIVER of New York: Joint resolution (H.J.Res. 292) proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

By Mr. LEMKE: Joint resolution (H.J.Res. 293) for the adjustment and settlement of losses sustained by the cooperative marketing associations; to the Committee on Agriculture.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BLOOM: A bill (H.R. 8546) granting a pension to Sophie Pincus; to the Committee on Invalid Pensions.

By Mr. BIERMANN: A bill (H.R. 8547) for the relief of Florence Byvank; to the Committee on World War Veterans' Legislation.

By Mr. BROWNING: A bill (H.R. 8548) for the relief of Elmer Eugene Derryberry; to the Committee on Claims.

By Mr. BURNHAM: A bill (H.R. 8549) granting a pension to Freda Boy; to the Committee on Pensions.

By Mr. DIES: A bill (H.R. 8550) for the relief of Peter Sprinkle; to the Committee on Claims.

Also, a bill (H.R.8551) for the relief of the Texas Realty Co., Inc.; to the Committee on Claims.

By Mr. FREY: A bill (H.R. 8552) for the relief of Henry W. Bibus, Annie Ulrick, Samuel Henry, Charles W. Hensor, Headley Woolston, John Henry, Laura B. Margerum, and George H. Custer, of Falls Township and borough of Tullytown, Bucks County, Commonwealth of Pennsylvania; to the Committee on Claims.

By Mr. GRAY: A bill (H.R. 8553) granting a pension to Elmer S. Laymon; to the Committee on Pensions.

By Mr. KENNEY: A bill (H.R. 8554) granting compensation to George S. Conway, Jr.; to the Committee on Claims.

By Mr. KRAMER: A bill (H.R. 8555) to confer the honor of "The Purple Heart" on William Rubsamen; to the Committee on Military Affairs.

By Mr. LANZETTA: A bill (H.R. 8556) to authorize the presentation of a Distinguished Service Cross to Quintin Serrano; to the Committee on Military Affairs.

By Mrs. McCARTHY: A bill (H.R. 8557) to correct the military record of Rock White; to the Committee on Military Affairs.

By Mr. McREYNOLDS: A bill (H.R. 8558) for the relief of Thalbert Davis; to the Committee on Claims.

By Mr. SOMERS of New York: A bill (H.R. 8559) authorizing the President to order Clive A. Wray before a retiring board for a hearing of his case, and upon the findings of such board to determine whether or not he be placed on the retired list with the rank and pay held by him at the time of his discharge; to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

2842. By Mr. BOYLAN: Petition signed by employees of the Long Island City plant of the National Sugar Refining Co., urging that a limit be set on the importation of refined sugar from Cuba and other tropical islands; to the Committee on Ways and Means.

2843. By Mr. COLLINS of California: Petition of J. E. Truesdale, Blanche Thomas, and 98 other residents of Riverside County, Calif., urging restoration of benefits to Spanish-American War veterans and their dependents; to the Committee on Pensions.

2844. By Mr. DOBBINS: Memorial of the Chamber of Commerce of Champaign, Ill., advocating liberalization of the Home Owners' Loan Act to provide funds for the repair and modernization of homes and the erection of new homes; to the Committee on Banking and Currency.

2845. By Mr. EDMONDS: Petition of the Philadelphia Board of Trade, protesting against the passage of House bill 7202; to the Committee on Labor.

2846. By Mr. HILDEBRANDT: Resolution of the Cooperative Wool Growers of South Dakota, urging more adequate appropriation for predatory-animal control; to the Committee on Agriculture.

2847. Also, resolution of the Cooperative Wool Growers of South Dakota, endorsing Senate bill 2280, truth in fabric bill; to the Committee on Interstate and Foreign Commerce.

2848. By Mr. JOHNSON of Texas: Petition of Mr. and Mrs. G. W. Sheeler, of Madisonville, Tex., favoring House bill 7986, McFadden radio bill; to the Committee on Merchant Marine, Radio, and Fisheries.

2849. By Mr. KELLY of Pennsylvania: Petition of citizens of Swissvale and other boroughs in Allegheny County, Pa., urging passage of the Wagner labor bill; to the Committee on Ways and Means.

2850. By Mr. KENNEY: Petition of the Senate of the State of New Jersey, memorializing Congress to enact with all convenient speed such legislation as may be necessary to abolish the Federal gasoline sales tax, and to surrender to the States exclusively the power to tax such sales in the future; to the Committee on Ways and Means.

2851. By Mr. KINZER: Resolution from the Junior League of Lancaster, Pa., opposing trade practices and blind buying at present prevailing in the motion-picture industry; to the Committee on Interstate and Foreign Commerce.

2852. By Mr. LINDSAY: Petition of the Ripans Chemical Co., New York City, opposing the National Securities Exchange Act of 1934, S. 2693; to the Committee on Banking and Currency.

2853. Also, petition of the Larned Corporation, New York City, opposing the National Securities Exchange Act of 1934, S. 2693; to the Committee on Interstate and Foreign Commerce.

2854. Also, petition of Wyeth Chemical Co., Inc., New York City, opposing the National Securities Exchange Act of 1934, S. 2693; to the Committee on Interstate and Foreign Commerce.

2855. Also, petition of John F. Murray Advertising Agency, New York City, opposing the National Securities Act of 1934, S. 2693; to the Committee on Interstate and Foreign Commerce.

2856. Also, petition of Howard E. Klohr and others, representing different departments of the Long Island City plant of the National Sugar Refining Co. of New Jersey, requesting a limit set on importation of refined sugar from Cuba and other tropical islands; to the Committee on Interstate and Foreign Commerce.

2857. By Mr. PARKS: Petition of members of the Seventeen Hundred and Eightieth Company, Veterans' Civilian Conservation Corps, Mount Nebo, Ark.; to the Committee on World War Veterans' Legislation.

2858. By Mr. RICH: Petitions from the Thimble Club of Rixford, Pa.; Church of the United Brethren in Christ of Duke Center, Pa.; and the Church of the United Brethren in Christ of Rixford, Pa.; favoring House bill 6097; to the Committee on Interstate and Foreign Commerce.

2859. Also, petition of the Woman's Christian Temperance Union of Harrison Valley, Pa., favoring House bill 6097; to the Committee on Interstate and Foreign Commerce.

2860. By Mr. RUDD: Petition of the Larned Corporation, New York City, opposing the passage of Senate bill 2693, the National Securities Act; to the Committee on Interstate and Foreign Commerce.

2861. Also, petition of the Ripans Chemical Co., New York City, opposing the passage of Senate bill 2693, the National Securities Exchange Act; to the Committee on Interstate and Foreign Commerce.

2862. Also, petition of the Wyeth Chemical Co., Inc., New York City, opposing the passage of Senate bill 2693, the National Securities Exchange Act, 1934; to the Committee on Interstate and Foreign Commerce.

2863. Also, petition of employees of the Long Island City plant of the National Sugar Refining Co. of New Jersey, favoring a limit set on importation of refined sugar from Cuba and other tropical islands; to the Committee on Ways and Means.

2864. By Mr. SADOWSKI: Petition of the House of Representatives and State Senate of the State of Michigan; to the Committee on Ways and Means.

2865. Also, petition of the Detroit Bank Depositors Cooperative League; to the Committee on Banking and Currency.

2866. By Mr. SMITH of West Virginia: Resolution of the West Virginia Legislature, requesting the President of the United States to approve the report of the wild life restoration committee; to the Committee on Agriculture.

2867. By the SPEAKER: Petition of the American League of Medical Freedom, assembled at Seattle, Wash., regarding the Tugwell-Copeland bill; to the Committee on Interstate and Foreign Commerce.

SENATE

FRIDAY, MARCH 9, 1934

(Legislative day of Wednesday, Feb. 28, 1934)

The Senate met at 12 o'clock m., on the expiration of the recess.

CALL OF THE ROLL

Mr. McKELLAR. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Bone	Carey	Dickinson
Ashurst	Borah	Clark	Dieterich
Austin	Bulkley	Connally	Dill
Bachman	Bulow	Coolidge	Duffy
Bailey	Byrd	Copeland	Erickson
Bankhead	Byrnes	Costigan	Fess
Barkley	Capper	Couzens	Fletcher
Black	Caraway	Cutting	Frazier

George	King	Nye	Thomas, Okla.
Gibson	La Follette	O'Mahoney	Thomas, Utah
Glass	Lewis	Overton	Thompson
Goldsborough	Logan	Patterson	Townsend
Gore	Lonergan	Pittman	Trammell
Hale	McAdoo	Pope	Tydings
Harrison	McCarran	Reed	Vandenberg
Hastings	McGill	Reynolds	Van Nuys
Hatch	McKellar	Russell	Wagner
Hayden	McNary	Schall	Walcott
Hebert	Metcalf	Sheppard	Walsh
Johnson	Murphy	Shipstead	Wheeler
Kean	Neely	Steiwer	White
Keyes	Norris	Stephens	

Mr. LEWIS. I desire to announce that the Senator from Arkansas [Mr. ROBINSON], the Senator from New Hampshire [Mr. BROWN], the Senator from Louisiana [Mr. LONG], and the Senator from South Carolina [Mr. SMITH] are necessarily detained from the Senate.

Mr. HEBERT. I desire to announce that the Senator from New Jersey [Mr. BARBOUR], the Senator from Pennsylvania [Mr. DAVIS], the Senator from West Virginia [Mr. HATFIELD], the Senator from South Dakota [Mr. NORBECK], and the Senator from Indiana [Mr. ROBINSON] are necessarily absent from the Senate.

The VICE PRESIDENT. Eighty-seven Senators have answered to their names. A quorum is present.

INVITATION TO INTERNATIONAL PARLIAMENTARY CONFERENCE ON COMMERCE

The VICE PRESIDENT laid before the Senate a letter from the Secretary of State, transmitting copy of a despatch from the American Embassy at Brussels and its enclosures, a letter from the Secretary General of the International Parliamentary Conference on Commerce, extending to the Congress of the United States an invitation to be present at the nineteenth plenary assembly of the above-mentioned organization, to take place at Belgrade on September 16, 1934, and the 5 days following, and requesting an indication of the views of the Senate with regard to the invitation, so that appropriate reply may be made to the Secretary General of the Conference, which, with the accompanying papers, was referred to the Committee on Foreign Relations.

ANALYSES OF IMPORT AND EXPORT TRADE

The VICE PRESIDENT laid before the Senate a letter from the Chairman of the United States Tariff Commission, transmitting, in partial response to Senate Resolution 334 of the Seventy-second Congress, second session, analyses of the import and export trade of the United States with Canada, France, Sweden, China, Chile, Union of South Africa, Switzerland, Colombia, Spain, Australia, Brazil, and Italy, which, with the accompanying papers, was referred to the Committee on Finance.

JOHN P. SULLIVAN

The VICE PRESIDENT laid before the Senate a telegram from John P. Sullivan, of New Orleans, La., in regard to certain remarks in the Senate on the 7th instant by the Senator from Louisiana [Mr. LONG] with reference to Mr. Sullivan, giving a short history of his career and defending his reputation for honesty and integrity of conduct, which was ordered to lie on the table.

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate a letter in the nature of a petition from Otto Wydeck, of Wolverine, Mich., praying for immediate payment of the so-called "soldiers' bonus", which was referred to the Committee on Finance.

He also laid before the Senate a letter in the nature of a petition from Tony Jos. Razicka, of Veseleyville, N.Dak., praying for the passage of the so-called "Lemke-Frazier farm-mortgage relief bill", which was referred to the Committee on Agriculture and Forestry.

Mr. ASHURST presented resolutions adopted by the Williams-Grand Canyon Chamber of Commerce, of Williams, Ariz., favoring readoption of the old forest administration policy of giving preference to small or class A stock outfits, with necessary amendments thereto; the discontinuance of the policy of granting 10-year grazing permits in the national forests; and the steady reduction of the holdings of large stock interests in favor of the homesteader and small stock outfits, which were referred to the Committee on Agriculture and Forestry.

Mr. VANDENBERG presented the following concurrent resolution of the Legislature of the State of Michigan, which was referred to the Committee on Finance:

Senate Concurrent Resolution 3

A concurrent resolution respectfully petitioning the Honorable Franklin D. Roosevelt, President of the United States of America, not to place any limit whatsoever on the acreage for sugar-beet production and beet-sugar production in the State of Michigan.

Whereas the sugar industry is of very great importance to the citizens of the State of Michigan; and

Whereas the farmers of this State are in need of all the advantages that can be given them in diversifying their operations as much as possible in the production of a variety of crops in order to be successful; and

Whereas sugar plants that have been closed for a number of years in some cases are not being opened for business and others are planning to open; and

Whereas the United States as a whole is not producing enough sugar within its borders to supply the needs of its people: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Legislature of the State of Michigan, convened in extraordinary session, hereby respectfully petitions the Honorable Franklin D. Roosevelt, President of the United States of America, not to put any limit whatsoever on the acreage for sugar-beet production, and that there be no limit placed on the amount of beet-sugar production in the State of Michigan, so that the Michigan sugar-beet factories may reopen; and be it further

Resolved, That if there is to be a reduction in the amount of sugar available in the United States, that this reduction be accomplished by reduction of imports from foreign countries; and be it further

Resolved, That a copy of this resolution be transmitted to the Honorable Franklin D. Roosevelt, President of the United States of America, and to the Michigan Members of the House and Senate of the Congress.

Adopted by senate February 27, 1934.

ALLEN E. STEBBINS,
President of Senate.
DON W. CANFIELD,
Secretary of Senate.

Adopted by house of representatives March 1, 1934.

MARTIN R. BRADLEY,
Speaker of House of Representatives.
MYLES F. GRAY,
Clerk of House of Representatives.

PAYLESS FURLOUGHS OF POSTAL CLERKS

Mr. VANDENBERG presented a telegram from Edward J. Lynch, president Branch 16, United National Association of Post Office Clerks, of Detroit, Mich., which was referred to the Committee on Post Offices and Post Roads and ordered to be printed in the RECORD, as follows:

DETROIT, MICH., *March 8, 1934.*

Hon. ARTHUR H. VANDENBERG,
Washington, D.C.:

The membership of postal employees of the National Legislative Council of Greater Detroit urge you to make a strenuous protest against Postmaster General Farley's 4-day payless furlough together with our 15-percent salary cut. This policy unwarranted with increasing postal business and inconsistent with President Roosevelt's appeal to business for higher wages to rank and file in industry.

EDWARD J. LYNCH,
President Branch 16, United National Association of Post Office Clerks.

RAISING OF SUGAR BEETS ON RECLAMATION PROJECTS

Mr. O'MAHONEY presented a telegram from J. W. Harzell, commander Riverton Post, American Legion, of Riverton, Wyo., which was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

RIVERTON, WYO., *March 8, 1934.*

Senator JOSEPH C. O'MAHONEY,
Washington, D.C.:

Whereas a great number of ex-service men have been induced by their Government to settle upon reclamation projects of the West; and

Whereas the raising of sugar beets is the only means whereby they can hope to make a living and pay for land and water under these reclamation projects; and

Whereas to restrict or prohibit the raising of sugar beets on such projects would be a betrayal of the promises made to them when they settled thereon:

We most earnestly demand that the Government of the United States keep faith with these ex-service men by permitting the unrestricted production of the crop essential to their welfare.

J. W. HARZELL,
Commander Riverton Post, American Legion.

REPORTS OF COMMITTEES

Mr. COPELAND, from the Committee on the District of Columbia, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 1100. An act to require the furnishing of heat in living quarters in the District of Columbia (Rept. No. 441); and

S. 2580. An act to exempt from taxation certain property of the National Society United States Daughters of 1812 in the District of Columbia (Rept. No. 442).

Mr. KING, from the Committee on the District of Columbia, to which was referred the bill (S. 2925) to amend the act entitled "An act to establish a Code of Law for the District of Columbia", approved March 3, 1901, and the acts amendatory thereof and supplemental thereto, reported it with amendments and submitted a report (No. 455) thereon.

He also, from the same committee, to which was referred the bill (S. 2950) to authorize steam railroads to electrify their lines within the District of Columbia, and for other purposes, reported it with an amendment and submitted a report (No. 456) thereon.

Mr. McADOO, from the Committee on Finance, to which was referred the bill (H.R. 7599) to provide emergency aid for the repair or reconstruction of homes and other property damaged by earthquake, tidal wave, flood, tornado, or cyclone in 1933 and 1934, reported it with amendments and submitted a report (No. 443) thereon.

Mr. COOLIDGE, from the Committee on Claims, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

S. 2467. An act for the relief of Ammon McClellan (Rept. No. 444);

H.R. 5163. An act for the relief of Calvin M. Head (Rept. No. 445); and

H.R. 5228. An act to authorize the payment of hospital and other expenses arising from an injury to Florence Glass (Rept. No. 446).

Mr. BAILEY, from the Committee on Claims, to which was referred the bill (S. 2664) for the relief of John F. Korbel, reported it without amendment and submitted a report (No. 447) thereon.

He also, from the same committee, to which was referred the bill (S. 2677) for the relief of S. L. Wells, reported it with amendments and submitted a report (No. 448) thereon.

Mr. LOGAN, from the Committee on Claims, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 232. An act conferring jurisdiction upon the Court of Claims to hear, determine, and render judgment upon the claim of Elmer E. Miller (Rept. No. 449); and

S. 2905. An act to confer jurisdiction upon the Court of Claims to hear, determine, and render judgment upon the claim of the Velie Motors Corporation (Rept. No. 450).

Mr. TOWNSEND, from the Committee on Claims, to which was referred the bill (S. 1758) for the relief of B. E. Dyson, former United States marshal, southern district of Florida, reported it without amendment and submitted a report (No. 451) thereon.

Mr. WHITE, from the Committee on Claims, to which was referred the bill (S. 255) for the relief of John Hampshire, reported it without amendment and submitted a report (No. 452) thereon.

Mr. SHEPPARD, from the Committee on Military Affairs, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 1810. An act to amend the act authorizing the issuance of the Spanish War Service Medal (Rept. No. 453); and

S. 2266. An act to authorize the sale of a portion of the Fort Smith National Cemetery Reservation, Ark., and for other purposes (Rept. No. 454).

Mr. WALCOTT, from the Special Committee on Conservation of Wild Life Resources, to which was referred the bill (S. 2629) establishing a fund for the propagation of salmon in the Columbia River district, reported it without amendment and submitted a report (No. 457) thereon.

Mr. THOMAS of Utah, from the Committee on Military Affairs, to which was referred the bill (S. 2320) for the relief of the officers of the Russian Railway Service Corps organized by the War Department under authority of the President of the United States for service during the War with Germany, reported it with amendments and submitted a report (No. 458) thereon.

Mr. TYDINGS, from the Committee on Territories and Insular Affairs, to which was referred the bill (H.R. 6185) fixing the date for holding elections of a Delegate from Alaska to the House of Representatives and of members of the Legislature of Alaska; fixing the date on which the Legislature of Alaska shall hereafter meet; prescribing the personnel of the Territorial Canvassing Board, defining its duties, and for other purposes, reported it with amendments and submitted a report (No. 459) thereon.

EDWARD K. BACHSCHMID

Mr. BYRNES. From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably, without amendment, Senate Resolution 200, and ask unanimous consent for its immediate consideration.

There being no objection, the resolution (S.Res. 200), submitted by Mr. REED on the 5th instant, was considered by unanimous consent, and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay from the contingent fund of the Senate to Edward K. Bachschmid, son of Paul Bachschmid, late a carpenter employed by the Senate under supervision of the Sergeant at Arms, a sum equal to one year's compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

ENROLLED BILL PRESENTED

Mrs. CARAWAY, from the Committee on Enrolled Bills, reported that on the 8th instant that committee presented to the President of the United States the enrolled bill (S. 1083) authorizing adjustment of the claim of the Potomac Electric Power Co., of Washington, D.C.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. FLETCHER:

A bill (S. 2999) to guarantee the bonds of the Home Owners' Loan Corporation, to amend the Home Owners' Loan Act of 1933, and for other purposes; to the Committee on Banking and Currency.

By Mr. POPE:

A bill (S. 3000) to purchase and distribute wheat among the needy in drought-stricken areas, and for other purposes; to the Committee on Agriculture and Forestry.

A bill (S. 3001) granting a pension to Dudley C. Tribble; to the Committee on Pensions.

By Mr. McGILL:

A bill (S. 3002) to correct the military record of Rock White; to the Committee on Military Affairs.

A bill (S. 3003) granting an increase of pension to Laura J. E. Reeves;

A bill (S. 3004) granting a pension to Spencer Graham;

A bill (S. 3005) granting a pension to Mary Pratt; and

A bill (S. 3006) granting a pension to Vernon B. Lodge (with accompanying papers); to the Committee on Pensions.

By Mr. McNARY:

A bill (S. 3007) to authorize an extension of exchange authority and addition of public lands to the Willamette National Forest, in the State of Oregon; to the Committee on Agriculture and Forestry.

By Mr. McKELLAR:

A bill (S. 3008) relative to appointment as warrant officers of certain enlisted men of the Army, Navy, Marine Corps, or Coast Guard; to the Committee on Military Affairs.

By Mr. SHIPSTEAD:

A bill (S. 3009) to amend section 5219 of the Revised Statutes, as amended; to the Committee on Banking and Currency.

A bill (S. 3010) for the relief of Wesley R. Peterson; to the Committee on Claims.

A bill (S. 3011) to name a vessel in the Navy "Veterans of Foreign Wars"; to the Committee on Naval Affairs.

(Mr. McKELLAR and Mr. BLACK introduced Senate bill 3012, which appears under a separate heading.)

By Mr. KING:

A bill (S. 3013) to amend sections 416 and 417 of the Revised Statutes relating to the District of Columbia; to the Committee on the District of Columbia.

PERMANENT AIR-MAIL SERVICE

Mr. McKELLAR. Mr. President, I ask leave to introduce a bill on behalf of the senior Senator from Alabama [Mr. BLACK] and myself providing for a permanent air-mail service.

This bill is in line with the President's letter to us of March 7 on the subject of air mail. It provides for a permanent air-mail service, the contracts for which are to be let on carefully arranged and prepared plans for open competitive bidding on routes to be selected by the Postmaster General.

The new contracts are to be let on a basis of honest payment for honest service. They are to be let for a period of 3 years, with a limitation of a maximum compensation of 30 cents per airplane-mile.

In order that the bidders may be treated fairly, 6 months will be allowed the successful bidder to qualify.

After 2½ years the Interstate Commerce Commission will fix the routes and maximum rates of pay, these routes and rates to take effect at the end of the 3-year contracts.

Combinations, companies with interlocking directorates or officers, subsidiaries, affiliates, associates, or holding companies, or companies manufacturing airplanes or airplane parts, are barred.

Consolidations and mergers are prohibited.

Officers and agents who actually participated in illegal contracts will not be dealt with.

There must be a reorganization of these companies whose contracts have been canceled and the offending officers let out in order for these concerns to bid. They must also, like others, conform to the law.

Excessive salaries, unearned bonuses, illegitimate expense accounts are tabooed.

The bill provides for pilots of high character and great skill. The pilots shall have fixed maximum flying hours, minimum pay, and retirement benefits.

These are the salient features of the bill.

Mr. President, I ask that both the letter of the President to us and the bill just introduced be printed in the RECORD, so that Senators may have an opportunity to read them.

Mr. FESS. Mr. President, from what has the Senator been reading?

Mr. McKELLAR. I have been reading from my own memorandum.

Mr. FESS. The Senator's own statement?

Mr. McKELLAR. My own statement.

Mr. FESS. What is the Senator's request?

Mr. McKELLAR. I ask unanimous consent to be allowed to introduce a bill.

The VICE PRESIDENT. Is there objection?

There being no objection, the bill (S. 3012) to revise air-mail laws was read twice by its title and, together with the letter submitted, referred to the Committee on Post Offices and Post Roads, and the letter and the bill were ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, March 7, 1934.

MY DEAR MR. CHAIRMAN: Our domestic air-mail contracts have been canceled. The Army Air Corps is temporarily carrying the air mail. I believe we should make new contracts with commercial air carriers as soon as possible to carry the greater part of our air mail.

To protect the public interest and to provide for new contracts on a basis of honest payment for honest service, I suggest new legislation on this subject.

We must avoid the evils of the past, and at the same time encourage the sound development of the aviation industry.

I suggest that new air-mail contracts be let for a period not exceeding 3 years on full, open, and fair competitive bidding, with a limitation of the rate of compensation above which no contract will be awarded.

Any combinations, agreements, or understandings intended to prevent free competitive bidding should be prevented, and such action should be a basis for cancelation of contracts.

In order that the bidding shall be really competitive I suggest that in determining the specifications for proper equipment only speed, useful load capacity, and safety factors and safety devices should be considered.

So that all companies desiring to qualify and bid may have an opportunity fully to prepare themselves for actual service, I suggest that after the contract is awarded a period of not longer than 6 months shall be allowed the successful bidder to qualify under the terms of the law and the bid.

It is my judgment that 6 months before expiration of the contracts made under competitive bidding the Interstate Commerce Commission should pass upon the question of public convenience and necessity of air-mail routes, and thereafter fix a maximum rate of air-mail pay on the routes designated, subject, of course, to equipment specifications to be laid down.

I suggest that the proposed law prohibit the award of an air-mail contract to any company having connections with subsidiaries, affiliates, associates, or holding companies, directly or indirectly, by stock ownership, interlocking directorates, interlocking officers, or otherwise, if said subsidiaries, affiliates, associates, or holding companies are engaged, directly or indirectly, in the operation of competitive routes or in the manufacture of aircraft, or other materials or accessories used generally in the aviation industry.

No air-mail contract should be sublet or sold to any other contracting company, nor should a mail contractor be allowed to merge or consolidate with another company holding an air-mail contract. Obviously, also, no contract should be made with any companies, old or new, any of whose officers were party to the obtaining of former contracts under circumstances which were clearly contrary to good faith and public policy.

Such safeguards should be provided as will prevent the evil practices of excessive salaries, unearned bonuses, and illegitimate personal-expense accounts detrimental to the interests of legitimate stockholders and the public.

Public safety calls for pilots of high character and great skill. The occupation is a hazardous one. Therefore, the law should provide for a method to fix maximum flying hours, minimum pay, and a system for retirement or annuity benefits.

Enactment of legislation along the lines suggested will establish a sound, stable, and permanent air-mail policy. The knowledge that the Interstate Commerce Commission, a judicial body, will hereafter regulate air transportation routes and air-mail pay will remove uncertainty as to routes and mail pay.

Such legislation will relieve air transport companies from paralyzing monopolistic control which has heretofore often influenced them to buy planes and other equipment from associates and affiliates.

Real competition between the manufacturing companies will stimulate inventive genius, and should give to our people safer and better equipment, both for commercial and military purposes.

I am sending letters similar to this to Representative MEAD, Chairman House Committee on Post Offices and Post Roads, and to Senator BLACK.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

Hon. KENNETH McKELLAR,
Chairman Senate Committee on
Post Offices and Post Roads,
Senate Office Building, Washington, D.C.

S. 3012

Be it enacted, etc., That the act of April 29, 1930 (46 Stat. 259, 260; U.S.C., supp. VII, title 39, secs. 464, 465c, 465d, 465e, 465f), is hereby repealed.

SEC. 2. The term "person", as used herein, is defined so as to include within its meaning all persons, firms, partnerships, corporations, or associations.

SEC. 3. The Postmaster General is authorized to award contracts for the transportation of air mail by aircraft between such points as he may designate, and for periods of not exceeding 3 years, to the lowest responsible bidders tendering sufficient guaranty for faithful performance in accordance with the terms of the advertisement at fixed rates per airplane-mile, with a definite weight basis of 1 cubic foot of space being considered as the equivalent of 10 pounds of air mail: *Provided*, That such rates in no case shall exceed 30 cents per airplane mile for the first 300 pounds of mail, and not exceeding 6 cents per airplane-mile for each additional 200 pounds of mail or fraction thereof, computed at the end of each calendar month on the basis of the average load for the route for such month: *Provided further*, That in no case shall the rate exceed 40 cents per airplane-mile: *Provided further*, That no contract or interest therein shall be sold, assigned, or transferred

by the person to whom such contract is given to any other person; and upon any such transfer the original contract, as well as such transfer, shall become null and void: *Provided further*, That if, in the opinion of the Postmaster General, the public interest requires it, he may grant an extension of any route, for a distance not in excess of 100 miles, and only one such extension shall be granted to any one person, and the rate of pay for such extension shall not be in excess of the contract rate on that route: *Provided further*, That the Postmaster General may designate certain routes as primary and secondary routes and shall include at least three transcontinental routes, extending to termini, as nearly as practicable, on the Atlantic and Pacific coasts, as primary routes. The character of the designation of such routes shall be published in the advertisements for bids, which bids may be asked for in whole or in part of such routes. Whenever sufficient air mail is not available, the first-class mail matter may be added to the maximum load specified in such contract.

SEC. 4. The Postmaster General shall cause advertisements of air-mail routes to be conspicuously posted at each post office that is a terminus of the route named in said advertisement for at least 30 days and by publication at least once a week for 4 consecutive weeks in some daily newspaper of general circulation published in the cities that are the termini for the route before the time of the opening of bids.

SEC. 5. After the bids are opened the Postmaster General may grant to a successful bidder a period of not more than 6 months from the date of award of the contract to take the steps necessary to qualify for mail services under the terms of this act: *Provided*, That at the time of the award the successful bidder executes an adequate bond with sufficient surety guaranteeing and assuring that within such period said bidder will fully qualify under the act to faithfully execute the contract: *And provided*, That if there is a failure so to qualify the amount designated in the bond will be forfeited and paid to the United States of America.

SEC. 6. The Interstate Commerce Commission is hereby empowered and directed to fix and determine, within 6 months prior to the expiration date of any and every contract made under this law, and at all events at a period not later than 3 years from the date of the passage of this act, the public convenience and necessity for all air-mail routes and the fair and reasonable future rates of compensation for the transportation of such mail matter by airplane common carriers and the service connected therewith, prescribing the method or methods by weight or space, or both, or otherwise, for ascertaining such rates or compensation, and to publish the same, and orders so made and published shall continue in force until changed by the Commission after due notice and hearing.

All provisions of section 5 of the act of July 28, 1916 (39 Stat. 412), relating to the adjustment of rates for carriage of mail by railroads shall be applicable to transportation of mail by airplane under this act so far as consistent with the provisions of this act.

SEC. 7. No person shall be eligible to bid on, or hold, any air-mail contract who owns, or, in turn, is owned, in whole or in part, by any other company engaged, directly or indirectly, in any phase of the aviation industry, whether the other company be a holding company, or a company transporting mail or holding a mail contract, or a company engaged in the manufacture or sale of airplanes, airplane parts or other materials or accessories generally used in air transportation. No person shall be eligible to bid for or hold an air-mail contract which has any officer or director in any holding company holding stock, directly or indirectly, in any company engaged in any phase of the aviation industry, or in any other company engaged in the manufacture or sale of airplanes, parts, or other materials or accessories generally used in air transportation; and no person shall be eligible to bid for or hold an air-mail contract if it or its predecessor is asserting or has any claim against the United States because of a prior annulment of any contract by the Postmaster General. No person shall be eligible to bid on or hold an air-mail contract if such person, through its officers, has entered into any combination to prevent competitive bidding for carrying the mails, or has made any agreement, or given or performed, or promised to give or perform, any consideration whatever to induce any person not to bid for any such contract, or who has employed any Senator or Member of Congress or Government official or officer of any political party to seek to influence the awarding of contracts, or has, as an officer or director, any person who has heretofore entered into any combination to prevent the making of any bids for carrying the mails, or which pays any officer, director, and/or employee as a salary and/or bonus and/or commission, or other compensation whatsoever, a sum in excess of the rate of $17,500 for a calendar year for full-time service.

SEC. 8. All persons desiring to bid on air-mail contracts shall be required to furnish in said bid a list of the stockholders and directors and a statement covering the financial set-up, including a list of assets and liabilities; and in the case of the corporation, the original amount paid to such corporation for its stock, and whether paid in cash, and if not paid in cash, a statement showing for what such stock was issued, and the financial responsibility of such bidder, as well as the bond offered, may be taken into consideration by the Postmaster General in determining the qualifications of the bidder.

SEC. 9. All persons holding air-mail contracts shall be required to keep their books, records, and accounts under such regulations as may be promulgated by the Postmaster General, and he is hereby authorized to audit the books of such contractors and to require a full financial report under such regulations as he may prescribe; and the Postmaster General is further authorized to reduce the mail pay rates to any air-mail contractors at the end of each fiscal year if, in auditing the books of such contractor, he is of the opinion that the public interest requires such action.

SEC. 10. Upon the establishment and maintenance of an air-mail route, the Postmaster General shall notify the Secretary of Commerce, who thereupon shall certify to the Postmaster General the character of equipment to be employed and maintained on each air-mail route. In making this determination, the Secretary of Commerce shall consult the Secretary of War and the Secretary of the Navy, and in his specifications furnished to the Postmaster General shall only determine the speed, load capacity, and safety features and devices on airplanes to be used on the route, which said specifications shall be included in the advertisement for bids.

SEC. 11. The Secretary of Commerce shall, and he is hereby, authorized and directed to prescribe the maximum flying hours of pilots and/or copilots on air-mail lines, the minimum pay of pilots and/or copilots on such lines, safe operation methods, and authorized to approve any plans made by air-mail operating companies for retirement or annuity benefits to pilots and/or copilots.

SEC. 12. The Secretary of Commerce shall have authority to promulgate all necessary regulations to carry out the provisions of sections 10 and 11 hereof.

SEC. 13. On such air-mail routes as are established, the contractor shall be required, without additional compensation, to carry air pilots of the United States Army, Navy, or Marine Corps, or of Reserve Corps, as copilots. The advertisements for the routes shall state fully the conditions and requirements, as prescribed by the Postmaster General, under which copilots shall be employed. All commissioned officers who are detailed to the above duty shall receive from the United States the pay, including flying pay and other allowances, now authorized in accordance with their military rank, and while detailed to such duty, shall also be paid the same rate per diem as is now payable to civilian employees of the United States under the Subsistence Expense Act of 1926, as amended.

SEC. 14. The performance by military personnel of duty hereunder shall in no way disturb or change their military status under their respective commissions, warrants, or enlistments in their respective branches of the service, or any right, privilege, benefit, or responsibility growing out of said military status.

SEC. 15. All persons awarded air-mail contracts, and who may employ civilian pilots and/or copilots, who now hold, or who may hereafter hold commissions in the Army, Navy, or Marine Corps service, shall, upon request of such pilots and/or copilots, grant them leave of absence of not to exceed 1 month each year, when such pilots and/or copilots may be called to Government duty training with their respective branches of the service, under their respective commissions, for such period: *Provided*, That all Reserve officers performing Government duty with their respective branches of the service shall be deemed to be in the Government military service, and, if injured or killed while on such active duty, such officer and/or his dependents and beneficiaries shall be entitled to the same benefits as in the case of officers of the Army, Navy, or Marine Corps and/or their dependents and beneficiaries.

SEC. 16. The Federal Radio Commission shall give preference in the allocation of radio frequencies to airplanes carrying mail and passengers during the time the contract is in effect.

SEC. 17. It shall be unlawful for the contractor of any primary air-mail route to hold any other contract, or for air-mail contractors competing in parallel routes to merge or enter into any agreement, express or implied, with the object in view of common control or ownership.

SEC. 18. The Postmaster General may provide service to Canada within 150 miles of the international boundary line, over domestic routes which are now or may hereafter be established and may authorize the carrying of either foreign or domestic mail, or both, to and from any points on such routes and make payment for services over such routes out of the appropriation for the domestic Air Mail Service: *Provided*, That this section shall not be construed as repealing the authority given by the act of March 2, 1929 (U.S.C., supp. VII, title 39, sec. 465a).

SEC. 19. The Postmaster General may cause any contract to be canceled for disregard or failure by the contractor to comply with the provisions of law herein contained and for any conspiracy or acts designed to defraud the United States with respect to such contracts. This provision is cumulative to other remedies now provided by law.

SEC. 20. Whoever shall enter into any combination to prevent the making of any bid for carrying the mail under this act, or shall make any agreement, or give or perform or promise to give or perform, any consideration whatever to induce any other person or concern not to bid for any contract pursuant to this act, shall be fined not more than $10,000 or imprisoned for not more than 5 years, or both.

SEC. 21. Section 3 of the act of February 2, 1925 (43 Stat. 805), as amended (39 U.S.C., sec. 463, supp. VII), is amended so as to read as follows:

Air-mail postage rates shall be 5 cents for each ounce or fraction thereof.

Mr. MCKELLAR. I ask to have printed in the RECORD a telegram I have just received relating to this matter.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

CHICAGO, ILL., *March 8, 1934.*

Hon. KENNETH MCKELLAR,
United States Senate:

I have noted in the morning papers with great interest the text of the President's message to you and Congressman MEAD. I believe this message includes everything necessary to place air mail on a sound basis of honesty and sincerity. Unquestionably you will have much to do with the framing of this new legislation, and therefore the air-mail pilots are again looking to you for counsel and aid at this time, which is the most critical for them in the history of their profession. We now have a chance, after many bitter fights, to secure a sound backing of proper legislation that will certainly raise pilots' standards and morale, which is bound to result in greater safety to the traveling public and will expedite speedy movements of the mail. The pilots in and around Washington will extend you every possible aid, and a committee made up of pilots flying on the lines will undoubtedly seek an appointment with you shortly to discuss the matter further.

DAVID L. BEHNCKE,
President Air Line Pilots' Association.

INCLUSION OF CATTLE AS A BASIC COMMODITY—AMENDMENT

Mr. SHIPSTEAD and Mr. O'MAHONEY each submitted an amendment intended to be proposed by them, respectively, to the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes, which were ordered to lie on the table and to be printed.

DATA RELATIVE TO AIR-MAIL CONTRACTS—WILLIAM P. M'CRACKEN, JR., ET AL.

Mr. HAYDEN. Mr. President, I submit and ask to have referred to the Committee on Printing certain extracts from the CONGRESSIONAL RECORD containing the proceedings and order in the case of the United States Senate *v.* William P. MacCracken, Jr., et al., alleging the respondents in contempt of the Senate of the United States in connection with a subpena to produce certain papers before a special committee appointed to investigate the awarding of air- and ocean-mail contracts, with a view to having them printed as a document.

The VICE PRESIDENT. Without objection, it will be so referred.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H.R. 7199) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1935, and for other purposes; that the House had receded from its disagreement to the amendments of the Senate numbered 15 and 22 to the said bill and concurred therein, and had receded from its disagreement to the amendments of the Senate numbered 13, 18, and 23 to the said bill and concurred therein severally with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed a bill (H.R. 8471) making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1935, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Vice President:

H.R. 5632. An act to supplement and support the Migratory Bird Conservation Act by providing funds for the acquisition of areas for use as migratory-bird sanctuaries, refuges, and breeding grounds, for developing and administering such areas, for the protection of certain migratory birds, for the enforcement of the Migratory Bird Treaty Act and regulations thereunder, and for other purposes; and

H.R. 7295. An act making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1935, and for other purposes.

GREAT LAKES-ST. LAWRENCE WATERWAY TREATY

Mr. PITTMAN obtained the floor.

Mr. CLARK. Mr. President——

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Missouri?

Mr. PITTMAN. I yield.

Mr. CLARK. Mr. President, I should like to propound a parliamentary inquiry for the purpose of clarifying the procedure under the special order heretofore adopted providing for a vote on the St. Lawrence Waterway Treaty.

Under that special order it is provided that reservations or amendments not formally offered before a certain time shall not be voted on. At the present moment the St. Lawrence Waterway Treaty is not before the Senate. The Connally cattle bill, so-called, is before the Senate. My parliamentary inquiry is this: Whether it would be in order for any Senator who may obtain the floor to offer reservations and have them pending to be disposed of under the operations of the special rule?

The VICE PRESIDENT. The Chair thinks it would be in order; at least, it would be in the interest of fair-play to all.

THE COPPER CODE

Mr. ASHURST. Mr. President——

The VICE PRESIDENT. The Senator from Nevada [Mr. PITTMAN] is entitled to the floor. Does he yield to the Senator from Arizona?

Mr. PITTMAN. I yield.

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the RECORD as a part of the remarks I shall make on the so-called "copper code" an analysis prepared by the labor organizations of Gila County, Ariz., respecting that code, and also a telegram on the same subject from the Lions Club of Phoenix, Ariz.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

(The analysis and telegram appear at the conclusion of Mr. ASHURST's remarks.)

Mr. ASHURST. A copy of the analysis has been forwarded to Gen. Hugh S. Johnson, Administrator of the N.R.A. It discloses that this copper code is worse than useless.

I have also had this copper code examined by three of the most experienced and trustworthy copper producers in the United States, and they severally denounce it as a discrimination against American labor and against the American-copper-mining industry. It is a profound pity that such an injustice is about to be perpetrated. Any competent, courageous man familiar with copper could write a code that would save the copper-mining industry in the United States and would set to work within the next 90 days at least 150,000 copper miners and smelter men.

I am beginning to believe that many, if not most, of our woes and troubles in this life are nothing more than human folly directed against human beings. This copper code is human folly directed against American citizens.

Some well-informed persons have denounced this code as ill-prepared, doubtful in meaning, and poorly constructed; in other words, experts assert that this code, in the language of the street, is "half-baked." Be that as it may, I prefer an official who is hard-boiled to one who is half-baked.

For some time I, myself, have been examining this so-called "code for the copper industry." I have discovered that this proposed code swarms with cryptic phrases that may be construed to suit the fancy of anyone and to meet the preconceived notions of all.

It is, however, more nearly a code for the benefit of foreign producers of copper than for American copper, and so far from affording any protection to, or consideration for, American labor, or for the American copper-mining industry, it inflicts upon them a cureless wound.

As a code of fair competition for copper, it is only an ironic jest. Inasmuch as the hearings on this code will take place on March 12, I invite all persons who may be interested to give the proposed code careful scrutiny.

This proposed "copper code" is a reckless assault upon American labor; it is likewise a reckless assault upon the American copper-mining industry. It is probable that those who have written the code do not understand it. I say this not in criticism of their ability but to do justice to their morality, for no man could advocate this code, if he understood it, unless indeed he possessed the heart of a

batrachian. I denounce this copper code as unfair and unjust and as an assault upon American labor and upon American industry. I denounce it in the name of that fair play which most bullies and all pugilists respect.

(The analysis and telegram ordered printed in the RECORD at the conclusion of Mr. ASHURST's remarks are as follows:)

ANALYSIS PREPARED BY THE LABOR ORGANIZATIONS OF GILA COUNTY, ARIZ., RESPECTING THE COPPER CODE

Under article II, Definitions, section 1, we have the following paragraph:

"1. The terms 'copper industry' or 'industry' include the mining, production, and/or treatment of copper in the United States, and also include the sale thereof in the United States by or on behalf of those engaged in any of such operations, whether in the United States or elsewhere."

It is our contention that this code as proposed is as much to benefit foreign copper as domestic copper. The above paragraph includes handlers of foreign copper in the proposed code. It is a well-known fact that some of our largest producers in this country also own or control some of the largest foreign copper mines. That seems to be the reason for the above-mentioned paragraph. We read a short while back of tuna fish being imported from Japan with the N.R.A. insignia on it and of sardines being imported from Norway with the same insignia on it.

There was quite a howl raised from the domestic industry and the shipments were reported impounded. To our way of seeing things, a shipment of foreign copper coming into this country under protection of a copper code approved by the Government might as well have a Blue Eagle stamped on every ingot.

For that reason every mention of the "industry" or the "copper industry" should apply specifically to the domestic industry and should not include any mention of foreign industry. The above, of course, mentions only the product of the foreign industry, but it directly affects every other phase of it:

Under article II, Definitions, section 2, we have the following paragraph:

"2. The term 'member of the industry' embraces all those engaged in the copper industry or in one or more of the processes involved therein, including the sale of copper."

Under section 1 of article II the proposed code includes in the "copper industry" the sale of copper by or on behalf of anyone producing copper, whether in the United States or elsewhere. Then along comes section 2 of article II and includes in "members of the industry" presumably signatories of the proposed code, all sellers of copper. In other words, after section 1 of article II allows foreigners to sell their copper in the United States, section 2 of article II allows these same foreign sellers to become signatories of the proposed code.

Is it the intention of the proponents of this proposed code to protect the foreign producer or the domestic industry? We again reiterate that the proposed code is for the exclusive benefit of the foreign producer.

Under article II, Definitions, section 7, we have the following paragraph:

"7. The term 'custom copper' means primary copper produced by custom smelters and/or refiners from purchased ores, concentrates, matte, or blister copper derived from primary sources."

This section leaves a wide loophole for evading the spirit and intent of the National Industrial Recovery Act. Custom smelters, as is well known, buy copper from primary producers far and wide. The above paragraph makes no mention of buying ores, and so on, from primary sources within the United States. This paragraph is but another instance of the intention of the proponents of this code to protect their foreign interests first.

You will notice that all through the definitions, terms used cover foreign as well as domestic producers and industries.

Under article III, Hours of Labor, section 1, maximum hours, we have the following paragraph:

"1. Maximum hours: On and after the effective date of this code no employee shall be permitted to work in excess of 40 hours per week, averaged over a 3-month period, nor in excess of 8 hours in any 24-hour period except as herein otherwise provided."

Under the provisions of the above paragraph a company can work their employees 56 hours a week until their average time is up and then lay them off until the 3-month period has passed.

The above argument covers article III, Hours of Labor, section 2, hours for clerical and office employees.

"2. Hours for clerical and office employees: No person employed in clerical or office work shall be permitted to work in excess of 40 hours per week, averaged over a 3-month period, and except as herein otherwise provided."

We respectfully suggest that the above paragraphs should read as follows:

"1. Maximum hours: On and after the effective date of this code no employee shall be permitted to work in excess of 30 hours per week, nor in excess of 6 hours in any 24-hour period.

"2. Hours for clerical and office employees: No person employed in clerical or office work shall be permitted to work in excess of 30 hours per week."

Under article III, Hours of Labor, section 3, exceptions as to hours, we have the following paragraphs:

"3. Exceptions as to hours: The limitations as to hours as specified in sections 1 and 2 of this article III shall not apply to the following:

"(a) To employees engaged in emergency maintenance or emergency repair work, involving break-down or protection of life or property: *Provided*, That in such special cases one and one half times the normal wage rate for any employee so employed shall be paid for all hours worked as overtime: *And provided*, That this overtime provision shall not apply in case of catastrophe involving threatened and/or actual loss of life.

"(b) Nor shall it apply to those men engaged in transporting employees to and from working places or completing the handling of material in transit, hoist men, power-house men, or pump men, providing the total working hours of such employees shall not exceed 56 hours in any one week.

"(e) In the case of shut-down properties or other special situations which may require modification of sections 1 and 2 of article III, the administrator on request of the member of the industry and after investigation may make special rulings and modifications."

In the case of subsection (a) of the above, it seems that the whole section is a contradiction of itself. It sets forth that employees shall be paid at the rate of one and one half regular rates for certain overtime work and then turns right around and says that this rate of overtime pay shall not apply under the very same circumstances.

It seems to us that the proponents of this proposed code are endeavoring to hoodwink not only their prospective employees but the administration itself.

In the case of subsection (b) of the above, it is not as yet apparent to us why anyone must work more than the specified time in any one day. There is no reason, that we can see, why shifts of hoist men, dump men, power-house men, etc., cannot be arranged in such a manner that they will only be worked the specified time.

Too, there is no reason why any of them should be worked 56 hours in any one week. After consideration it seems to us that this clause is but a subterfuge to draw attention from sections 1 and 2 of article III.

MINIMUM WAGES

In the case of subsection (e) of the above, it is a well-known fact that most of the copper properties of the United States are closed at present. The only men employed at these shut-down properties are key men and bosses. Since the only intent and purpose of the proposed code is to keep these properties closed, the owners thereof do not want to hire any more men, hence this paragraph.

Under article IV, Wages, sections 1 and 2, minimum and clerical and office employees, we have the following paragraph:

"1. Minimum: The minimum wages for this industry for the various districts are as follows:

"(a) Eastern wage district: Surface labor, 30 cents per hour, underground labor, 35 cents per hour.

"(b) Southwestern wage district: Surface labor, 30 cents per hour; underground labor, 38 cents per hour.

"(c) Northwestern wage district: Surface labor, 35 cents per hour; underground labor, 41 cents per hour.

"2. Clerical and office employees: No accounting, clerical, office, sales, or service employees working on a weekly basis in any office shall be paid less than at the rate of $15 per week, provided, however, that office boys and girls and messengers shall be paid at a rate not less than 80 percent of the minimum hereinabove specified, and provided further that the number of such boys and girls and messengers so paid shall constitute not more than 5 percent of the total number of such employees of any office of any one employer, but in any case such employer shall be entitled to one such employee."

We have no information at hand as to wage rates in any district except the State of Arizona.

However, in the State of Arizona the minimum rates for years past have been for surface labor, 31¼ cents per hour and for underground labor 50 cents per hour. The minimum rate for surface labor for American laborers has been, in the past, 40⅝ cents per hour. There has never been a set scale for clerical labor in the past, but in any case the minimum paid for such labor has never been below $25 weekly.

The proposed copper code makes no mention of any increases in wages in case of advances in selling prices of copper. To protect the interest of the laboring man there should be a sliding scale adopted assuring him of increased earnings when the copper companies enjoy such increassd earnings.

According to such information as we possess the copper companies can afford to increase wages at the rate of 5 percent for every cent increase in the selling price of copper.

MAINTAIN SCALE

We have been led to believe that the spirit of the N.I.R.A. is to maintain wage standards while reducing hours of work. Under conditions as set forth in the proposed code, wage standards have been reduced, along with hours of work, to such an extent that a living wage will not be paid. We believe that our weekly wage scale should be maintained as in the past.

Under article IV, Wages, section 4, wages above minimum, we find the following paragraph:

"4. Wages above minimum: If an equitable adjustment of the differentials in the wage rates above the minimum fixed in this code has not been made since July 1, 1933, there shall then be such adjustment, if necessary, made within 60 days from date of the approval of this code. Such equitable adjustment shall mean that the differentials in amount existing prior to the formulation of this code shall be maintained for employees other than persons enumerated in article III, section 3, paragraph (c), pro-

vided, however, that in no event shall hourly rates of pay be reduced."

This paragraph is just a trifle ambiguous, as it was probably intended, but it seems to us that the only ones benefited by it are those working at present. As we have stated before, most of the copper properties are closed at present and only key men and bosses are employed.

It seems from the above paragraph that they will be the only ones benefited by minimum rates which have been in effect for years. Men who will be hired later certainly cannot be called employees now, yet this paragraph states that only employees shall have their scale maintained.

Under article V, General Labor Provisions, section 1, child labor, we find the following paragraph:

"1. Child labor: On and after the effective date, no person under 18 years of age shall be employed in the copper industry except in clerical, office, sales, service, technical, and engineering departments, and no person under 16 years of age shall be employed in any capacity."

We are hoping to see a child labor law passed by the State of Arizona in the near future. In the meantime, however, may we respectfully suggest that the above paragraph should read as follows:

"1. Child labor: On and after the effective date, no person under 21 years of age shall be employed in the copper industry except in clerical, office, sales, service, technical, and engineering departments where such employees are not employed underground, and no person under 16 years of age shall be employed in any capacity."

Under article V, General Labor Provisions, section 6, company town and stores, we find the following paragraph:

"6. Company town and stores: Employees other than maintenance or supervisory men, or those necessary to protect property, shall not be required, as a condition of employment, to live in houses rented from the employer. No employee shall be required, as a condition of employment, to trade at the store owned or specified by an employer."

The above paragraph if interpreted literally would include one half of the employees of any copper company. It is a well-known fact that maintenance men comprise nearly half of the employees of such a company. This is just an example of the ambiguity of the code as a whole.

Under article VI, Administration Code Authority, section 1, membership, we find the following paragraphs:

"1. Membership: A code authority to supervise the administration and enforcement of the code is hereby created which shall consist of seven members to be elected in the following manner:

"(a) Three members, one to be appointed by each primary producer having a productive capacity of 150,000 tons per annum.

"(b) Two members to be elected by all other primary producers.

"(c) Two members to be elected by customs smelters, refiners, and other producers of secondary copper subject to the provisions of this code.

"All action taken by the code authority shall be effective only upon the affirmative vote of not less than five members thereof."

It would have been much clearer if the above subsection (a) should have read:

"(a) Three members appointed by Anaconda Copper Co., Phelps-Dodge Copper Co., and Kennecott Copper Co."

That is the meaning of subsection (a) of the above. It is a well-known fact that these same three companies own or control the majority of the smelters, refineries, etc., so that, in reality, instead of appointing and controlling only the three members, they actually control the five votes necessary to dictate the policies of the code authority.

We should like to suggest the following to comprise the code authority:

Three members appointed by the Anaconda Copper Co., Phelps-Dodge Copper Co., and Kennecott Copper Co	3
Three members to be elected by all other primary producers	3
Two members to be elected by custom smelters, refiners, etc	2
Two members elected by and to represent organized labor	2
One member to be appointed by the President of the United States	1
Total	11

A majority vote to decide all questions.

Under article VII, Production and Sales, we find that the proponents of this proposed code want to give to the code authority, which the three largest copper companies control, all powers for limiting and regulating copper production, all powers for taking care of surplus stocks, all powers for setting a minimum sale price and for regulating and allocating sales, and to take any such other steps as they might wish.

If the above article VII is passed and adopted in the final copper code, it will practically do away with the whole copper code. Because of the power vested in the code authority under this article VII, things may be changed to suit them.

It is our contention that allocation of quotas for current production must be made upon a State basis to insure fair play for every copper-producing State.

EMBARGO URGED

It is also our contention that surplus stocks of copper or copper ores must be impounded and handled in much the same manner as the surplus stocks of oil. We believe that not more than 5 percent of the surplus stocks should be released each year. In this way 95 percent of your current market would be reserved for current production.

It is also our contention that a prohibitive tariff, or, better yet, an absolute embargo against foreign copper is absolutely essential at the present time and for the future. With an embargo and a control of the surplus as outlined above, it would be unnecessary to set a minimum price on copper.

Under article IX, Modifications, section 2, we find that the proponents of the proposed copper code desire to terminate the code on June 16, 1935. With the changes mentioned in the foregoing papers and with a copper code that is fair to the little man as well as the huge corporation, as fair to the laboring man as to the employer, a copper code that would serve the purposes intended by the conception of the National Industrial Recovery Act, we should like to see a code in effect until June 16, 1937.

PHOENIX, ARIZ., *March 8, 1934.*

Senator HENRY F. ASHURST,
Washington, D.C.:

Proposed copper code wholly inadequate for Arizona conditions. Necessary to have constructive code which allocates production and sale of copper from each producing State. Copper must not be sold below cost of production, which insures miners a living wage. Suggested code would paralyze over half of Arizona's basic industry and would compel Arizona to liquidate half of her communities and population. Copper needs an embargo.

PHOENIX LIONS CLUB,
JOHN G. EAGER, *President.*
FRED A. LINE, *Secretary.*

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries.

ORDER OF BUSINESS

Mr. WALSH, Mr. COPELAND, Mr. McADOO, Mr. McGILL, and other Senators addressed the Chair.

The VICE PRESIDENT. Does the Senator from Nevada yield; and if so, to whom?

Mr. PITTMAN. Mr. President, I gave notice that, with the consent of the Senate, I would address myself today to one phase of the Great Lakes-St. Lawrence Waterway Treaty, namely, the question of how it affects the Mississippi River Valley project. I realize that Senators may desire to transact some morning business. I am very much interested in copper, and therefore I have enjoyed the speech of the Senator from Arizona [Mr. ASHURST], and am very happy that he made it in my time. While I do not desire to yield for any speeches, if there is any routine business Senators desire to transact, such as the introduction of bills, and so forth, I am glad to yield for that purpose.

PROCEDURE IN THE APPOINTMENT OF POSTMASTERS

Mr. WALSH. Mr. President, I have been receiving, as no doubt many Senators on this side of the Chamber have been receiving, many letters inquiring about the procedure in the selection of postmasters. Replying to many such letters, I have sent them the printed regulations but later received more and more letters with reference to details. I have prepared a statement which I hope is clear, concise, and direct, which I submitted to the Civil Service Commission, and which very briefly sets forth what is the procedure, the nature of the examination, the method of selection after the examination, and so forth. I ask that it may be printed in the RECORD at this point so that it may be sent, instead of lengthy letters, to inquiring citizens.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PROCEDURE IN THE APPOINTMENT OF POSTMASTERS
By United States Senator DAVID I. WALSH

Facts which applicants and others who are interested in the appointment of postmasters should know.

CLASSES OF POST OFFICES

Post offices are divided into four classes: First, second, third, and fourth.

The fourth class are those offices where the business does not warrant a salary of $1,100 a year and where the postmasters are paid compensation dependent upon the stamp cancelation in the office.

The third class are those offices where the salary paid is $1,100 to $2,300 per year, inclusive.

The second class are those offices where the salary is $2,400 to $3,100 per year, inclusive.

The first class are those offices where the salary is $3,200 per year and above.

All appointments of postmasters of the first, second, and third classes are made by the President and are subject to confirmation of the Senate.

EXAMINATION OF APPLICANTS

The method of selecting these postmasters has been set forth in an Executive order issued by the President, dated July 12, 1933.

Briefly stated, this Executive order provides that post-office appointments shall be made in the following manner: When a vacancy occurs, notice of an examination is published, and all applicants must file, on or before a given date, an application with the United States Civil Service Commission. An examination and investigation is then conducted by the United States Civil Service Commission. Thereafter the United States Civil Service Commission certifies to the Post Office Department not more than three eligibles, which means the three applicants who receive the highest ratings in the examination conducted by the Civil Service Commission.

No applicant, however, can be considered eligible unless he has received a passing mark of 70 percent. If only one or two applicants have received a passing mark of 70 percent, then it may be possible for only one or two eligibles to be found in a given examination. The rule for certifying three eligibles applies where three or more have passed the examination, and in such a case the three highest are the eligibles submitted by the United States Civil Service Commission.

These examinations and investigations are conducted impartially without personal or political influence of any character.

In the case of postmasters for the first- and second-class offices, the Civil Service Commission, in addition to the requirement that each applicant file a comprehensive questionnaire, conducts a careful inquiry through the leading patrons of the post office as to the standing, as a representative citizen, of each applicant. This examination consists of obtaining information as to the extent of his acquaintanceship with the community, its problems, and its citizens, his influence and activities in the community and the opinions of business men as to his character and ability—in a word, to learn the representative character of his citizenship.

In addition the questionnaire inquires carefully into the extent the applicant has had experience of an administrative character. It is the view of the United States Civil Service Commission that postmasters for first- and second-class offices should be not only representative citizens of the community but should have established a reputation for personal integrity, financial stability, and have had actual experience in an administrative capacity. Therefore, inquiries are made as to whether or not and how many persons have been employed by the applicant, what kind of business he has conducted, his experience in managing employees in order to protect the public against infractions of the discipline provided for postal employees, his knowledge of keeping bank accounts and records, and of the preparation of statements—financial, statistical, etc. After a survey of all these factors is made, each applicant is given a rating, and the three highest eligibles are certified to the Post Office Department.

As to postmasters of the third class, a somewhat different examination is conducted. In the third class it is assumed that the postmaster must be his own clerk, distributor of the mail, and perform the general duties within the post office. Therefore a written examination is conducted to test the training and clerical ability of each applicant for the purpose of finding out his mental capacity to perform the clerical and supervisory duties of the office. A third-class office may have no employees except the postmaster and a clerk, and therefore the postmaster must keep the records and perform practically all the other duties. It is not necessary to have more than a good general education in order to qualify. If one receives less than a passing mark in this class, it is a determination that he has not the capacity to perform efficiently the duties of the office, although he may or may not have received a majority of favorable reports as to his reputation and standing from those in the community where the post-office is located.

FOURTH-CLASS OFFICES

Fourth-class postmasters come within the competitive classified Civil Service. On October 15, 1912, the President issued an order classifying under the Civil Service Act and rules fourth-class postmasters not theretofore so classified. That order was amended by the President on May 7, 1913, and again on June 3, 1921. The order, as amended, requires that all appointments (except those in Alaska, Canal Zone, Guam, Hawaii, Philippines, Puerto Rico, and Samoa) at fourth-class offices where the compensation is $500 a year or more shall be made from certification after examination by the Civil Service Commission: *Provided*, That in the event that for the examination for any office there are fewer than three applicants the Commission may, in its discretion, authorize selection in the same manner as provided for offices with annual compensation of less than $500. Where the compensation is less than $500, all appointments shall be made on the recommendation of post-office inspectors after personal investigation, subject to prescribed regulations.

PROCEDURE FOLLOWING EXAMINATION

After the eligibles are certified by the Civil Service Commission to the Post Office Department, that Department is then ready to receive recommendations before making its nomination to the President. Usually recommendations from the Congressmen and Senators of the same political faith as the administration are invited. In turn Senators and Congressmen usually ask for recommendations from local committees, organizations, and citizens.

It should be borne in mind that no amount of personal or political influence is of any avail to a candidate until after the Civil Service examination is reported, and even then no amount of personal or political influence will aid any candidate unless he is one of the three highest eligibles. The President has stated through his Executive order that he will appoint one of these three eligibles, someone from the classified Civil Service or the present postmaster. If the present postmaster is reappointed no further examination is necessary. If a person in the classified service is selected, such person must first be found eligible in a noncompetitive examination given by the Civil Service Commission.

The Civil Service examinations give applicants an opportunity to meet the standards and requirements which the President has fixed for the guidance of the Civil Service Commission and as preliminary to receiving an appointment. These Civil Service rules and regulations are a part of the Presidential order. While there have been some slight changes in them, in substance they are the same rules and regulations that have guided the appointments of postmasters since the latter part of the Wilson administration. Previous to that time the appointments of postmasters were made without any civil-service examination being required, the appointments being chiefly upon political recommendations.

AGE AND RESIDENCE QUALIFICATIONS

No one over 66 years of age and no one who has not been an actual resident patron of the post office (not necessarily a citizen of the township where several post offices are located) for 1 year before filing application, is eligible to compete in examinations.

OUR CHANGING CIVILIZATION—ADDRESS BY SECRETARY ICKES

Mr. COSTIGAN. Mr. President, on February 24, 1934, Hon. Harold L. Ickes, Secretary of the Interior, delivered an address in Chicago before the Cook County League of Women Voters on Our Changing Civilization. His remarks are entitled to more permanent preservation. I ask leave to have them printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I shall spend no time saying complimentary things about the League of Women Voters or telling you what a pleasure it is for me to be your guest tonight. I will take it for granted that other speakers on other occasions have paid such deserved tribute to your worth as an organization as to satisfy all the amenities on that score. I have noticed that women take their politics much more seriously than do men. You undoubtedly asked me to speak to you because you are interested in the significant social and political movements that are taking place in our country today. Perhaps you hoped that I might be able to throw some light on those social and political movements.

At the outset, with your permission, I shall briefly sketch with a broad brush a political background without which we cannot hope to understand what is going on in this country. I will then endeavor to show the relationship of present trends to that historical background, following which, foolhardy adventure that I know it to be, I shall give voice to what I hope the future has in store for the people of the United States, although I will want it distinctly understood that I lay no claim to being a prophet. I will not attempt to tell you what will happen in the future, only what I hope may happen.

Turning back the pages of the past, we see an interesting and colorful panorama of significant and crowding events. As the result of economic pressure in the old lands or because they craved the right to think their own thoughts and live their own lives according to the dictates of their own consciences, our forefathers, braving the terrors of a sea that was still little known, came to this land determined to establish here homes for themselves and their children. With few exceptions they refused to be turned back. They were ready to endure every privation, to face boldly every peril. With such motives and with such a purpose they could not fail to conquer. And they did conquer. The first real test they faced was one with nature, that nature that can be so implacable and cruel in one mood and so alluring and disarming in another. Landing on the Atlantic coast, they began to cut out of the dense forests land upon which to build their crude cabins and to grow food and clothing for their needs. They subdued nature, they fought back the Indians, and generation after generation their roots sank more deeply into the soil of the new land.

It was only the adventurous or the desperate who left Europe to found a new empire on these shores. It was only the hardy and the enduring who could survive after these shores had been

reached. It required outstanding qualities of both physique and spirit not only to wrest a bare existence from the soil but to build a new and an enduring civilization. These ancestors of ours developed in themselves and transmitted to their children qualities of heart and mind that have left an indelible impress upon every succeeding generation.

It was not an easy life in pioneer days in this country. The graces of living were either an almost forgotten memory or a dim and distant hope. It was a fight for very existence. These early Americans fought nature, they fought the Indians, they fought the French in combination with the Indians, they fought Great Britain on two occasions, they fought the Spaniards, the Mexicans, and they fought each other. As we turn back the pages of our history we realize the heroic qualities of our ancestors. We glory in those qualities. We would not have had them different. But as we look deeper, we discover that ruthlessness was mixed with heroism, cruelty with kindness, hardness with mercy. Nor was this unnatural. A pioneer race is always a ruthless race. It has to be to survive. And ours has survived.

A race of pioneers to begin with, we continued to breed pioneers for generation after generation. We needed to breed pioneers because there was always a frontier just beyond that had to be explored, adventured upon, and finally subdued. Ax in hand and rifle on shoulder, our forefathers continued to push that frontier back, conquering, destroying, exploiting, until at last there was no longer any physical frontier to be bent to their will. With no frontier left to be subdued, with no new lands to exploit, the pioneer spirit which had been bred into us for generations had to discover new worlds to conquer. It could not be bred out all at once.

So from exploiting nature we turned to the exploitation of human beings, to the building-up of an industrial and commercial empire. After unsuccessful attempts to bend the proud spirit of the native Indians to our will, we began to kidnap and import a more friendly race from equatorial Africa. Slavery was instituted, waxed strong, and flourished. Not in the North, although this was not because of any superior humanitarianism or civic virtue on the part of those of us who lived in the North. It happened that slavery was not adapted to our northern climate and soil. But it did flourish in the South, and the South grew rich and powerful on the exploitation of fellow human beings. However, the North refused to forego its opportunity to be developed merely because it could not economically use slave labor. We discovered that there was a type of labor which was cheaper for us and more adapted to our purposes than were Negroes imported from Africa and sold at so much a head on the auction block. So the North sent over to Europe and by painting glowing pictures of America as a land of opportunity enticed cheap immigrant labor here by the hundreds of thousands. Eagerly and hopefully came these hordes year in and year out, seeking a hospitable land where they could realize their dim dreams of freedom, equality, and fraternity. Speaking strange languages, possessing strange customs, they in their turn were easy to exploit. Herded into mines, congregated into factories, housed in squalid hovels, they worked for long hours at heavy tasks for inadequate pay.

And all the while the descendants of the conquering pioneers more and more lived lives of ease and comfort while profits continued to pour in as the result of physical slavery in the South and economic exploitation in the North endured by millions of fellow human beings.

Then we discovered a new means of adding to our already impressive industrial and commercial empire. Our inventors built for us intricate, almost human machines at which women and little children could be profitably employed. We did not hesitate to exploit in their turn these two groups. Although no less an authority than the Supreme Court of the United States has held that women are not physically adapted to heavy and toilsome tasks for long hours, that to do so makes for race deterioration, our rugged individualists continued to work women at heavy and toilsome tasks for long hours. And because they were women, they were paid substantially less than would have been paid to men for an equal or lesser output. The brutal social dictum was enunciated that it was better for children to work in factories than to be on the streets, and our captains of industry cheerfully and not altogether unselfishly assumed that if they were not in factories children would be on the streets serving no good purpose. Pillars of society, prominent citizens, captains of industry, elders and deacons in the churches tried to justify incomes ill gotten from the drooping bodies of little children whom the Founder of Christianity had especially charged us with responsibility for.

And all the time the rich became richer and the poor became poorer. And all the time there were relatively fewer of the rich and relatively more of the poor. And all the time we never ceased to boast of America as the land of the free and the home of the brave. And all the time, at least on every Fourth of July, our chests swelled with pride as the chosen orator sonorously read in ringing tones the immortal words of Thomas Jefferson, "all men are created free and equal."

The exploiters of our natural resources and the Simon Legrees holding to their tasks men, women, and children too weak to defend themselves, early sensed the possibility that the economic system they were erecting might some day tumble about their ears unless they safeguarded it by securing control of government. So they moved on government with the same acquisitive determination with which they had in the beginning moved against the Indians and upon the forests and just as, at a later stage, they had moved against the Negroes from Africa, the peasants from Europe, and the women and the children of their own land. They were determined that a sufficient number of men friendly to their interests should occupy seats of power. And, generally speaking, they succeeded. Here by cajolery, there by threats, yonder by the use of money or of favor, they placed men in city councils, on county boards, in State legislatures, and in the Halls of Congress who knew which side their bread was buttered on. Then they turned their attention to the executive branches of government. Here, while their methods were more subtle they were just as effective, until it came to pass that what the late Senator Dolliver, of Iowa, said about that President under whom he was serving at the time, namely, "He is entirely surrounded by men who know exactly what they want", became true of all too many of our mayors, our Governors, and, sometimes, even of our Presidents.

Nor did these rugged individualists overlook the courts. As the courts became more and more powerful in our political life as the result of John Marshall's enunciation of the doctrine that they had the right to pass upon the constitutionality of a legislative act, it became increasingly important for those who would control government to see to it that friendly judges were placed upon the bench. So it came to pass that often the easiest road to the bench, whether by election or by appointment, lay beneath the feet of those lawyers who had highly conservative corporate connections or had represented great aggregations of capital. It is still customary on the part of some naive citizens of this country to raise their hands in shocked horror if any statement is made implying that all the judges of all the courts are not free from sinister influences and are not upright and impartial judges. But such naïveté is an occasion for ill-concealed mirth on the part of those who know, and this includes the great masters of finance and industry in these United States.

So the American political and industrial system that reached its perfect flower during the preceding administration continued to be controlled and fostered by those who profited most from that system. Our Presidents were selected for us in back-room caucuses by machine politicians representing big business. We erected a great Moloch before which all of us worshiped. We threw into the gaping jaws of this Moloch our common heritage, our defenseless men, women, and children, and finally our Government. Success in America did not necessarily depend upon probity of character, sincerity of life, or intellectual qualities. If only we could make money, by whatever means, we were in the ranks of the envied and the revered. Money washed away a multitude of sins. One could not be a social pariah, no matter what he had done, provided he were a multimillionaire. Men deferred to other men if only they possessed wealth. Men even bowed down to their own images if those images were encrusted with gold. Nor were women any slower than men to bend the knee to the golden calf. That woman was the most satisfactorily married whose husband's bank account enabled her in personal adornment, in personal indulgence, and in domestic establishment to outshine the wives of less successful and, therefore, less desirable husbands.

Shouting the slogan "less business in government" the rugged individualists finally took complete possession of the Government of these United States while a complacent President played with his cronies in a certain little green house in K Street. At this stage of our national degradation the man most revered and looked up to, "the greatest Secretary of the Treasury since Hamilton", bent all of his ability to the task of reducing the taxes upon the very rich while spreading the burden correspondingly upon the shoulders of those less able to pay. He clung tenaciously to his vast personal interests in monopolistic enterprises. This "greatest Secretary of the Treasury since Hamilton", while laboring hard to reduce the taxes of his own class, found time to devise means of refunding millions of dollars of taxes already assessed against great corporations and wealthy individuals.

The frenzied dance of the dervishes of Wall Street became madder and madder. We were in a new economic era. The supply of gold was as inexhaustible as our pioneer forbears had thought our forests to be. Everyone was to become richer and richer. And without effort on his part. All one had to do to become a millionaire was to buy on a shoe string real estate at treble its value or to squeeze together enough money to open a brokerage account in order to buy stocks that he never expected to see or sell stocks that he never owned. Even banks organized affiliates to speculate in securities. In order to induce people without money to buy things they did not need, we ingeniously devised the system of installment buying.

Institutions that cannot now lend a few thousand dollars to save a workman's home advanced millions to be wasted in Wall Street. A market tipster outranked a college president. Officers and directors of trust companies spent their time bending over the stock ticker. That was indeed a voice in the wilderness that was raised against official corruption. Since everyone else was getting his, why not the public official? And who cared anyhow? Honesty was a quaint characteristic belonging to an antiquated stage of society. Money could not be tainted. Dishonesty was a mere peccadillo. It was a voluntary matter to obey the law. Shakespeare's "put money in thy purse, honestly if thou canst, but put money in thy purse" bade fair to become the national motto.

Then came the falling of the skies in September of 1929. It was as if a giant comet, bursting with terrific impact upon the earth, had blown up every building in the land, leaving our maimed and pain-racked bodies scattered in all directions.

So much for yesterday. Today, and by today I mean that period of time since March 4 last, there is a different tale to be told, although one that grows directly out of the past.

It was a thoroughly frightened and disillusioned people that marched to the polls in November 1932 and in overwhelming numbers registered their will that the curtain should be finally rung down on a farce that ended as a tragedy. The American people may not have been any too sure just what kind of a President Franklin D. Roosevelt would make, but they had faith that he would give them a new type of leadership. This was what they wanted, and they took the chance.

For once the people won. It may be that they won because the rugged individualists, the captains of industry, the masterful financiers, were so disorganized and frightened that they neglected to give their customary attention to the political affairs of the Nation. At any rate, the old order changed, and there came into power in Washington an administration headed by a man of real imagination, of magnificent courage, and of social idealism. He was a general taking command of a field where a mighty battle had been lost. Everywhere were evidences of destruction, of carnage. The dead had not been buried, the wounded were lying unattended, the horizon was dotted with those in full flight. It was an occasion to test the courage of any man, but the courage of the new Commander in Chief never faltered. He set about to restore order out of chaos. He addressed himself to the task of rebuilding the morale of the people. He rallied the scattered forces, took stock of the resources that were left, filled in the ranks, and resolutely faced the enemy.

For months the chosen leaders of the United States had been in a blue funk. During its last days the preceding administration had tremblingly hoped against hope that March 4 would dawn before the last of our banks had crashed. It was a case of holding one's breath until someone else could take over the responsibility. And what a responsibility it was! No President of the United States had ever been inaugurated in such circumstances. Advised that the banking situation of the entire country was on the verge of a complete collapse, the first act of the new President was to close every bank in the country. An examination showed that the patient was so desperately ill that the only chance to save its life was by a major operation, performed without an anaesthetic. The operation was performed, and successfully, with the result that its banking system has been saved to the Nation. The farmers needed help. President Roosevelt during the campaign had promised them help. He promptly gave it. The small-home owners, unable to meet their interest charges or to pay their mortgages, needed help. They were unhesitatingly accorded it. As a candidate the President had promised that no one should lack food and shelter. He has kept that faith.

Busy as Government was burying the dead and healing the wounded and restoring morale, it early realized that its major task was to rebuild for the future. This it proceeded to do energetically and intelligently. The Congress willingly passed acts giving the Executive extraordinary powers and responsibilities. The Congress said, in effect, to the President, "The emergency that exists can be met only by the quick exercise, when necessary, of the broadest possible powers, and these powers we cheerfully endow you with, with full confidence in your willingness and ability to meet each situation as it arises."

Exercising these powers the President has inaugurated and carried on a tremendous Public Works program such as has never before been attempted in the history of the world. Three billion three hundred million dollars have been allocated for useful and socially desirable public works in order to get men back to work, thus increasing buying power, thus stimulating business and industry, thus priming the pump of economic recovery. He conceived the brilliant policy of setting up Civilian Conservation Corps camps. Into these camps, which now have been operated almost a full year, unemployed young men from all parts of the country have been gathered. They have been given work in the national forests; in National, State, and local parks; on reclamation projects; on erosion-control and on flood-control projects. While performing a useful public service, which in course of time will repay the capital invested with generous dividends besides, the immediate result has been to give these young men restored morale through employment. Engaged as they are in healthful outdoor work, living in sanitary camps, and provided with adequate and nourishing food, these men are strong, sturdy, upstanding citizens as compared with the undernourished recruits of ebbing morale who entered these camps.

The strangest procession to come to Washington after March 4 was composed of those who had been among the great and the powerful under the old regime. Rugged individualists who had been loudly asserting their own self-sufficiency, their ability to stand on their own feet, to conduct their own affairs without any suggestion from Government, came—a broken and a humble crowd. Hat in hand, they humbly begged the strong man in the White House to save them from themselves. Nothing proud or haughty or overbearing about these men now. They knew that they had failed to meet the test, that the Government which they in large measure controlled had been unable to serve either them or itself. They were as frightened as little children seeing ghosts at night. They had been naughty, but they never would be naughty again if only their past transgressions might be forgiven, if only dear, kind, nice Government would drive away the big bad wolf that was threatening them.

I had my own interesting experiences. It is known to everyone that one of the most ruthless, arrogant, and haughty industries in the United States had been the oil industry. It had been a law unto itself. God had put oil into the ground for its special benefit. It was accountable to Him alone, and then only if He never closed His eyes.

Here was a very giant among the industries, completely manned by rugged individualists. As it happened, this industry furnished a perfect example of the results of unchecked and ruthless exploitation. Within the industry all was confusion worse confounded. State conservation laws were being openly flouted. Illegally produced oil was being bootlegged by the hundreds of thousands of barrels, with a resulting depressing effect on prices everywhere. One rugged individualist was stealing the oil of a brother rugged individualist. Price wars raged all over the country, this rugged individualist taking away the market from that rugged individualist by selling below cost. New wells were being brought into production, although too much crude oil was already being produced. Oil, wastefully taken from the ground, was being stored at great expense in tanks above ground through fear that some fellow rugged individualist would get away with oil some dark night. Banks were not only refusing to lend more money to the oil producers, they were actually calling loans. Credit was being contracted everywhere.

The result of it all was that this industrial behemoth, brought to its knees, came to Washington begging for help. The proposition the oil industry made to the Government was the startling one that the Government, in effect, take over the industry and run it. It was frankly confessed that the situation was beyond control and that only the strong hand of Government could save it. I listened in amazement to the urgent representations of men whose very names had always filled me with awe that they would sponsor a bill before Congress to give the Secretary of the Interior dictatorial powers in the oil industry. Only the Secretary of the Interior knew how little the Secretary of the Interior knew about oil. The mental state of these great industrialists can be judged from the fact of their willingness to intrust the destinies of a great business enterprise to a Government official who was without scientific knowledge with respect to oil as a product or special acquaintance with oil as a business. A far cry this from "less Government in business."

Following oil, came men speaking for coal, another of the great business enterprises of America, to tell the Secretary of the Interior how sick their business was and how much they hoped that, with the President's permission, he would exercise sovereign powers over the coal business and join his efforts with theirs to keep it from final dissolution.

I recite these two instances because they came within my own personal observation, but they were not isolated cases. It is fair to say that in the early days of the present administration there was a general disposition throughout the business world to beg the Government to come to the rescue of business, even to the extent of exercising dictatorial powers. What it meant was that the confident self-assurance of a large number of American business men had broken down. This panicky turning to Washington demonstrated that frequently the bigger the man when things are going well, the greater the coward when adversity comes. In their extremity these boastful, aggressive supermen, these rugged individualists, came fearfully to Washington to beg the President to help them save some little from the disaster that by their arrogance and pride and lack of understanding of economic laws and social forces they had themselves precipitated. At least they were able to recognize strength when they saw it, and they saw it in President Roosevelt.

The event has proved that, although they had lacked the understanding necessary to gage economic and social forces, they were unquestionably wise in laying their troubles at the feet of the President. The man that they had traduced during the campaign; whom they had jeered at as being irresolute, indecisive, incapable of making up his own mind or of holding it, was, they discovered, to their great relief, a different kind of man altogether. Here was a man of keen understanding, of great ability, of splendid courage, not only willing but able to help them solve their difficulties. Under the extraordinary powers granted him by the Congress in the National Industrial Recovery Act, President Roosevelt proceeded to restore the morale of business, as he had already restored the morale of the rank and file of the people.

With a return of confidence among business men, due to the ministrations of President Roosevelt, it is regrettable to note that there is already to be seen in some quarters a renewed tendency to disregard the rights of others; a recurrence of that disposition to ride ruthlessly over all opposition that characterized many of our business men prior to the great cataclysm. Men who came frightened to Washington only a few months ago beseeching the Government for help are beginning to adopt the "whose-afraid" attitude of the small boy trying to make himself and others believe that he has never feared anything. It is to be hoped that the lesson of the immediate past will not so soon be forgotten and that the American business man in the future, appreciating that his business has a social aspect, will so conduct it as to contribute his share to the greatest good of the greatest number of the people.

The man who will make predictions in the social or political field is foolishly bold. I will make no predictions, but I will venture to give voice to certain hopes. I have expressed on other occasions my conviction that it was more than a political election which occurred in these United States on November 8, 1932. It was a social revolution. I believe that as a people we have definitely entered upon a new path, and that if we follow it confidently and resolutely, it will mean a happier and richer life for the average man, woman, and child in our country. I believe

these things because I believe in President Roosevelt and his social purposes. Moreover, it is my opinion that the people themselves desire and intend to have a better social order. This community in aspiration between the people and their President is what gives this social movement force and direction.

No one expects the millennium. It is too much to hope that even reasonable expectations will be realized overnight. But we may look forward to the day when child labor, abolished at least for the moment by the stroke of President Roosevelt's pen when he signed the textile code on July 9, last, will be permanently outlawed by the adoption of the constitutional amendment that is now being considered by the States; when a carefully worked-out system of unemployment insurance and old-age pensions will give security to those temporarily out of work or during the time when their ability to earn a living will be gone; when the sweat shop will be outlawed; when we will flush with shame to think that we ever endured a system by which women were permitted to work long hours for inadequate pay at tasks beyond their strength; when shorter hours and minimum wages for labor will be recognized as elementary justice; when noisome slums, both in our cities and on our countrysides, will be wiped out; when every child born in this land will have an equal opportunity under the law to grow in normal circumstances to a happy maturity; an opportunity to be educated to the extent of his capacity to absorb and use an education; an opportunity to work at a task for which he is adapted; an opportunity to have food, clothing, and shelter for his needs; an opportunity to play as well as to work, and to have a reasonable amount of leisure which he may employ in normal recreations, in travel or in self-improvement.

Proponents of the old system of ruthless individualism, which went on the rocks on November 8, 1932, have begun to comb the beach. Noting the improved economic situation that has been brought about under the wise leadership of President Roosevelt, they are becoming carpingly critical. They are decrying any suggestion of a social revolution, of the prospect of better times for people generally. Ignoring the lessons of the past, they would restore the old order. These critics belong to the exploiting class. They believe that a country is great and happy if a bare handful have the wealth while the great majority who contribute to the production of that wealth are compelled to live on the borderline of want. They glorify a system under which 2 percent of the people of the country possessed 80 percent of the national income. These men belong to that class of Bourbons who are incapable of learning anything.

So-called "leaders" went hither and yon on Lincoln's birthday finding fault with the Roosevelt administration or damning it with faint praise. Imitating the devil who on occasion can glibly quote Scripture, they had the effrontery to quote from Lincoln's sayings and writings in an attempt to prove a dubious point. It is truly ironic that men of the class that Lincoln stood against all his life should at this time oppose in the name of Lincoln the man of the greatest social vision since Lincoln. Ironic, but not strange. It has always been thus. I can envisage the time a generation or more hence when descendants of present-day reactionaries will in their turn attempt to block another necessary and overdue social advance by misapplying the words of that man with the social vision who sits in the White House today.

Regardless of the reactionaries, the die-hard Tories, who in their secret soul of souls would willingly see this administration fail, even if it meant renewed suffering for the people, provided that as a result of that failure they could return to political power, it is my firm belief that we have turned our backs finally upon an era that history will regard as at once ruthless, sordid, and inglorious.

While, in order to make my case within the reasonable limits of a speech, I have brought out in bold relief certain tendencies and results of our past political and social life, I am not ignorant of the fact that our economic system, despite its injustices, its inequalities, and its cruelties, has given us in many respects a wonderful and glorious background. I have not attempted to give a complete or even a carefully balanced review of our American social order. I am not ignorant of the fact that men and women of as noble purposes as have been found in any country in any period of history have bravely led in an unremitting fight for social and economic justice in this land. They have been undiscouraged by defeat, undisturbed by criticism and ridicule. With clear eyes they have seen that what on the surface seemed to be the real America was not in fact the real America. They have always realized that a small group, as a result of the wealth, the social prestige, and the political influence it has aggrandized to itself, has occupied a place in our national life out of all proportion to its numbers. They have not needed to be told that the overwhelming majority of our citizens have been sound of heart and have clung tenaciously to our best American traditions despite every discouragement.

I know as well as the next that men and women of wealth have given generously for public purposes. They have endowed hospitals, provided magnificent parks, and built great universities. They have made it possible for our scientists to fight disease more effectively. They have given us great museums of art, magnificent libraries. They have financed expeditions to delve into the earth to discover the history of vanished generations. They have done many other noteworthy things. But while I recognize gratefully their generous impulses and their fine purposes, I am nevertheless of the opinion that the greatness of our country in the final analysis will be measured by the opportunities offered to the average citizen for a richer and fuller life. This Nation will be great and noble just in the degree that all of its citizens are permitted to share fairly in all that the country can produce for the physical, mental, and spiritual well-being of its people.

I do not expect everyone to agree with me. I know that there are people who either possess great wealth themselves, or who flutter about wealth in the possession of others as moths about a candle, who would return to the old system. But I warn them that they are laying a lighted match to a keg of powder when they raise difficulties in the way of President Roosevelt's program. They run the risk of blowing themselves up along with all the rest of us.

I have noted that those who criticize the President and his methods offer not one single substitute policy. They are negative critics. Hypocritically, they grieve over bureaucracy. They tremble for the stability of our institutions. Through crocodile tears they complain that sufficient respect is not being accorded the Constitution. They are certain that what President Roosevelt is doing is either wrong of itself or is being done in the wrong way. But they offer nothing affirmative. They are constrictive critics. They are as lacking in effective remedies as was their administration prior to March 4. They are the modern exponents of "do-nothingism." They do not want the patient restored to health if it has to be done by new methods of surgery. Their view is that if their incantations should fail, it would be better for the patient to die. In that event he would at least die respectably and constitutionally. I suspect that the great mass of the people prefer to be restored to health even if by new and hitherto untried methods. At the same time, I believe that our Constitution will continue to live, adapting itself to changing conditions, as it has from the beginning, so as to serve the higher purposes of an evolutionary society.

People generally throughout the United States appreciate that President Roosevelt, realizing the difficulties under which they have been living, has the will to join with them in forging out of the fluid metal of the present a stronger and more enduring social order. They are falling into line under his leadership, confident of his wisdom, his strength, and his purpose to achieve. Who would dash their high hopes unless he has some sure remedy to propose? Rather should all of us in the common cause press forward together in the spirit of that wise French leader who exclaimed: "There go my people; I must follow."

THE LOBBY EVIL—ADDRESS BY SENATOR BYRNES

Mr. ADAMS. Mr. President, on the 29th day of January 1934 the junior Senator from South Carolina [Mr. BYRNES] delivered over the National Broadcasting System an address on the subject of Lobbying and Its Evils. I ask unanimous consent to have the address printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On January 20 the President of the United States was quoted as stating that he would use his influence to secure legislation prohibiting one holding office either as an official of the United States Government or member or employee of the national committee of a political party, from practicing before departments of the Government in any matter involving the expenditure of public funds.

Evidently the President had learned that some gentlemen who had been active in the political campaign resulting in his election had moved to Washington and, because of their supposed influence with the President, had been employed to represent clients before the departments of the Government.

The statement of the President served to accomplish three things. It served notice upon these political lawyers that he disapproved of their activities in Washington. It waved a notice upon weak-minded and weak-kneed employers of the Government who might be influenced by these lobbyists that their conduct would meet with the disapproval of the President.

It served notice upon the citizen who has business with his Government that there is no back door to the White House, and if he has a legitimate cause it is unnecessary for him to employ a lobbyist to present that cause. The evil to which the President called attention is not a new one. It is as old as the Government itself. Attention is directed to it at this time because a change in administrations will always bring to Washington a new crop of lobbyists associated with the party coming into power, and, further, because the expenditure of large sums in connection with the recovery program and the establishment of codes for the various industries, offer great opportunities for the activities of the lobbyist.

Lobbyists in Washington prosper only because there is no one quite so gullible as the successful business man. It is always amazing to those acquainted with Washington life that the man who is known to his neighbors as a "hard-headed business man" so frequently becomes soft headed when he has business with his Government. He seems to base his judgment of the character of those directing the affairs of government upon what he has heard or has read of the corrupt activities of some isolated ward politician. He fails to observe that the Government employees who are presumed to be corrupt invariably die poor.

Any general characterization of political lawyers in Washington is apt to do injury to some attorneys who in public life have rendered distinguished service, who now reside in Washington, and who practice their profession in the courts of the District instead

of in the hotels of the city. I doubt, however, that these gentlemen will be injured. The legitimate lawyer is recognized and so is the professional lobbyist.

However, the lobbyist prospers and because he does, it becomes our duty to curb the evils resulting from his activities. Because it inevitably will cause men to lose confidence in the honesty of Government, it is essential that those in control of the Government should do all in their power, not only to abolish the evil, but abolish even the appearance of evil.

In the discussion of the matter, it is generally agreed that a member of a national committee or an employee of such committee should not be permitted to practice before the departments of the Government. I would go further and provide that no man who within 2 years served as a member of a national committee or an employee of a national committee should be permitted to so practice.

The evil to be abolished is the use of political power to influence the determination of matters by employees of the Government. That political power and prestige comes as a result of the power to recommend persons for appointment in the department. If, for instance, a man has served as a member of the Republican National Committee, it is fair to assume that he has recommended to office men who are not in the Department determining the expenditure of public funds. No man who has served upon that committee within 2 years should be permitted to practice before the employee for whose appointment he is responsible.

It is equally fair to assume that since March 4 members of the Democratic National Committee have been responsible for the appointment of department officials and they should be prohibited from practicing before the departments for 2 years after the date they sever their connection with the national political organization.

It is further necessary to provide that no official or employee of any department should be permitted to practice before a department within 2 years after he has severed his connection with the Government. He has not only appointed men in the departments but has promoted those already in the service. To practice before such employees should be embarrassing to him and to the employees. However, the law should be enacted, not to save him embarrassment but to save money to the taxpayers.

While these things are necessary, I can think of nothing more hypocritical than the Congress legislating to prohibit such activities on the part of national committeemen and departmental officials and not legislating as to Members of Congress. Many years ago the justice of this position was recognized, and Congress prohibited a Member of Congress from accepting compensation for services rendered in connection with any claim involving the payment of money out of the Treasury.

However, this does not go to the heart of the evil. The object of this legislation was not to limit the income of a Member of Congress but to prevent him from exercising political power to influence an employee of a department in rendering a decision favorable to some individual in whom the Member of Congress was interested. The object is to assure the people of this Nation that when their money is dispensed by an official it will be done because the merits of the case demand it, and not because some man in political life demands it.

While most of the recent discussion has revolved around the members of the national committee, the truth is they are few in number and their influence is limited. This is true of the department officials who resign and practice in Washington. It is certainly true of ex-Senators and ex-Congressmen. The politically wise know that a Congressman-elect has more influence than an ex-Congressman. There is more danger in the political influence exerted by a live Congressman than in the influence attempted to be exerted by a politically dead Congressman.

It is fair to assume that the Members of the United States Senate and the Members of the House of Representatives have had more to do with the appointment of officials in the departments of the Government than have the members of the national committee. Many of the higher officials of Government must be confirmed by the Senate, and many of them are appointed upon the recommendation of Members of the House. All of them have a vote and voice in determining whether a particular bureau shall continue to exist and whether its appropriation shall be increased or decreased.

Let us assume that upon the recommendation of a Member of the Senate a lawyer is appointed to the legal staff of the Bureau of Internal Revenue. Thereafter a corporation in the Senator's State asks him to appear in a case where the corporation claims a refund of taxes. When the Senator appears he finds sitting on the conference committee considering the claim the lawyer appointed upon his recommendation. The lawyer has sought the assistance of the Senator to obtain employment in order to support his family. He may not believe the corporation or individual is entitled to receive the payment of the claim under consideration. The Senator tells him he believes it should be paid. Would it be surprising if the young lawyer takes the position that inasmuch as the Senator who must tax his people in order to get the money to pay this claim declares that it should be paid, he is not going to assume the burden of saying that the Senator is wrong, and antagonize the man who gave him an opportunity to support his family.

Under such circumstances there is absolutely nothing between the Treasury and the man who wants to put his hands into the Treasury.

Let us further assume that a contract is to be awarded. One contractor asks that a Senator appear for him before a department. Another contractor is the lowest bidder, and, relying upon the justice and fair dealing of the Government, he seeks no political influence. If the contractor for whom the Senator appears is awarded the contract by reason of a determination that the lowest bidder is not a responsible person, could anyone convince the lowest bidder that he has not been defrauded of the contract? If as a result of the decision the Government assumes a greater obligation, the taxpayer pays the bill.

As a part of the recovery program, officials of the Reconstruction Finance Corporation are authorized to make loans to railroads, insurance companies, and more recently to mortgage corporations. Under this new program it is apparent that whenever an application for a loan is rejected because of the inadequacy of the security offered, the Senators and Representatives are to be called upon to persuade the officials that the security is adequate and the loans should be made. The Congressman knows that he will be asked to appear, not because he is an expert in valuing securities, but solely because the borrower believes that he possesses political power to influence the decision of the Department official.

There is another angle to the question. Whenever a departmental employee determines upon the awarding of a contract, the payment of a claim, or the granting of a loan, as the Senator wishes it to be done, he can then tell the chief of his bureau that the Senator is under obligation to him. If a few weeks thereafter the chief of the bureau, in order to expand his activities and thereby justify a larger salary, appeals for an increased appropriation of 2 or 3 million dollars for his particular bureau, and the employee who favors the Senator asks him to support the appropriation, the Senator suffers the same embarrassment to which the departmental employee was previously subjected. If he reciprocates the favor shown him, it means that in order to obtain a few thousand dollars for one of his constituents he will take a few million dollars from all of his constituents.

So far as the Government and the taxpayer are concerned, there is no difference between the Congressman's receiving a fee of $500 for his services in influencing the departmental officials and his receiving in the following election a campaign contribution of $500 from the person who was benefited by his services. The evil is the exercise of political influence, resulting in a decision based upon such influence instead of upon the merits of the case. That evil can be cured only by legislation such as that proposed in the bill I have introduced prohibiting a Member of the Senate or of the House from appearing before any department of the Government, representing any individual or corporation, advocating the payment of a claim, the awarding of a contract or the granting of a loan.

Legislation at this time prohibiting the use of political influence would be most timely. Between this date and July 1 approximately $8,000,000,000 will be disbursed by the Government. It is to be spent or loaned in order to revive industry and furnish relief to the people of the Nation. The professional lobbyist must not be permitted to enrich himself by reason of the misfortunes of the people. It matters not that lobbying has always existed. This is a new deal. And, while we are demanding that every industry adopt a code giving greater consideration to the rights of the public, we should demand that the political lawyers conform to a new code of political ethics that will recognize public office as an opportunity to serve the people instead of an opportunity to serve themselves.

It would not interfere with them in the performance of any duties as legislators. It would only seek to prevent them from interfering with officials of the executive departments in the performance of their duties.

In the expenditure of vast sums of money for relief by immense Nation-wide organizations hastily recruited it was inevitable that there should be some few persons who would be guilty of petty grafting. The officials in charge of the administration of these relief funds have fearlessly exposed the offenses and dismissed the offenders. Director Hopkins and Secretary Ickes have promptly dismissed the few employees found disloyal to the trust reposed in them. Congress must do its part to protect the people against the misuse of political power.

The proposed legislation as to Members of the Senate and House will work no hardship upon them. Within recent years the people have demanded that a Senator and a Representative do everything except that which they were elected to do, namely, legislate. If they comply with one half the requests they receive to travel around the city visiting the departments, the only way in which they can know what is going on in Congress is by reading the newspapers the following day. And while they desert the Capitol in an effort to please their friends, the few who are not called upon to run errands can remain at the Capitol to determine what taxes to levy upon the people, and how that money shall be spent.

The truth is, the citizen has been misled into believing that he cannot present the simplest request to an official of the United States Government, except through a Senator or Representative. He has no hesitation in approaching the officials of his State Government and seldom thinks of having to approach one through his State senator or the members of the house of representatives in his State. He has, however, the unfortunate belief that he cannot directly appeal to the officials of the United States Government. I say "unfortunate" because the citizen should feel and be justified in feeling that he can approach the officials of his Government without the intervention of any legislator.

Such legislation as I have proposed would have a wholesale effect. It would not only save millions of dollars to the taxpayers, but it would enable Senators and Representatives to do

that which they would infinitely prefer to do—study the legislation pending in Congress. Instead of being forced to travel all over the city of Washington acting as lawyer, broker, and salesman, pleading for the special interests of a few individuals who seek funds from the Treasury, they could remain at their posts at the Capitol and devote their time to legislating for the welfare of all the people of America.

THE NEW POLITICAL ORDER

Mr. BORAH. Mr. President, I have here two editorials, one appearing in the New York Times of Thursday, March 8, 1934, and the other appearing in the Chicago Daily Tribune of Wednesday, March 7, 1934, dealing with the same subject matter. I ask that the editorials be inserted in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, Thursday, Mar. 8, 1934]

STANDING UP FOR DEMOCRACY

Great Britain could not hope to escape the continental winds which lately have been blowing so hard against democratic institutions. When Germany and Austria and Italy are filled with sneers at what they call dying democracy, now existing, as they say, in only "a few corners of the earth", Britons cannot fail to take notice. They, too, have been hearing much at home of fascism, or the corporative state, or outright dictatorship as something far superior to parliamentary government. In a sharp challenge to all this loose kind of talk a large number of men eminent in all walks of British life have just signed a public protest against this lax and unthinking scorn of democratic methods, with the accompanying proposals to apply "the inquisition to political opinion." They urge all sincere democrats to stand up for the faith that is in them and to resist with every use of reason and persuasion those who appeal to passion and violence in order to bring about a new political order.

The signers of this protest embrace leaders in science and education and the liberal arts, as well as many men in public life. The whole list, which must number about a hundred, is like a roll of honor. Clergymen, authors, professors, economists, newspapermen have their names thick upon it. What they urge is not a passive defense of democracy but an active campaign in its advocacy. They admit that democracy and, especially, some of its instruments of government are now on trial, but they demand that the trial be a fair one, that all the evidence be heard, and that no hasty and half-baked judgment be tolerated. In order to make their program concrete they specify the four following political conceptions to be aggressively maintained:

1. A profound conviction of the supreme importance of liberty.
2. An appreciation of the urgency of securing peace and justice by reorganization without delay in both international and national affairs.
3. A determination to work through democracy as the primary safeguard of liberty.
4. A conception of leadership that involves treating democracy with a new respect, offering scientific schemes of a far-sighted and far-reaching order, commending them by the methods of reason, and asking that they should be judged on their merits alone.

[From the Chicago Daily Tribune, Wednesday, Mar. 7, 1934]

NO DICTATORSHIP FOR JOHN BULL

The managers of the British Labor Party do not like recent remarks of the former solicitor general in the late Labor government, Sir Stafford Cripps, which suggest a dictatorship when Labor comes into power. The executive committee of the party has taken them seriously enough to publish a disavowal, which also contains the following interesting assertion of principle:

"The Labor Party, as has repeatedly been made plain in its official declarations, stands for parliamentary democracy. It is firmly opposed to individual or group dictatorship whether from the right or from the left. It holds that the best and, indeed, the only tolerable form of government for this country is democratic government with a free electoral system and an active and efficient parliamentary machine for reaching effective decisions after reasonable opportunities for discussion and criticism.

"Insofar as any statements which are at variance with the declared policy of the party on this question have been or may be made by individuals, these are hereby definitely repudiated by the national executive."

The tide of reaction which has swept over democratic institutions on the continent, and is felt in plausible disguise even in America, has not shaken the political philosophy of the British.

ACHIEVEMENTS OF THE ADMINISTRATION—SPEECH BY POSTMASTER GENERAL FARLEY

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered by Postmaster General Farley at the ninth annual dinner of the New York drug trade on Thursday evening, March 8, 1934, on the subject of Government.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Annual dinners of this organization are reputed to be happy and informative events. I consider myself fortunate to be with you, to enjoy your hospitality, and to learn the views of those who are engaged in the various phases of an important industry.

I feel at home among you because you are business men. I can talk to you as a business man to business men. I can also talk to you as a public servant intrusted for a time to administer some of the affairs of our National Government.

Not so many years ago a President of the United States declared that "Government after all is a simple matter." He lived to be disillusioned. Government is not a simple matter.

Unless government is in the hands of the vigilant, the resourceful, the courageous, the honest, and the patriotic, the rights and the welfare of the people are disregarded and the Government falls under the domination of lobbyists, organized minorities, and special interests.

These interests always know exactly what they want, and they proceed to get it if the administration in power is either indifferent or is not alert to prevent them.

Government, whether it be municipal, county, State, or national, should be responsive to the interests and the needs of the people generally. It should guarantee "equal rights to all and special privileges to none."

Throughout all time there have been sinister interests seeking to capture and control all governments. These interests, whether they be actuated by political or financial motives are always self-seeking.

Too often the governments of our cities, our counties, our States, and even that of our Nation have fallen under the influence or the domination of such interests; and whenever and wherever they have done so, human rights have suffered.

There is multiplying evidence that the people generally have been aroused from their indifferent attitude toward governments. They are not only realizing their own power, but they are demanding responsive governments.

I feel that I am justified in asserting that Franklin D. Roosevelt, in the campaign of 1932 and during the year since he became President of the United States, is largely responsible for the real and active interest which the people are now manifesting in government.

Certain it is that under his leadership the Federal Government has become more responsive to the aspirations and the needs of the people of this country than ever before in its history.

President Roosevelt has refused to cater to the selfish demands of any class or any section. He has earnestly endeavored to induce every citizen to take an active interest in the affairs of the Government. He knows that the people will support a government which has strong, decisive, and patriotic leadership.

President Roosevelt's administration has been responsible for the conduct of the Government for just a year, yet it has been more truly representative of all the people than any administration in our history, and its accomplishments during this brief period have been nothing short of marvelous.

At the very moment President Roosevelt was taking the oath of office, the banking structure of the country was collapsing; upward of 14,000,000 men and women were unemployed; industry was paralyzed and agriculture was prostrated. Worst of all, despair had taken hold of the people and they were without confidence in the future.

The Government itself had been undermined, and its position, to say the least, was insecure. There was unrest everywhere and rebellion against the existing order was growing by leaps and bounds.

The picture is entirely different today. Where despair reigned a year ago, there now are confidence and hope. Several millions of the then unemployed have found work; industry has been revived, and the condition of agriculture has greatly improved.

I will not dwell upon the almost insurmountable obstacles and the tremendous tasks which have faced President Roosevelt and his administration, nor will I emphasize the long and arduous hours of study and labor which he has given toward finding a solution of these problems.

I do wish, however, to call attention to the very substantial gain in basic commodity prices during the past year. These commodity prices have, according to a well-known market and financial authority, shown the following approximate gains from March 4, 1933, to March 4, 1934: Wheat, 79 percent; corn, 108 percent; oats, 119 percent; rye, 71 percent; cotton, 95 percent; wool, 115 percent; steel, 73 percent; copper, 40 percent; sugar, 75 percent; and silver, 69 percent.

Many of the more substantial securities have shown corresponding gains. Wages have been increased, hours of labor have been reduced, and working conditions improved.

The banking system of the country has been placed upon a strong and solid foundation, and the Government is guaranteeing bank deposits up to a certain amount. The president of the American Bankers' Association is authority for the statement that the banks are now in position to finance legitimate credit needs.

The railroads, which, a year ago, like many other important industries, were facing bankruptcy, now report a constantly increasing freight and passenger business. From all sections of the country reports of better conditions and of renewed confidence are received.

Perhaps of more importance than all these is the new order of social justice which has been inaugurated under the administration of President Roosevelt.

Not only is the country well on the road toward business recovery, but along with this recovery are being instituted many social reforms which will bring a greater degree of happiness and contentment to the people.

From time to time partisan critics of the administration complain that the Roosevelt recovery program is costing vast sums of money and that Congress is giving too much power to the President. They forget, or rather they prefer not to remember, that the terrible depression through which the people of this country have struggled has been as disastrous and far-reaching as a war would have been. All of us know that money is not spared when it comes to prosecuting a war. Why should money be spared in fighting such a depression?

As to those who are appalled by the billions the Government has paid out, I will ask, When has the Government made a better investment? Besides, all the money the Government has spent is not lost. The advances for farm mortgages and home mortgages which the Government has taken care of will come back—approximately all of it.

We hear a lot about loans by the R.F.C. to banks and corporations. We hear very little when these sums are repaid, yet they are being repaid right along. This spending is on the best security the country offers, notwithstanding that the Jeremiahs among us would have you believe that the various agencies that have been supplying the necessary capital to keep things going might as well have cast this capital into the sea.

To cope with the unusual conditions, it was necessary for the President to have unusual powers and be it said to their credit that the Members of Congress, with few exceptions and without regard to party affiliations, have voted him the necessary powers. True, these powers have been delegated by the Congress to the President for stipulated periods and in order that he might have a free rein in combating the depression and bringing about recovery.

Results so far achieved justify these powers. There are, in Congress and out of Congress, a few loud and persistent critics of the administration. They find fault with everything, but up to date none of them have offered any constructive alternatives. They profess to be disturbed over what they assert is the passing of constitutional government, and they work themselves into a state of excitement over what they declare is the trend toward socialism.

The truth of the matter is that the Government still functions under the Constitution and that the extraordinary powers conferred upon the President have been delegated to him by Congress with a time limit on them.

No one, unless he belongs to a selfish and formally entrenched financial or industrial group, need worry over the cry of socialism. On the contrary, the great mass of the people, in whose behalf social reforms have been instituted, have long been entitled to the benefits which these reforms give and they will, I am positive, hold on to them.

When you hear one of these critics predicting ruin because of the mounting national debt, just remind him that even with all the contemplated emergency expenditures for national recovery, it is estimated that the national debt of the United States on June 30, 1934, will be $29,800,000,000 as compared with Great Britain's national debt of $39,500,000,000.

If Great Britain, with its comparatively small per capita wealth, can maintain its credit with such a national debt, it seems reasonable to conclude that the United States, with its greater per capita wealth and with returning prosperity, will be able to do as well.

No one who is familiar with the history of the Government during the past year can minimize the great part Congress has played in the recovery program. A large majority of the Members of both Houses have patriotically put the interests of the country above their own personal and political interests. It was natural to expect that most of the Democratic Members would support the administration, but many Republican Members have put partisanship aside and have joined with the Democrats in the enactment of necessary legislation.

As to the few who have been actuated by political partisanship and who have allowed themselves to become hostile snipers for personal or party reasons, they will be judged by their own constituents.

Ever since his inauguration, President Roosevelt has, from time to time, given the people frank information on the condition of the country, as well as on all the measures being taken to improve that condition. He does not mislead with false hopes, nor does he overpaint the pictures of returning prosperity.

For 12 months President Roosevelt, with stout heart, intelligent foresight, patience, resourcefulness, and an abiding faith in Divine Providence, has kept up the fight that has slowly but surely enabled him to bring order out of chaos; given us time to take stock of our moral and material resources and banished the fears of pessimism. It has been a hard road; but a confident, cheerful, and valiant leadership has brought us a long way on it, and now the way ahead seems easier and smoother.

One year ago the Government leaders were discouraged and without resourcefulness, and business was at a standstill. Every measure or policy of action or inaction which accorded with the former leaders' philosophy of government had been tried and found wanting.

President Roosevelt and his administration, from the beginning, have given vigorous, forceful, and intelligent attention to the problems facing the country.

It is the purpose of the administration to see to it that the fruits of labor from now on are more equally divided, that the rights of property are adequately protected, and that the rights of all the people are jealously guarded.

Let us for a moment look back over the past year and further view the change that has taken place. Our foreign policy has changed the distrust, suspicion, and, in some instances, disrespect of our neighboring peoples to confidence and understanding. We are in friendly accord with every nation.

While our Naval and Military Establishments are being properly provided for, this is not being done with a view to offensive action but solely for national defense. In our own country the President and his administration are striving to bring to a realization the age-old hope that every man will be engaged in profitable labor and that he can perform it in peace and contentment.

The President has adjusted and stabilized our currency and has placed it once again on a firm foundation.

A year ago many thousands of young men, homeless wanderers without work and without much hope, were living as chance permitted them, under conditions that tended to break their spirits and seriously affect their characters. No more do we see the sad plight of a homeless army of youths wandering over the land, but we do see hundreds of thousands of young men, disciplined in mind and body, engaged in productive labor with the Civilian Conservation camps, which will benefit not only them but their children and their children's children.

Every plan of the administration has a distinct purpose which is well thought out and carefully devised for the benefit of the people as a whole. The farmer, whether he be the owner of a large farm or a few acres; the banker in the city or in the village; the man who is trying to own a home; the laborer, the professional man, the mechanic, the aged poor, and the helpless child, now feel the sheltering arm of the Government reaching out in protection over them, and this protection will continue to be afforded until conditions become such that it is no longer needed.

The manhood and womanhood of this country will not be permitted to suffer or to deteriorate while a temporary business and agricultural depression impedes the march of the new social order that is designed to make this the best and the happiest country in the world.

This administration has demonstrated to the citizens that a political platform is a thing to stand on and not to run on, as has been the case of political platforms for many years. When the Democratic platform was written, the thought was that the party will promise only that which it could and would faithfully endeavor to perform. How well the Roosevelt administration has performed is known to all.

The National Recovery Act has proved the wisdom of its purpose, and there seems no doubt that it has added a new and lasting element in the harmonious cooperation between capital and labor. It has eliminated child labor, provided shorter hours, and, in many instances, better pay for the workers. And it has spread employment, thereby creating additional jobs. In addition it is rapidly eliminating unfair competition and providing a well-ordered industrial system.

The Farm Loan Mortgage Act and the Home Loan Mortgage Act have reassured the farmer and the city worker that their farms and their homes—the fruit of their labors—are being protected.

The repeal of the eighteenth amendment was a return to a rule of reason in lawmaking, and it is expected to greatly increase the revenues of the Government as well as to bring about a reduction in organized crime and to engender a greater respect for law.

The passage of the Economy Act has eliminated duplication of effort in the various departments and bureaus of the Government; put an end to much extravagance and waste and brought a considerable reduction in the regular expenses of the Federal establishment and consequent benefit to the taxpayers of the country.

The Revenue Act of 1932 has been amended so as to eliminate many vicious abuses of the income tax law, such as have been disclosed by the Senate investigations.

Congress gave the President power to alter the gold content of the dollar and to stabilize the currency. Early criticisms of his action under this authority have now been turned to praise.

The Glass-Steagall banking bill, with its provisions for the insurance of bank deposits is a great step toward the reestablishment of public confidence in the country's banking system.

The Securities Regulation Act and the plan to regulate the stock market exchanges are designed to protect the people against the sale of worthless securities and against the disastrous consequences of wild and uncontrolled speculation.

The Muscle Shoals project, which the preceding administration appeared unable to cope with, is now, under the Tennessee Valley Authority, being expanded into a great public enterprise which will bring immeasurable benefits to the people of the entire Tennessee Valley.

The entire economic structure of the country—industrial, agricultural, and financial—is being overhauled, disciplined, and placed in the service of all the people.

We cannot have complete agricultural and industrial recovery without a restoration of our foreign trade. Measured in terms of dollars our foreign trade has been reduced to approximately 35 percent of what it was in 1929. Our imports and exports are about what they were 30 years ago.

The President has asked Congress for power to enter into executive commercial agreements with foreign nations in the hope of increasing our exports and at the same time controlling imports.

At the beginning of its second year the administration is seeking to consolidate the gains made during the first year and to more vigorously press the attack on all fronts against the depression, which is slowly but surely receding.

The recovery job is by no means done, but it has gone far enough to perceive the sanity, the conservatism, the humanity, and the practicality of the system. It was a daring experiment, but its success is illustrated by the smoking stacks of thousands of factories that were cold and still a year ago; by the long lines of men marching to work with dinner pails who, before the advent of Roosevelt to the White House, were waiting for the bitter meals of charity; by the people buying in the stores, by the merchants trooping to the big centers of trade to replenish their stocks, and, most of all, by the cheerful, hopeful attitude of our whole population who now face the future confidently, with heads erect, instead of shuddering daily in expectation of further disaster.

I do not pretend to say that recovery is complete or that the recovery program is perfect. Much remains to be done, and the days to come will bring with them some of the old anxieties. Yet we have come through a bitter winter. None have starved, millions have been saved from misery. Now we are coming into the first spring in 4 years that comes with promise.

The stimulation in business by Government expenditure so far will take up a lot of the slack. As we swing toward the full tide of business under the new deal, I am sure that our business people have learned much, and learned most of all that only by keeping all our people busy can we assure our own prosperity.

It is not hard to pick flaws in any vast enterprise; it is particularly easy to pick flaws in a program that is so simple in its objectives and so intricate in its processes as the President's recovery plan.

Undoubtedly there have developed weaknesses and mistakes, but the finest thing about the guiding mind that is responsible for all of it is his willingness to acknowledge where the errors have occurred and his willingness to correct them.

Here is a flexible program. Should injustices develop, they will be straightened out. The President has not, and cannot, promise that every individual will prosper, any more than he could promise that there would be no losses when he insisted that no bank should continue to operate unless it was solvent, but he has assured that every business shall have its opportunity to flourish and develop, and undoubtedly the foundations of future fortunes are being laid now by those fortunate enough to have the opportunity, and wise enough to take advantage of it.

Altogether, we are getting along pretty well—better than we dared hope a year ago. The Roosevelt administration has had, and still has, two main objectives—business and agricultural recovery and social reforms. Can anyone deny, in sincerely and diligently driving toward such objectives, that the Government is responsive to the aspirations and the welfare of the people and the country?

GREAT LAKES-ST. LAWRENCE DEEP WATERWAY TREATY

Mr. PITTMAN. Mr. President, by agreement, the resolution for the ratification of the treaty will come to a vote on the 14th day of March. There will be very little time for debate of the treaty between now and then, as debate will be limited, beginning on Tuesday next, to 20 minutes on the treaty and 10 minutes on each reservation.

I intend this morning to deal with the major objection, as I understand it, to the treaty. I realize there have been a number of objections raised. The chief objection, however, or the material objection, as I look at it, comes from those who are directly interested in carrying out the program for the navigation of the Mississippi River and its tributaries. I realize that is a very important matter. I can well understand why any Senator from the Mississippi Valley should decline to vote for the treaty if he believes that it might affect the carrying-out of the project which has already been adopted for the improvement of navigation on the Mississippi River and on its tributaries.

I have felt from the beginning that such a fear in the minds of those Senators is unfounded. I have believed, and I am now certain, that the real instigation of this fear did not come from those who are interested in the navigation of the Mississippi River and its tributaries. I am satisfied that the argument was originated in and circulated from the city of Chicago, and that the propaganda was urged from three sources, namely, the Sanitary District of Chicago, the Power Trust, and the railroads centering in Chicago.

The largest railroads of the United States center in Chicago. I think the railroads of the country are wrong in opposing water navigation, as I have said many times. But, be that as it may, every Senator knows that the railroad association has adopted resolutions expressly stating that the railroads are opposed to the improvement of any inland waterway.

The Sanitary District of Chicago has been dumping its sewage into a canal that leads into the Illinois River and thence into the Mississippi River. There were suits brought, not by Canada, but first by the State of Wisconsin and then by practically all the other States bordering on the Great Lakes, to enjoin the taking of undue quantities of water from Lake Michigan through this canal for the purpose of flushing the sewage. The only remedy for Chicago was either to have a great quantity of water to flush the sewage or to build sewage-disposal plants that would dispose of the sewage and purify it before it went into the streams. That would cost the city of Chicago from $80,000,000 to $100,000,000. It is very easy to see, therefore, why the city government of Chicago would oppose the pending treaty. The officials of the city of Chicago are still opposing it. The business men of Chicago are not opposing the treaty. The citizens of Illinois are not opposing the treaty, as we shall see later.

The situation came down to this point: When the suit came up between the State of Illinois and the sanitary district on the one hand, and the other States which I have mentioned on the other hand, the Supreme Court of the United States was considering whether or not the diversion of the water was damaging the rights of the States involved and whether or not there was an injury to the riparian rights of those States and an interference with navigation on the Great Lakes.

The Supreme Court found as a fact that it was; and they found as a second fact that Chicago, by a certain diversion, could take care of its sewage. Therefore I say it is perfectly evident where this fear originated.

Now I am coming directly to the question of how the program for the navigation of the Mississippi River and its tributaries is affected by this treaty.

I take the resolution adopted by the Mississippi Valley Association on November 27 and 28, 1933. I am going to read just what they had to say on this matter. Of course, several mimeographed resolutions have been adopted since then, but they have come from the sources I have already mentioned. Here is what they state, and this is in the resolutions adopted:

> We reaffirm in principle our faith in the merits of a St. Lawrence waterway from the Lakes to the Atlantic.

Here is what they oppose:

> We oppose the ratification of the St. Lawrence Treaty now pending before the United States Senate until its inequities shall have been corrected; until American rights shall have been protected; until the markets for American agriculture and industry shall have been safeguarded; until a commercially useful Lakes-to-the-Gulf waterway shall have been made secure; until provision is made whereby American money goes to American labor and American sovereignty over Lake Michigan is preserved.

I submit that the chances are 99 to 1 that there is only one thing in these resolutions that a majority of the resolutions committee knew anything about, and that is this:

> Until a commercially useful Lakes-to-the-Gulf waterway shall have been made secure.

That is the only matter in which Senators from the Mississippi Valley are interested in which every other Senator in the United States is not equally interested.

I am willing to discuss every other question involved in this matter; but today I am going to take up the sole, single question that this treaty does not in any way whatever injure the Mississippi River project or the projects dealing with any of its tributaries—that it could not in any way injure them.

I have just received a letter from Maj. Gen. E. M. Markham, Chief of Engineers, in answer to questions that I propounded to him. It will be seen from the answers to direct questions, not hypothetical questions, that his answers are equally direct.

What is his first answer? Here is what he says in this letter, and I am going to read the entire letter later:

> It has never been the view of this Department that the diversion of water from the Great Lakes into the Chicago Drainage

Canal is an essential factor in the present and future development of the interior-waterways system formed by the Mississippi River and its tributaries.

Could anything be any more emphatic? This is not his opinion, but he says:

It has never been the view of this Department—

That is, the Department of the Engineers, the War Department, which for 50 years has had charge of the program for flood control and the improvement of navigation on the Mississippi River.

Let us see what else he has to say on that subject. Here is his exact language:

Our inland waterway system is not dependent on the Great Lakes for its water supply. The flow of our great interior rivers, with such conservation as may be necessary, is ample to provide for their maximum development for navigation.

Along the same lines here are some direct answers. He says:

Looking into the future, the demand must be foreseen for deeper and more commodious channels in our interior waterways, but these channels can be provided without the diversion of water from the Great Lakes.

If anything can be more positive than that statement, I do not know what it is.

Here is the chief of this bureau of Army engineers, the chief of this commission, who has been in it for years and worked up to the top, whose chief work has been the study of our inland waterways—not the deep waterway through the St. Lawrence. That is his positive assertion. Perhaps, however, there are other assertions that will go to show how clear he was on this question and how certain.

In the same letter he makes this absolute emphatic statement:

Under the Public Works program, however, construction has been begun on a great storage reservoir at Fort Peck at the headwaters of the Missouri, which through the conservation of flood waters will add at least 20,000 cubic feet per second to the low-water flow at the mouth of the Missouri. It is at once apparent that this measure of water conservation will add three times as much water to the low flow of the Mississippi as is involved in the decreed reduction of the Chicago diversion.

That is not all, however. It might be thought that he was depending solely on the Fort Peck Dam. No; he says:

The Fort Peck Dam is, however, but a beginning in the possibilities in the conservation of the water resources of the Mississippi. The available water supply with proper conservation is ample for any future needs of navigation without drawing upon the Great Lakes.

There is no way to get around this fact unless we have better evidence. Where is the better evidence? The lobbyists for the railroad companies, the power companies, and the sanitary district who write these things? The attorneys of the sanitary district of Chicago? Possibly; but I desire to say that there never has been a successful attack on the Board of Engineers of the United States Army, which has had charge of the development of our inland waterways since the beginning of my memory. They are not interested in the Great Lakes-St. Lawrence deep waterway. That is a matter of slight importance by comparison with the great work they have been conducting here for years, and which they are conducting so rapidly at the present time.

Let me read just a few more lines from this letter before the whole letter is put in the RECORD:

This Department has committed itself fully and whole-heartedly to the improvement of our great interior-waterways system, and it would be its duty to present fully to Congress the need for augmenting the water supply of the Mississippi River by diversion from the Great Lakes if this supply were necessary to the present and future development of the Mississippi River system. It does not regard a diversion greater than that provided in the Supreme Court decree as necessary for that purpose, and is cognizant of the injury to navigation and related interests on the Great Lakes that would result from any excessive diversion of water through the Chicago Drainage Canal.

I think that shows the spirit of Major General Markham. I think that shows his sincerity. I think that proves that his whole heart is in the development of the navigation of the Mississippi River and its tributaries.

Now let me read the letter. It is not very long, but I have already read emphatic statements from it. The letter is addressed to me. As I stated before, I made certain inquiries of General Markham as to questions that I desired to answer emphatically. He says:

JANUARY 31, 1934.

Hon. KEY PITTMAN,
United States Senate, Washington, D.C.

DEAR SENATOR PITTMAN: In accordance with your request, I take pleasure in advising you on the asserted need for a diversion of water from Lake Michigan to provide for the present and future improvement of the Mississippi River for navigation.

A decree of our Supreme Court and the provisions of the St. Lawrence Deep Waterway Treaty limit the diversion from the Great Lakes through the Chicago Drainage Canal into the Illinois River after the year 1938 to an annual average of 1,500 cubic feet per second, in addition to the amount drawn for the municipal water supply for the city of Chicago and discharged into the canal as sewage. The decree contemplates that this sewage shall be purified before its discharge into the drainage canal. The reliable flow through the Illinois waterway and into the head of the Illinois River, as augmented by the water drawn for municipal purposes, will therefore be, not 1,500 cubic feet per second but will be 2,400 cubic feet per second. The annual average flow will be at least 3,200 cubic feet per second. The maximum annual average diversion through the Chicago Drainage Canal, including the sewage discharge from the city, has been 9,965 cubic feet per second. The decree will, therefore, decrease the diversion by a maximum of 6,765 cubic feet per second.

Then follows the paragraph I have just read:

It has never been the view of this Department that the diversion of water from the Great Lakes into the Chicago Drainage Canal is an essential factor in the present and future development of the interior waterways system formed by the Mississippi River and its tributaries. The initial action to restrict the diversion was taken by this Department in 1907 because of the injury to navigation on the Great Lakes resulting from the lowering of their levels by reason of the diversion. Subsequently certain States of the Union brought action in the Supreme Court to restrain the diversion to prevent injury to their citizens, and the present decree is a result of the latter action. I need not point out to you that even were the present treaty not ratified a due regard for the interests and rights of these States will impel a proper restriction of the diversion. The interests of our own citizens, aside from any consideration of the treaty, will presumably always limit the diversion of water from the Great Lakes into the Mississippi River system to that essential to the public need.

Our inland-waterway system is not dependent on the Great Lakes for its water supply. The flow of our great interior rivers, with such conservation as may be necessary, is ample to provide for their maximum development for navigation. The major tributaries of the river, the Ohio and the Missouri, as well as the Mississippi itself above the mouth of the Illinois, have been or are being developed for modern barge navigation with their own water resources. The portion of the main stem of the Mississippi below the mouth of the Illinois and the link with the Great Lakes formed by the Illinois River itself are alone affected by the diversion.

Under the direction of Congress this Department has made a thorough study of the amount of water that will be required to meet the needs of a commercially useful waterway on the Illinois River and its connection with the Great Lakes, and on December 6, 1933, submitted a report setting forth its conclusions. This report was reviewed by the Board of Engineers for Rivers and Harbors as provided by law. The report finds that by constructing two modern locks and dams on the Illinois River, which will supersede two old and inadequate structures now impeding navigation on the river, and with the completion of a lock and dam at Alton on the Mississippi River below the mouth of the Illinois, the flow provided under the decree of the Supreme Court and the provisions of the treaty will be ample for the fullest development of navigation on the Illinois.

Note this:

The conclusions in this report apply not only to the present 9-foot barge navigation but also to any future increase in depth that may be found advisable. No public need of navigation therefore exists for a larger diversion so far as navigation on the Illinois is concerned.

Even with the present diversion the extreme low-water flow of the Mississippi in the short reach of 23 miles between the mouth of the Illinois and the confluence of the Missouri has proved insufficient to afford a reliable 9-foot channel suitable for modern barge navigation. With funds provided under the Public Works program, work will soon be begun on a lock and dam at Alton, a short distance above the mouth of the Missouri, which will make navigation independent of shortages of water supply. This dam is part of the comprehensive development of the upper Mississippi River, now in active prosecution, to afford modern 9-foot barge navigation to Minneapolis and St. Paul.

There remains therefore only the consideration of the need for a diversion from the Great Lakes to afford the fullest development of navigation on the Mississippi below the mouth of the Missouri. The present low-water flow of the Mississippi at

St. Louis, immediately below the confluence of the Missouri, is 42,000 cubic feet per second, of which 35,000 cubic feet per second is contributed by the natural flow of the Missouri and the upper Mississippi, and the balance of about 7,000 or less cubic feet per second by the diversion from the Great Lakes into the Illinois River. This minimum flow is not adequate to provide a reliable channel of the full 9-foot depth. Under the Public Works program, however, construction has been begun on a great storage reservoir at Fort Peck, at the headwaters of the Missouri, which through the conservation of flood waters will add at least 20,000 cubic feet per second to the low-water flow of the mouth of the Missouri. It is at once apparent that this measure of water conservation will add three times as much water to the low flow of the Mississippi as is involved in the decreed reduction of the Chicago diversion.

Looking into the future, the demand must be foreseen for deeper and more commodious channels in our interior waterways, but these channels can be provided without the diversion of water from the Great Lakes. A comprehensive report made by a special board of engineers in 1909 found that it would be possible to provide a 14-foot channel in the Mississippi River from St. Louis to the mouth by dredging and constructing works to confine and regularize the low-water channel, but that the great cost of these works was not justified by the benefits. Subsequent experience in the improvement of the river does not controvert this conclusion. Should it be found advisable at some future time to provide in channels of the Mississippi River and its tributaries a greater depth than 9 feet, to provide which effort is now being directed, a deeper channel in the Mississippi River below St. Louis can be provided by the further development of the works to confine and regularize the low-water channel. After these works have been developed to the maximum limit practicable and advisable, it may well be found appropriate to further augment the low-water flow of the river. The Fort Peck Dam is, however, but a beginning in the possibilities in the conservation of the water resources of the Mississippi. The available water supply, with proper conservation, is ample for any future needs of navigation without drawing upon the Great Lakes.

This Department has committed itself fully and whole-heartedly to the improvement of our great interior waterways system, and it would be its duty to present fully to Congress the need for augmenting the water supply of the Mississippi River by diversion from the Great Lakes if this supply were necessary to the present and future development of the Mississippi River system. It does not regard a diversion greater than that provided in the Supreme Court decree as necessary for that purpose and is cognizant of the injury to navigation and related interests on the Great Lakes that would result from any excessive diversion of water through the Chicago Drainage Canal.

Sincerely yours,

E. M. MARKHAM,
Major General, Chief of Engineers.

Mr. DIETERICH. Madam President——

The PRESIDING OFFICER (Mrs. CARAWAY in the chair). Does the Senator from Nevada yield to the Senator from Illinois?

Mr. PITTMAN. I prefer not to be interrupted until I finish this brief statement. Then I will be glad to answer any questions I may be able to answer. I am dealing with one subject only, hastening as much as I can on account of the pending bill; but, of course, I will be glad, when I shall have finished, to answer any question. I hope to finish in about 10 minutes.

I think that General Markham has very clearly stated that away back in 1909 they limited the diversion through this canal because the diversion was injuring States on the Great Lakes and was interfering with the riparian rights of those States and the citizens there.

He calls attention to the fact that the rights of these people on the Great Lakes must be considered and should be considered. It must be remembered—and Senators will see that it is so if they will look at this map on the wall—that the Great Lakes drain one watershed and the Mississippi River, with its tributaries, drains an entirely separate watershed. The drainage canal from Chicago, shown on the map here on the wall, goes from Chicago through a divide and connects with small rivers which run into the Illinois River at the point I indicate on the map. Originally the Chicago River ran into Lake Michigan instead of running in the other direction.

In other words, even the present diversion through the drainage canal from Chicago into the Des Plaines River, into the Illinois River, and then into the Mississippi, is a diversion of water from one watershed into another watershed.

I wish to call attention to a principle of law which the Supreme Court of the United States has not yet passed on, and that is whether or not under the constitutional power to regulate nagivation the Congress has the power to injure the natural navigation and natural waters of a State by taking waters out of one watershed and diverting them into another watershed for the purpose of benefiting the navigation of another State outside the first watershed. I doubt very seriously whether that can be done. I do not think the Congress of the United States would have the right to destroy the Great Lakes, even if it could physically do so, by diverting the waters from the Great Lakes watershed into the Mississippi Valley for the purpose of benefiting the Mississippi Valley section of the country. I do not think there was any such intention in the constitutional provision with regard to the regulation of interstate commerce.

The Congress of the United States has already adopted a policy with regard to this matter. Congress, by an act approved July 3, 1930, directed a survey to determine the amount of water that might be diverted through the Chicago Canal. I quote from this act:

Illinois River, Ill., in accordance with the report of the Chief of Engineers, submitted in Senate Document No. 126, Seventy-first Congress, second session, and subject to the conditions set forth in his report in said document, but the said project shall be so constructed—

Here is what I want the Senators to pay attention to, in order to show that Congress has already adopted a policy with regard to this matter—

But the said project shall be so constructed as to require the smallest flow of water with which said project can be practically accomplished.

It goes on further and says:

Provided further, That as soon as practicable after the Illinois waterway shall have been completed in accordance with this act, the Secretary of War shall cause a study of the amount of water that will be required as an annual average flow to meet the needs of a commercially useful waterway as defined in said Senate document—

That is as small an amount of water as possible. I continue reading from the report—

and shall, on or before January 31, 1938, report to the Congress the results of such study with his recommendations as to the minimum amount of such flow that will be required annually to meet the needs of such waterway and that will not substantially injure the existing navigation of the Great Lakes to the end that Congress may take such action as it may deem advisable.

Mr. DIETERICH. Mr. President——

The PRESIDING OFFICER (Mr. POPE in the chair). Does the Senator from Nevada yield to the Senator from Illinois?

Mr. PITTMAN. I yield.

Mr. DIETERICH. If that is true, and General Markham says there is none, why should the study be made of it?

Mr. PITTMAN. The study was made before he wrote the letter.

Mr. DIETERICH. Before he wrote the letter?

Mr. PITTMAN. Yes.

Mr. DIETERICH. Mr. President, will the Senator yield for another question?

Mr. PITTMAN. I yield.

Mr. DIETERICH. How does the Senator reconcile the letter of Major General Markham with the statement of his predecessor, General Brown, who was Chief of Engineers in the United States Army in 1930, in response to a question propounded to him by the junior Senator from Michigan [Mr. VANDENBERG] as follows:

What is your present judgment as to the smallest flow of water that is necessary to develop a commercially useful waterway of this kind?

Having reference to the Lakes-to-Gulf waterway, to which he replied:

The indications are, with everything in view, that something like 5,000 feet per second should be held available for that purpose.

Mr. PITTMAN. Mr. President, I will answer the question. It has already answered itself. He said that it indicated that 5,000 cubic feet would be necessary instead of the 10,000 cubic feet flowing through there before the injunction

by the court. It indicated that 5,000 cubic feet would be necessary. There is considerable difference between a guess by General Brown—and he is a very eminent engineer—than an opinion based upon thorough study and report.

Mr. LA FOLLETTE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from Wisconsin?

Mr. PITTMAN. I yield.

Mr. LA FOLLETTE. May I also suggest that at the time the estimate was made by General Brown, which was referred to by the Senator from Illinois, the projects to which General Markham refers in his very significant and important letter, for flood control and conservation of water supply under the Public Works Act, had not been worked out and were not under construction.

Mr. PITTMAN. I thoroughly agree with the Senator. I was about to say that the Illinois waterway has been completed only a very short time. It was a very good guess, we might say, on the part of General Brown that from indication about 5,000 cubic feet per second would be necessary instead of the 10,000 cubic feet that the city of Chicago was diverting. That guess was made before the survey was completed. As a matter of fact, the Board of Engineers under this very instruction from the Congress of the United States which I have just read, an instruction to determine the smallest amount of flow that would carry out the Illinois project without substantial injury to the water rights of the Lakes, made a study and determination, on which they filed a report, and in that report of the Board of Engineers they determined, as well as does General Markham, who confirms it, that they did not need any of it at all, as far as that is concerned, and that the 1,500 feet would be ample.

Mr. DIETERICH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nevada further yield to the Senator from Illinois?

Mr. PITTMAN. I yield.

Mr. DIETERICH. Has the report of the engineers in reference to the question of the amount necessary to divert for a commercially useful waterway, as directed by the Rivers and Harbors Act of 1930, found its way into print as a Senate document as yet?

Mr. PITTMAN. Not the final print, but I will have an excerpt from it put into print right now. I have read from it and am very happy to put it into print.

Mr. DIETERICH. I thought it was a voluminous report.

Mr. PITTMAN. No. The excerpt consists of only a few sheets.

Mr. DIETERICH. I will ask the Senator then, not having had the opportunity to examine the report, if the Board reports the following:

After consideration of these reports—

Having reference to the reports of the district and the Board of Engineers—

I concur in general with the view and recommendation of the Board. It does not appear possible to arrive at a conclusion determining whether this flow will afford suitable sanitary conditions on the waterway until after the sewage-purification plants in Chicago have been completed and placed in operation.

Mr. PITTMAN. My recollection is that there is a statement which is very similar to that, and I will say that probably it is correctly read. I will say that they were dealing there entirely with sewage and not with navigation. I am not discussing a question of sewage right now. That is a matter that concerns Chicago more than it does me. As far as navigation is concerned, the report of the engineers is absolutely as General Markham has reported it here. There is a statement in the report, I believe, that, in the opinion of the engineers, at certain periods of time it might be required to temporarily, for emergency purposes, turn more water through. On the other hand, Mr. Chief Justice Hughes has found that it will not take any more than provided in the treaty.

I do not have any desire to go into the question of the sanitary district's sewage; I think that the sewage system of Chicago has interfered sufficiently already with the great problems of the development of international waterways without going into a debate as to whether it takes 1,500 cubic feet or 5,000 cubic feet to purify Chicago.

As a matter of fact, when we get down to the proposition, Chicago has now been able to sell its bonds. The sale of the bonds was its greatest trouble, and I was sorry for Chicago. Chicago has been able to sell them, is going to purify its sewage, as other great cities do, and will not require over 15 percent as much water as it did require, for the simple reason that it is making its sewerage 85 percent pure. But I am still dealing with the Mississippi River navigation and not with the sewage system.

I have just called the Senate's attention to the fact that the Congress, by the act of July 3, 1930, recognizes the rights of the States on the Great Lakes. That their rights were certainly equal to the rights of the States on the Mississippi River, and in my opinion were superior to those rights, because their water was within their natural watershed, while the water to be diverted to the Mississippi River was in a different watershed.

I cannot conceive that Congress could have stated the principle any stronger than they stated it in this act when they directed the Board of Engineers first to find the lowest flow of water that would accommodate the project of navigation on the Illinois, and second, to report the minimum amount of diversion that would carry out the project of the development of the navigation on that river. That is the policy.

One would think from hearing this debate that the question of the diversion of water from Lake Michigan into the Illinois River was purely a question between the United States and Canada. Canada has brought no suit against us whatever.

I ask to have printed in the RECORD at this point an excerpt from the report dealing with that particular subject.

The PRESIDING OFFICER. Without objection, it is so ordered.

The report referred to is as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, December 6, 1933.

Subject: Report on survey of Illinois River, Ill.
To: The Secretary of War.

1. I submit for transmission to Congress my report, with accompanying papers and illustrations, on survey of Illinois River, Ill., called for by the following item in the River and Harbor Act approved July 3, 1930:

"Illinois River, Ill., in accordance with the report of the Chief of Engineers, submitted in Senate Document No. 126, Seventy-first Congress, second session, and subject to the conditions set forth in his report in said document, but the said project shall be so constructed as to require the smallest flow of water with which said project can be practically accomplished, in the development of a commercially useful waterway: *Provided*, That there is hereby authorized to be appropriated for this project a sum not to exceed $7,500,000: *Provided further*, That the water authorized at Lockport, Ill., by the decree of the Supreme Court of the United States, rendered April 21, 1930, and reported in volume 281, United States Reports, in Cases Nos. 7, 11, and 12, Original—October term, 1929, of Wisconsin and others against Illinois and others, and Michigan against Illinois and others, and New York against Illinois and others, according to the opinion of the Court in the cases reported as Wisconsin against Illinois, in volume 281, United States, page 179, is hereby authorized to be used for the navigation of said waterway: *Provided further*, That as soon as practicable after the Illinois waterway shall have been completed in accordance with this act, the Secretary of War shall cause a study of the amount of water that will be required as an annual average flow to meet the needs of a commercially useful waterway as defined in said Senate document, and shall, on or before January 31, 1938, report to the Congress the results of such study with his recommendations as to the minimum amount of such flow that will be required annually to meet the needs of such waterway and that will not substantially injure the existing navigation on the Great Lakes to the end that Congress may take such action as it may deem advisable."

2. The Illinois River is formed by the confluence of the Kankakee and Des Plaines Rivers in the northeastern part of Illinois, flows southwest 273 miles, and enters the Mississippi River at Grafton, 23 miles above the mouth of the Missouri River, and 38 miles above Eads Bridge at St. Louis. The project authorized by Congress for the improvement of the river includes a navigable connection with Lake Michigan at Chicago via the Des Plaines River, the Chicago Drainage Canal, and the Chicago River. The Chicago Drainage Canal was constructed by the sanitary district of Chicago between 1892 and 1900, and provides a channel with a minimum width of 160 feet and minimum depth of 16.5 feet, extending from the deep-draft channel provided by the Federal

project for the improvement of the Chicago River across a low divide to Lockport on the Des Plaines River. The total length of the channel from Lake Michigan to Lockport, afforded by the Chicago River and Drainage Canal, is 36.2 miles. From Lockport a 9-foot channel is provided through the Des Plaines and Illinois Rivers to Starved Rock, near Utica, a distance of 60 miles, by the construction of a lock connecting the drainage canal with the Des Plaines River and 4 locks and dams in the Des Plaines and Illinois Rivers. The locks have chambers 110 feet wide and 600 feet long. This improvement was undertaken by the State of Illinois, under the name of the Illinois waterway, and completed by the Federal Government. From Starved Rock to the mouth, a distance of 231 miles, the Illinois has been improved under the existing project to provide a channel 9 feet deep and 200 feet wide. In this section of the river two locks and dams were constructed more than 40 years ago, at Kampsville and La Grange, 31.5 and 77.5 miles, respectively, above the mouth. The locks are 73 feet in width and 300 feet in length and are inadequate in size and in approaches for the convenient and expeditious passage of modern barge tows. The pools of these dams do not afford a complete slack-water improvement, but because of the exceptionally moderate slope of the river, and the present augmentation of the flow by diversion from Lake Michigan, a through channel of the prescribed dimensions has been secured by dredging. The acts of authorization limited expenditures to $3,500,000 on that part of the waterway below Utica and to $7,500,000 on the portion above Utica. These sums have been adequate to provide a waterway of the dimensions contemplated in the authorization. In summary, the waterway from Lake Michigan to the mouth of the Illinois River is made up of a deep but narrow open channel from Lake Michigan 36.2 miles to Lockport; a completely slack-watered improvement, with locks of ample dimensions, thence 60 miles to Starved Rock, and an open channel interrupted by two dams with inadequate locks, thence 231 miles to the mouth of the river. The channel has a width of 160 feet from Lake Michigan to Joliet, a few miles below Lockport, and a width of 200 feet thence to the mouth. It was opened to navigation March 1, 1933. Its use has been hampered by inadequate clearances at bridges, particularly in the section from Utica to Lockport. Action to require the owners of these bridges to alter them so as to provide reasonably free, easy, and unobstructed navigation has been taken as prescribed by law, and the alterations are being proceeded with.

3. The project adopted by Congress for the improvement of the Mississippi River below the mouth of the Illinois River provides for a channel 9 feet deep with a width of 200 feet from the Illinois to the northern boundary of St. Louis, and a width of 300 feet below that point, to be obtained by open-channel improvement. Above the mouth of the Illinois the project for improvement of the Mississippi provides for a 9-foot channel of width adequate for modern barge service, through the construction of locks and dams. Experience during the exceptional low water of the past few years having shown the impracticability of maintaining a 9-foot channel above the mouth of the Missouri with open-channel works, the Chief of Engineers, in a report printed in House Document No. 137 (72d Cong., 1st sess.), recommended the improvement of the Mississippi from the mouth of the Missouri to Minneapolis to provide a channel 9 feet deep and of adequate width. The construction of the locks and dams contemplated in this recommended project has been included in the Public Works program under the National Recovery Act. With funds provided under this program it is proposed to construct the lock for a dam in the Mississippi River at Alton, 17 miles below the mouth of the Illinois, which, when the dam is completed, will provide a reliable 9-foot depth in the Mississippi to and beyond the Illinois. The pool of this dam will extend about 80 miles up the Illinois River. With the completion of this dam the remaining major navigation problem in the connection between the Illinois and Mississippi River system is at the rock shoal known as the "Chain of Rocks", in the upper part of St. Louis. At extreme low water the currents through this reach are excessive and navigation difficult. The Department has, however, under construction a storage dam at Fort Peck, at the headwaters of the Missouri, which is designed to afford an adequate low-water flow through and out of that river.

5. The Chicago Drainage Canal was constructed for the purpose of diverting the sewage of Chicago from the lake frontage of the city to safeguard the city water supply. On a complaint of various States bordering on the Great Lakes that the diversion of water lowered the levels of the Great Lakes to the serious injury of the companion States and their citizens, a decree was entered by the Supreme Court of the United States, on April 21, 1930, enjoining the State of Illinois and the sanitary district of Chicago from diverting water in excess of an annual average of 6,500 cubic feet per second on and after July 1, 1930, 5,000 cubic feet per second after December 31, 1935, and 1,500 cubic feet per second after December 31, 1938; these amounts to be in addition to domestic pumping. The limitation on diversion was based on the construction by the Chicago Sanitary District of sewage-treatment plants to purify the sewage of the city. The River and Harbor Act of July 3, 1930, specifically authorizes the water within the limitation of the decree for the use of navigation on the Illinois waterway. Article VIII of the Great Lakes-St. Lawrence Deep Waterway Treaty, now pending before the Senate of the United States, provides that the diversion of the water from the Great Lakes system through the Chicago Drainage Canal shall be reduced by December 31, 1938, to the quantity permitted as of that date by this decree of the Supreme Court of the United States.

6. The district engineer reports that the domestic pumpage during the summer season, when low water may be expected in the rivers, will be about 1,700 cubic feet per second, bringing the total annual supply from the drainage canal into the Illinois River to an annual average of 3,200 cubic feet per second. This supply will not, however, be uniform, as the normal flow must be held down to permit an excess diversion during local storms so that sewage-contaminated water will not be carried into the lake. He finds that the reliable flow with an annual average diversion of 1,500 cubic feet per second from the lake will be about 2,400 cubic feet per second. This supply is ample to meet all requirements of lockage in the completely slack-watered section of the waterway extending from Lake Michigan to Starved Rock. It is not sufficient to maintain the present channel in the section of the river below Starved Rock. By completing the slack watering of the portion of the river below that point through the construction of a new lock and dam near La Grange and another near Peoria, and dredging the heads of the pools, at a total estimated cost of $9,121,000, the present channel dimensions can be maintained after the diversion has been reduced to 1,500 cubic feet per second. The dams would be modern structures of the movable type so that flood heights would not be increased and with locks 110 feet wide and 600 feet long.

7. The district engineer is of the opinion, however, that the channel of 200-foot width provided in the existing project does not form a commercially useful waterway for modern barge traffic of the character that may be expected to develop on the Illinois River, and that to afford a commercially useful waterway it should have a width of 300 feet, increased at the bends. The cost of the widening of the channel to 300 feet increases the cost from $9,121,000 to $15,530,000. This is $5,200,000 in excess of the cost of providing a channel 300 feet in width, widened at the bends, if the present diversion is continued. The district engineer recommends that the existing project for the Illinois River be modified to provide a channel at least 9 feet deep and 300 feet wide from Lockport to Grafton by canalization and dredging, at an estimated cost of $15,530,000 with $350,000 for operation and care of locks and dams, and $150,000 annually for channel maintenance.

8. The completion of the dam at Alton is also essential to provide a 9-foot depth in the Illinois River between the proposed new dam at La Grange and the mouth of the river with a diversion of 1,500 cubic feet per second. The estimated cost of this lock and dam is $8,011,000, of which $3,540,000 has already been allotted for the construction of the locks, leaving $4,471,000 to be subsequently provided for the construction of the dam. The district engineer recommends that the existing project for the improvement of the Mississippi River be modified to provide for the construction of this lock and dam.

9. The estimated commerce on the Illinois River, after improvement to afford a minimum channel width of 300 feet with adequate locks throughout, is estimated at 8,330,000 tons, and the annual transportation economies from its use will amount to over $5,000,000. The expenditures necessary to afford a fully useful waterway are therefore wholly justified.

10. While the district engineer finds that an annual diversion of 1,500 cubic feet per second, increased by domestic pumpage, is ample to provide an adequate flow to meet all requirements of lockage, seepage, leakage, and evaporation on the waterway, he concludes that the determination whether this flow will provide a flow suitable from a sanitary standpoint for a commercially useful waterway can be made only by experience after the sewage-treatment plants at Chicago are completed. He points out that the weight of export testimony is to the effect that the effluent from the sewage-treatment plants will be inoffensive, but that the program is on such an unprecedented scale that such predictions must contain an element of uncertainty; and that no reliable process of calculation can predict the effect of raw sewage in storm-water run-off and of accumulated sludge deposits.

11. The division engineer concurs in general with the conclusions of the district engineer. He believes that in order to afford an assured channel in the Chain of Rocks section of the Mississippi River at St. Louis, its positive improvement should be provided by the construction of locks and dams at an estimated cost of $12,000,000. He recommends that the Chief of Engineers be granted authority to direct such additional temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation.

12. These reports have been referred, in accordance with law, to the Board of Engineers for Rivers and Harbors. Attention is invited to its report herewith concurring in general with the views and recommendations of the reporting officers.

13. The Board reports that the minimum average annual diversion of water from Lake Michigan that will be required to meet the direct needs of navigation for a commercially useful waterway in the Illinois River and that will not substantially injure the existing navigation on the Great Lakes, is 1,500 cubic feet per second, as prescribed by the Supreme Court decree, but that the indirect needs of such a waterway in the matter of securing satisfactory sanitary conditions for those aboard vessels or employed at terminals cannot be determined until the waterway has been fully completed and the diversion limited to 1,500 cubic feet per second for a sufficient period of time to observe the conditions that may then exist. The Board further reports that it is desirable to modify the existing project for the Illinois River so as to provide for a channel at least 9 feet deep and 300 feet wide below Lockport, to be secured by dredging and the construction

of locks and dams at Peoria, La Grange, and Alton on the Mississippi River and the removal of the existing structures at La Grange and Kampsville, all as generally shown on the maps and plans herewith and at an estimated cost for the work in the Illinois River proper of $15,530,000, with $350,000 annually for operation and care of locks and dams, and $150,000 annually for channel maintenance; and $8,011,000 for a lock and dam in the Mississippi River near Alton, with $60,000 annually for maintenance and operation, one half of the original cost and annual maintenance to be charged to the improvement of the Illinois River, and one half to the improvement of the Mississippi River from the mouth of the Illinois to Minneapolis. Should the project be thus modified, the Board recommends that the exact location and details of design of all structures be left to the decision of the Chief of Engineers at the time of construction and that allotments be made in such manner as to permit completion by December 31, 1938; and that the Chief of Engineers be granted authority to direct such additional temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation.

14. After due consideration of these reports, I concur in general in the views and recommendations of the Board. The report conclusively shows that aside from sanitary requirements, the minimum annual average flow from Lake Michigan required to meet the needs of a commercially useful waterway in the Illinois River is a direct diversion of 1,500 cubic feet per second in addition to domestic pumpage by the city of Chicago. It does not appear possible to arrive at a conclusive determination whether this flow will afford suitable sanitary conditions on the waterway after the sewage purification plants at Chicago have been completed and placed in operation. This flow will not substantially injure the existing navigation on the Great Lakes. In order, however, to maintain the channel dimensions provided in the present project in the Illinois River with the flow above specified, it will be necessary to construct two locks and dams in the Illinois River at La Grange and Peoria, respectively, and dredge the heads of the pools created by these dams at an estimated cost of $9,121,000, and to complete the lock and dam in the Mississippi River at Alton at an estimated cost, in addition to the funds already provided, of $4,471,000. To afford an adequate commercially useful waterway it is necessary, whatever the diversion, to widen the existing channels to 300 feet, increased at the bends, at an additional cost of $6,409,000, bringing the total for the Illinois River to $15,530,000. This expenditure is amply justified by the benefits to commerce and navigation resulting from the provision of an adequate waterway from the Great Lakes and the enormous industrial center at Chicago to the wide-spread system of inland waterways being provided on the Mississippi River and its tributaries.

15. The construction of a lock and dam at Alton is essential to afford a 9-foot channel of adequate widths for modern barge service in the Mississippi River to St. Paul and Minneapolis, as well as to the improvement of the Illinois. No good purpose is seen in charging any portion of the cost of this improvement to the Illinois River. Since the construction of the Fort Peck Dam at the headwaters of the Mississippi River is expected to greatly ameliorate low-water conditions on the Missouri River and in the Mississippi below the mouth of the Missouri, no modification of the project for the improvement of the Mississippi below the mouth of the Missouri to improve present low-water conditions should be undertaken at this time. Having in view the international as well as the national interest in the diversion of water from Lake Michigan, I do not consider it appropriate that the Chief of Engineers should be afforded discretionary power to increase the diversion. The present discharge of untreated sewage produces as bad sanitary conditions in the Chicago Drainage Canal and in the portion of the Illinois waterway immediately below Lockport as those which may be expected with the reduced diversion after the sewage treatment has been completed in accordance with the intent of the decree of the Supreme Court. The situation is one which unquestionably demands a remedy, but the remedy should, in my opinion, be afforded first by the purification of the sewage; and, second, if that prove inadequate, by a moderate and reasonable draft of water from Lake Michigan. Until the need is established for a greater diversion than that now provided by law, I see no reason for a modification of the present legislation.

16. I therefore recommend that no change be made for the time being in the water authorized to be used for the navigation of the Illinois River under the provisions of the river and harbor act approved July 3, 1930, that the slack watering of the river be completed by the construction of modern locks and dams at La Grange and Peoria, and that to provide a fully useful commercial waterway the project for the improvement be modified to provide for a channel at least 9 feet deep and 300 feet wide below Lockport; all as generally shown on the maps and plans herewith and at an estimated cost of $15,530,000, with $350,000 annually for the operation and care of locks and dams and $150,000 annually for channel maintenance; the exact location and details of design of all structures to be left to the discretion of the Chief of Engineers. I point out the importance of the prompt provision of funds, so as to complete the construction of the locks and dams at La Grange and Peoria by December 31, 1938.

E. M. MARKHAM,
Major General, Chief of Engineers.

Mr. PITTMAN. Let me refer to some objections that have been made. I want, in the first place, to read some endorsements of this project from the middle western section of the country. Here is a statement from Omaha, Nebr., February 15, 1933, being a letter addressed to Hon. ARTHUR CAPPER, United States Senate, Washington, D.C.:

OMAHA, NEBR., *February 15, 1934.*

Hon. ARTHUR CAPPER,
United States Senate, Washington, D.C.:

Missouri River Navigation Association, representing business and public interests of nine Missouri Valley States, and Omaha Chamber of Commerce, representing civic and business interests of Omaha, are both on record favoring construction St. Lawrence seaway. To this end we urge immediate ratification pending treaty to bring ensuing benefits, lower transportation costs as promptly as possible to distressed agriculture and industry in the land-locked Middle West.

RUFUS E. LEE,
Chairman Waterways Committee,
Omaha Chamber of Commerce.
A. J. WEAVER,
President Missouri River Navigation Association.

Here is another one:

MINNEAPOLIS, MINN., *February 19, 1934.*

Senator HENRIK SHIPSTEAD,
Senate Office Building, Washington, D.C.:

Upper Mississippi Waterway Association joins other organizations interested in the economic rehabilitation of the Midwest in urging the immediate ratification of the St. Lawrence Seaway Treaty now pending before the United States Senate.

C. C. WEBBER,
President Upper Mississippi Waterway Association.

These statements become interesting because these two associations are in the Mississippi Valley and are not only interested in the development of the 9-foot channel of the upper Mississippi River and the 9-foot channel of the Missouri River but are also interested in the development of the 9-foot channel from the mouth of the Missouri River to the Gulf of Mexico. They may be mistaken, it is true; others may know that the Mississippi system of waterways need water from the Lakes, but I do not know where they found it out. I still contend that all this propaganda came from three sources. I may be mistaken about that also, but that is my individual opinion.

Now let us see who are those who have endorsed this project. The Legislature of Arkansas endorsed it on March 3, 1933. I remind Senators that that was after the treaty had been negotiated and published in 1932. The State of Indiana, by legislative action, endorsed it; the State of Michigan, the State of Minnesota, the State of Montana, the State of Nebraska, the State of North Dakota, the State of Ohio, the State of South Dakota, the State of Wisconsin, and the State of Kentucky also endorsed it.

Mind you, Mr. President, there were 21 States that endorsed the Great Lakes-St. Lawrence Deep Waterway project; but the States I have just named have endorsed the treaty, because the question was raised that the States that had endorsed the project before the treaty became public would not have endorsed the treaty. Here, however, they are. I ask leave to have the resolutions of the various legislatures published at this point in my remarks.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

STATE OF ARKANSAS

Senate Concurrent Resolution 25

Be it resolved by the senate (the house concurring), That the treaty between the United States and the Dominion of Canada providing for the opening of the Great Lakes to ocean-ship navigation, already signed by the high contracting parties and now before the Senate of the United States for ratification, expresses the will and the desire of the State of Arkansas for an outlet to the ocean in terms that are equitable alike to both Nations, and that this State, acting officially by concurrent resolution of its legislature, urgently implores and demands of the Senate of the United States that such treaty be ratified immediately in its present form.

MARCH 3, 1933.

STATE OF INDIANA

Enrolled House Concurrent Resolution 8

Concurrent resolution demanding a speedy completion of the St. Lawrence deep waterway

Whereas there is now before the Senate of the United States a treaty between the United States and the Dominion of Canada

which provides the plans, allocation of tasks, estimates of costs, and commits the two Nations to increasing the usefulness of our inland seas by replacing obsolete equipment, standardizing of depths, and increasing capacity of channels, locks, and canals in the St. Lawrence River to meet present-day needs, so that the Great Lakes ports may be opened to the uninterrupted movement of ocean-borne commerce; and

Whereas an ocean way to the midcontinent, besides contributing importantly to national efficiency, is absolutely essential to place the interior of the United States on a world competitive basis: Therefore be it

Resolved by the House of Representatives of the General Assembly of the State of Indiana (the senate concurring), That the General Assembly of the State of Indiana hereby reaffirms its previous demands for the speedy completion of the seaway project, and urgently requests the Members of the United States Senate, and the Senators from Indiana in particular, that they not only support immediate and unconditional ratification of the said treaty but that they use every legitimate effort to impress upon their colleagues the need to this State of being placed on a sea base for lifting the competitive position of its industries and agriculture in world trade.

SEC. 2. The clerk of the house is hereby instructed to send copies of this resolution to each Member of the Senate and House of Representatives of the Congress of the United States from the State of Indiana.

January 1933 session.

STATE OF MICHIGAN

Senate Concurrent Resolution 7

Concurrent resolution urging the United States Senate to expedite a vote upon ratification of the Great Lakes-St. Lawrence Seaway Treaty

Whereas the Great Lakes-St. Lawrence Seaway Treaty is now in the hands of the Foreign Relations Committee, having passed through the hands of a subcommittee where full and comprehensive hearings were granted to all interested parties; and

Whereas sufficient publicity has been given to this project so as to enlighten the whole of our people; and

Whereas it now appears that there exists a real and imperative need for a waterway outlet for the products of the great Middle West; and

Whereas it appears that the immediate effect of ratification would result in the expenditure of large sums of money for labor and materials; and

Whereas such outlay by the Government would permit of great increase in employment, thereby lessening the burden of the present depression for which there seems to be no immediate remedy: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Fifty-seventh Legislature of the State of Michigan requests the Senate of the United States to delay no longer in bringing the matter of ratification before that body for final consideration.

Passed senate January 18, 1933.

Passed house February 2, 1933.

STATE OF MINNESOTA

Joint Resolution, H.F. 168

Memorializing the United States Senate to ratify at the instant session of Congress the treaty between the United States of America and the Dominion of Canada for the building of the Great Lakes-St. Lawrence seaway

Whereas the project of connecting the Great Lakes with tidewater by a deep-waterway channel is of vital interest to all of the people of the State of Minnesota and others residing in the central and western part of the country; and

Whereas there has recently been concluded a treaty between the United States of America and the Dominion of Canada for the building of such channel; and

Whereas hearings have been held by a subcommittee of the Foreign Relations Committee of the United States Senate on such treaty; and

Whereas there are sound reasons for believing and expecting the Foreign Relations Committee of the United States Senate to report out said treaty for such seaway early in January of the present session of the United States Congress with the recommendation that said treaty be ratified: Now, therefore, be it

Resolved, by the House of Representatives of the State of Minnesota (the Senate of the State of Minnesota concurring), That the State of Minnesota memorialize the Senate of the United States now in session and by the adoption of this joint resolution the State of Minnesota does memorialize the Senate of the United States to ratify at the present session of the Congress of the United States the treaty between the United States of America and the Dominion of Canada providing for the building in accordance with the terms of said treaty a deep-waterway channel connecting the Great Lakes with tidewater; and be it further

Resolved, That the Governor of this State is hereby requested to forthwith transmit to the Senate of the United States a properly authenticated copy of this joint resolution of the House of Representatives and the Senate of the State of Minnesota.

January 1933 session.

STATE OF MONTANA

Senate Joint Resolution 5 (introduced by committee on Federal relations)

Resolution requesting the enactment by Congress of legislation necessary to bring about the completion of a through seaway via the St. Lawrence River, and requesting the President of the United States to proceed to a treaty with Canada relative thereto

To the honorable Senate and House of Representatives of the United States of America and the honorable President of the United States of America:

Whereas economic authorities in the United States and Canada, acting officially both as joint commissions and severally, have repeatedly and unanimously declared that enlarging the connecting channels of the Great Lakes and the St. Lawrence River to admit uninterrupted movement of ocean-borne commerce from and into the Great Lakes is economically sound and necessary to raise the competitive position, establish economic equality, permit future development, and effect the return of prosperity to the vast continental areas of both countries; and

Whereas over the past 5 years diplomatic correspondence has brought the two nations into agreement on the assignment of tasks and division of costs, said correspondence having allocated to the United States the construction and cost of all improvements in international waters, which includes the deepening to 27 feet of the connecting channels of the upper Great Lakes, a new lock at the Soo corresponding in dimensions to the locks in the new Welland Ship Canal, and the improvement of the international stretch of the St. Lawrence River from Lake Ontario to the forty-fifth parallel (opposite Cornwall), where the river ceases to form the boundary line between the two countries, and allocating to Canada the completion of the new Welland Ship Canal and the improvement of the river from the forty-fifth parallel aforesaid to the sea; and

Whereas approximately one half of the tasks assigned to each Government has either been completed, is in process of completion, or already authorized by one or other of the two Governments, and approximately one half of the total cost of the through seaway has either been expended, in process of being expended or involved in authorizations already made, all of which have been carried out and are capable of being completed without any treaty; and

Whereas engineering authorities in Canada and the United States, acting officially both as joint boards and severally, have agreed upon engineering plans and costs and unanimously declared that the International Rapids section (48 miles), of the St. Lawrence River, extending from Ogdensburg to the international boundary must, for economic reasons, be developed for navigation and power jointly; and

Whereas the State of New York, with the clear intent of delaying or obviating the completion of a thorough seaway, via the St. Lawrence, and advancing a deep-water route across the State of New York, has caused to be prepared engineering plans, which, if permitted to be carried out, will, under the most favorable conditions postpone through navigation 17 years, but predictably a generation, and in the meantime afford New York opportunity to transfer its barge canals to the Federal Government and, under the pseudonym "all-American", embark the Government upon the staggering and almost useless expense of deepening or widening them for the passage of lake ships down to the port of New York for transfer to the ocean carrier, but not admitting the ocean ship to the Great Lakes, thus denying to midcontinental areas direct access to the sea; and

Whereas no development of this International Rapids section of the river can be undertaken by either country or any agency in either country without an agreement or treaty appropriate thereto, having first been entered into between Canada and the United States; and

Whereas the land-locked interior of the United States is deeply concerned and in emergent need of the relief which would accrue to that area by the opening of such seaway and the citizens of New York State also are directly interested in the improvement and early utilization of the large reservoir of cheap power which would be made available by such joint development; and

Whereas the need exists for a formula or plan that will effect the development of this section of the river for navigation and power at the earliest possible date, by employing the most practical, the most expeditious, and best agency or agencies for that purpose: Therefore be it

Resolved by the Legislative Assembly of the State of Montana, That the President of the United States be, and is hereby, requested to proceed to a treaty with Canada for the development of the aforesaid International Rapids section of the St. Lawrence River at the earliest possible date and in accordance with the plans agreed upon by the joint board of engineers, or such amendment to or changes in said plans as may be subsequently adopted by such joint board; and be it

Resolved, That in such improvement all permanent works, such as dams and navigation works, be constructed by the Governments of the United States and Canada, along the general lines of assignment of tasks and division of costs outlined in the correspondence between the two countries, but not the power house, superstructure of installation of power machinery; and be it further

Resolved, That the Congress of the United States be, and is hereby, requested to enact the necessary preliminary legislation

declaring all lands and the entire flow of the St. Lawrence River, extending from the shore to the international boundary line in the river, from Lake Ontario to the forty-fifth parallel, where the river ceases to form the boundary between the two Nations, necessary for the purposes of navigation of said waters and the waters connected therewith; and be it further

Resolved, That a copy of these resolutions be spread upon the journal of the senate, and that a copy thereof properly attested by the president of the senate and the speaker of the house of representatives, be transmitted to the Senators and Representatives in Congress from Montana, and a copy to the President of the United States.

MARCH 1933.

STATE OF NEBRASKA

Senate File No. 272

Be it resolved by the senate (the house concurring), That the treaty between the United States and the Dominion of Canada providing for the opening of the Great Lakes to ocean-ship navigation, already signed by the high contracting parties, and now before the Senate of the United States for ratification, expresses the will and the desire of the State of Nebraska for an outlet to the ocean in terms that are equitable alike to both Nations, and that this State, acting officially by concurrent resolution of its legislature, urgently implores and demands of the Senate of the United States that such treaty be ratified immediately in its present form.

January 1933 session.

STATE OF NORTH DAKOTA

Senate Concurrent Resolution B

Be it resolved by the Senate of the State of North Dakota (the House concurring), That—

Whereas there is now before the Senate of the United States a treaty between this Nation and Canada providing the terms under which may be constructed the long-sought and much-needed seaway uniting the Great Lakes with the Atlantic Ocean; and

Whereas such maritime benefits extended to the nearby ports on the Great Lakes would be of inestimable value both to the agricultural and industrial life of North Dakota;

Now, therefore, we urgently request of our Senators in the Congress of the United States that they not merely support immediate and unconditional ratification of said treaty but that they use every legitimate effort to impress upon the Senate the dire need of this State for relief from an overwhelming burden of transportation costs, a relief obtainable in very large measure through the ratification of this treaty and through the immediate construction thereafter of the navigation works required to extend the Atlantic Ocean westward to within less than 300 miles of the boundaries of this State.

Ordered, That copies of this resolution be sent to each Member of the Senate and House of Representatives of the Congress of the United States.

STATE OF OHIO

House Joint Resolution 22, memorializing the Senate of the United States to ratify the Great Lakes-St. Lawrence Seaway Treaty now signed by the United States and Canada

Whereas the Great Lakes-St. Lawrence Seaway Treaty has been signed by the United States and Canada and has been reported favorably by the Foreign Relations Committee of the United States Senate; and

Whereas this treaty will be of great and lasting benefit not only to the citizens of Ohio, but of the United States: Now, therefore, be it

Resolved by the General Assembly of the State of Ohio, That the Senate of the United States be, and it is hereby, requested to ratify immediately the Seaway Treaty; and be it further

Resolved, That copies of this joint resolution be transmitted by the clerk to the President of the United States and to each Member of the United States Senate.

STATE OF SOUTH DAKOTA

Senate Concurrent Resolution 2

Concurrent resolution memorializing the Senate of the United States to ratify the Great Lakes-St. Lawrence Seaway Treaty with Canada

Be it resolved by the Senate of the State of South Dakota (the house of representatives concurring)—

Whereas a treaty has been negotiated between the Government of the United States and the Canadian Government, known as the "Great Lakes-St. Lawrence Seaway Treaty", which said treaty is now being considered by the Foreign Relations Committee of the United States Senate, under the terms of which there is to be built a seaway connecting the Great Inland Lakes of North America with the ocean by the widening and deepening of the St. Lawrence River, thereby transforming all our Lakes ports into ocean ports with direct connections with the great tidewater markets of the world; and

Whereas transportation is one of the largest cost factors in doing all classes of business, which cost is paid by either the producer or the consumer, and transportation by water is admittedly the most economical and advantageous to all interests as a whole, and particularly to the interior of the Nation now far removed from the world's ocean ports now enjoying low transportation costs; and

Whereas the construction and building of a seaway is deemed to be a permanent benefit and advantage to the United States, and particularly the several interior States located upon and in close proximity to the Great Lakes ports, and also particularly advantageous to agriculture in that it would reduce the freight transportation costs on all farm commodities: Now, therefore, be it

Resolved by the Senate of the State of South Dakota (the house of representatives concurring), That we respectfully memorialize the Senate of the United States to ratify the pending Great Lakes-St. Lawrence Seaway Treaty, and respectfully urge and request the Honorable PETER NORBECK and Hon. WILLIAM J. BULOW, United States Senators from the State of South Dakota, to support said ratification; and be it further

Resolved, That the secretary of state is hereby directed to transmit copies of this memorial to His Excellency the President of the United States Senate and to each of the 96 United States Senators.

H. A. USTRUD,
President of the Senate.
JOE ATKINS,
Secretary of the Senate.
GEORGE ABILD,
Speaker of the House.
O. L. BODLEY,
Chief Clerk of the House.

January 1933 session.

STATE OF WISCONSIN

Joint Resolution 6, S, memorializing the United States Senate to promptly ratify the treaty with Canada for the construction of the Great Lakes-St. Lawrence waterway

Whereas during the past year a draft treaty has been concluded between commissioners representing the United States and Canada for the building of the Great Lakes-St. Lawrence waterway, and extensive hearings have been conducted upon this proposed treaty by a committee of the United States Senate; and

Whereas the construction of the Great Lakes-St. Lawrence waterway would be of very great benefit to every economic interest in this State and would materially aid in the economic recovery of the entire country: Therefore be it

Resolved by the senate (the assembly concurring), That the Legislature of Wisconsin respectfully memorializes the United States Senate to promptly ratify the draft treaty between the United States and Canada for the construction of the Great Lakes-St. Lawrence waterway, and that after ratification of this treaty the Congress of the United States pass legislation necessary to begin the actual work of construction in the near future; be it further

Resolved, That properly attested copies of this resolution be transmitted to the presiding officers of both Houses of the Congress of the United States and to each Wisconsin Member thereof.

January 1933 session.

STATE OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES,
COMMONWEALTH OF KENTUCKY,
January 16, 1934.

Dr. Hill, of the county of Floyd, offered the following resolution, viz:

"Concurrent resolution requesting prompt ratification of the Great Lakes-St. Lawrence Seaway Treaty

"Whereas there is now before the Senate of the United States a treaty between the United States and the Dominion of Canada which provides the plans, allocation of tasks, estimates of costs, and commits the two Nations to increasing the usefulness of our inland seas by replacing obsolete equipment, standardizing of depths, and increasing capacity of channels, locks, and canals in the St. Lawrence River to meet present-day needs, so that the Great Lakes ports may be opened to the uninterrupted movement of ocean-borne commerce; and

"Whereas an oceanway to the midcontinent, besides contributing importantly to national efficiency, is absolutely essential to place the interior of the United States on a world competitive basis: Therefore be it

"*Resolved by the House of Representatives of the State of Kentucky (the senate concurring therein)*, That the 1934 session of the general assembly hereby memorializes the Senate of the United States for the speedy commencement of construction of the Great Lakes-St. Lawrence seaway project, and urgently requests the Members of the United States Senate, and the Senators from Kentucky in particular, that they not only support immediate ratification of the said seaway treaty but that they use every legitimate effort to impress upon midwestern agriculture and industries in world trade and as a major part in the President's Public Works program for the relief of unemployment.

"SEC. 2. The clerk of the house of representatives is hereby instructed to send copies of this resolution to each Member of the Senate of the Congress of the United States."

Attest:

J. ERWIN SANDERS,
Chief Clerk of House of Representatives.

Mr. PITTMAN. Mr. President, the objection has been made that the Illinois River navigation would be very much

bettered by a tremendous flow of water through it from the Lakes rather than to have a system of locks. The Government will have to erect 2 new locks there in place of 2 old locks, but a reading of the long report which I just presented will show that the Board of Engineers find that navigation on the Illinois River would be far superior through the lock system, rather than through the flooding of it with large quantities of water. They refer to the canalization of the Monongahela River, the Ohio River, and other rivers, stating that instead of impeding navigation the control of fast-flowing waters aids navigation. Let me read from the same hearing from which the Senator from Illinois just read a portion of General Brown's testimony. General Brown had this to say about the matter:

It has been contended that the flow at Lockport as limited by the treaty will destroy the usefulness of the Illinois waterway.

I am reading now from the same document from which the Senator from Illinois read, from the hearings in 1932 before the Foreign Relations Committee. Here is what General Brown had to say:

It has been contended that the flow at Lockport as limited by the treaty—

That is, to 1,500 second-feet—

will destroy the usefulness of the Illinois waterway. This contention is without basis of fact as will be seen by a study of the table set forth below.

What does the table show? It shows as follows:

Monongahela River; total canalized length, 131 miles; total fall, 153.6 feet; number of dams and locks, 14; average yearly tonnage, 25,000,000.

Ohio River; total canalized length, 981 miles; total fall, 429.14 feet; average low-water flow (cubic feet per second), 1,000 feet; average yearly tonnage, 20,000,000.

Panama Canal; total canalized length, 51 miles; total fall, 85 feet; average low-water flow (cubic feet per second), 1,300 feet; average yearly tonnage, 28,000,000.

Illinois River; total canalized length, 291 miles; total fall, 165 feet; average low-water flow (cubic feet per second), 3,400 feet; average yearly tonnage, 10,000,000.

I forgot to give the number of dams and locks in the Ohio River. There are 52 dams and locks in the Ohio River; there are 14, as I have indicated, on the Monongahela River, and there will be 7 on the Illinois River. So that such basis for objection to the pending treaty falls flat.

Mr. DIETERICH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from Illinois?

Mr. PITTMAN. I yield.

Mr. DIETERICH. Is the report the Senator asked to have filed and printed as a part of his remarks the report of the engineers submitted December 1, 1933?

Mr. PITTMAN. What I asked to have printed is made up of excerpts from that report. It is not the full report.

Mr. DIETERICH. I was going to say, if that is the report, why did the Senator on February 1, 1934, when we complained that the report had not been filed and was not available to the Senate for inspection, say this, quoting the words of the Senator from Nevada:

The Senator from Louisiana is always involved in mystery; but there is no mystery at all about this document. The proof of the report is out. The printers are working on it as hard as they can. They are working on it day and night; but it contains a number of graphs and curves and maps that they say are quite difficult to prepare. What I am trying to get them to do is to give us a temporary print of the report, if they can, without these highly finished maps and graphs, for the use of the Senate. I think possibly we will have the temporary print here in 2 or 3 days.

May I ask the Senator if we ever obtained that print?

Mr. PITTMAN. I think so. I think it is here. It was, I am sure, placed on the desks of Senators.

Mr. DIETERICH. And the few pages the Senator sent to the desk did not constitute the report referred to?

Mr. PITTMAN. As I have said, what I sent to the desk is made up of excerpts from that report; that is all. I made that statement before the Senator made his inquiry. I said that the matter I desired to have printed was from the report in the form of excerpts and dealt purely with the questions which I have been discussing.

Mr. DIETERICH. May I ask the Chairman of the Foreign Relations Committee why this report has not been printed in document form and made available to Senators?

Mr. PITTMAN. It is in the form of a large document, which was placed on the desks of Senators while in crude form. In the completed form it was delivered a week or two ago. I have one in my hand now [exhibiting], and I believe the Senator probably has a copy on his desk. I am not a member of the Committee on Printing, but I have been trying through that committee to get the two volumes put together and printed in better shape, and I am informed that they will be here today. That is the best I can do. This volume [exhibiting] contains it all.

Mr. DIETERICH. And how long has it been in the Printer's hands, may I ask the Chairman of the Committee on Foreign Relations?

Mr. PITTMAN. It has been in his hands some time, I will say to the Senator; it has been a slow work.

Mr. DIETERICH. And it is not as yet available to the Senate for inspection?

Mr. PITTMAN. Yes, it is; it is right here now.

Mr. DIETERICH. That is, this one volume?

Mr. PITTMAN. It is now in one volume and not in two; but everything is contained in that one volume which is on the Senator's desk, or should be there, and I advise the Senator to read it tonight.

Mr. NORRIS. Why wait until tonight?

Mr. PITTMAN. Well, it is rather long.

Mr. NORRIS. It is only a couple of thousand pages.

Mr. DIETERICH. Evidently the Senator from Nevada has not read it himself.

Mr. PITTMAN. I will assure the Senator that he is entirely right in assuming that I have not read it all, and it will be a long time before I will have to read it all; but I have had men like Major General Markham and General Pillsbury and others who know what the substance of it is answer the direct questions I asked them. I have their answers, and they satisfied me when they told me that the Mississippi waterway system did not need any water whatever out of Lake Michigan, and that the report of the engineers confirms that statement.

I am interested in the Mississippi River project, not in the sewage-disposal project at Chicago. I really am interested in the Mississippi River development. I was born and raised on the Mississippi River. I have at least a sentimental feeling for it. In the State of Nevada we have no waterways, unfortunately. We are not prejudiced in this matter in any way whatsoever. I would not consciously take part in doing anything whatever to retard or injure great navigation projects on the Mississippi River and its tributaries. All my life I have been an advocate of inland waterways, and at least for 20 years on the floor of the Senate, and those who have been here know that I have been fighting to improve and preserve the water transportation in the country, fighting against the railroad companies of the country who were doing everything in their power, through legislation and through their actions before the Interstate Commerce Commission, to destroy water navigation. They are opposed to it now.

That is the only question I desire to discuss today. It was rather through the courtesy and kindness of my friend the Senator from Texas [Mr. CONNALLY] that I took the liberty of doing even this much this morning. I know that I am interfering with the passage of the bill which he has in charge, but I wanted to discuss the chief objection that is set forth by the Mississippi River Valley Commission. When his bill is disposed of, then, on tomorrow or Monday, if I have the time to do so and some other Senator does not take the floor, I desire to discuss the question of sovereignty. I also want to discuss the question of how the money is divided between the two countries and where it will be spent.

I want to show then that there is no injury to speak of to the railroads of the country. I want to show that the effect on the railroads will not take place for 8 years, anyway, and that by 8 years from this time the two big railroads which are interested, the Pennsylvania and the New York Central, according to the curves of growth, will have 60 percent more mile-tonnage than they have now. I want to show in that speech that it will not retard that growth by the end of 8 years by more than 4 percent. I want to show that the railroads are deluding their workmen to get behind the propaganda when the project will not affect them whatsoever. However, I shall not take the time to go into that matter now.

Mr. NYE obtained the floor.

Mr. LA FOLLETTE. Mr. President, will the Senator from North Dakota yield to me?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Wisconsin?

Mr. NYE. I am glad to yield.

Mr. LA FOLLETTE. On the 13th day of February 1934 I addressed to Hon. F. H. LaGuardia, mayor of the city of New York, a letter reading as follows:

UNITED STATES SENATE,
February 13, 1934.

Hon. F. H. LAGUARDIA,
Mayor of the City of New York, New York City.

DEAR MR. MAYOR: The charge is being circulated throughout the country that the project provided by the St. Lawrence Treaty will be injurious to the city of New York.

President Roosevelt has strongly recommended ratification on broad national grounds, and in his recent message to the legislature Governor Lehman emphasized the importance of immediate public development of St. Lawrence power in order to insure fair rates for electricity in all parts of the State.

Opponents of the treaty, however, have argued that there is no demand for cheap current from the St. Lawrence, and that New York City and other North Atlantic ports will sacrifice existing advantages if Detroit, Milwaukee, Chicago, Cleveland, and other Great Lakes cities are given the same access to deep-water navigation for bulky products and imports which these cities on the Atlantic today enjoy.

Your view of the effect of the power and seaway project upon the people of the great city over which you preside would, I am confident, be welcomed by the whole Nation. I should also like to be advised whether or not any official study has been sponsored by the city of New York which has shown that completion of the seaway from the Lakes to the Atlantic would injure the port of New York.

Sincerely yours,

ROBERT M. LA FOLLETTE, JR.

This is the mayor's reply which I received under date of February 26:

CITY OF NEW YORK,
OFFICE OF THE MAYOR,
February 26, 1934.

Hon. ROBERT M. LA FOLLETTE,
United States Senate, Washington, D.C.

MY DEAR SENATOR: I beg to acknowledge receipt of your letter of February 13, 1934. No special interest or agency claiming to speak for the city of New York is justified in opposing the Great Lakes-St. Lawrence Treaty on the ground that it is inimical to the welfare of the people of our city.

President Roosevelt and Governor Lehman are entirely correct in their public statements to the effect that the municipalities of this State will readily absorb cheap electricity from the public power project on the St. Lawrence.

The joint report of the Federal Power Commission and the Power Authority of the State of New York shows that electricity can be generated on the St. Lawrence, transmitted, and delivered at the substation in New York City at a price of less than one half cent per kilowatt-hour at 80-percent load factor. It would unquestionably benefit every consumer of electricity in the city of New York to have this potential abundant supply of exceptionally cheap current available through public development. The mere availability of St. Lawrence power would in my opinion provide the salutary force of public competition which has always resulted in lower electric rates for consumers.

It is conceded, as the President stated in his message, that St. Lawrence power cannot be developed by the State of New York without a treaty with Canada, since the river is a boundary stream.

To build dams in the St. Lawrence for the dual purposes of developing power now running to waste and removing obstacles to navigation which today block off the access of the Great Lakes to the sea will admittedly save millions of dollars and reduce the cost of both power and navigation.

No official study has ever been sponsored by the city of New York that supports the claim that completion of the seaway will injure the commerce and shipping of our port. We have one of the great natural harbors of the world and it has been improved by the use of public funds. New York City is unique as a port and not afraid of inland competition. Since 80 percent of the water-borne commerce of the United States is domestic rather than foreign trade, the extension of our seacoast into the Middle West will inevitably increase the profitable exchange of goods between New York and the other great American cities in the littoral of the Great Lakes.

A temporary or slight diversion of export and import tonnage does not justify, in my opinion, the obstructing of a national project so obviously in the interest of the United States as a whole. In the long run, it is certain that New York City as the metropolis of the Nation will benefit from economic recovery and development in the Middle West. I am, therefore, heartily in favor of the ratification of the treaty which President Roosevelt has submitted to the Senate.

With kind personal regards, I am, sincerely,

F. H. LAGUARDIA, *Mayor.*

Mr. President, I thank the Senator from North Dakota for extending to me the courtesy in his time to read these letters.

Mr. LEWIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Illinois?

Mr. NYE. I yield.

Mr. LEWIS. May I point out to the Senator from Wisconsin, in relation to the letters he has just read, that the statements in the letter of the mayor are but a reaffirmance and repeating of the position taken by ex-President Theodore Roosevelt in a public address which he delivered in New York when visiting the community there, in which he pointed out the advantage to New York of taking this power out of the hands of private interests, turning it into public control, and there discussing how the governments of Ontario and the State of New York, by the action of the State of New York, would cooperatively produce the better result which Mayor LaGuardia points out and of which there has never been any doubt.

I beg to say in conclusion of my observation that we are now and at no time have ever opposed any arrangement between Ontario and the State of New York in respect to power. I inform my eminent friend from Wisconsin that the statement in the letter of Mr. LaGuardia is but a repetition of the wise utterances and statesmanlike conclusions of former President of the United States Theodore Roosevelt, now to be found in the letter of Mr. LaGuardia which the Senator has read.

Mr. LA FOLLETTE. Mr. President, will the Senator yield?

Mr. NYE. I am glad to yield.

Mr. LA FOLLETTE. It is obvious that the Senator from Illinois did not hear the complete text of this letter. The Senator from Illinois has continuously and very often asserted on the floor of the Senate that the power development can take place in the State of New York without a treaty. In that respect the Senator from Illinois differs from the present President of the United States, and Presidents of the United States who served before him. He differs from the State Department, and he differs from every other Senator I know of who is familiar with the situation. They are all in agreement that a power project upon the St. Lawrence River, it being a boundary stream, can be developed only under a treaty between the United States and Canada.

Furthermore, the Senator has failed to grasp the broad, statesmanlike position taken by the mayor of the city of New York concerning the development of this inland empire. I commend to the Senator a careful reading of the letter when it is printed in the RECORD.

Mr. LEWIS. Mr. President, I am delighted to accept the suggestion, that I may verify what I have said. If the able Senator is correct that all the authorities he has quoted have really asserted that it is necessary to have an international treaty in order to have dealings between Ontario and the State of New York, one wonders what has been happening all this time when the little town of Windsor, Canada, and the city of Detroit have been carrying on for 50 years a municipal regulation of the dealings between themselves and the relationship between the two localities. If the authorities with whom my eminent friend says I am at variance have been asserting themselves on such a line as he has remarked, then I deeply deplore their ignorance

and their error, and am gratified that I have been correct all the time.

Mr. NYE. Mr. President, I think every advocate of the pending Great Lakes-St. Lawrence Waterway Treaty has good cause to rejoice over the interest which the mayor of New York has manifested in this program. I hope to live to see the day when the city of New York and the entire Atlantic seaboard shall come to possess a larger understanding of our greater national problems than now seems to exist—an enlargement that will compare with the understanding which the mayor of New York has so often made manifest.

Mr. VANDENBERG. Mr. President, before the Senator leaves that topic, may I interrupt him for a moment?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Michigan?

Mr. NYE. I am glad to yield to the Senator.

Mr. VANDENBERG. I think it ought also to be emphasized, in this connection, that two of the great newspapers of New York—the New York American and the New York Post—have had the national viewpoint in mind to the extent of speaking out courageously and emphatically in favor of the ratification of this treaty.

Mr. NYE. All of which, Mr. President, is cause for greater rejoicing out in our central and northwest region.

Mr. LEWIS. Mr. President, will the eminent Senator from Michigan allow us to participate in the confidential communication just had between himself and my very able friend from North Dakota.

Mr. VANDENBERG. Mr. President, if the Senator will read the RECORD, he will find out what I said while he was busily engaged in discussing other matters with the Senator from Oklahoma [Mr. THOMAS].

Mr. LEWIS. That will be ex post facto. It will be after the crime, and I shall have no chance then to remedy it or to punish it. [Laughter.]

Mr. NYE. Mr. President, the navigation and power benefits of the Great Lakes-St. Lawrence Treaty have been so well established in this debate that I do not propose at this time to discuss such phases of the subject in detail.

It has been conclusively demonstrated by many able addresses on both sides of the aisle that overwhelming national advantages will result from this great Public Works project, and that no section or locality in the United States will suffer any real or substantial injury. This is in accord with the principle which brought the Thirteen Original Colonies together, and which we have never violated without injurious results from the beginning of our history as a nation.

That principle may be stated in the proposition that what is economically sound and genuinely beneficial to one section of the United States is good for the Nation as a whole. On that principle we have expended nearly $2,000,000,000 for the development of the Mississippi system, for our other inland waterways, and for the development of our great harbors on the Atlantic, the Gulf, and the Pacific coasts.

We can also assume at this stage of the debate that the cost of the project, which must be measured against the benefits, has been established beyond the point of serious controversy.

It is true that engineers retained by public-utility and railroad corporations and other unofficial or interested parties have made estimates ranging from $750,000,000 to $1,500,000,000. The President submitted with his message the official estimate of the only agency of our Government which the Congress has ever accepted as a proper authority in dealing with river, harbor, and canal improvements, namely, the United States Corps of Engineers. The report of the Corps of Engineers is based, not upon guesswork or calculation, but upon a survey in the field covering every item of cost and requiring several years of labor. It shows that the net cost to the United States Government of this project will not exceed $182,000,000 in new funds. By that expenditure we shall create a new seacoast for the United States more than 3,500 miles in length and provide from Duluth to the Atlantic a 27-foot channel of ample depth for 80 percent of the ocean-freight vessels of the world.

In addition, the State of New York, by an investment of $89,000,000 will get the benefit of a completely self-liquidating public-power project which will generate the cheapest electric current available on this continent.

When it is considered that 18 States directly tributary to the Great Lakes will get cheap navigation at an annual saving of about $79,000,000, and that all the New England States and New York and Pennsylvania will benefit from a public yardstick on electric rates, the national advantages insured by this treaty cannot be successfully challenged. The entire project can be built, maintained, and all costs of construction and maintenance amortized over a period of 50 years at a cost of $9,300,000 per annum. Those figures cannot be challenged without impeaching the highest engineering authority we have, namely, the Corps of Engineers, and the good faith of the President, who submitted to this body their official report.

I believe in the good faith of the President of the United States. I am unwilling to reject the findings of the Corps of Engineers in favor of the propaganda directed against this treaty by railroad bankers and the Power Trust.

At this time I propose to discuss several phases of this subject which have not heretofore received adequate consideration in this body.

No State in the Union finds itself so far away from the channels of transoceanic commerce as does my State of North Dakota. Being centrally located, as we are, in the interior of this continent, we have for years contemplated the many blessings which would flow out of any program that brought ocean transportation nearer to our prairies and to those points where we desperately need a larger competition in the world of transportation.

In my State and in neighboring States we pay heavier tolls than are paid anywhere else on this continent for the transportation of those commodities we produce and sell to the rest of the world and those commodities which we must buy from other States and other parts of the world. So now, when the project for a canal seems to approach that success for which we have been waiting so long, I imagine that there is no project under consideration at the present time in which the people of my State are as intensely interested as in this. They will be watching closely that cooperation which may come from the other States of the Union in a project which means so very much to our future. I undertake to say that no project in our American history has ever received such united support from the farmers of the United States as has the project which is provided by the pending treaty.

No Senator can investigate the facts and remain in doubt after his survey that that statement is true. I am not referring to the seaway project in general terms, but to the definite, specific plan which is before us in this treaty. Nor am I referring to the farmers of any one section, but to those who actually live upon the farms throughout the United States.

Every intelligent farmer in this country knows that he pays the freight to get his products to market. He knows that excessive transportation costs are a blight upon agriculture which no industry can survive, and pay a profitable return. He fully appreciates the fact that cheap transportation is a blessing to every nation that can develop it. He understands that in the long run it is a gain to every class and section and interest, including other forms of carriers which develop new tonnage whenever freight is moved from one port to another by ocean vessels or river barges.

Senators who live in great cities in which not a bushel of grain is produced may argue the question and undertake to prove that agriculture will not use and will not benefit from the completion of this seaway from the heart of the American Continent to tidewater. But the farmer knows better. He will not accept such sophistry, and reject everything that hard experience and the unjust charges levied upon American agriculture for generations have taught him.

Since the debate on the treaty began in the Senate the great farm organizations of the United States have appealed for its ratification in terms which cannot be ignored.

Mr. BAILEY. Mr. President——

The PRESIDING OFFICER (Mr. OVERTON in the chair). Does the Senator from North Dakota yield to the Senator from North Carolina?

Mr. NYE. I yield.

Mr. BAILEY. I rise merely to make an inquiry. The Senator stated that the American farmer knows better than those who are saying that he is not likely to derive anything of very great value to himself on account of the construction of the St. Lawrence Seaway. That may be true, but I wish to get some information.

There is a differential in favor of Canada in its trade with the British Commonwealth of Nations. That differential is stated, in terms of our money, at 6 cents on wheat. I should like to have the Senator tell me how, if we construct this canal, the American farmer can hope to compete with the Canadian farmer in the export of grain to the members of the British Commonwealth of Nations so long as there is a differential of 6 cents a bushel in favor of the Canadian shipper. That is a difficulty in my mind. If the Senator can clear that up, I will be much obliged to him.

Mr. NYE. Mr. President, assuming that this differential will continue indefinitely——

Mr. BAILEY. Let us see about that. Have we not to assume the facts as they are? We cannot assume that something will be different. Just on that point I should like to make the remark that the paper read just now by the Senator from Wisconsin [Mr. LA FOLLETTE] assumed that we would be out of the present economic depression within a few years. That is a very violent, and, I think, unjustifiable assumption in the light of what we know. However, I am not going to assume anything; I am going on the facts. This differential exists, and the Senator cannot say it will not exist forever. I wish he would discuss the matter in the light of the facts as they are rather than on theories which might tend to clinch his argument.

Mr. NYE. Going back again, Mr. President, to my assumption which the Senator interrupted before I could state fully what it was——

Mr. BAILEY. I beg the Senator's pardon.

Mr. NYE. Assuming that this differential which gives the Canadian farmer an advantage in the world market today should be continued, or assuming that the differential should grow even more oppressive upon the American farmer than it now is, still the American farmer has every right and every urge to hope for the expeditious completion of this waterway, because so large a number of our grain interests in the Northwest find their outlet, not in Europe, not abroad, not off this continent at all, but find it in Buffalo, in New York, and if from Buffalo outward, oceanward, there can be an improved condition afforded as relates to grain rates, as relates to a foreign market, that all redounds more to the advantage of the Northwest grain producer.

Mr. BAILEY. Mr. President, is the Senator contending that the advantage will be as between Duluth, for example, and Buffalo, and not by way of the world traffic?

Mr. NYE. Only as the advantage is to be gained by affording Buffalo a better outlet to the continent.

Mr. BAILEY. That would look altogether to the consumption of the American wheat crop here in the United States.

Mr. NYE. Not altogether.

Mr. BAILEY. Then, let me ask the Senator one more question. If the Senator is right in that theory, what is there to prevent ships from carrying wheat now from Duluth to Buffalo?

Mr. NYE. There is nothing to prevent them at all.

Mr. BAILEY. Then, there would be no necessity for building a seaway on that account.

Mr. NYE. If Buffalo can be afforded better access to Europe through the St. Lawrence, then our advantage in the Northwest will be all the greater.

Mr. BAILEY. Does the Senator think that Buffalo would be enabled to ship wheat to the British Commonwealth of Nations more advantageously than Canada would be?

Mr. NYE. Not under the differentials which now exist.

Mr. BAILEY. They do exist. Let me ask the Senator another question. Does the Senator know that the exports of wheat from the United States to the United Kingdom since this differential was put into effect have fallen to the insignificant amount of 900,000 bushels of wheat in a year—practically nothing?

Mr. NYE. Of course, Mr. President, we are all familiar with those facts.

Mr. BAILEY. So this seaway would be of very great assistance to the wheat farmers of Canada, and of very little, if any, to the wheat farmers of the Northwest of our own country, so far as the British Commonwealth of Nations is concerned.

Mr. NYE. I cannot agree with the Senator in that contention at all.

Mr. BAILEY. I should like to have the Senator attack that statement in the light of the facts I have stated.

Mr. NYE. The farmers of the Dominion of Canada are going to benefit by reason of this project, if it is realized. I think in equal degree the farmers of the United States, of the Northwest section particularly, are going to profit through this project.

Mr. BAILEY. The Senator says he "thinks" that will be so. That is opinion. I wish the Senator would tell me how that could happen, when Canada could ship her wheat through this canal to the members of the British Commonwealth of Nations at an advantage over us of 6 cents.

Mr. NYE. Mr. President, we have been proceeding on the basis of an assumption. Now that the Senator makes his point, I will say that I cannot agree with him that this differential is always going to exist, nor that it can long exist.

Mr. BAILEY. Mr. President, I did not say that. I expect them to make it 10 cents. It will tend to increase rather than to decrease, and especially in view of the fact that we have notified the world that we are proceeding now to interpret the tariff by way of barter and trade agreements, rather than in the old way. If we trade in that way, if we are to conduct the affairs of our Nation in that way, who will say that the British Commonwealth of Nations, which depends for its existence as a commonwealth of nations wholly upon commercial advantage, will not take steps further to strengthen its trade advantage? There is nothing except trade advantage that binds Canada to England beyond the oath of allegiance to the King, which may be revoked at will.

Mr. NYE. Mr. President, be that as it may—and the question of who would enjoy the greatest profit under this project has been repeatedly debated in the Senate—the fact, nevertheless, remains that there never has been a national project which has won so united a backing of great national farm organizations as the Great Lakes-St. Lawrence project has invited. The urge of these organizations for the ratification of this treaty must not and cannot be ignored.

The oldest farm organization in the United States is the National Grange. Several of the Members of this body are Grange members, including the minority leader, the Senator from Oregon [Mr. MCNARY], whose father was the founder of the Grange in his State. This organization, which is wholly nonpartisan, has State branches in 33 States with more than 5,000 local granges. It is organized from Maine to the State of Washington and generally throughout the Middle West and the East. Certainly it must be conceded that such an organization could take no other than a national position on any great public question with which it undertook to deal. The Grance cannot be accused of taking a sectional viewpoint on any problem.

At a meeting held on January 14, 1934, the National Grange adopted the following resolution:

The National Grange has for years advocated a ship canal from the Great Lakes to the sea to open up the heart of the continent

to the benefits of ocean navigation. The Grange believes that this provision of cheap transportation, linking a great economic area with the markets of the world, will either directly or indirectly benefit not only those engaged in agriculture but also the Nation as a whole.

The area directly tributary to the seaway produces more of the cereal crops of the Nation than all other sections of the country combined, and many other important agricultural interests are centered there. Both leading dairy areas are located on the seaway.

The opportunity to further rural electrification through public development of St. Lawrence power as a part of the project is also of vital interest to many of our local and State organizations.

The fact that at least 90 percent of the seaway mileage is already available for navigation by ocean-going cargo vessels is a cogent argument for removing the few remaining barriers which still bottle up this important agricultural area.

Every Chief Executive since President Wilson, regardless of party, has advocated this improvement and contributed to the negotiation of an agreement essential to any joint undertaking affecting two neighboring nations. President Roosevelt is to be congratulated upon his decisive action to make the project a reality as a part of his recovery program.

FRED J. FREESTONE, *Chairman, New York,*
E. A. ECKERT, *Secretary, Illinois,*
RAY W. GILL, *Oregon,*
L. J. TABER, *ex officio, Ohio,*
Executive Committee of the National Grange.

The Farmers' Union, as we know it in the Northwest, has 22 State branches and local organizations in 33 States. In many of these States the Farmers' Union has the largest membership of any farm organization.

On February 17 Mr. John A. Simpson, the national president of the Farmers' Union, addressed to me the following statement:

THE FARMERS' EDUCATIONAL AND
COOPERATIVE UNION OF AMERICA,
Washington, D.C., February 20, 1934.

Hon. GERALD P. NYE,
United States Senator, Washington, D.C.

DEAR SENATOR: This is in reply to your query of February 15 as to the views of the Farmers' Educational and Cooperative Union of America and of myself on the St. Lawrence Seaway project.

I am glad to reaffirm the long-established position of the Farmers' Union in support of this project.

I may add that since the seaway project has culminated in a treaty pending before the Senate, the Farmers' Union expects that Senators of both political parties recognize and redeem the plighted faith of their political organization in their 1932 platforms.

Sincerely yours,

JOHN A. SIMPSON.

Mr. BAILEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from North Carolina?

Mr. NYE. I yield.

Mr. BAILEY. There is no plighted faith with respect to this proposition in the Democratic platform of 1932. Mr. Simpson has professed to advise us on a treaty of the utmost importance; I can conceive of none ever presented to the Senate of more importance than the treaty now under consideration, yet Mr. Simpson has not taken the trouble to be accurate even with respect to the Democratic platform, which was framed within a year and a half.

Mr. NYE. I have never yet known of a plank in a party platform from which partisans were departing, with respect to which those departing from it did not find some seemingly good excuse for doing so.

Mr. CLARK. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Missouri?

Mr. NYE. I yield.

Mr. CLARK. I should like to ask the Senator from North Dakota, since he is reasserting the proposition of the lack of faith of the Democratic party in carrying out pledges alleged to be contained in its party platform in behalf of the Great Lakes-St. Lawrence Deep Waterway Treaty now pending, to point out any mention of that treaty in the Democratic platform of 1932.

Mr. BAILEY. Mr. President, I will give the Senator from North Dakota a copy of the Democratic platform of 1932, since he raises the question as to my statement that there was no such plank in the platform. The Senator from North Dakota states that that statement was motivated because I was desiring to get off the platform. That is a plain challenge. Here is the platform in my hand. I ask the Senator to say whether or not there is a promise to ratify this treaty or to build this seaway in the Democratic platform of 1932.

Mr. NYE. Mr. President, I have been certain all along that both parties had very strongly supported the waterway treaty. If I am mistaken I am perfectly willing to be corrected here today.

Mr. BAILEY. But remember, this controversy arose out of Mr. Simpsons' statement in the letter just read by the Senator.

Mr. NYE. I understand.

Mr. BAILEY. Permit me to finish. To the effect that the Farmers' Union expected us to maintain our plighted faith. Then the Senator in response to my question suggested that I was seeking some excuse for departing from the platform. I have the platform here. I will tender it to the Senator, and if he will show me wherein in that platform it promises anything whatever with respect to this treaty or the St. Lawrence Seaway, then I will confess my error, but if not I want the Senator to confess.

Mr. NYE. Mr. President, I am quite ready to accept the Senator's word that his party's platform does not contain anything which binds his party in approval of or in endorsement of this project.

Mr. BAILEY. Will the Senator permit me now to say something that will clear up that matter?

Mr. NYE. I am quite willing to yield.

Mr. BAILEY. I was on the platform committee at Chicago, and I did not miss a moment of the meeting. I had the preliminary draft of that platform in my hands all through the meeting. I read it word after word. I brought it home with me. I filed it. I have it in this desk. I bear witness that neither in the preliminary platform nor in any word that was said or suggested to be said, was there a line of plighted faith or promise as to this seaway or this treaty. I know whereof I speak, and I am a witness to the fact.

Mr. NYE. Mr. President, so much for the National Grange and the Farmers' Union endorsement of this project.

The American Farm Bureau Federation held its annual convention at Chicago on December 13, 1933. It has 44 State farm bureaus and 1,800 county farm bureaus. At the national convention at Chicago last December a resolution endorsing the Great Lakes-St. Lawrence seaway was adopted by an overwhelming vote. That resolution was favorably reported from the committee that studied the subject on the motion of Earl Smith, for many years a farm leader and president of the Farm Bureau Federation of the State of Illinois. The resolution as adopted by the federation, was as follows:

The St. Lawrence waterway should be completed with the least possible delay; to make it possible for work to start on the international section in the near future, the treaty with Canada as it is now pending before the Senate of the United States should be ratified early in the 1934 session of Congress.

In addition to that, Mr. President, I have received a letter from the American Farm Bureau Federation, dated January 23, 1934, which I ask unanimous consent to have printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letter is as follows:

AMERICAN FARM BUREAU FEDERATION,
Washington, D.C., January 23, 1934.

Senator GERALD P. NYE,
Senate Office Building, Washington, D.C.

MY DEAR SENATOR NYE: In answer to your inquiry of January 20, as to the position of the American Farm Bureau Federation on the St. Lawrence waterway project, may I quote the concluding paragraph from resolution XIV, "Transportation", adopted at the fifteenth annual meeting of the American Farm Bureau Federation, December 13, 1933.

"The St. Lawrence waterway should be completed with the least possible delay; to make it possible for work to start on the international section in the near future, the treaty with Canada as it is now pending before the Senate of the United States should be ratified early in the 1934 session of Congress."

The American Farm Bureau Federation has supported by resolutions adopted in annual sessions at various times during the last

15 years the early completion of the St. Lawrence waterway. The resolution just above quoted is the last authoritative statement on the matter, and indicates, as will be easily seen, an earnest desire that this great waterway be constructed at the earliest possible moment, and that the pending treaty with Canada be ratified by representatives of the two interested Governments.

This matter was further discussed in a meeting of the executive committee of the American Farm Bureau Federation in a session held in Washington, D.C., on January 10, 1934. It was agreed by the members of this committee, without formal motion, that the St. Lawrence Waterway should be supported, inasmuch as such diversion of water for the Illinois waterway is provided as will safeguard transportation and sanitation across the State of Illinois. This position was taken relying on the latest facts divulged by the Corps of Army Engineers, which guarantees adequacy of flow.

The latest facts of the Corps of Army Engineers on the question of diversion are contained in the report on the survey of the Illinois River to the Secretary of War, dated December 6, 1933. In this report the district engineer for the Chicago area states that the eventual 1,500 cubic feet per second of diversion, as provided for in the River and Harbor Act of July 30, 1930, is adequate for the main portion of the Illinois Canal, but is not sufficient for a section below Starved Rock in Illinois. Since, however, the district engineer, the division engineer, and the Chief of Engineers recommend plans of enlargement for this and other sections of the Illinois Canal, all of which is provided for in the plans of the Corps of Army Engineers; it seems evident that the question of diversion and the amount of diversion of water are not of that supreme importance which otherwise would be the case.

The district engineer, the division engineer, and the Chief of Engineers in the report to the Secretary of War, dated December 6, 1933, agree in general that 1,500 cubic feet per second diversion, increased by domestic pumpage, "is ample to provide an adequate flow to meet all requirements of lockage, seepage, leakage, and evaporation on the waterway"; but not all these officials have data at hand definitely to permit decision as to a flow suitable from a sanitary standpoint for a commercially useful waterway after the sewage treatment plants are completed at Chicago, these having been ordered by a decision of the United States Supreme Court.

However, the treaty itself, in article 8, paragraph (a), provides for such modification of the diversion to meet any emergency as will adequately protect the Illinois waterway both from the transportation and sanitary points of view. The treaty states, "In the event of the Government of the United States' proposing, in order to meet an emergency, an increase in the permitted diversion of water, and in the event that the Government of Canada takes exception to the proposed increase, the matter shall be submitted for final decision to an arbitral tribunal, which shall be empowered to authorize for such time and to such extent as is necessary to meet such emergency, * * *."

It is significant in the report of the Chief of Engineers that he states, "Until the need is established for a greater diversion than that now provided by law, I see no reason for a modification of the present legislation." It will be remembered in this connection that "the present legislation" to which reference is made is the River and Harbor Act of July 3, 1930, in which Congress then expressed its approval on the diversion proposition, stating amounts and dates of diversion and specifying that after December 31, 1938, the amount thereof should be 1,500 cubic feet per second.

The American Farm Bureau Federation, having been interested in this project for more than a decade, earnestly desires to see its operative benefits for that great inland section of our country which, by the completion of the St. Lawrence seaway, will have transportation of the cheapest kind brought to its door. The Federation expects Senators of both parties to redeem the St. Lawrence Seaway pledges of their respective platforms.

This project was initiated by President Wilson, was approved and sponsored by the succeeding three Republican Presidents, and is now proposed for final completion by President Roosevelt. This would seem to raise the project above party politics. The issue revolves itself, seemingly, into a clear-cut collision between selfish localized interests, which interests naturally want to protect their own investments, but in this desire they forget the broad fundamental national policies which should govern in the solution of the controversy.

The membership of the American Farm Bureau Federation gives little attention to those selfish transportation and utility interests which are now massed almost in solid phalanx against the completion of this great transportation project. Temporarily there are lesser agricultural exports going abroad than in former years, but this condition does not dissuade farmers from seeking to develop in every practicable and economic way the facilities for exporting farm products. The time will come again, perhaps as quickly as the completion of the St. Lawrence seaway, when products will move, as in former amounts, abroad. Accordingly, farmers looking into the future, and knowing that transportation costs subtract largely from the net profits in agriculture, are actually interested in the St. Lawrence Seaway and its early completion.

No farmer and no official in the American Farm Bureau Federation seeks in any way to limit or handicap transportation on any other stream in the Nation. The federation's point of view is that all of our inland water transportation systems should be so linked together that they will make a network over the great producing area in our Nation. The navigability of the Illinois waterway, of the Mississippi, Ohio, Missouri systems must be developed. Nothing in the development of the St. Lawrence seaway must be permitted to be done which will handicap in the least these other waterways. With the projects ahead on the Illinois, Missouri, and Mississippi systems all outlined by the Corps of Army Engineers, it appears that there will be a fine relationship among these various water routes when the pending treaty shall have been approved by the Senate.

Indications are in evidence that this opportunity might be the last chance of the Government of the United States to participate in the building of the St. Lawrence seaway. Should we miss this chance the inland areas of our country would have denied them a free route to the sea and to the commerce of the world, and in addition a large northeastern section of our country would be denied its proportionate part of the power which is a valuable asset to the project.

Trusting this information will be such as you desire, I am,

Very respectfully,

AMERICAN FARM BUREAU FEDERATION,
CHESTER H. GRAY,
Washington Representative.

Mr. NYE. Mr. President, any Senator who will take the time to read these statements, and they merit careful reading and consideration, will observe that the ratification of the treaty is urged with singular unanimity by the farmers of this country on the broadest national grounds.

There is no sectional appeal in these petitions. The treaty is not recommended on grounds of narrow, selfish advantage to agriculture without regard to the welfare of other industries. The farmers have taken the position that the President took in his message to the Senate, namely, that a project which insures cheap transportation and cheap electricity will benefit every section and every industry, including agriculture, and injure none.

Let it not be thought that these national farm organizations have blindly followed the President's leadership without regard to the interests of States which it has been claimed here, without any supporting proof, will suffer from the completion of this project.

I believe it is fair to say that this debate has brought forth as much argument against the treaty from the States of Missouri and New York as from any other States.

In the hearings on the treaty, page 903, I note that the Missouri Farm Bureau Federation is on record in favor of ratification in terms as strong as those expressed by the national federation.

On February 9, 1934, the New York State Grange held its annual meeting at Lake Placid. It represents 133,000 farm homes in upstate New York with active organizations in nearly every county. By an almost unanimous vote, the Grange of the State of New York adopted the following resolution:

Whereas, as the St. Lawrence seaway would open up the heart of our continent to the benefits of ocean navigation; and

Whereas we believe that it would bring great benefits to all farmers of New York State: Therefore be it

Resolved, That the Grange of the State of New York representing 133,000 farm homes, warmly commends President Roosevelt and Governor Lehman for their decisive action in advancing this project and strongly urges the United States Senators from the State of New York to support the ratification of the treaty in the Senate.

I do not believe it is possible to account for such widespread support of the treaty among the farmers of this country except upon the theory that agriculture is virtually a unit in seeking the national benefits this project will insure. We can quibble here over the question of sovereignty over Lake Michigan; we can seek to arouse nationalistic fears and prejudices; we can hold up the absurd bugaboo of an invasion of the Great Lakes by battleships that would have to go through locks to reach the Lakes. But in my judgment we cannot successfully indict the patriotism, the devotion to national interests, and the intelligence of the farmers of this country. Nor do I believe that we can frighten or deceive those farmers into giving up the advantages to agriculture in cheap transportation and cheap power which such debate is intended to obscure.

It is not alone upon the farms that the people are asking for the ratification of this treaty. The industrial workers and the consumers in the cities appreciate that their interest and welfare are bound up with the interest and welfare of

agriculture. The urban dweller knows that excessive transportation costs levied against the farmer are pyramided in the ultimate costs which are charged in the cities.

There has never been a more striking demonstration of the common interest of the mass of the people in the cities and on the farms than the fact that 65 American cities, through their elected officials, recently joined with the Grange, the Farmers' Union, and the American Farm Bureau Federation in urging the Senate to ratify the Great Lakes-St. Lawrence Treaty. The cities on the Great Lakes and the St. Lawrence that know this problem first hand have made that appeal. Duluth, Superior, Milwaukee, Toledo, Detroit, Cleveland, and more than 50 other cities from the head of the Great Lakes to the Vermont boundary of New York have made the same petition to the Senate which has come from millions of farmers of the United States.

These petitions have been presented here after all the official studies pertaining to the project covered by the treaty have been made available to the public. I submit that they are entitled to the consideration of every Senator.

This is a nonpartisan, nonpolitical question. The project was initiated under the administration of President Wilson, and the negotiations were carried to completion after a dozen years of study and conference through the administrations of Presidents Harding, Coolidge, and Hoover.

This project was endorsed in 1920 in the Wisconsin Progressive platform of the late Senator Robert M. La Follette, one of the keenest students of transportation in American history. In 1924 it was embodied in the platform upon which he was an independent candidate for President, with the support of the railroad-labor organizations of the United States.

I do not propose to discuss the treaty from a political standpoint, but I cannot refrain from the observation that it should be a source of pride to every Republican in this Chamber that the great, historic project embodied in this treaty has been endorsed and pledged to the American people by the party at every convention held in recent years.

When the party last assembled in convention, in June 1932, the negotiation of the treaty had been brought to a successful conclusion by Secretary of State Stimson, of New York. The costs had been allocated between the United States and Canada. Every item in the engineering plans for all the works had been drawn up and agreed upon, and these plans had been incorporated as a part of the treaty itself.

Only one factor of major importance remained to be decided. That was the question of whether the 1,100,000 horsepower of cheap electricity available on the American side of the St. Lawrence was to be turned over to private interests—that is, to the Morgan-controlled Niagara-Hudson Power Corporation—or was to be developed under an agreement separate from the treaty by the Power Authority of the State of New York, a public agency.

The Dominion of Canada had already determined this question between public and private interests by entering into an agreement with the Province of Ontario for development of Canada's share of the water power under the treaty by the Ontario Hydro-Electric Commission, a public agency.

Under these circumstances, the Republican National Convention met at Chicago. With the treaty in the President's hands, only awaiting the formality of signature by diplomatic representatives of the United States and Canada, who had already reached complete agreement, the Republican National Convention adopted the following pledge:

> The Republican Party stands committed to the development of the Great Lakes-St. Lawrence seaway. Under the direction of President Hoover, negotiation of a treaty with Canada for this development is now at a favorable point. Recognizing the inestimable benefits which will accrue to the Nation from placing the ports of the Great Lakes on an ocean base, the party reaffirms allegiance to this great project and pledges its best efforts to secure its early completion.

Certainly no more specific pledge than that could be written in the English language. I have never heard of a single Senator or Representative who supported the Republican ticket or platform in 1932 who repudiated that plank or publicly dissented from it prior to the election.

During the campaign the Democratic candidate also pledged the immediate completion of the Great Lakes-St. Lawrence project, and went a step beyond President Hoover by promising that the water-power resources on the St. Lawrence should be publicly developed by a collateral agreement between the State of New York and the Federal Government in connection with the pending treaty.

So, Mr. President, in that campaign we found both parties championing the cause which was involved in connection with this proposed treaty. It has just been argued here whether or not the Democratic Party had expressed itself in its platform upon the question of this treaty. I have had called to my attention this paragraph in the 1932 platform of the Democratic Party:

> We advocate the extension of Federal credit to the States to provide unemployment relief wherever the diminishing resources of the States make it impossible for them to provide for the needy; expansion of the Federal program of necessary and useful construction affected with a public interest such as adequate flood control and waterways.

The thought has been left here this afternoon in some degree, though I presume not intentionally so, that the Democratic Party has not been on record in its platform in support of this project; but in 1928 the Democratic Party did have a very specific plank in its platform supporting the St. Lawrence and Great Lakes project. They said in that particular platform:

> We favor and will promote deep waterways from the Great Lakes to the Gulf and to the Atlantic Ocean.

Such were the pledges made repeatedly by both candidates for President before and after this treaty was signed, without public dissent from their supporters in either party.

I am unwilling to believe that 33 Members can be found in this body who will vote to betray those pledges solemnly made to the American people to solicit their votes at the polls.

Upon the pledges made by him in the campaign, Mr. Roosevelt was elected by an overwhelming majority, carrying every section of the country save five of the smallest States in the Union. The President has faithfully redeemed his pledge on this question by submitting the treaty with a message urging its ratification in the strongest terms. Since January 10 he has sent four additional messages to the Senate, transmitting reports from the Federal Power Commission, the Power Authority of the State of New York, the Department of Commerce, and the War Department, comprising the findings and facts upon which his recommendations rest.

It has become evident there are not sufficient votes on the majority side to defeat this treaty. It can only be rejected by a combination with Republican Senators based upon the betrayal of party pledges and repudiation of the repeated promises of the standard bearers of both political parties.

I cannot bring myself to believe that the Republican Party or any faction of it is ready to enter into such a combination to defeat a treaty negotiated under three Republican Secretaries of State and pledged to the people of this country in the last convention as a project that would insure inestimable benefits to the Nation.

If the Republican Party has a future, it cannot in my judgment betray a solemn pledge of that character and supply the margin of votes needed to defeat the pending treaty.

If the time has come when the Republican Party is ready to decide great public questions on sectional grounds, in open defiance of the pledges made at national conventions, it will have to play the minority role that always has fallen and always will fall to a sectional party.

If Republicans from New England and the Atlantic seaboard are determined to stand on the proposition that the Middle West and West should not be given access to the sea because it might interfere with eastern railroad and power interests, then the Republican Party must reconcile itself to the permanent alienation of every State west of the Alleghenies Mountains.

The election of President Roosevelt insured the public development of the St. Lawrence power project in connection with this treaty. The people of the West know that to be true. If this treaty shall be defeated, how will the Republican Party be able to explain away the pledge of 1932? How can the brand of the Power Trust be erased from the party that countenanced such a betrayal of a platform pledge? The defeat of the treaty, in my judgment, would not only blast the hopes of 45,000,000 people on the farms and in the cities of the Great Lakes Basin but would insure the defeat of Republican candidates throughout that region in the elections of 1934.

No matter what may be the view or the purpose of special interests and assumed political leaders outside this Chamber, I am confident that this treaty will be ratified by an overwhelming majority of the representatives of both parties in the Senate. When that shall have been accomplished we shall have had a part in launching the greatest public improvement on this continent since the Panama Canal. We shall have demonstrated to the American people that regardless of differences on other questions the United States Senate has placed national above sectional and special interests and vindicated the principle that the Federal Government should afford equality to all sections of our country alike.

Mr. President, in conclusion, I ask unanimous consent to have printed in the RECORD a statement prepared as a digest of a book written by Thomas Saxton Ireland and entitled "The Great Lakes-St. Lawrence Deep Waterway to the Sea", published recently by Putnam, which it seems to me presents so logical and so pertinently the situation that I should like to have it permanently preserved in the RECORD.

The PRESIDING OFFICER. Without objection, the statement will be printed in the RECORD.

The statement referred to is as follows:

THE GREAT LAKES-ST. LAWRENCE DEEP WATERWAY TO THE SEA

(A digest of the book bearing that title as written by Tom Ireland (Thomas Saxton Ireland), published by Putnam, prepared especially for Senator NYE, Jan. 30, 1934)

The wonderful development of manufacturing throughout the world during and after the war rests upon transportation. Improvements in the physical means of transportation during the last half century have so extended the limits of commercial intercourse among nations that the interchange of products around the world is as freely accomplished today as was the local trade of a group of villages when this country was founded. The disposal of the surplus of American factories and farms abroad has been the foundation stone of industrial progress by mass production in the United States. The future of America will be determined by the success of efforts to extend commercial relations with other countries for the disposal of this surplus production, and for the cheap reciprocal inflow of raw materials. Economical transportation between producing areas in the United States and foreign markets is one of the first requisites of a successful foreign trade. Improvements increasing the economy of oversea business are national in their character and contribute to the welfare of every citizen in the land. If industry or agriculture is distant from tidewater, as in the Midwest United States, the heavy costs of transportation to tidewater for handling, breaking bulk, and reshipment must be either added to the selling price or subtracted from the producer's earnings. The result is waste, spread needlessly over agencies which separate artificially the producer from the consumer.

This depression is primarily due, it seems, to the undistributed surpluses of the farms, mines, forests, and industrial plants of the Midwest United States, as well as of the rest of the world. The need of normal times is paramount today for a project or formula that will put value into those surpluses by lifting them above the horizon of profitable shipment to market. The St. Lawrence seaway is just such a project, bringing ocean shipping to the heart of the Midwest United States and Canada, creating one third more seacoast, and adding it on to the Atlantic and Pacific coasts, enlarging the outlet, and releasing the productive energy of all the West. The cost of transportation by rail has now reached the point where a haul of 800 or 1,000 to 1,500 miles across the country completely wipes out the margin of profit on many commodities entering largely into our foreign trade and limits the markets for many others with the attendant expense of transfer and terminal delays, including storage and insurance. It cannot be too strongly impressed on those responsible for our national policies that either this condition must be soon eliminated or the foreign trade of the United States will be permanently impaired.

For practical purposes the Great Lakes-St. Lawrence deep waterway to the sea, even more important than Panama, and with the new Welland Canal already detouring Niagara Falls, is to take the Atlantic Ocean from the Strait of Belle Isle at the mouth of the river St. Lawrence and to place it at the water front of Duluth, 2,340 miles in the heart of the continent, granting to the ports on this new seacoast the full benefit of low ocean rates to the markets of the world. Conservatively speaking, the cost of transportation over long distances by ship as compared to rail is in the ratio of 10 miles by ship to 1 by rail. Over the seaway's 27-foot channel, steamers will glide past the reloading stations that now consume profits by expense and delay and 4 out of every 5 vessels now plying the seven seas need be loaded just once for direct transit abroad. The Great Lakes tributary area to be particularly benefited in the United States is a region of factories and of farms, of mines and of forests, where 45,000,000 of our people get their livelihood, providing half of the agricultural wealth of the Nation, half of its manufactures, and half of its foreign trade.

The radius of ship operation will be extended, opening up to ocean vessels a score of points already great on these inland seas, increasing cargo tonnage, and thus employing more ships. The seaway will go far in the direction of placing the merchant marine of the United States on a self-sustaining basis. The domestic share of the carrying trade will be reserved to vessels of American registry because under title 46 of the United States Code only such vessels can transport merchandise or passengers from one United States port to another. Between the ports of this new seacoast and the ports of the world, ocean transportation, namely, the world's lowest-cost transportation, will apply. Since distance from raw materials to factories and distance of finished goods to market are measured by rates for freight, the seaway remakes the world transportation map. Besides adding value to the present products of industry and agriculture of the United States by reductions of freight, it will reveal, develop, and create new markets, new industries, and new businesses with all which that implies by way of increased purchasing power of the 50,000,000 of people on both sides of the international boundary line of the Great Lakes tributary area.

The building of a seaway of the projected 27-foot depth to send ocean vessels from former Lakes ports out into the Atlantic will abolish the handicap of excessive shipping costs to a vast landlocked interior of the continent. On the waterway the obstacle to deep-draft vessels has been overcome by the new Welland Canal. The barriers in the St. Lawrence River remain for engineering skill to surmount, and since mostly on the Canadian boundary, require joint and international work, The whole project, then, was jointly conceived between the United States and Canada.

Several States, now numbering 23, formed the Great Lakes-St. Lawrence Tidewater Association in 1919 to give life to the century-old ambition of connecting the Great Lakes for shipping purposes with the sea. The activities of this association are supported entirely by public appropriations voted by the legislatures of these States. The association, therefore, possesses an official character differing materially from ordinary organizations of this general type. The efforts of 23 States to bring ocean rates to the marooned interior of the United States have finally resulted successfully in the present treaty of July 18, 1932. The treaty of 1871, granting the United States perpetual use of the St. Lawrence below the boundary, is basic to the present treaty which gives American vessels the same right to use the Welland Canal and other channels wholly within the Dominion. Canada receives in return a perpetual right to navigate American locks at Sault Ste. Marie and Lake Michigan. The seaway treaty of July 18, 1932, makes the waterway for navigation usage an international seaway throughout its entire extent.

The Panama Canal was opened up in 1915 with the favorable outcome of drawing the Atlantic and Pacific seaboards eccnomically closer together, but with the unexpected result that the entire middle region of the continent finds itself seriously handicapped in shipping rates. Whereas the opening of the Panama Canal reduced the transportation costs between New York and San Francisco by as much as 11 percent, the rate between Chicago and San Francisco was actually increased 13 percent due to the disproportionately higher railroad rate involved in the case of shipments between the Pacific coast and this Midwest point.

Then came the war with its rifts in great economic currents adversely affecting the Middle West that today make it doubly urgent to take advantage of the Great Lakes-St. Lawrence seaway. Ocean rates maintained at the low pre-war level further distort the economic setting of this section of the country. While rail rates in good times in the United States on wheat, for instance, have increased about 6½ cents to 12 cents a bushel, foreign producers reach European markets at less cost in proportion to pre-war costs than our Midwest American farmers can. Although the Great Lakes depths are sufficient to bear ships of ocean size, still ocean-going vessels cannot move through the 12-foot Erie and 14-foot St. Lawrence Canals that connect the Lakes with the sea. These incomplete links to the sea require that exports and imports shall be reloaded at least twice, and also that a part of the journey shall be made in more expensively operated craft, causing a definite handicap on goods in transit between the Midwest United States and Atlantic seaboard points along with those abroad.

It seems that the solution of the shipping problem of the Midwest United States lies in no longer regarding the transportation system to the Strait of Belle Isle as a series of disconnected lakes, canal, and river projects, but rather in visualizing it as one great connected highway of transportation to and from the sea.

The estimate was made in 1926 by the United States Department of Commerce that completion of the seaway would mean an average saving to the farmer of the United States of approximately 6 cents to the bushel on the cost of shipping grain to

the markets of Europe. As a result of this saving, the price enhancement of grain would hit almost the entire American crop, since the price of grain is what Liverpool gives for the export surplus less shipping costs. The increased purchasing power to a great proportion of the continent's producers from savings on their shipments of grain and other things, would substantially benefit the populations over the entire areas of both Canada and the United States. Furthermore, while in normal times high shipping rates mean only industrial and agricultural stagnation, with people able to find work elsewhere and drift away, in times of industrial depression and abnormally low prices, the lowest possible cost of getting freight to the consuming centers becomes a matter of real life and death. Only one of two things can restore the people of the Midwest United States to parity in competition and that is to move themselves to tidewater or to move the tidewater to themselves.

The plans for the St. Lawrence seaway are not confined to navigation alone but include the development, incidental to the construction of the necessary navigation works, of 5,000,000 installed horsepower of hydroelectric energy, to 1,100,000 of which the United States will be entitled. As to this American portion of 1,100,000 horsepower in the International Rapids section of the St. Lawrence River, the United States has arrived at a tentative understanding with the power authorities of the State of New York by which New York will assume the cost of the power works provided by the seaway treaty and will own the power accruing to the United States. It is with reason that the power authorities of the State of New York have agreed to pay the Government of the United States $89,726,000 for this power. With a vast reservoir of low-cost hydroelectric energy at the immediate disposal of a 200-mile new seacoast from Rochester's harbor down the St. Lawrence to Messena, the competitive position of this section westward to the interior of the continent, and eastward to the markets of the world will be immeasurably enhanced

The total net cost for navigation to the United States of the Great Lakes-St. Lawrence waterway would not be over $126,000,000, and the period of construction would be 7 years. This amount is reached by deducting from the total the share that Canada has paid by way of completed improvements, or is still to pay, by deducting the amounts already spent or raised or authorized on the part of the United States, irrespective of the seaway, and by deducting the sum to be paid to the United States by New York State for hydroelectric power. To arrive at the result of $126,000,000 the figures are used of the Joint Board of Canadian and United States Government Engineers, which seems to be the very highest and most official authority on the subject.

With ratification of the seaway treaty by the Senate an accomplished fact, the administration of Franklin D. Roosevelt, who has expressly and publicly approved the seaway, has the opportunity of greatly advancing this project's cause by allotting from the $3,300,000,000 provided by Congress for public works creating permanent national wealth the comparatively small sum of $126,000,000 to finish the seaway, while only $200,000 appropriated to finish the work of preliminary engineering already authorized by Congress would hasten the completion of the waterway by 6 months.

There now follows a brief summary of the six sections of operations from Duluth-Superior to the Atlantic Ocean at the Strait of Belle Isle.

1. For purposes of this study the distance between the head of the Lakes and the foot of Lake Erie comprises the first six sections of the project, and in this section the task of improvement is allotted to the United States. Only in their connecting channels, the St. Marys, St. Claire, and Detroit Rivers, of a total length of 135 miles, have dredging and blasting been necessary to clear the way for navigation. To provide a uniform 27-foot channel in these connecting channels, requires simply the dredging of 2 additional feet beyond the 25-foot depth authorized in the rivers and harbors bill of 1930. A new 30-foot lock at Sault Ste. Marie and compensation works in the St. Claire and Niagara Rivers remain for the United States to build for compliance with specifications in the seaway treaty of July 18, 1932.

2. Canada's fourth new Welland Ship Canal, 25 miles long and comprising section 2, has been completed for use since August 6, 1932. It is of 27-foot seaway depth, and to overcome the 325-foot drop between Lake Erie and Lake Ontario it has seven lift locks. These locks set the dimensions for all new locks to be installed in the seaway, and are each 80 feet wide, 30 feet deep, and the usable length of 820 feet.

3. Of the 183-mile stretch from the foot of Lake Ontario to Montreal, the first 115 miles are international waters. For convenience the first part of these 115 miles, where the St. Lawrence flows through the 67 miles of the Thousand Isles, has been designated as section 3, while the remaining 48 of the 115 miles of boundary waters constitute section 4 of the project. Through the Thousand Isles the river is wide and deep excepting a few rocky shoals that require being blasted away for a 27-foot channel, a minor task that is now completed.

4. The International Rapids part of the project along the remaining 48-mile stretch of the 115 miles of boundary waters calls for the preponderant work and expense of the whole seaway undertaking, and it is for the construction in this section that ratification of the treaty is necessary. In this 48-mile stretch, as provided in the treaty, it will be the task of the United States to provide the major portion of 27-foot channels and other works involving navigation. Two great dams are to be built across the river drowning out a series of rapids and creating two broad and deep lakes or pools. The upper dam, with one lock and 2 miles of canal, is to be built at Crysler Island, on the Canadian side of the river. The lower dam, with two locks and 6 miles of canal, is to be at Barnhart Island on the United States side. The locks will be of 30-foot depth. The flow of water over the two dams will produce some 2,200,000 horsepower of electric energy, one half of which belongs to the United States and one half to Canada.

5. In the remainder of the 183-mile stretch from the foot of Lake Ontario to Montreal, after subtracting the Thousand Isles section of 67 miles and the International Rapids section of 48 miles, there remains a channel 68 miles long entirely within Canadian waters. Navigation will traverse a widening of the river known as "Lake St. Francis", and will then proceed through the Beauharnois Channel around the Soulanges Rapids and into Lake St. Louis. That work is already more than three quarters completed. The Lachine Rapids, between Lake St. Louis and Montreal, will be passed around by a 3-mile canal with three locks and carrying navigation to the harbor of Montreal.

6. From Montreal, 159 miles down to the city of Quebec, Canada has already provided a first-class ocean ship channel of 35-foot depth. Also from Quebec to the end of inland navigation at Father Point, the channel has a minimum depth of 35 feet, and eastward of Father Point there is no restriction as to depth.

That injury would result to the railroads from seaway competition contradicts, it seems, another contention that the seaway would not have justifiable use. If it were to be only slightly used, there would not, of course, be any competition to fear by the railroads. The seaway, when completed in fact, has an opportunity to render real service. On the shores of the Great Lakes there are the conditions most likely to develop successful water transportation, namely, large quantities of bulk commodities that may be by machinery cheaply loaded and where there is also a large volume of package freight. United States traffic on the Great Lakes reached the maximum of 160,000,000 tons in 1929, a great part of which would not only not move at all but would not even be produced except for access to cheap maritime transportation by the Lakes. Yet, according to the report of the St. Lawrence Commission presented to President Coolidge, the total estimated tonnage available for the waterway amounted to under 4 percent of the tonnage carried by the American railway systems connecting the Lakes with the seaboard and 12 percent of the sea shipments moving through the affected American ports. In the long run the seaway will help all the railroads, including eastern lines. It will call for great new terminals and ports on the Lakes. It will make dormant but potential productivity along their lines enter the field of profitable production, setting up a brisk new railroad commerce between the seaway area and at least the South and West. In fact, sea and land, boat and train, have mutually dependent and noncompetitive functions, each confined to its own performance in commerce.

In accord with the Canadian policy of promoting transportation connections on east and west lines, the St. Lawrence waterway will promote one of Canada's greatest ambitions of closer trade relations with the United Kingdom and with the rest of the Empire. Yet the benefit from the seaway to the United States is bound to be far greater than the benefit to the Dominion of Canada. The population of Canada by the census of 1932 is 10,506,000, while that of the United States for 1930 is 122,775,000, so that the population of the United States is 12 times that of Canada. The population of the area of the United States tributary to the seaway and to be directly benefited by it is 45,000,000, or still more than four times the total population of Canada. So, granting that everyone in Canada is to be benefited by the seaway, but only those Americans living in the area tributary to the Great Lakes region are to be benefited in the United States, this country, on the basis of persons to be benefited by the seaway, gets a 4-to-1 advantage as compared to the Dominion. Population is not the only basis for judging comparative advantage, for taking the figures of ship tonnage of Canada and those of the United States, respectively, using the Great Lakes-St. Lawrence waterway, in the normal year of 1928, the United States tonnage was 2,525,437 and the Canadian was 608,166. We find, therefore, that the United States gets a 4- if not a 5-to-1 benefit from the seaway as compared to Canada.

If refusal of the United States to go through with the seaway is based on the refusal to engage in an enterprise that will also benefit Canada as a foreign power, it should be remembered, it seems, that no two peoples on the face of the earth are more closely united in family ties, racial and religious characteristics, and customs and viewpoints than those of Canada and of the United States. Though strictly respectful of each other's sovereignty and independence, they have traveled along in peace and harmony so long together that to all intents and purposes they have identical, though separate, national interests. For more than 100 years, by the Disarmament Treaty of 1818, the 3,000 miles of international boundary between the United States and Canada have been maintained without a fort or a gun or any other evidence of military precaution. The Governments of the two nations, in conformance with the wishes of their people, have freely interchanged the privileges of navigation on all the common and connecting waters between them. While Canadians have invested millions of dollars in extending their railroad lines into the territory of the United States, American railroads, crossing and recrossing the international boundary throughout its entire extent, have developed important additions to their own systems on Canadian soil.

To complete the St. Lawrence waterway to the sea with the generous cooperation of our great and friendly neighbor is consistent with the proudest boast of two nations whose 3,000-mile

frontier is the longest international boundary in the history of the world, and is consistent with the determination to make this boundary line between the United States and Canada, without fortifications, without warships, and without cannon, a perpetual monument to confidence and good will.

BIOGRAPHY OF THOMAS SAXTON IRELAND

Thomas Saxton Ireland, author, lawyer, and member of the Officers' Reserve Corps of the United States Army, was born in Cleveland, Ohio, on December 16, 1895, the nephew of Caesar Grasselli.

Early education completed at the Cleveland University School, young Ireland was immediately enrolled as a freshman at Princeton University in 1914 and graduated with an A.B. degree in 1918. Following this, he entered the Harvard University Law School, where, opportunity affording, he was able to weave considerable travel in Italy, France, and England into the university study years, and thus he rounded out the foundation for his career which began when he left Harvard with his LL.B. degree, and later carried off an LL.B from the Boston University Law School.

Private legal practice engaged his time in New York City as a logical sequence to his scholastic achievements, but as a cultural attribute he devoted considerable time to the study of German, Spanish, Italian, and French.

As a member of the Ohio bar, Ireland returned to Cleveland from the East in 1926 to take up private practice as an attorney, but found his interest in the Great Lakes-St. Lawrence seaway sufficiently absorbing to require a large part of his time and energy. Ireland today is, among other qualifications, associate editor of the midwestern Italian newspaper Corriere de Ohio, and has contributed numerous articles to other publications.

Back in the days of the Boston police strike Ireland responded to the Coolidge call for volunteers and enrolled as an emergency policeman, patrolling a night beat. For his service he was given a certificate of acknowledgment.

When Italy appeared somewhat upset over the possibility of territorial expansion in the direction of France in 1930, Ireland wrote a stirring article in Italian and for the Italian press. In this he suggested that Il Duce abandon his tactics and turn toward Turkey for expansion and improvement. Curiously enough, only a brief interval elapsed until Mussolini did that very thing, which caused Ireland's friends to feel that the article may have had a modicum of effect, and that at least it had been brought to Mussolini's attention.

During the summer of 1933 Ireland began work on his latest book, The Great Lakes-St. Lawrence Deep Waterway to the Sea. Originally the inspiration to undertake such a literary effort was due, the author tells, "to the generous and kindly encouragement of Walter D. Briggs in the Widener Memorial Library at Harvard." Briggs had long urged Ireland to take advantage of unbridled enthusiasm and do a book on Canada—favorite topic of the Ireland discussions and writings.

The Great Lakes-St. Lawrence volume is both timely and effective in its argument. It stresses the practical purposes of the proposed waterway to the sea as being of even greater importance than the Panama Canal, and shows how 4 out of 5 ships now sailing the seven seas can easily navigate the proposed 27-foot channel, which may some day reach from the Strait of Belle Isle inland to the Duluth water front.

"Nor are the plans for this seaway confined to navigation alone", Ireland explains, "for they include the development, incidental to the construction of the necessary navigation works, of 5,000,000 installed horsepower hydroelectric energy, to 1,100,000 of which the United States will be entitled.

"Additionally, the seaway proper will take the Atlantic Ocean along a 2,340-mile course inland to the heart of the continent, thus granting seacoast benefits of low ocean rates to the markets of the world from inland America."

Commenting on the volume, Walker Stone has written in the Washington (D.C.) Daily News recently declaring that "his book is an adequate and interesting summary of all of the pro arguments." Others who have read and criticized Ireland's book have been equally favorable in their observations.

Mr. NYE. Further, I ask to have printed in the RECORD resolutions adopted by the board of directors of the Minot Association of Commerce in support of the project; a letter from the secretary of the Garrison Civic Club, of Garrison, N.Dak., in support of it; resolutions adopted by the Kiwanis Club of the city of Fargo, N.Dak., in support of the project; and resolutions adopted by the Bismarck (N.Dak.) Association of Commerce upon the same question.

There being no objection, the letter and resolutions were ordered to be printed in the RECORD, as follows:

Resolution adopted by board of directors Minot Association of Commerce, December 15, 1933

Whereas it has come to the attention of the board of directors of the Minot Association of Commerce that the next session of Congress will very likely have placed upon its calendar the Great Lakes-St. Lawrence deep-waterway project as one of the important items to receive first consideration; and

Whereas more than one third of the States of these United States are vitally concerned with this most important water transportation development because of its effect on transportation costs on goods and products moving to and from the places of origin; and

Whereas transportation costs have increased very materially during the past 20 years, while in many instances the prices received for products have decreased: Therefore be it

Resolved, That the board of directors of the Minot Association of Commerce, assembled in regular session, urge that the Great Lakes-St. Lawrence deep-waterway project receive the early and favorable consideration of the next session of Congress.

I hereby certify that the above is a true and accurate copy of the resolution adopted by the directors of the Minot Association of Commerce December 15, 1933.

MINOT ASSOCIATION OF COMMERCE,
By JAMES BARRETT, *Secretary*.

GARRISON CIVIC CLUB,
Garrison, N.Dak., December 4, 1933.

Senator GERALD P. NYE,
Cooperstown, N.Dak.

DEAR SENATOR NYE: The members of this organization, at the regular meeting today, instructed me to write to you and Senator FRAZIER urging that you do what you can to secure approval of the Great Lakes-St. Lawrence seaway at the next session of Congress.

This project will go a long way toward reducing the disadvantage to this part of the country by reason of the construction of the Panama Canal. The Panama Canal has brought lower freight rates to the extreme eastern and western parts of our country, but it has caused higher freight rates for most of the Mississippi Valley.

The cost of transportation is an important element affecting the prices paid here for farm products, especially products such as wheat, which are exported to foreign countries. The seaway, by lowering the cost of transporting farm products, will raise the price received by the producer, and thus increase the income of every farmer in North Dakota and other States.

We are sure that you will do all in your power to bring about the approval of such treaty and other legislation as may be necessary to bring about this benefit to our State.

Yours respectfully,

W. C. CULL, *Secretary*.

Whereas we are advised that the next session of Congress will take up and consider legislation pointing toward the consummation of the Great Lakes-St. Lawrence seaway project; and

Whereas this project would be of untold benefit to the State of North Dakota, as well as to the whole Northwest, affording this section of the country cheap transportation from the head of the Lakes to the sea; and

Whereas the Kiwanis Club of Fargo, being vitally interested not only in the welfare of the immediate community but of the entire State of North Dakota and the Northwest, feels that legislation should be at once enacted and the necessary appropriations made to carry out this great project: Now, therefore, be it

Resolved, That we, the members of the Kiwanis Club of Fargo, individually and as an organization, urge upon our Members in Congress and upon the several executive departments in Washington having supervision over such projects to use every means at their command to the end that legislation may be enacted and the proper agencies authorized to make possible the Great Lakes-St. Lawrence seaway; and be it further

Resolved, That a copy of this resolution be spread upon the minutes of this club and that copies of the same be forwarded to Hon. LYNN J. FRAZIER, Hon. GERALD P. NYE, Hon. JAMES H. SINCLAIR, and Hon. WILLIAM LEMKE, our Senators and Representatives in Congress.

Resolution endorsing St. Lawrence Seaway Treaty

Whereas there is now pending in the Senate of the United States for ratification a treaty negotiated between the United States and Canada, providing for the joint construction by those two nations of the St. Lawrence seaway, the final realization of which will open the Great Lakes to the ocean commerce of the world and bring the benefits of ocean transportation into the very heart of the continent;

Whereas the establishment of the St. Lawrence seaway will, in our opinion, bring immeasurable economic benefit to the entire North and Midwest, including North Dakota, and give to this great inland empire a degree of economic equality and opportunity not otherwise possible, and generally contribute to the welfare of the Nation as a whole: Now, therefore, be it

Resolved, by the board of directors of the Association of Commerce of the city of Bismarck, N.Dak., That the President of the United States be earnestly requested to send a special message to Congress recommending the ratification of the St. Lawrence Seaway Treaty and that the Senate of the United States is hereby petitioned to promptly act favorably upon such recommendation and that the immediate ratification of such treaty and the subsequent construction of such seaway project be made a major project of this administration; be it further

Resolved, That the Senators and Congressmen from North Dakota be requested to exert all the power at their command to bring about favorable action upon such seaway treaty during the present session of the United States Senate; be it further

Resolved, That copies of this resolution be forwarded to the President of the United States and to the Senators and Congressmen from North Dakota.

Adopted by the board of directors of the Bismarck (N.Dak.) Association of Commerce, January 5, 1934.

H. P. GODDARD, *Secretary.*

Mr. CLARK. Mr. President, under the ruling of the Vice President this morning I offer the following reservation to the St. Lawrence Treaty and ask that it may be read and considered as pending.

The PRESIDING OFFICER. The clerk will read, as requested.

The LEGISLATIVE CLERK. The Senator from Missouri proposes the following reservation to the St. Lawrence Deep Waterway Treaty:

The United States ratifies this treaty with the distinct understanding that both high contracting parties recognize the complete and unquestioned sovereignty of the United States over Lake Michigan as a lake lying wholly within the boundary of the United States; that the high contracting parties recognize that Lake Michigan is not a part of the boundary waters of the international boundary between the United States and Canada; and that any of the provisions of article VIII of this treaty to the contrary notwithstanding, the question of diversion of water from said lake and the amount of such diversion, as well as all other questions affecting said lake, shall be and remain under the complete and exclusive control of the United States.

Mr. CLARK. I offer another reservation, which I ask may be read and considered as pending.

Mr. LEWIS. Mr. President, at this point may I inform my able friend from Missouri that I have a similar reservation to that which he has just tendered, and I am willing to yield to him in offering it.

Mr. CLARK. May I say that the reservation which I have just sent to the desk will be offered only in the event the reservation read a moment ago shall be rejected.

The PRESIDING OFFICER. The reservation offered by the Senator from Missouri will be read.

The LEGISLATIVE CLERK. The Senator from Missouri offers the following reservation:

The United States ratifies this treaty with the distinct reservation that diversion of water from Georgian Bay by the Canadian Government shall never exceed 1,500 cubic feet per second without the consent of the United States.

Mr. CLARK. I offer a further reservation, which I ask may be read and considered as pending.

The PRESIDING OFFICER. The reservation will be read.

The legislative clerk read as follows:

The United States ratifies this treaty with the distinct understanding that any of the provisions of subdivision (b) of article III of the treaty to the contrary notwithstanding, any funds provided by the United States for use in the St. Lawrence waterway may be used at the option of the United States Government for the employment of United States labor and United States engineers and the purchase of United States material whether the moneys are expended on construction in the United States or in Canada.

Mr. CLARK. I offer a further reservation, which I ask may be read and considered as pending.

The PRESIDING OFFICER (Mr. HARRISON in the chair). The clerk will read as requested.

The legislative clerk read as follows:

The United States ratifies this treaty with the distinct understanding that, in the event an all-Canadian waterway should be constructed from Georgian Bay down the Ottawa River to the St. Lawrence, Great Britain and its Province, the Dominion of Canada, shall not construct or maintain fortifications or military defenses along such waterway between Georgian Bay and the sea, and such waterway shall at all times, in peace or war, be open for the free use of the commercial and naval craft of Great Britain and its Provinces on the one hand and the United States on the other.

Mr. NORRIS. Mr. President, I have received a telegram from Hon. Frank P. Walsh, chairman of the New York Power Authority, which I ask may be read at the desk.

The PRESIDING OFFICER. Without objection, the clerk will read, as requested.

The legislative clerk read as follows:

NEW YORK, N.Y., *February 20, 1934.*

Hon. GEORGE W. NORRIS,
United States Senate, Washington, D.C.:

My attention has been called to a charge made on the floor of the Senate February 15 intimating that ratification of the St. Lawrence Treaty as recommended by President Roosevelt will promote private power interests concerned with the development of the St. Lawrence River. There is no foundation whatsoever for this statement. On the contrary, the public development of St. Lawrence power advocated by President Roosevelt in connection with the treaty and throughout his 4 years as Governor of New York has been consistently opposed by private power interests. The reason for this is evident. All the water power which will be available under the treaty will be divided between two public agencies; 1,100,000 horsepower to be developed by the Power Authority of the State of New York and 1,100,000 horsepower by the Hydroelectric Power Commission of the Province of Ontario. This will insure an abundant supply of electricity at the lowest possible rates. The private power companies in New York are today charging domestic consumers rates about four times the rates in Ontario. While the development of water power is in the hands of a public agency in the Province of Ontario, private interests control the power resources of the Province of Quebec on the lower St. Lawrence. These interests are today exploiting the private resources of Quebec for private profit just as the Niagara-Hudson Power Corporation of New York exploits Niagara Falls on the American side of the boundary. These two private combinations, one in Canada and one in the United States, will be shielded from the application of a public yardstick on fair rates if ratification of the St. Lawrence Treaty is blocked and the public development by the Province of Ontario and the State of New York is thus prevented. This explains why the private power interests on both sides of the boundary are opposing ratification of the treaty. The truth is that the development of the St. Lawrence under the treaty will greatly promote the public interest not only by providing cheap electricity but also by attracting and developing new industries. The Premier of Quebec, Mr. Taschereau, has consistently opposed the St. Lawrence Treaty and the public development of water power it will make possible. In this he has had strong support from the cities of Montreal and Quebec, where private power interests are strongly entrenched.

In a speech before the Quebec Legislature January 13, 1932, Premier Taschereau said: "The pressing need of the United States is for power. Do you think we are ever going to get industrial development in the Province of Quebec and in Canada by permitting the United States what she needs now for developments of her own industries. I have seen many captains of industry, so-called, and they all tell me the same thing; keep your hydropower at home and you will have American capital going into your Province for the development of industries and your Province will profit and progress. * * *" There can be no question that the development of hydroelectric resources is proceeding rapidly in Canada and that cheap hydroelectric power is essential to the development and maintenance of American industry. The brief filed by the Power Authority of the State of New York with the Foreign Relations Committee of the Senate contains this significant statement from a public address delivered by Randall J. Leboef, Jr., general counsel for the Niagara-Hudson Power Corporation: "I cannot get out of my mind the Aluminum Co. going up on the Saguenay River, in the Province of Quebec, and creating in the wilderness not only a vast power development but building an actual city, with an industry giving profitable employment to thousands of workmen." The private power interests in the United States are today marshaling every influence and resource to block the public development of St. Lawrence power and its distribution at low rates by the municipalities of New York. President Roosevelt and Governor Lehman have for years supported the Power Authority in its policy of making this great natural resource available under conditions that will insure the lowest possible rates to consumers of electricity. Since the St. Lawrence River is an international stream forming the boundary between the Province of Ontario and the State of New York, this great block of water power obviously cannot be developed for the immediate benefit and relief of consumers of electricity without ratification of the pending treaty with Canada.

If, as President Roosevelt warned in his message, the treaty should be defeated, Canada might deepen her canals on the Canadian side of the river and thus get the benefit of cheaper navigation and simultaneously develop the water power lying wholly within Canadian territory and under the control of private interests in the Province of Quebec. This would rob American consumers of the present opportunity to obtain cheap electricity from the public power project in the International Rapids section; it would delay the power development in this section of the river for a generation to come; it would greatly increase the cost of the power in this section when and if it should develop for power alone without a division of the cost between both power and navigation; it would give the private power interests in Quebec the same advantage over the Hydroelectric Commission of Ontario as it would confer upon private power interests in the State of New York; it would represent the greatest victory for these interests in history, since the pending treaty makes possible the public development of the largest single block of power on the North American Continent. In the face of the conditions that actually exist on the St. Lawrence, it is difficult to understand how any Senator could seriously charge that the pending treaty promotes the interest of private power companies either in Canada or in the United States. Such a statement indicates a wholly distorted view of the actual facts, and I am therefore requesting, on behalf of the trustees of the Power Authority of the State of New York, that this communication be read into the RECORD of the Senate.

FRANK P. WALSH.
Chairman the Power Authority of the State of New York.

Mr. NORRIS. Mr. President, I should like the attention of the Senator from Texas [Mr. CONNALLY].

I desire to make some remarks on the treaty. I do not wish to interfere with the bill of the Senator from Texas which is now pending. I prefer not to make any remarks today if I can make them tomorrow or Monday. I realize, however, that a limitation of debate will go into effect soon; and if the bill which is now pending continues before the Senate, there may not be time for all Senators who wish to address the Senate on the treaty to do so.

I do not like to take up the time to speak on the treaty when the bill of the Senator from Texas is pending. If there is any reasonable assurance that the bill can be disposed of soon, I will not attempt it. At the same time, I have not made any remarks on the treaty so far, and I should dislike to have the time arrive when I would be entirely excluded from speaking by the desire of other Senators to address the Senate on the treaty.

Mr. CONNALLY. Mr. President, will the Senator yield?

Mr. NORRIS. Yes.

Mr. CONNALLY. Of course, I am very anxious to have a vote on the cattle bill today. I was not able yesterday to obtain an agreement to vote upon the bill at a certain time today. If I had any intimation that such an agreement could be secured, I should make the point of no quorum and try to work out the matter.

I am not disposed to cut off the Senator from Nebraska from making a speech on the waterway treaty, because I realize that other Senators have embraced the opportunity to address the Senate on the treaty, and I certainly should not want to be in the attitude of denying the same privilege to the Senator from Nebraska.

Mr. LEWIS. Mr. President——

The PRESIDING OFFICER (Mr. CLARK in the chair). Does the Senator from Nebraska yield to the Senator from Illinois?

Mr. NORRIS. I do.

Mr. LEWIS. May I be permitted to make an inquiry of both the Senator from Texas and the Senator from Nebraska? Speaking as one who has been accorded a little voice in the machinery of the debate, I ask my able friends the Senator from Texas and the Senator from Nebraska whether there is any objection to holding a session tomorrow in order that Senators may have opportunity to make the addresses referred to by them.

Mr. NORRIS. I have no objection. I should be glad if we could have a session tomorrow, if I thought I might be recognized tomorrow to speak on the treaty and devote the afternoon to it.

Mr. LEWIS. May I ask the able leader of the minority if he has any program that runs counter to that—if the minority have other legislation that it is proposed to consider tomorrow?

Mr. McNARY. Mr. President, I think we all entertained a hope that we might recess from today until Monday, in order to have Saturday at our offices. Everyone is anxious to hear the able Senator from Nebraska discuss this subject. I believe the limitation of debate begins on Tuesday.

Mr. NORRIS. If there is not a desire on the part of a number of Senators to speak on Monday, that will suit me; but I understand there is. There are several Senators who have said they wish to speak on Monday.

Mr. CONNALLY. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Texas?

Mr. NORRIS. Yes.

Mr. CONNALLY. I suggest to the Senator that he give notice in the open Senate that he will speak on Monday.

Mr. NORRIS. That would not give me any parliamentary advantage. It would be only a matter of courtesy.

Mr. CONNALLY. It would through courtesy; and I am sure no Senator would undertake to interfere with the Senator from Nebraska. However, if the Senator desires to speak today, of course, I shall not make any objection.

Mr. NORRIS. I am informed that the Senator from Illinois [Mr. LEWIS] had already given notice that he will speak either tomorrow or Monday.

Mr. LEWIS. If we are not to have a session tomorrow, it will be Monday. I will yield to the able Senator from Nebraska, however, as I know this is a subject he wishes to discuss, and follow him on Monday.

The PRESIDING OFFICER. The Chair will state that the Senator from Nevada [Mr. PITTMAN], the Chairman of the Foreign Relations Committee, has also given notice of an intention to speak on Monday.

Mr. McNARY. Mr. President, in view of that situation and the importance of the subject, it is obvious that we shall be in session tomorrow.

Mr. McKELLAR. Yes; we have an appropriation bill which several officers of the administration state must be acted upon, and we shall have to go on tomorrow, anyway.

Mr. WALSH. I think we should have a session tomorrow.

Mr. McKELLAR. I hope, however, that the pending bill can be passed today.

Mr. NORRIS. I will take this opportunity, then, to notify the Senate that if I can secure recognition tomorrow, I shall address myself to the treaty.

Mr. CONNALLY. I am sure the Senate will be in session tomorrow.

Mr. NORRIS. I think we ought to be in session tomorrow.

Mr. McNARY. I ask for unanimous consent that when the Senate concludes its session today, it recess until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. The Senator from Oregon asks unanimous consent that when the Senate concludes its session today it recess until 12 o'clock noon tomorrow. Is there objection?

Mr. CONNALLY. Reserving the right to object——

Mr. NORRIS. Let me change the language of the notice I gave.

Mr. CONNALLY. Just a moment. Has the Senator from Oregon consulted the Senator from Arkansas [Mr. ROBINSON]?

Mr. McNARY. We discussed the matter yesterday, and I think the Senator from Tennessee [Mr. McKELLAR] is in touch with his wishes.

Mr. McKELLAR. Yes. I have no objection to the request of the Senator from Oregon.

Mr. CONNALLY. Then I am not going to make any objection.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Oregon? The Chair hears none, and it is so ordered.

Mr. NORRIS. Mr. President, the suggestion is made that we shall not have anybody here tomorrow, even if we do have a session.

Mr. LEWIS. I suppose the Senator means that Senators will voluntarily take a holiday.

Mr. NORRIS. If that is true, let me change my notice and say to the Senator from Illinois that it will be agreeable to me to follow him, or to have him follow me, and speak on Monday instead of tomorrow.

Mr. LEWIS. I shall try to arrange that on Monday to suit the convenience of the Senator. I certainly do not desire to bring upon him any inconvenience.

Mr. NORRIS. Then we will let it stand that way.

Mr. LEWIS. And waive the notice of an intention to speak on Saturday?

Mr. NORRIS. Yes.

Mr. BORAH. Mr. President, could we not have a session beginning at 11 o'clock on Monday?

Mr. McNARY. I think that would be very proper, in view of the debate.

Mr. COUZENS. I should have to object to that, because we have the revenue bill before us every morning at 10 o'clock, and we work on it until after 12.

Mr. LEWIS. The Senator means, I take it, before the Committee on Finance?

Mr. COUZENS. Yes.

Mr. McKELLAR. I see no objection to meeting at 11 o'clock, if it is desired; but, of course, the Senator from Michican could control the matter by objecting.

Mr. WALSH. Is it understood that we are to have a session tomorrow?

Mr. LEWIS. It is rather assumed, I believe.

The PRESIDING OFFICER. The Chair will state that the Senate has already, by unanimous consent, agreed that at the time of concluding its session this afternoon it will recess until 12 o'clock tomorrow.

Mr. WALSH. That settles it so far.

HOUSE BILL REFERRED

The bill (H.R. 8471) making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1935, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

INCLUSION OF CATTLE AS A BASIC INDUSTRY

The Senate resumed the consideration of the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes.

Mr. CAPPER. Mr. President, I intend to support the pending measure, H.R. 7478, to include cattle as a basic commodity under the terms of the Agricultural Adjustment Act; but I shall vote for the measure on the assumption that the Secretary of Agriculture will not impose the processing tax on cattle at a time and in such a manner that the producers will have to bear the tax burden. When that is done, when the producer pays the tax, the object of the bill, of course, is defeated. When the processing tax was applied on hogs the result was that the farmer got a lower price for his hogs. This must not happen as to cattle.

The measure carries an appropriation which, as I interpret it, will enable the A.A.A. to initiate a production-control program without assessing the costs, through a processing tax, immediately upon the cattle producers.

I see no language in the bill which would compel the Secretary of Agriculture to levy a processing tax on the producers. If it had contained such a provision, I should feel compelled to vote against it.

If a processing tax is levied under conditions as they are now and that tax is passed back to the producer, it will simply insure the ruin of many cattlemen. I am trusting to the judgment of the Secretary of Agriculture not to take any such action. I desire to have this statement in the RECORD before I cast my vote for the measure.

I send to the desk resolutions adopted on March 3 by the Riley County (Kans.) Farmers' Union, No. 45, which I believe expresses the sentiment of livestock men generally, and ask that they be included as part of my remarks.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

FARMERS EDUCATIONAL AND COOPERATIVE
UNION OF AMERICA,
RILEY COUNTY FARMERS UNION, No. 45,
Leonardville, Kans., March 5, 1934.

Senator ARTHUR CAPPER,
Washington, D.C.

DEAR MR. CAPPER: The following resolutions were adopted by the Riley County Farmers Union, No. 45, assembled in quarterly session at Walsburg schoolhouse March 3:

"*Resolved*, That we ask Secretary of Agriculture Wallace and the Congress of United States of America to take such action as may be necessary to prevent further importation of agricultural commodities.

"*Resolved*, That—

"Whereas the processing tax on wheat and hogs appears to be borne by the producer of these commodities; and

"Whereas there is proposed by the Secretary of Agriculture a processing tax on cattle; we therefore go on record as opposing any processing tax on cattle, and demand of Secretary Wallace to leave cattle untaxed until such time as the cattlemen can realize cost of production plus a reasonable profit; be it further

"*Resolved*, That a copy of these resolutions be sent to Secretary Wallace."

Yours very truly,

GUST LARSON, *Secretary.*

The PRESIDING OFFICER. The question is on the amendment of the Senator from North Dakota [Mr. FRAZIER].

Mr. CONNALLY. I am willing to have the amendment agreed to.

The amendment was agreed to.

Mr. LA FOLLETTE. Mr. President, I offer the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 2, after line 8, it is proposed to insert the following:

SEC. 3. (a) There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $150,000,000, which shall be available for the following purposes:

(1) Under rules and regulations to be promulgated by the Secretary of Agriculture, for the elimination of diseased dairy and beef cattle, including cattle suffering from tuberculosis or Bangs disease, and for payments to owners with respect thereto;

(2) Under rules and regulations to be promulgated by the Secretary of Agriculture, in conjunction with the Federal Emergency Relief Administration, for the purchase and transfer of dairy cows to farms which do not have dairy stock for supplying milk and milk products for noncommercial family use;

(3) Not to exceed $50,000,000 for advances by the Secretary of Agriculture to the Federal Surplus Relief Corporation for the purchase of dairy and beef products for distribution for relief purposes.

(b) No processing tax shall be levied under the Agricultural Adjustment Act, as amended, for the purpose of obtaining revenue for reimbursement of expenditures authorized by this section.

Mr. LA FOLLETTE. Mr. President, I should like to state at the outset that I offer this amendment after consultation with a number of Senators who come from States in which the dairy industry is of great importance. Among them are the Senator from Iowa [Mr. MURPHY], the senior Senator from North Dakota [Mr. FRAZIER], the junior Senator from North Dakota [Mr. NYE], the Senator from Minnesota [Mr. SHIPSTEAD], and others.

Since I have been a Member of the United States Senate I have taken the position that there could be no sound prosperity in the United States until the great agricultural industry was placed upon a sound, profitable basis. I maintained during the period of the so-called "boom" that it was ephemeral in character, that it could not endure, because the great agricultural regions of the United States and the millions of people dependent either directly or indirectly upon agriculture, were fighting a losing economic battle.

It should be remembered that this depression, insofar as it relates to the agricultural industry as a whole, did not begin in October 1929. Taking the industry as a whole, the depression so far as agriculture is concerned began in 1920.

Mr. WALSH. Mr. President, confirmatory of the Senator's statement, he will recall that we had before us in 1922 an emergency tariff bill, the avowed purpose of which was the relief of agriculture.

Mr. LA FOLLETTE. Yes, Mr. President, but agriculture was relieved under that emergency tariff act as it was usually relieved under tariff laws. It was relieved of a great percentage of its purchasing power.

Mr. WALSH. But it was a recognition of the distress of agriculture.

Mr. LA FOLLETTE. Precisely. The point is well taken by the Senator.

Mr. President, I think it is generally conceded that the distress of the agricultural industry was due to policies pursued by the Government during the war and in the period which followed it. After this country entered the war, in 1917, a well-conducted campaign was carried on from Washington by officials of the Government appealing to farmers all over the United States to increase their production. They used the newspapers which circulate in the agricultural communities, they used the farm journals, they even used the billboards along the rural highways.

Suited to the localities in which these appeals were circulated, an appeal was made to the farmers of this country to grow more wheat, more corn, more cotton, more hogs, produce more beef, more mutton, and more dairy products. Each one of these appeals, circulated under the official

aegis of our Government, wound up with the appeal, "And help your Government win the war."

The Federal Reserve Board, which controls the credit policy of our great national-banking system, adopted a policy of liberal extension of credits to farmers, manufacturers, and business men, upon the theory that the extension of those liberal credits would enable them to increase their production and thus help the Government win the war.

The fact remains, however, that agricultural prices in this country did not rise in proportion to the increase in the prices of the products which the farmers had to buy. This disparity during the war period between the prices which farm products brought and the prices which the farmers had to pay for the things they bought was an economic discrimination against one of our great basic industries.

Mr. President, in response to these appeals upon the part of the Government to increase their production, the farmers took advantage of the liberal credit policies on the part of the great Federal Reserve National Banking System and borrowed money to buy more land, to build bigger barns, to increase their livestock, and, above all, to buy power machinery to take the place of the labor of their sons, who were patriotically serving the Government in uniform. The inevitable result was that the farmers of this country got their lines of credit at the banks extended almost to the breaking point.

One day in August 1920 the Federal Reserve Board had a secret meeting at Washington, in which those sleek, well-fed gentlemen, sitting around a mahogany-top table, came to the conclusion that the country was too much inflated as a result of the credit policy which they themselves had inaugurated during the war. On that afternoon they issued instructions to the Federal Reserve banks all over the United States to curtail agricultural indebtedness. As a result, farmers all over the country were confronted with a demand for reduction of their notes and mortgages. There was only one method they could adopt in order to realize the cash to meet those demands upon the part of the banks, and that was through a dumping of their crops upon the markets. The deflation policy inaugurated by the Federal Reserve Board, and for which the Government must assume responsibility, produced the worst panic in agricultural commodity prices which this country had ever seen up to that time.

Mr. President, this is not a figment of my imagination. Secretary of Agriculture Wallace, the father of the present Secretary, in 1923 stated, after careful investigation, he had come to the conclusion that the deflation policy upon the part of the Federal Reserve Board had cost the farmers of this country $15,000,000,000.

This, however, was not the only staggering blow dealt to agriculture as a result of governmental policy at the beginning of 1920 and 1921. In 1920 the Congress of the United States passed the so-called "Esch-Cummins bill", now known as the "Transportation Act of 1920." It was passed because of the pressure of railroad executives and railroad security holders in this country. It provided for the return of the railroads to private management following Government operation during the war, but it likewise provided that the Interstate Commerce Commission must fix rates high enough to produce a return of 5¼ to 6 percent upon the aggregate value of the railroads' property.

The Interstate Commerce Commission had not concluded its physical valuations of the roads, and under the terms of this law, which was virtually a mandate, it was necessary for the Commission to take what Commissioner Eastman described in his minority report as "a leap in the dark."

In any case railroad freight rates in the United States, as a result of the enactment of that law, went up approximately 35 percent on the 26th day of August 1920, and they have remained there or they have gone constantly higher ever since. Even during this period of depression, when all other prices and values have been sliding toward the vanishing point, railroad freight rates have been maintained or increased.

This increase in freight rates as a direct result of the inauguration of a national policy upon the part of this Government hit every consumer in the United States; for, whether we realize it or not, we pay the freight costs on everything which we buy to eat, to wear, and to use. It hit all consumers, but it hit the farmers of this country hardest of all. It hit the farmers of this country hardest of all because under the crazy marketing system which exists in this country the farmer is the one producer in the United States who cannot add the cost of transportation to the selling price of his product. On the contrary, the farmer has the cost of transporting his goods to market subtracted from the price which he gets for them.

If there are any Senators here who doubt that statement, let them go out into the cattle-producing country, let them buy a carload of prime beeves and ship them to a commission merchant to be sold at the market. If that carload of prime beeves brings more than the transportation charges from the shipping point to the primary market, the commission merchant will send you a check for the difference. If they do not bring enough to pay the transportation charges, you will get a bill from the commission merchant telling you how much you owe him.

Mr. BAILEY. Mr. President, I wish to ask the Senator a question.

Mr. LA FOLLETTE. I yield.

Mr. BAILEY. Why is that so?

Mr. LA FOLLETTE. I stated, Mr. President, it was so because of the crazy marketing system which exists in this country.

Mr. BAILEY. That is very indefinite—"a crazy marketing system." I should like the Senator to tell me if it is not so because the farmer, having a great amount of cattle to sell, is selling in the buyers' market?

Mr. LA FOLLETTE. Mr. President, I do not think that is the complete answer. I know it is a fact that in the countries where cooperatives have been well developed no such situation exists, and I am not at all convinced that the Senator is correct in assuming that it is simply because the farmers are shipping too many beeves or too many hogs or too many sheep to market. I am more inclined, Mr. President, to be convinced that it is due to the control of those markets by the packers and by other individuals and organizations which stand between the producer of our primary foodstuffs and the ultimate consumer.

Mr. BAILEY. Mr. President, assuming that to be the reason—not taking it to be absolute, because the Senator himself is in some doubt—but assuming that to be the reason by a parity of reason, since the farmer cannot pass on the freight to the consumer and must bear the burden himself, will the Senator tell me how the farmer could pass on the processing tax?

Mr. LA FOLLETTE. Mr. President, I cannot answer that question, because I am not at all convinced that the farmer can pass on the processing tax. I will say to the Senator that it may be possible to pass on the processing tax in the case of nonperishable commodities, but I think that there is very grave question as to whether the processing tax, insofar as perishable products are concerned, can be passed on. Therefore, I would not attempt to answer the Senator's question.

Mr. BAILEY. Let us take an example. The Senator refers to nonperishable products. Let us assume that wheat and cotton are such. The Senator's idea is that since they are nonperishable the farmer may be able to pass on the processing tax, and by a parity of reason, the freight charges, because they are nonperishable?

Mr. LA FOLLETTE. The reason I raised the question as between perishable and nonperishable commodities is that, of course, it is possible to create a storage for the nonperishable commodity, and perhaps to bring about a more orderly marketing of it than there is in the case of the perishable commodity, which must have cold storage, and the facilities for which are necessarily limited.

Mr. BAILEY. Let me ask the Senator if he has not reached precisely the same conclusion which I thought he would reach at the beginning? It is because, in the case of

nonperishable articles, such as cotton and wheat, there can be what the Speaker speaks of as orderly marketing?

Mr. LA FOLLETTE. More orderly, I should like to say.

Mr. BAILEY. And the Senator is using the word "orderly" marketing in the sense that he gets to that point where the farmer can sell in the seller's market and not in the buyer's?

Mr. LA FOLLETTE. Well, he does and he does not. Of course, the Senator knows that there have been numerous occasions when even the prices of the so-called "nonperishable agricultural commodities" have gone far below the cost of production, and I am sure that no State has suffered any more from that situation than has the Senator's own State.

Mr. BAILEY. That is so, but it still remains the fact that the difference between the two is that the nonperishables may be held by the farmer until such time as there is a seller's market, and the perishable he cannot hold, and therefore he does not ever get into the seller's market. I was driving at just that point, that the difference is in selling in a seller's market, and that if we cannot pass on the freight, we cannot pass on the tax.

Mr. LA FOLLETTE. It is only a relatively better position, may I say to the Senator, and one is not satisfactory simply because it is better than the other, in my view.

Mr. President, on the other hand the farmer has had to pay this added freight cost upon everything which he has bought for himself and his family and for use upon the farm. In my opinion this has been one of the large contributing factors in the prolongation and the intensification of the agricultural depression which has prevailed in this country since 1920. Upon the theory that a government responsible in the first place for precipitating the agricultural depression, and responsible in the second place, in part, for its prolongation, I have supported ever since I came to this body every piece of legislation which I felt was designed to bring relief to the great farm industry. I have not supported it, Mr. President, only because I was in sympathy with the tragic situation confronting the farmer and his family during these long bitter years; I have supported it because I was convinced that we never could have sound prosperity during the so-called "boom period." I have been convinced that we could never even attain a partial recovery during this depression, unless the great buying power represented by the 6,000,000 farmers of this country and their dependents was restored to our markets. I supported the McNary-Haugen bill, not because I felt that it held out any particular hope to the dairy farmers of Wisconsin; I supported it because I believed that one part of the industry could not be prosperous while another part of the industry was languishing and in economic distress.

When the present Agricultural Adjustment Act was under consideration in this Chamber I supported the amendment offered by the Senator from Nebraska [Mr. NORRIS] to provide for a price at least equivalent to the cost of production. I also supported the amendment offered by the Senator from North Dakota [Mr. FRAZIER] as a substitute for the farm-refinancing program provided in the bill. I supported those amendments, and I supported the bill upon its final passage, because I felt that it was the only measure which held out any hope to this great bloc of our population.

The dairy industry and the cattle industry are in a tragic situation. Every Senator who has made any study of the subject fully realizes that statement to be true. I want to show what has happened to the purchasing power of the dairy farmer in this country. In 1913, 100 pounds of milk, on the average, were bringing a return to the farmer in Wisconsin of $1.33, and 100 pounds of flour in the same year cost $3.30; in other words, in 1913, 100 pounds of milk sold by a farmer in the State of Wisconsin would buy 40 pounds of flour.

In 1932, 100 pounds of milk in Wisconsin brought, on the average, 88 cents, while flour per 100 pounds was selling for $3.20; that is, 100 pounds of milk sold by a farmer in Wisconsin in 1932 would buy only 27 pounds of flour.

In August, 1933, 100 pounds of milk sold in Wisconsin would buy only 22 pounds of flour, and in December, 100 pounds of milk sold in my State would afford purchasing power capable of buying only 20 pounds of flour.

From 1910 to 1914, 100 pounds of milk sold by a farmer in Wisconsin would purchase 99 pounds of typical dairy rations. From 1921 to 1931, on the average, 100 pounds of milk would buy 123 pounds of dairy rations.

The relatively favorable position of the dairy industry in relation to other agricultural activities during that period caused many farmers throughout the United States who had not been theretofore engaged in the dairy industry to purchase dairy cows and to begin the production and sale of milk and other dairy products.

From March to July 1933 grain prices more than doubled. The result, Mr. President, was an increased cost of production to the dairy farmer. In July of last year 100 pounds of milk sold in Wisconsin would buy only 86 pounds of feed, as compared with 123 pounds for the 1921 to 1931 average. In December last 100 pounds of milk sold in Wisconsin would buy only 94 pounds of feed. In other words, Mr. President, so far as the activities of the Agricultural Adjustment Administration have been successful in helping to increase the price of other farm products, they have penalized and placed at a further economic disadvantage the producers of dairy products in Wisconsin and other dairy States.

Wisconsin produces over 11,000,000,000 pounds of milk a year, or 11 percent of the total quantity produced in the United States and more than is produced in any other dairy State. Wisconsin produces 65 percent of the cheese, 40 percent of the evaporated milk, and it is the third largest butter-producing State in the Union. I cite these figures to show what an important economic effect has inevitably been produced in the State which I have, in part, the honor to represent, by the activities of the Agricultural Adjustment Act in—justifiably, as I contend—endeavoring to increase the price of other farm products. Nevertheless, we cannot escape the fact that these activities have resulted in a terrific economic disadvantage to the dairy farmers of Wisconsin and other dairy States and have added to their woeful plight in this situation.

Mr. President, it was generally assumed when the Agricultural Adjustment Act was passed that its benefits could successfully be obtained only for branches of the agricultural industry which were upon an export basis. Many Members of this Chamber no doubt are under the impression that there is an overproduction in the dairy industry today, but I do not think the statistics indicate any such condition.

In 1929 there was produced in the United States the equivalent of 76.7 billion pounds of milk which was sold off the farms in the United States. The average price was $2.41 per hundred pounds. In 1932 there was produced an equivalent of 78.4 billion pounds, or an increase of 2.3 percent during the 3-year period. During the same 3-year period, however, the population of the United States increased 2.7 percent. In other words, between 1929 and 1932 population in the United States increased faster than dairy production. The average price in 1932 was $1.26 per hundred pounds, a decrease of 48 percent from the average price of 1929. In other words, from 1929 to 1932 the amount of dairy products sold increased less than the increase in population, but at the same time the dairy farmers sustained a decrease in price of 48 percent.

Is it not obvious, Mr. President, from these figures, that the dairy industry is not confronted with the same situation that faces the producers of cotton, wheat, tobacco, corn, hogs, and rice? The dairy industry is not producing more than is usually consumed at home. The other branches of the agricultural industry which I have mentioned were producing more than could be consumed in the domestic market even during the time when the population had more adequate purchasing power than it has today.

To sum up, the dairy industry has not increased its production more than the population has increased. The low prices in the dairy industry are not due, therefore, to an unusual increase in dairy production. It seems perfectly

obvious to me that the sharp decline in dairy prices is due to one cause and one cause alone, namely, the rapid decline in purchasing power. Therefore, Mr. President, we are dealing with a problem beyond the control of the dairy industry. We are confronted by a situation where the fate of this industry is inextricably interwoven with the fate of purchasing power of the urban population of the United States. We had a pretty concrete example of that last year. From January 1933 to June 1933 the average price of butter wholesale in Chicago was around 15½ to 16½ cents. In June and July it climbed to 26½ cents per pound. But what happened? The consumption of butter fell off 15 percent, and the consumption in that marketing region of substitutes for butter increased 5,000,000 pounds.

It is clear to me that it was not because the people in that area suddenly came to the conclusion that they preferred dairy substitutes to the genuine article. The reason for this decrease in the consumption of butter in that marketing area was clearly due to the fact that because of depleted purchasing power the individuals normally purchasing these dairy products were unable to meet the increase in price from 16 cents to 26½ cents per pound.

Mr. President, we are dealing with a situation, insofar as the dairy industry is concerned, which convinces me that no substantial benefit can flow to the dairy industry through devices which seek to increase artificially the price beyond the ability of the consumer to buy.

There is a situation confronting the industry which it cannot meet and cannot control. It is a situation due to the general economic depression in the United States. If the dairy industry was producing an exportable surplus, it would present a very different problem. On the contrary, however, we are confronted with facts which demonstrate that the industry has not increased its production even as much as the population has increased.

In 1932 the dairy industry in the United States produced about 25 percent of the farm income; hogs, about 10 percent; cotton, about 8 percent; all grains, including wheat, about 6 percent; and tobacco, about 2 percent. There are about 3,000,000 farms, according to the census, which are engaged in the production of dairy products. This total number of farms engaged in the production of dairy products compares very favorably with the totals of the farms engaged in the production of the other products which I have just mentioned.

Two hundred and thirty-six million dollars has been distributed by the A.A.A. to the other branches of the agricultural industry which do not produce nearly so much farm income as the dairy industry produced. The dairy industry is not suffering from the problem of overproduction. Relief for this industry, if we are to save it from disaster, must be upon some other basis than that upon which the other industries are being dealt with under the Agricultural Adjustment Act.

Therefore, in consultation with the other Senators whom I have mentioned, I have offered the amendment now pending. I appeal for its adoption upon the broad general ground of public health and relief. It has been the policy of the Government for a long period of time in conjunction with the States to carry on a well-directed and sustained program for the eradication of bovine tuberculosis. In this period, when the dairy industry is in great distress, we are justified in asking for an enlargement and an augmentation of the program, not only to carry on the work which has been so well done in many areas in cleaning up tuberculosis, but also to inaugurate a campaign for the eradication of contagious abortion which is becoming a menacing factor so far as both the dairy and cattle industries are concerned. It is estimated that there are about 600,000 cows in the United States suffering with tuberculosis today. It is further estimated that there are approximately 3,000,000 cows in the United States suffering from contagious abortion. If the amendment is adopted this campaign, under rules and regulations to be promulgated by the Secretary of Agriculture, can be carried forward. It will be a great step in advance so far as public health is concerned, and it will at the same time bring relief and benefit to the dairy industry.

Also, the amendment provides for the purchase and distribution of cows to a substantial number of the more than a million farms in the United States which do not now produce dairy products, and which are therefore not consuming dairy products at this time.

In consultation with some of those who are directing the relief activities in the United States, I find they are very much interested in carrying on an experiment of distributing cows to those farms which do not now have family cows. They are interested in it not only from the point of view of relief, but they are interested in it because they believe it will improve the dietary situation in very large areas in the United States.

The amendment also provides for money to be transferred by the Secretary of Agriculture from this fund to the Federal Surplus Relief Corporation for the purchase of both dairy and beef products for distribution to those who are upon relief, in order to balance their diet and, likewise, at the same time in order to afford relief to this dairy industry.

Mr. President, in this connection I would like to read briefly from a letter which I received from the wife of a farmer in Wisconsin. It came unsolicited, may I say, as its context will demonstrate:

DEAR SENATOR LA FOLLETTE: You are probably somewhere attending a birthday ball tonight, while I am sitting beside the old kitchen range in a drafty old house shivering because the wind just will come in. Maybe that is just as it should be, but I do not think so, for surely farmers and their wives perform as great a service as do even United States Senators, and are entitled to a wage that will at least give them a decent comfort.

I hope that you will give a thought to the dairy farmers of your State. You cannot help us alone, of course; but surely there must be some way that we, too, can make a living wage, and by that I mean a wage that will include a little medical and dental care. There are five children in my family, none of whom have ever been to a dentist, and some of them so badly in need of that kind of care. Can you imagine a 10-year-old boy with his double teeth all too far gone to save and some decay on his permanent front teeth?

You can look over our financial statement, and if you see any way on earth I can take proper care of these children on that income, I should be glad of your advice. Teeth, tonsils, adenoids, sinus—all these things must wait until we get a fair return for our labor.

I am getting desperate. If we were numbered amongst the poor, our children would have these defects taken care of; but we are merely farmers, and must help pay the bill for the poor to the tune of nearly $20,000 in our county last year, while our own go without because we cannot pay.

Health is of the first importance, and after that, to my mind, comes the home; and that should be something more than just a place to get in out of the rain. In our house there are not beds enough for the family, nor bedding enough for the beds we do have; and still they plow up the cotton because of a surplus.

I should like an opportunity to use up my family's share of that surplus. Why, I would even have more than two house dresses at one time and blankets and sheets and mattresses for the beds. It makes me dizzy to think how much of that surplus we could use just for necessities, or, if those things are not necessities for farmers, then for the sake of decency. * * *

Mr. President, I ask unanimous consent to have this lady's financial statement incorporated at this point in my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Financial statement, 1933

29,712 pounds milk, average test 4.9; fat, 1,386.37, average price, 23 cents	$238.89
1,930 pounds cream, average test, 37.59; fat, 736.73; average price, 24 cents	168.07
61 turkeys sold	118.72
1 calf (not veal)	12.60
Silo filling	13.00
Eggs	5.55
Total income from farm (cost of hauling milk and cream not included)	556.83
Loan Regional Agricultural Credit Corporation	275.00
Paid to Regional Agricultural Credit Corporation—June 1933–Jan. 1, 1934	34.69
Rent paid in cash	65.00
Paid on stock and machinery	224.31
Personal-property tax	6.16

Financial statement, 1933—continued

Silo	$47.50
Share in wood saw	5.00
One half ensilage cutter	20.00
Horse and cow feed	22.83
Turkey and chicken feed	47.19
Seed	23.00
Help	12.75
Insurance—stock, $1.72; buildings, $7.75	9.47
Dues, union and legion	4.75
Clothing, family of 7	79.48
Groceries, gas for engine, kerosene, postage, etc	229.70
	831.83

Mr. NYE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. REYNOLDS in the chair). Does the Senator from Wisconsin yield to the Senator from North Dakota?

Mr. LA FOLLETTE. I yield.

Mr. NYE. I am sure the Senator has no intention of leaving the impression that this letter is unusual or that it does anything other than express a situation that is very general throughout the agricultural regions of the country, does he?

Mr. LA FOLLETTE. No, Mr. President. I brought it over with me to the Senate Chamber this morning because it seemed to me that it bore evidence of being such a sincere and direct statement upon the part of an intelligent woman who is struggling to meet her obligations as a wife and a mother.

Mr. President, it is not possible to describe adequately the situation confronting the dairy farmers of this country. It is not possible to describe adequately the situation confronting the cattle producers of this country. Their plight is desperate. The situation which existed in the State of Wisconsin and in many of the other States in the Central West and Northwest last fall was a clear indication of the desperate condition of our farmers.

I am convinced that the only way in which relief may come to these people is through the adoption of this amendment, and I plead with the Senate to give it favorable consideration.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. THOMAS of Oklahoma. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Couzens	Kean	Reed
Ashurst	Cutting	Keyes	Reynolds
Austin	Dickinson	King	Russell
Bachman	Dieterich	La Follette	Schall
Bailey	Dill	Lewis	Sheppard
Bankhead	Duffy	Logan	Shipstead
Barkley	Erickson	Lonergan	Steiwer
Black	Fess	McAdoo	Stephens
Bone	Fletcher	McCarran	Thomas, Okla.
Borah	Frazier	McGill	Thomas, Utah
Bulkley	George	McKellar	Thompson
Bulow	Gibson	McNary	Townsend
Byrd	Glass	Metcalf	Trammell
Byrnes	Goldsborough	Murphy	Tydings
Capper	Gore	Neely	Vandenberg
Caraway	Hale	Norris	Van Nuys
Carey	Harrison	Nye	Wagner
Clark	Hastings	O'Mahoney	Walcott
Connally	Hatch	Overton	Walsh
Coolidge	Hayden	Patterson	Wheeler
Copeland	Hebert	Pittman	White
Costigan	Johnson	Pope	

Mr. LEWIS. I desire to announce that the Senator from New Hampshire [Mr. BROWN], the Senator from Louisiana [Mr. LONG], the Senator from Arkansas [Mr. ROBINSON], and the Senator from South Carolina [Mr. SMITH] are necessarily detained from the Senate.

The PRESIDING OFFICER (Mr. POPE in the chair). Eighty-seven Senators having answered to their names, a quorum is present. The question is on the amendment of the Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. CONNALLY. Mr. President, I hope Senators will not vote in favor of this amendment. I will say to the Senator from Wisconsin that the original bill takes care of the situation. In the hearings, and by letters to various Senators, the Secretary of Agriculture has made it clear that a part of the program will be to take care of the tubercular-cattle situation. The amendment proposes to add $150,000,000 to the bill; and, of course, I cannot accept or agree to any amendment adding so large a burden to the appropriation.

I hope the amendment will be rejected.

Mr. NYE. Mr. President, in all the years there has been discussion here of the needs of agriculture, I think there never has been so forceful a presentation of a desperate existing need out on the farm as that made today by the senior Senator from Wisconsin [Mr. LA FOLLETTE]. Little can be added—in fact, I think nothing can be added—to enforce the argument he has presented; but if there is sincerity of purpose—and I believe there is—on the part of lawmakers in this body, for Heaven's sake let there be response to the needs of that great element who are so largely dependent upon their industry with beef and dairy cattle.

The Senator from Wisconsin read here an eloquent appeal that was never intended to be such, more than to the individual Senator to whom it was addressed—an appeal that shows a mother, a housewife, a home-maker, revealing how hopeless is the situation in her case—and yet her letter expresses in a very eloquent way only what is true in thousands upon thousands of farm homes today.

With all my heart I hope there will be concurrence in the amendment offered by the Senator from Wisconsin.

Mr. PITTMAN. Mr. President, I am very strongly in favor of the purpose of the amendment of the Senator from Wisconsin [Mr. LA FOLLETTE]. I think he has made entirely clear the situation in his State. I am also, however, very heartily in favor of the passage of the bill presented by the Senator from Texas [Mr. CONNALLY]. It already carries an authorization of $200,000,000—a very large sum in the mind of the Director of the Budget.

The Senator from Texas assures us that a part of this $200,000,000 may be used for the very purpose intended to be covered by the amendment of the Senator from Wisconsin. While I should vote for the amendment if the matter were not otherwise provided for, I fear that if we shall increase to $350,000,000 the amount authorized by the bill the result will be the defeat of the entire measure.

Mr. CONNALLY. Mr. President, I desire to read to the Senator from Nevada a quotation from a letter from the Secretary of Agriculture:

> Money can be used to good advantage in eradication of tuberculosis from dairy cattle. The appropriation can be utilized to provide for more substantial financial assistance to producers than otherwise would be possible at this time.

And other things along that line.

Mr. LA FOLLETTE. Mr. President, I desire to say merely a few words in reply. So far as the tuberculosis-eradication campaign is concerned, my understanding is that the Department does not intend to use more than $15,000,000 for that purpose at the most, and more likely it will be $12,000,000. This will not accomplish the substantial relief provided in the pending amendment.

It is a grave injustice to the States of the Union which have carried on in the past their programs for the eradication of tubercular cattle in conjunction with the Federal Government, and have provided their share of the money to clean up those areas, to now launch a campaign for the eradication of tubercular cattle in States which have not taken advantage of their opportunity. It is worse than injustice to proceed to tax the farmers in States where the eradication program has been carried forward in order to help clean up the diseased cattle in other States of the Union. It is a grave injustice; it is nothing short of an outrage to ask those States where the farmers have taxed themselves to carry on programs for the eradication of tuberculosis in cattle to be now asked to pay a processing tax upon their products in order to clean up tubercular cattle in other States of the Union which have not carried on such programs. Either this program is justifiable on the basis of public health or it is not. It is justifiable on the

ground of public health, and it follows that the expense should be borne by the Treasury.

Mr. SHIPSTEAD. Mr. President, I wish to say a word in support of the amendment presented by the Senator from Wisconsin [Mr. LA FOLLETTE].

There is no branch of the farm industry which has been so much neglected under the so-called "recovery program" as has the dairy industry. The dairy industry feels that the pending bill, as originally introduced, and without the amendment of the Senator from Wisconsin, would not be a drop in the bucket so far as it is concerned. The dairy industry is desirous of being placed in the picture of recovery, if there is to be any recovery.

We have helped the producer of cotton very materially by the payments we have provided, and we have helped the producers of tobacco. It is claimed that we have helped the producers of wheat. In the wheat area there was the greatest drought in half a century, and the price of wheat has gone up to some extent, but is not nearly up to the so-called "parity price" aimed at in the Agricultural Adjustment Act.

For these reasons I hope the amendment of the Senator from Wisconsin will be agreed to.

Mr. WALSH. Mr. President, may I inquire of the Senator whether the amendment has been approved by the Secretary of Agriculture?

Mr. SHIPSTEAD. I do not know.

Mr. WALSH. May I ask the Senator from Wisconsin whether it has been submitted to the Secretary of Agriculture?

Mr. LA FOLLETTE. Mr. President, I cannot answer that question.

Mr. WALSH. Has it been submitted to the Committee on Agriculture and Forestry?

Mr. LA FOLLETTE. No; it was not submitted to the committee.

Mr. WALSH. In other words, the Senator wants an expression by the Senate regardless of the views of the Secretary of Agriculture?

Mr. SHIPSTEAD. The information we now have was not available at the time the bill was before the Committee on Agriculture, so it could not be presented to the committee.

Mr. WALSH. For the Senator's information I may say my inquiry has been answered in confidence.

Mr. VANDENBERG. Mr. President, I am tremendously impressed by the observations submitted by the senior Senator from Wisconsin [Mr. LA FOLLETTE] regarding dairy distress, which deserves and must have relief. But may I confess to a complete daze in respect to the fundamental relief program which is to be pursued regarding basic agricultural commodities and their treatment under the pending bill and the contemporary administration of agricultural recovery measures?

It seems to me that we are attempting to go in a dozen different directions at once. The result may too easily be confusion worse confounded. It invites vertigo rather than victory over a depression. At least to the extent that the eminent Secretary of Agriculture chose an apt phrase as the title of his now famous booklet entitled "America Must Choose", I want to express myself in agreement with him. I speak as one whose record proves an anxiety to cooperate with the President so far as possible. My complaint is that America is not choosing and that the administration does not choose consistent courses.

Here is the situation respecting basic agricultural commodities and processing taxes which now confronts the Senate, and I remind the Senate, as I briefly call the roll of inconsistencies with respect to it, how completely these different proposals pull in opposite directions. I respectfully submit that progress under such auspices is impossible.

In the first place, we have added to the bill as basic commodities certain nonperishable commodities, such as peanuts, flax, and so forth. We have had during the past year a perfectly clear demonstration in respect to cotton that the processing tax does not achieve the purpose which it is supposed to accomplish. It has not succeeded in reducing the surplus. We have almost as much cotton as ever, and it is now recommended that we embrace compulsory acreage reduction. Yet, in the face of this perfectly clear demonstration that the processing tax does not operate successfully in respect to cotton, it is proposed again to extend the field of nonperishable commodities to which the processing tax shall be applied, and again to try the experiment which has already failed its major purpose.

Secondly, we have had experience with the processing tax in respect to hogs. The universal and poignant testimony seems to be that when the processing tax is applied to perishable commodities, or to livestock, the tax is passed on to the producer and becomes an utterly fatal factor with respect to his marketing equation. He, the farmer, pays the cost. Yet, in the face of that experience, that the processing tax in respect to hogs is unsatisfactory and suicidal, it is proposed in this bill to extend the system by applying the processing tax to another perishable commodity, to another element of livestock, to cattle, and inevitably, if there is any analogy, we are threatening the cattle industry as a result. If the present bill gets its $200,000,000 from processing taxes, then the cattle industry may be ruined. If it is a bounty from the Treasury, and the system is logically extended to all other deserving agricultural commodities, then the Treasury may be ruined. America must choose—and the field of choice is not a happy one. But the immediate point I am making is that our administration leadership must choose first, and choose consistently.

Mr. President, my discussion of the first two propositions is not the only phase of the situation which is utterly contradictory. In this bill, upon the one hand, we are adding peanuts, flax, and so forth, as basic commodities, without any appropriation to finance their particular relief. In other words, we are intending to leave it exclusively to the collection of a processing tax to reimburse the Treasury for the investment which is involved. This was the original intent of the bill 1 year ago. Secondly, we are adding cattle, with an appropriation of $200,000,000, but with the apparent expectation that only a portion of the cattle disbursement is to be repaid by a processing tax. In other words, the first group of commodities to which I referred are to stand wholly upon their own financing through a processing tax. The second commodity is to be partially self-financing through a processing tax, and partially not.

Now comes a third commodity which is to be made basic, but it is to be completely relieved from any processing tax and from any self-contribution and is to rely exclusively upon the Treasury for its funds. I am not complaining of the merits of this latter proposition. I am discussing the lack of consistent plan—the fatal lack. I am inquiring what the basic philosophy of our agricultural relief is to be. If we are to proceed in sympathy with this third proposition, namely, to depend upon funds from the Treasury for this relief, then not only the dairy industry but scores of other prostrate agricultural commodities are entitled to precisely the same type of consideration. The prostrate bean industry, for just one instance, in the State of Michigan, is entitled to similar consideration, and Senators will readily testify that numerous other agricultural commodities are entitled to similar treatment. In other words, in the absence of a clean-cut plan of procedure, it seems to me that we are putting together a patchwork policy which is inevitably doomed to failure. Instead it seems to me that America and the administration must choose—and without much more delay.

Nor is this the only inconsistency in the situation. When the processing tax and the basic commodity idea were first discovered by the "brain trust" the theory was that they were to apply solely to commodities with a surplus. Yet now there is pending a proposal for a processing tax and a basic commodity identification for sugar beets, which are, by no remote stretch of the imagination, a surplus crop, either now or hereafter. So that it is proposed to apply the processing tax theory not only to a surplus crop but also to a nonsurplus crop, and we who have a particular interest in sugar beets will find it necessary to be hospitable to the idea solely

because there is linked with it a possible quota protection which might serve in some degree to offset the contemplated damage. Yet the glaring inconsistency remains. Our policy is all things to all men.

Mr. President, the Secretary of Agriculture writes this amazingly candid booklet entitled "America Must Choose", and I want to commend his candor. He gives us three routes which we may follow. One is nationalistic, another is internationalistic, and the third is a middle ground between the two. He approaches the problem from the middle ground with leanings that are frankly internationalistic. I think I would approach the problem from the middle ground with leanings that are nationalistic. But certainly he is right, that America must choose. Not only must America choose, but the administration must choose—and choose first—and the Senate must choose, in respect to the course which is to be pursued regarding relief measures. We cannot continue indefinitely to travel in opposite directions. We cannot survive a perpetual paradox.

I divert long enough to indicate how this same devestating perplexity confronts us upon every front. I comment upon but one of many inconsistencies. The N.R.A. is utterly nationalistic in its genius, its inspiration, its scope, and its net result. There cannot be anything more nationalistic than the N.R.A. It is the climax in nationalism. Yet the proposed tariff bargaining policy, which presently will be at the bar of the Senate, is just as internationalistic in phase and genius and inspiration and objective. The result of the N.R.A.'s operations is to put production costs in the United States up. The result of the tariff bargaining policy will be to drive certain production costs in the United States down. The same old anomaly—simultaneously marching up and marching down the hill.

Furthermore, even if the tariff-bargaining proposition were occasionally to succeed, and a bargain were to be made with some foreign country, I very much doubt whether, under N.R.A. code prices and production costs in the United States, it would be possible for any alien, even though he had agreed to the bargain, to buy anything of us as a result of the bargain, because of our high production cost involved as a result of the N.R.A. operations.

The point I am making is that America must choose, precisely as the Secretary of Agriculture has indicated. It cannot go nationalistic in one moment and in one direction, and internationalistic at another moment and in another direction. Yet that is precisely the incompatible program laid out for us as between the N.R.A. upon the one hand and a lower-tariff program upon the other. America must choose. The administration, speaking for America, must choose. I conclude these general observations on our situation by reading a brief excerpt from the eminent journalist, Mark Sullivan, in this morning's newspapers discussing yet another phase of this failure to choose. I quote:

> To adapt the President's own picture of himself as a football captain, the two goals are in many respects at opposite ends of the field. By yet another figure of speech, the President is like an automobile driver. To revive business he steps on the gas, but the next instant, in order to achieve "social and economic readjustment", he grabs the hand brake. The result is a series of violent jerks, very bad for the machine, and just now creating a delicate situation.

I say this with the greatest respect for the President and a full realization of his terrific difficulties and a free acknowledgment that there is no experience to guide our decisions. I speak as one who wants to help, as my record proves. But I am bound to speak in a plea that we seek one goal at a time.

Now, let me get back to the pending bill. There is a direct analogy between this contemplation of the N.R.A. and the tariff upon the one hand, and the pending consideration in agricultural relief. The processing tax, under the theory of the Agricultural Adjustment Act, is supposed to be passed on to the consumer. Therefore the processing tax is supposed to increase the price of agricultural commodities. Mr. President, if it does increase the price of agricultural commodities, then adequate tariff protection inevitably must remain, and whether it remains or not, there can be no sale abroad of that surplus at the enhanced prices at home resulting from the processing tax. We are constantly pulling in opposite directions with our policies.

As far as my own viewpoint is concerned in respect to essential agricultural reliefs—and a means of effective relief must be found—I am happy to say that the first vote I ever cast in this body, in 1928, was for the McNary-Haugen bill and the equalization fee as a means for caring for agricultural surpluses and for enforced agricultural cooperation and for stabilizing the situation without burden on the Public Treasury. If I dared to make a prophecy, it would be that sooner or later we shall return to the McNary-Haugen theory and the equalization-fee theory of handling the agricultural surplus. We shall return to the agrarian leadership of the distinguished senior Senator from Oregon [Mr. McNARY]. But in the meantime, Mr. President, I submit that America must choose precisely as the Secretary of Agriculture has challenged. But long before America has an opportunity to choose Congress and the administration must choose as to which of these divergent routes shall be pursued.

I submit that it is utterly impracticable and impossible for us finally to approve a measure which proposes a series of contradictory amendments to the Agricultural Adjustment Act, which in three different directions undertake, first, to identify one product as necessary on which to pay a processing tax; secondly, a product which shall partially pay a processing tax and for the balance of its benefit depend upon the Treasury; and, third, that there shall be commodities which pay no processing tax and depend upon the Treasury entirely for their bounty. Thus we renew allegiance to the original principle of a theory that has failed; yet we complicate it with a desertion of its sound fiscal program. Still worse, we are asked thus to proceed without any clear knowledge or information as to what precisely is proposed, as to how the funds shall be used, and as to the net results that may be reasonably anticipated.

Speaking of the measure as a whole, and not the particular dairy amendment now pending, I am utterly unable to approve a measure which instead of simplifying our situation, instead of consolidating our ground, leads us still further into a maze in which our failure to choose the route which we propose to travel invites a greater measure of disaster, instead of an increased measure of relief. I want America to choose.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Wisconsin.

Mr. CAREY. Mr. President——

The PRESIDING OFFICER. The Senator from Wyoming.

Mr. CAREY. I heartily agree with the Senator from Michigan when he intimates that the administration is not consistent. In reading the book America Must Choose, I notice the Secretary states that we might have to eliminate the beet-sugar industry, the wool industry, and perhaps the flax industry. I should like to ask the Senator from Michigan a question. Would it not accelerate the elimination of those industries to put them under the A.A.A. and give them a processing tax?

Mr. VANDENBERG. Mr. President, I suspect it would. In other words, being specific, I should think that if the Secretary of Agriculture wanted to eliminate flax, as he has intimated to be his ultimate purpose, that the simple inclusion of flax in the bill under the amendment which the Senate has just adopted would put flax almost entirely at his mercy. The difference in the case of the sugar-beet situation is that we are proposing, if possible, to protect the use of that power by specific and adequate protections written into the bill itself.

Mr. CAREY. I notice that this book, America Must Choose, is published by the Foreign Policy Association of New York and the World Peace Foundation of Boston. I should like to ask if any Member of the Senate knows whether they are farm organizations or not. I understood the Secretary was representing agriculture.

Mr. FRAZIER. Mr. President, I have looked up to some extent the question as to whom those two organizations represent, and I have come to the conclusion that both of them are adjuncts of the World Court and the League of Nations.

Mr. CAREY. I am surprised. I thought both of them were farm organizations.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Wisconsin.

Mr. COPELAND. Mr. President——

The PRESIDING OFFICER. The Senator from New York.

Mr. COPELAND. I find myself in a strange position, speaking for an amendment to a bill when I am really in opposition to the bill itself. But sometimes a bad bill may be improved by changing it somewhat.

I listened with interest to the statement made a few moments ago by the Senator from Michigan [Mr. VANDENBERG]. He spoke about his attitude toward the McNary-Haugen bill. Personally I share the views that he then expressed. I voted for that bill every time I had a chance to, and voted to pass it over the veto of the President. I have always believed and believe now that that measure has in it a degree of relief for agriculture such as has not been offered by any other proposal.

I rose particularly to say a word about the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE]. He proposes to appropriate $150,000,000 to be used for two or three purposes. The first of these is to aid in the elimination of diseased dairy and beef cattle, including cattle suffering from tuberculosis.

I always hesitate to impose any professional opinion upon the Senate. But I am sure Senators will forgive me for saying that the eradication of tuberculosis from cattle herds is of vital importance to the human family.

Every time we go into a hospital devoted to bone and joint diseases, we see little chaps with hip-joint disease and other joint disease and involvement of the bones. Every one of the children in that hospital is there because he consumed milk contaminated with the germs of tuberculosis.

Bovine tuberculosis is conveyed to the human family, particularly to the children, through milk. Therefore, if we have any real interest in the welfare of the children, we can, through the adoption of this amendment, if the bill becomes enacted into law, do an act of mercy.

My State has spent millions of dollars in the eradication of tubercular cattle. We have several counties in New York where there are now no reactors, no cattle infected with tuberculosis, so far as scientific test will determine. That was done at enormous expense, not alone the expense of making the examinations, the professional service rendered, but also the expense of reimbursing the farmers for the destroyed cattle.

If we could destroy every tuberculous milk animal in the United States, we would do away with bone and joint disease among the children of this country. So I am heartily in favor of the proposal of the Senator from Wisconsin that the appropriation be made for this humane purpose.

I assume that subsection (2) on page 2 was intended to be helpful in reestablishing dairy herds where they have been destroyed, or to take back to the subsistence farms healthy cows. The Senator from Wisconsin proposes that:

> Under rules and regulations to be promulgated by the Secretary of Agriculture, in conjunction with the Federal Emergency Relief Administration, for the purchase and transfer of dairy cows to farms which do not have dairy stock, for supplying milk and milk products for noncommercial family use.

Once more I congratulate the Senator from Wisconsin because of his humane thought in connection with this particular situation.

Then, of course, no one who has any love of humanity could fail to appreciate subsection (3):

> Not to exceed $50,000,000 for advances by the Secretary of Agriculture to the Federal Surplus Relief Corporation for the purchase of dairy and beef products for distribution for relief purposes.

I assure the Senate that bread lines are very long today in spite of all we have done to relieve unemployment. When I walk down Sixth Avenue in my city and see in front of employment agencies the queues of men and women who are seeking work, I know that poverty abounds. So all the purposes set forth in this amendment appeal to my heart; and, regardless of what may happen to the other provisions of the bill, certainly we may well turn aside from those conditions which are purely economic to give consideration for a moment to a measure which has to do with the physical welfare of our people.

Mr. PITTMAN. Mr. President, I should like to ask the Senator a question.

The PRESIDING OFFICER. Does the Senator from New York yield to the Senator from Nevada?

Mr. COPELAND. I yield.

Mr. PITTMAN. I should like to ask the Senator from New York whether or not the tubercular cows are sold for beef; and if they are sold for beef, whether or not the disease is communicable in that way?

Mr. COPELAND. I doubt if the disease would be communicable from the consumption of beef which had been thoroughly cooked, but it violates the aesthetic sense, and every sense of decency that one possesses, to think that these tuberculous cattle should be consumed by the people.

Mr. PITTMAN. Are they being consumed?

Mr. COPELAND. They are not in my State. There diseased cattle are killed by employees of the State and are destroyed, and not alone buried, but lime is added in order that there may be a complete destruction of the carcass.

Mr. PITTMAN. Mr. President, I have no doubt that the Senator from New York is thoroughly familiar with the subject; I accept his opinion on it; and I have changed my mind with regard to how I shall vote on this question.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. REYNOLDS. Mr. President——

Mr. McKELLAR. Mr. President, if we are to vote on the amendment, I think we ought to have a full Senate present; and I suggest the absence of a quorum, unless the Senator from North Carolina wishes to speak.

Mr. REYNOLDS. I wish to make a few observations.

Mr. McKELLAR. Very well; I will withhold the motion to enable the Senator from North Carolina to do so.

Mr. REYNOLDS. I thank my friend, the Senator from Tennessee.

Mr. President, I have listened with unusual interest to the statements which have been made on this floor today by the senior Senator from the State of Wisconsin [Mr. LA FOLLETTE]. I have been interested because I have been impressed with the fact that, as evidenced by his address to this body, he has not only spoken in behalf of the American people as a whole, but he has spoken on behalf of the children of this land, as suggested by the able Senator from the great State of New York [Mr. COPELAND]. I have been interested further because every State in the entire Union unquestionably must, if not now, then sooner or later, interest itself in the great problem of wiping out and eradicating disease from the cattle and other domestic animals of all kinds in this country of ours.

There is hardly a State in the Union today that has not appropriated immense sums for the eradication of tuberculosis. In my State of North Carolina I am fortunate, indeed, in being able to proclaim to this august body that the cattle are not as generally affected there as they are in other States; but, at the same time, the western portion of that great State, from which the junior Senator from North Carolina comes, is a mountainous section where a great dairying industry is conducted. As a matter of fact, it is one of the chief industries of that section of North Carolina, as is well known to my friend the senior Senator from the State of Illinois [Mr. LEWIS]. The people in that dairying section of my State, as in every other dairying section throughout the United States, are vitally interested in eradicating this terrible disease. I can see no reason against an appropriation by our Government, not only of a hundred

million dollars, but I believe that every man who sits within the sound of my voice would be glad to vote for an appropriation of 10 times $100,000,000 if he felt that by so doing the expenditure of that immense sum would forever after wipe that dreaded disease from the face of North America.

I am only sorry that every single Member of this body was not here a few moments ago when the able Senator from the State of Wisconsin brought to the attention of those who were present a letter from the wife of a farmer in his State, a letter that appealed to me as coming from the heart of an honest hard-working woman. How greatly I was impressed. I shall never forget when she said, to paraphrase her words, "I only wish it were possible for my Government to give to me just my portion of all the cotton and of all the foodstuffs in the form of corn or wheat and rye, which the Government has destroyed by plowing up thousands upon thousands of acres of land which had been planted and cultivated. If that were possible, in all probability, I could be the proud possessor of two cotton dresses."

Some may probably feel that an appropriation of $150,000,000 will increase the production of this industry, will bring about a greater production of milk, of cream, of butter, and of cheese. That is a silly idea, for the very reason that in this country of ours we have never yet experienced overproduction. Since the creation of this, the greatest nation of all the earth, much as we have had, we have never had too much. It has never been a question of overproduction; it has been a question of underconsumption. That is the trouble.

I am sometimes almost nauseated when I hear people say that the trouble in this country today is overproduction. It is not overproduction; it is underconsumption; and our products are not consumed because the people have not the money with which to buy them. In this land of plenty, in this land of 120,000,000 people, there are today millions who are actually undernourished; there are today many thousands who really are slowly starving because they are not properly nourished. It is a question of underconsumption.

If Senators for a moment can pause and envision in their respective minds a hand sufficiently large to grasp within its palm all the wheat and all the corn which could be utilized in the making of flour and the making of corn meal, and then go further and envision the arm that holds that hand and picture it swinging around that immense head and scattering that wheat and that corn from the blue waters of the Atlantic to the Golden Gate of the Pacific, and from the heavily timbered forests of Michigan to the old pine-clad slopes of Florida or the plains of Texas, spreading a great sheet of grain stuffs all over this country from one end of it to the other, and letting that grain spiral downward to find its way into every house in this country where, hovering around the firesides, are men and women, mothers and fathers and children, who are hungry and in some cases actually starving—every bit of that overproduction about which we hear so much would be consumed within a week's time.

Overproduction! There is no such thing as overproduction; it is underconsumption. As I stand here and look at my noble friend from Texas [Mr. CONNALLY], the great cotton-growing State of the country, I am reminded again of that poor woman in the State of Wisconsin who wrote the pathetic, heart-rending letter in which she said that she only wished that she was the possessor of two cotton dresses. Yet we hear it said that we have overproduction!

If, again, Senators can envision in their respective minds that immense hand sufficiently large to grasp within its palm every single hat and coat and pair of pants and red underwear and all the farm machinery and all the automobiles and the tires in the country, and picture that hand swinging around that gigantic head, scattering that "overproduced" stuff throughout the length and breadth of this land, letting it fall into the farmyards and into the back yards of the people living in the cities and towns, where there is dire need and actual want—there would not be a thing left on the shelf of a store; there would not be a thing left in a factory in this country. The trouble is that we have underconsumption, which is attributable to the fact that the people have not the money with which to buy.

When I heard the Senator from Wisconsin speak a while ago of a certain paragraph of the amendment which he has submitted calling for the expenditure of several million dollars to supply to homes and to the farmers milk cattle where none may be found at this time, it reminded me that the fortunate people residing in this country today are the ones who are the possessors of small tracts of land on which the taxes are low—if such a place may be found anywhere within the confines of the 3,200 counties of this country—the man who has a roof over his head, the man who has a well or spring from which to draw water, the man who has a small patch of woods from which to cut his fuel, the man who has a good old-fashioned kindly faced milch cow to provide milk and butter and cream and cheese for his children. I would that it were possible for the Government to provide every family in the United States, in a position to care for it, with a milch cow for the children, a milch cow for the home. Nothing could be better; nothing would tend more toward bringing millions upon millions in the cities to the farming lands.

Eventually there will have to be a back-to-the-land movement. Our cities, like the cities in continental Europe and in Asia, are overcrowded. The greater portion of the suffering being experienced in this land of plenty, and all over the earth, is being experienced by the millions in the great melting pots, such as New York, Chicago, St. Louis, London, Paris, Moscow, Leningrad; and the world itself will eventually arrive at the time when there will be a back-to-the-land movement.

Insofar as the junior Senator from North Carolina is concerned, he is going to support the amendment offered by the senior Senator from Wisconsin [Mr. LA FOLLETTE] for the reasons stated by himself and for the reasons stated by that great representative of the people, the senior Senator from New York [Mr. COPELAND].

Mr. McKELLAR. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Couzens	Kean	Reed
Ashurst	Cutting	Keyes	Reynolds
Austin	Dickinson	King	Russell
Bachman	Dieterich	La Follette	Schall
Bailey	Dill	Lewis	Sheppard
Bankhead	Duffy	Logan	Shipstead
Barkley	Erickson	Lonergan	Steiwer
Black	Fess	McAdoo	Stephens
Bone	Fletcher	McCarran	Thomas, Okla.
Borah	Frazier	McGill	Thomas, Utah
Bulkley	George	McKellar	Thompson
Bulow	Gibson	McNary	Townsend
Byrd	Glass	Metcalf	Trammell
Byrnes	Goldsborough	Murphy	Tydings
Capper	Gore	Neely	Vandenberg
Caraway	Hale	Norris	Van Nuys
Carey	Harrison	Nye	Wagner
Clark	Hastings	O'Mahoney	Walcott
Connally	Hatch	Overton	Walsh
Coolidge	Hayden	Patterson	Wheeler
Copeland	Hebert	Pittman	White
Costigan	Johnson	Pope	

Mr. LEWIS. I beg to announce the absence of the Senator from Arkansas [Mr. ROBINSON], the Senator from New Hampshire [Mr. BROWN], the Senator from Louisiana [Mr. LONG], the Senator from South Carolina [Mr. SMITH], and the Senator from Utah [Mr. KING], all called from the Chamber on official business.

The PRESIDING OFFICER. Eighty-seven Senators have answered to their names. A quorum is present. The question is on the amendment of the Senator from Wisconsin.

Mr. LA FOLLETTE. Let us have the yeas and nays.

The yeas and nays were ordered.

AIR-MAIL CASUALTIES

Mr. FESS. Mr. President, I send to the desk a copy of the Washington Times of this afternoon and ask the clerk to read the item which I have marked.

The PRESIDING OFFICER. Without objection, the clerk will read, as requested.

The Chief Clerk read as follows:

[From the Washington Times of Mar. 9, 1934]

TWO MORE DIE AS MAIL PLANES CRASH—TOLL UP TO EIGHT AS STORM AND BAD ENGINE TAKE LIVES; TWO IN SHIP SAVED

Two more Army flyers crashed to their deaths today, bringing the total dead since the Army took over the job of flying the mail to eight, as the Senate Post Office Committee and the Black air-mail committee met here to draft a new bill returning the mail to private carriers.

First Lt. Otto Wienecke crashed in a heavy snowstorm near Chardon, Ohio. He was 4 hours late and was believed to have lost his way in the terrific storm.

The second casualty was at Daytona Beach, Fla., where Sgt. Ernest C. Bell was crushed to death when a heavily laden plane went into a spin at 500 feet shortly after taking off.

Two other flyers in the plane, Lt. W. M. Reed and Radio Operator Floyd Marshall, escaped with minor injuries.

The committees here met behind closed doors to draft a measure in conformity with the President's recommendations that the mail be returned to private carriers under rigid safeguards. Open hearings will be held later.

Mr. FESS. Mr. President, I have had the news item read in order that I might express the hope which is in the hearts of most of the millions of Americans that the air-mail business be discontinued at least until some arrangement can be made that will indicate more safety than now is assured. I hope that the Postmaster General, who said in the hearings when the matter was before the committee that he did not feel he had any right to take into consideration the question of the loss of life, will change his attitude and that, by order of the President, he will return the carrying of the air mail at once to safe channels or else discontinue the service entirely until other arrangements can be made. That is the only reason why I had the item read.

Mr. LEWIS. Mr. President, will the Senator from Ohio state to the Senate in what way he would suggest that the mail be taken away from the present carriers at this particular time? What is the suggestion of the Senator?

Mr. FESS. My suggestion, if the cancelation of the contracts cannot be withdrawn, is that we stop having the mail carried in the air for the time being, until some other arrangement can be made. I think the Senator will agree with me that mail service in the air is not sufficiently important to justify the sacrifice of human lives in this way. That is the only suggestion I have to make.

Mr. LEWIS. Did the Senator bring forth that newspaper item and have it read, and make the suggestion he has made, with a view of reflecting on the administration as having done something wrong in this particular connection, or for the purpose of intimating that the unhappy death of these victims may be imputed to the administration?

Mr. FESS. I do not need to bring forth anything to reflect upon the administration for its inhuman and un-American and indefensible conduct in changing the method of carrying the mails without first giving a hearing to both sides of the issue. I know that the Senator is a lawyer of great standing, and I have no doubt he will agree with me that every person charged with an offense has the right to be heard before punishment is visited upon him. If so, then what was done was un-American, from my standpoint.

Mr. LEWIS. Then, what the Senator from Ohio is really doing is seeking to return to the administration of Mr. Brown, or, in the language of the bard, he is "still harping upon my daughter"?

Mr. FESS. Mr. President, I should be very glad to return to Mr. Brown the administration of the mail service, which certainly would be far more creditable than what is being done now.

Mr. LEWIS. And the presumption is, I take it, that by having this article read the Senator indicts the present administration with responsibility for these unfortunate calamities?

Mr. FESS. Why, of course.

Mr. LEWIS. Intimating that had Mr. Brown been in control, these lives would have been saved?

Mr. FESS. I am not making that assumption. That is obvious. That is axiomatic.

Mr. LEWIS. In other words, it is obvious that had Mr. Brown remained in power these accidents would not have happened?

Mr. FESS. Certainly not.

Mr. LEWIS. I assume it is very natural that the Senator from Ohio should make that observation; and I call attention to the fact——

Mr. FESS. If the Senator desires to go into that, we will spend the remainder of the day on it.

Mr. LEWIS. We are in it now by the action of the Senator from Ohio.

Mr. FESS. All right; then, I will take the floor for the remainder of the day.

Mr. LEWIS. It is to be deplored that 13 unhappy individuals have met the misfortune of death in flights conducted by private concerns that had nothing to do with the mail and which we must ascribe in a great degree to unfortunate atmospheric conditions; but I count it as quite unbecoming the eminent Senator from Ohio that he should have this article read today for the purpose of leaving before the country the reflection that the present administration is responsible for these deaths, and should seek, in the adroit manner which he has adopted—which, I assure him, is less skillful than he assumes—to create a political issue, or bring a charge against the administration by leaving the impression that it was responsible for the unhappy calamities which have been recited.

I ask the Senator, does he not now remember that but a few days ago——

Mr. FESS. Mr. President, I do not yield further.

Mr. LEWIS. The Senator is not yielding. I am holding the floor.

Mr. FESS. The Senator is not holding the floor. I have the floor.

Mr. LEWIS. Then I should, in view of the conduct of the Senator from Ohio——

Mr. FESS. I have the floor.

The PRESIDING OFFICER. The Senator from Ohio is entitled to the floor.

Mr. LEWIS. Then I ask the Senator if he will yield to me.

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Illinois?

Mr. FESS. I will yield to the Senator, but not for a speech.

Mr. LEWIS. How can I inform the Senator, and enlighten him, except by that method?

Mr. FESS. The Senator from Illinois has no ability to inform the Senator from Ohio. The Senator from Illinois is simply dealing in words; that is all.

Mr. LEWIS. I did not quite hear the Senator. Will he make himself definite? What did the Senator say?

Mr. FESS. I said that a multiplicity of words without thought is not information.

Mr. LEWIS. The Senator has experience in that line, and can speak advisedly. [Laughter.] I was simply endeavoring to express my view of the general disgust I know all will feel when we contemplate the purpose of introducing this article.

Mr. FESS. The Senator from Ohio could not debate with the Senator from Illinois very long without experiencing that sensation.

Mr. President, the Senator from Illinois has taken occasion to insinuate that I was introducing this item of information for some other purpose than to call on the administration to stop the legalized murder that is now going on. That is not my purpose alone, but from every section of the country there come telegrams and letters asking that the mails be taken out of the air until at least there is some degree of safety assured to the pilots. When the Senator insinuates that the same thing would have occurred if the mail had been carried by pilots skilled in this service and prepared for safe flying, that we would have had the same results we have had when we send Army aviators into the air to do work for which they were not trained and for which they are paying the penalty of the supreme sacri-

fice, he is assuming what everybody here knows is not the fact.

These deaths are occurring not because it is necessary but because Army aviators are sent into the air without properly equipped planes and without sufficient training, when they would not have been required to go had they not been sent on this particular mission.

Mr. McKELLAR. Mr. President, will the Senator yield?

Mr. FESS. That would not have occurred had the mail been carried by men trained in planes equipped for this particular service and equipped to fly through snowstorms. The pilot who fell in a snowstorm at Chardon, Ohio, could not see his way, and he was not flying under the two-way radio beams that would have kept his course correct. He went to his death in a plane that was not sufficiently equipped.

The Senator will get nowhere by saying that the same thing would have happened if the pilot had been in a well-equipped plane, designed for the purpose.

Mr. McKELLAR. Mr. President, will the Senator yield?

Mr. FESS. Mr. President, it is unfair from any standpoint to charge the Army boys with going to their death through lack of skill when they are flying courses and in a service for which they were not trained. They are the most skillful operators of planes in the world for the particular service for which they are trained. No finer example of their skill has ever been given than the flight under General Foulois, involving a magnificent demonstration of flying throughout a full week.

There were 500 planes in the air at once. A great fleet of them went from Detroit south over my own home. It was one of the most magnificent demonstrations that anybody ever saw. Those boys were flying in formation. They were flying as they had been trained to fly. It was announced that almost certainly, with the air filled with planes, some of those Army boys would meet death; but what was the fact? Not a single life was lost, and yet they flew in fleets like flocks of birds. As we watched them, it looked as if they were right close together. It was the most magnificent thing I ever saw.

Those men were trained for that particular kind of flying. They would not have been doing that in a snowstorm, however, or at nighttime. If those same boys had been sent out to do blind flying in planes so equipped as to enable the pilots to keep their course by an announcement to one ear if they should go too far to the right, and an announcement to the other ear if they should go too far to the left, thus enabling them to keep on the course even blindfolded—which our Army planes are not equipped for, but which modern commercial planes are equipped for—there would not have been this loss of life.

When my friend from Illinois asserts that my purpose in making this statement is simply to reflect on someone, I desire to say that I am making the statement of fact that this tragic loss of life is due to the change in the method of carrying the air mail; and the Senator can put the responsibility wherever he pleases to put it. It has to go, I think, to the President.

Now, why do I say that?

Mr. LEWIS. One never knows. [Laughter.]

Mr. FESS. The one who never knows is the Senator who interrupts me. [Laughter.]

Mr. President, I hold in my hand the testimony of Mr. Farley. When he was asked on the witness stand whether he had taken into consideration the possibility of the death of these pilots, did he take the position the Senator from Illinois has taken? He did not. He said that was not his business; that the lives of pilots could not enter into his consideration when he was dealing with this particular problem. He repeated that statement; and I am saying that not only is he responsible, but the responsibility is higher up, for the reason that he said, "I laid the matter before the President, and the President advised me to consult the Department of Justice. We did that, and we made our decision to take the step, and we did not consider either the industry that had been built up, or the effects upon the industry, or the lives of the pilots"; and when he was asked why he did not consider those things, he said he did not think he had any right to consider them.

If the Senator had listened, as I listened, to the testimony of the Postmaster General, and then had refreshed his mind, as I have done, by reading the transcript of his testimony stating that he did not consider that he could take these things into consideration, the Senator would understand why, having read about the accident resulting in the death of 2 other pilots of the Army, bringing the total number to 8, I have raised the question.

Will not the President, by the issuance of an Executive order, take the mail out of the air until at least we can make some arrangement under which there will not be the necessity of a useless sacrifice of life? That is the purpose for which I had the article read, in the hope that the Senator himself would be willing to join me and say that at least the mail should be taken from the air altogether, and if it cannot be turned back to the same companies, let the carriage of the mail through the air be suspended until companies can be equipped to do what seems to be necessary.

Mr. LEWIS. Mr. President, will the Senator allow an interruption, or does he prefer to have me wait until he shall have concluded, when I can take the floor?

Mr. FESS. I will do just what the Senator wants.

Mr. LEWIS. I would not want the Senator to yield with that understanding, for there would be nothing left of him.

Mr. FESS. I would be very glad to be the victim of the Senator. I think I would enjoy it.

Mr. LEWIS. Possibly the Senator would. I cannot say that the Senator would not enjoy it, because I think too much of him to visit anything on him that would cause him pain.

Mr. FESS. That is mutual.

Mr. LEWIS. The Senator tells the country that the Postmaster General, in his presence, according to the testimony he read, said he was powerless to make a change such as the Senator says, in his judgment, should be made. I ask the Senator, in view of what he has said was his understanding, what steps has the Senator from Ohio taken to obtain information or to ask of the President any aid, or what steps has he taken with a view to remedying these conditions? Why has he waited this length of time, during which these accidents could happen from atmospheric disturbances, and here in this public body attempt to ascribe those things to the administration, when from his position his complaint could have been addressed to the President of the United States or to the Postmaster General for action? What excuse has the Senator for this parade of theatricals we have heard this afternoon?

Mr. FESS. Any request I might have made to the President of the United States would not have had any effect on the smearing campaign that has been followed by the administration in attempting to blacken the reputation of a former administration. I am not such a fool as to expect that the President would pay any attention to any request I might make that this thing should stop.

Mr. LEWIS. Of course, the President is a wise man and would not pay attention to some people. [Laughter.] But I ask the Senator again whether he took any step whatever; and if he did not, how can he admit to himself such conduct as comporting with his solicitude where, seeing the situation and the possible danger, he makes no effort, either by word or by action, to avoid it, and not until now, when he may get some political advantage to himself or to his party, does he make this public assault and slander upon the President of the United States?

Mr. FESS. Mr. President, that is an innocent statement. I admire the innocency of the Senator from Illinois. All that took place was in the committee. Mr. Farley, the Postmaster General, was before the committee. He was asked what he was going to do. He had no suggestion to make as to what he was going to do. We have no suggestion up to date, except in the letter from the President and the bill introduced today looking to a return to private enterprise equipped to perform this work in safety. There is not an

iota of reason for having that legislation. All they propose to do could be done under existing law without any new legislation.

If it is a change of rates that is desired, the authority is found in the Watres-McNary law. If it is elimination or cancelation of any part of a contract that is wanted, they can accomplish it under the law. The only thing that can be required under the existing law is that when a contract is changed or canceled the other party must be given 45 days in which to have a hearing. But the administration did not grant 5 minutes to the companies before canceling all the contracts, with the provision in the law that a contract can be canceled at any time, but that the parties shall have 45 days for opportunity to be heard. This action was taken without rime or reason, the most un-American thing I have ever known, and the Senator from Illinois rises and says, "What were you doing in order to rectify it?"

The committee has been at work every day until today, and it seems to me it would have been an imposition upon the committee for anyone else to take the matter up with the President, when the President himself had ordered this action, as was testified by the Postmaster General.

Mr. President, I think I will take the time to read the testimony of the Postmaster General. I had not intended to do so, but it is so very important that I think I will read it.

Mr. LEWIS. Mr. President, will the Senator yield to me at this point?

Mr. FESS. I yield.

Mr. LEWIS. If I understand the Senator in his last declaration, his solicitude is not so tender for the unhappy misfortunes and the loss of the lives of those to whom he has alluded; it has now gotten back to its original purpose, the rescue of those who had the private contracts, who had obtained them by fraud, and were enjoying them in crime, and the Senator wanted them to have 45 days more of enjoyment in looting the Treasury.

Mr. FESS. The Senator is a distinguished lawyer——

Mr. LEWIS. Sometimes. [Laughter.]

Mr. FESS. Always, except when he is playing politics in the Senate Chamber.

Mr. LEWIS. How could the Senator know that?

Mr. FESS. When he is in a courtroom he stands very high, not only in the opinion of his associates but of those who read about the utterances of the great lawyer.

Mr. LEWIS. I thank the Senator. Some day I will say something equally nice of him, and we will leave it there. [Laughter.]

Mr. FESS. Yet, Mr. President, in the face of that, he assumes that the conduct of the Postmaster General is warranted when he cancels a contract without one word of evidence on the part of those who have been injured, though he knows that the meanest criminal on the face of the earth, if he is a citizen of the United States, is entitled to his day in court. But here an industry in which $300,000,000 of invested capital is involved, in which hundreds of American citizens have their all invested, employing 22,000 of the best-skilled pilots and personnel that ever sat at a wheel in an airplane, by one fell stroke is struck down, a verdict without trial, a conviction without those interested being permitted to make a defense.

Without a word of explanation they are stricken down on an allegation of fraud, with no willingness to have the statement of fraud refuted, and it is all to be done at the cost of a great industry and at the cost of human lives, and then, when the man in charge is called upon, he says, "That was not to be considered. I did not think I had any right to take that into consideration." I do not want to be unkind to Postmaster General Farley.

Mr. LEWIS. It is not a question of being unkind. Will the Senator be just?

Mr. FESS. I will be. I will be more just than the Senator is when he is defending an unjust performance, as he is now defending one.

Mr. LEWIS. Will the Senator insist that if a man is caught looting the Treasury, he must be given 45 days' notice before the policeman arrests him or before he is brought before a court of law?

Mr. FESS. It must be understood whether he is a robber or not.

Mr. LEWIS. It seems to be understood. Many of them confessed.

Mr. FESS. It is understood by the promoters of the smearing campaign, but it is understood by nobody else. The Senator is not getting anywhere standing here and defending an act which he knows is indefensible.

Mr. LEWIS. The Senator from Ohio charges that an act is indefensible because when anything is taken from his friends, those who have been his political allies, it is wholly indefensible however corrupt they may be in their conduct.

Mr. FESS. The Senator would not say that except when he is in a tight place, as he is now.

Mr. LEWIS. Does the Senator refer to the enactment of the prohibition laws when he says a "tight place"?

Mr. FESS. The Senator is now arguing prohibition?

Mr. LEWIS. I should like to prohibit some things, if I could do so.

Mr. FESS. I think the Senator ought to apply his argument to himself and prohibit himself, especially putting a padlock upon the free utterance of statements which he himself, as a lawyer, would not commend in his own practice.

Mr. LEWIS. I say to the Senator I would also commend the doctrine that when one is caught in a crime he should be apprehended as quickly as possible, and that no party affiliation, or arrangement by one who was the beneficiary of a party, should afford him the joy and pleasure of continuing to loot the Treasury for 45 more days, while he destroyed the evidence of his guilt so that he could not be convicted.

Mr. FESS. What is the use of yielding——

Mr. LEWIS. None whatever. [Laughter.]

Mr. FESS. Not a bit, for utterances such as the Senator from Illinois is making. It is absolutely a waste of time.

Mr. BLACK. Will the Senator yield for a question as to two of the figures he gave?

Mr. FESS. I yield.

Mr. BLACK. The Senator made the statement that there were 22,000 pilots engaged in operating the air mail, as I understood him, and $300,000,000 invested in it. May I ask the Senator from where those figures came?

Mr. FESS. Three hundred million dollars is a little below the estimates.

Mr. BLACK. What estimates?

Mr. FESS. It is estimated that $70,000,000 is invested in the manufacture of the airplanes themselves. There is more than $100,000,000 invested in industries producing material for the airplanes. There is at least $160,000,000 invested in private and municipal airports, according to the reports as to air development, published about a year ago.

Mr. BLACK. The Senator, then, did not intend to leave the impression that there was $300,000,000 invested in the transport companies that were carrying the mail?

Mr. FESS. No, no. I am speaking of the industry as a whole.

Mr. BLACK. I do not assume that the Senator meant there were 22,000 pilots carrying the air mail?

Mr. FESS. I will have to refresh my memory on the figures. My statement from memory was that there are 22,000 pilots engaged in the air business. I should want to verify that figure.

Mr. BLACK. In carrying the air mail?

Mr. FESS. No; in all aviation business.

Mr. BLACK. Does the Senator have the figures as to the number carrying the air mail?

Mr. FESS. I think I have; although I do not have them in my mind.

Mr. BLACK. Less than 1,000, is it not?

Mr. FESS. I think all of that.

Mr. President, let me refresh the Senators' minds. I did not intend to make this reference, but the matter has come to the point where I must do it. I want to say again that I

do not desire to reflect upon Postmaster General Farley. I know, as every Senator must know, that the head of a Department cannot be expected to know all the details of the Department. We have all been simply amazed at the detailed information possessed by Postmaster General Walter Brown. The way he carried the details in his mind was to me most amazing as I sat and listened to his testimony. Anyone who will read the transcript of the testimony will recognize that he is possessed of a wonderful store of detailed information concerning the Post Office Department.

Mr. Farley comes to the Post Office Department without any particular knowledge of the business of the Department. I am not criticizing that. He takes over the work of the greatest business connected with our Government, that of the Post Office Department, and whatever is done he has to do; he has to bear the responsibility. Of course, he cannot know all the details. He has to rely upon his lieutenants for them and he has to rely especially upon his counsel. But I admit that when he went on the witness stand and answered the questions asked I felt considerably embarrassed for Mr. Farley, because his lack of acquaintance with the Department of which he was the head was simply pitiable, and people all around the hearing room said, "Is not that too bad?" and so on. When the subject of air mails was reached this is what Mr. Farley said, when Senator AUSTIN asked the question:

Are you familiar, Mr. Farley, with the institution of passenger carriage and express carriage and mail carriage that have been built up in the years before you came into office?

Postmaster General FARLEY. I realize it was quite an extensive service.

Senator AUSTIN. I wonder if you can tell us how many men—that is, unskilled workmen and skilled workmen and office help and others—obtained their livelihood in that institution?

Postmaster General FARLEY. I haven't any idea.

I do not think that is a subject of criticism. People might say he ought to have known, especially if he was going to strike down this industry, how many people would be affected.

Senator AUSTIN. It was a great number, wasn't it?

Postmaster General FARLEY. I would assume so.

Senator AUSTIN. The institution has cost lives of men, sacrificed small investors and investments by large investors, has it not?

Postmaster General FARLEY. I would assume so.

Senator AUSTIN. It was really the most outstanding institution that had come through the depression, was it not?

Postmaster General FARLEY. It was an outstanding institution.

Senator AUSTIN. And by the sudden cancelation of those contracts, without hearing the contractors themselves, you put an end immediately, suddenly, without warning, to a very splendid institution, didn't you?

Postmaster General FARLEY. Well, in view of the facts, I looked upon it as my duty to take the action that I did.

Senator AUSTIN. And didn't you contemplate, when you did that, that in the effort to substitute something for it, suddenly thrown together, that the lives of other men would be put to hazard?

I want the Senator from Illinois to listen to this:

That in the effort to substitute something for it, suddenly thrown together, that the lives of other men would be put to hazard?

Postmaster General FARLEY. We did not give any consideration to that feature of it at that time. We had certain facts before us, Senator, and I felt it was my plain duty, according to the law, to act as I did.

He had before him certain facts alleged, but there never was a chance given to anyone against whom they were alleged to make any statement in refutation, and the Senator, as a lawyer, would never tolerate that sort of practice.

Mr. McKELLAR. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Tennessee?

Mr. FESS. I yield.

Mr. McKELLAR. As I understand, there have now been eight flyers, all told, killed in Army planes. Is that correct?

Mr. FESS. That is what I understand.

Mr. McKELLAR. During the same period there have been two planes which formerly carried mail destroyed and 13 people killed in the destruction of those planes. Is that not correct?

Mr. FESS. Mr. President——

Mr. McKELLAR. Is that correct?

Mr. FESS. The Senator from Ohio is not on the witness stand.

Mr. McKELLAR. I am asking the Senator a question.

Mr. FESS. Mr. President, I will answer it in my own way.

Mr. McKELLAR. Very well.

Mr. FESS. Mr. President, the Senator from Tennessee refers to 2 passenger planes, 1 carrying 8 people, going down in the mountains. He is referring to 2 planes lost on two separate dates, and assumes that the loss of those planes answers the charge that is made against the Government that 8 Army planes have gone down, in which 8 pilots have been killed, and 13 planes have been wrecked, and these planes were wrecked in sections which were not mountainous, most of them being lost between the Atlantic seaboard and Chicago, and none being lost in the mountains.

Mr. McKELLAR. Mr. President, that is not the purpose of my question. The purpose of my question is simply this: In 2 of the planes 13 people lost their lives.

Mr. FESS. Yes.

Mr. McKELLAR. In 8 of the planes 8 people lost their lives. Has the Senator on a single occasion, in connection with the subject of the air mail, called the attention of the Senate publicly to the loss of those 13 lives?

Mr. FESS. No.

Mr. McKELLAR. And has he not continuously harped upon the loss of the 8 lives in the Army planes?

Mr. FESS. No. The Senator is on thin ice there. The lives that are lost through the destruction of the Army planes are lost by the action of the Government. The lives that are lost in the transport planes by private individuals are not lost due to the action of the Government. When the action of the Government is the cause of the death of 8 different pilots on 8 different days, then it becomes a question whether we should not stop it, because it is due to the action of our Government.

The Senator from Tennessee cannot get anywhere by saying that we have not raised our voices in criticism when the two commercial planes fell in mountainous country.

Mr. McKELLAR. Although the two planes formerly carried the mail, and although 13 people lost their lives in the fall of those planes, the Senator does not say a word about the loss of the 13 lives, but confines himself solely to the 8. I may be on thin ice, but I do want to say that I am not in thin air.

Mr. FESS. I am not playing the game that the Senator from Tennessee is undertaking to play. I am calling attention to the useless sacrifice of Army pilots flying in planes not properly equipped, and the Senator must know that we shall be obliged to make a change. I understand—and if I am wrong the press is the source of my error—that the plane flying from Salt Lake City to Cheyenne, in which the eight passengers were lost, was not a mail plane. Even if it had been a mail plane, that service is not on a parity with that which involves our sending the Army flyers out, because we have the control of the Army flyers and we can take them out of the air, as I think we ought to, and it seems to me that the Senator should join with me in the request that they be taken out, especially in bad weather.

Mr. McKELLAR. The Senator said a while ago that in my reasoning I was treading on thin ice. I may be; I do not know; but the Senator is certainly in mighty thin air in the argument he is now making.

Mr. FESS. I am trying to keep the Government out of the air until it is prepared to go into the air.

Mr. McKELLAR. I think the Senator ought to have a little compassion for the 13 people who were killed.

Mr. FESS. I have.

Mr. McKELLAR. I have compassion for all of them.

Mr. FESS. I do not know how far the Senator thinks he has gotten in that statement. He is evidently trying to excuse the responsible government in charge of the Army for the sacrifice of eight of our boys who could not say

"No", because it is not their business to say what they shall do. They are told to do something, and they must do it. The Senator said that sacrifice under that condition is not different from sacrifice under the condition of the two planes to which he calls my attention. Of course, anyone arguing that way is not in a position to accept anything that anyone else may say.

Let me continue with Mr. Farley's testimony:

Senator AUSTIN. Didn't you contemplate when you canceled these contracts that, in the effort to substitute something for it, suddenly thrown together, that the lives of other men would be put to hazard?

Postmaster General FARLEY. We did not give any consideration to that feature of it at that time. We had certain facts before us, and I felt it was my plain duty, according to the law, to act as I did.

Senator AUSTIN. Let me ask you this, Mr. Farley: Did you consider that the people of our country were beginning to appreciate the passenger service and make use of it, and that their use of that passenger service had proved to be beneficial to the Government?

Postmaster General FARLEY. I don't think I had any right to take that feature of it into consideration.

Mr. President, if I interpret aright the statement of the Postmaster General just read, it does not make any difference whether we destroy property or not, it does not make any difference whether we break a contract and cancel it without giving the contractor a chance to be heard, it does not make any difference how many lives we are going to lose by installing an ill-equipped service. That is not our business. I think the Postmaster General ought not to have made that statement.

Senator AUSTIN. Did you in fact consider that during these 4 years of the administration preceding you, the amount of the service, the extent of it, the rapidity of it, and the excellence of it, had increased whereas the cost had been decreased?

Postmaster General FARLEY. I did not take that into consideration at all.

* * * * * * *

Senator AUSTIN. As a matter of fact, whether it was considered or not, you did inaugurate a substitute method of carrying the mails, did you not?

Postmaster General FARLEY. Yes; we did.

Senator AUSTIN. And when did they go into effect?

Then there was considerable lack of certainty as to just what date it took effect, but that is scarcely of any particular value to us at the moment.

Senator AUSTIN. Do you know whether James V. Eastman was killed in the service, trying to substitute something else for this institution which you had put an end to?

Postmaster General FARLEY. If you say that the records show that he was killed in carrying the mail, that is true, but I am not sure as to the name or place.

Senator AUSTIN. Then you don't know whether he was killed on the first day you started or not?

Postmaster General FARLEY. No, I don't.

Then he referred to the falling of the plane that carried eight passengers.

Senator AUSTIN. What do you say as to whether you know three young men were killed in preparation for carrying the air mail?

Postmaster General FARLEY. I regret that those boys lost their lives.

Senator AUSTIN. I know, but were they killed in preparation for carrying the mails?

Postmaster General FARLEY. I don't know whether they were killed in preparation for it, or in carrying it. I haven't the facts before me.

Senator AUSTIN. Did Lt. J. H. Gibson, en route from Middletown, Pa., to Columbus, Ohio, to begin air-mail duties, take to his parachute in a heavy snow storm at Mansfield, Ohio, and his plane crash on February 18?

Postmaster General FARLEY. I do not know whether it is a fact or not.

Senator AUSTIN. Do you know whether Lt. Edward T. Gorman, carrying the air mail from Miami to New York, nosed over and damaged his plane at Greenville, S.C.?

Postmaster General FARLEY. No; I don't know whether that is correct or not.

Senator AUSTIN. Don't you know that Lt. W. E. Thomas cracked a tail skid in landing at Fort Worth and his mail was sent on in another plane February 19?

Postmaster General FARLEY. I am not familiar with the particular incident.

It is difficult, Mr. President, in the light of these questions and answers to believe that the Postmaster General is to be interpreted just as he answered the questions. In other words, the lives of these pilots are not a matter of concern to him. That is not a matter he should take into consideration. He carried out his plan on the ground suggested by the Senator from Illinois [Mr. LEWIS], that the contracts were fraudulent and therefore they had to be summarily dealt with, and that summary dealing would necessitate denying those charged any opportunity to be heard. That is the way in which Postmaster General Farley took his position upon the suggestion and instruction of counsel.

Mr. President, on another occasion, and it will not be long deferred, I propose to take up the question of the legality of these contracts. Every one must admit that there has been no fraud proved as yet. We should not reach a conclusion by an ex parte proceeding. The committee had at its side representatives from the legal department of the Government without cessation at any sitting of the committee, and if there is any fraud involved the Senator from Illinois [Mr. LEWIS] knows that the only way to proceed is to indict the men guilty of fraud. Such a proceeding would afford them a trial where they could be heard. Yet here are 25 companies that by ex parte action, without ever giving them 1 hour to be heard, without an indictment, without a hearing, are charged with fraud, pronounced guilty, and a decision rendered without any trial whatever. That cannot ever be justified.

If the Senator says that the Postmaster General acted because he had no other basis on which to act, then he assumes that there was no possibility of the Postmaster General's being mistaken or in error. I can show, as any Senator here can show, if he will examine the record, that there was no fraud of any sort, and that every act that was performed was within not only the letter but the spirit of the law.

We will take it up at the proper time and see whether the Senator can get away with what he is now alleging, that there was not any right to wait to have these people heard in their defense.

Mr. LEWIS. Mr. President, then may I say, before the Senator takes it up——

The PRESIDING OFFICER (Mr. MCCARRAN in the chair). Does the Senator from Ohio yield to the Senator from Illinois?

Mr. FESS. I yield.

Mr. LEWIS. Before the Senator takes up the subject, which he threatens to take up, I hope he will prepare himself to answer the query I submit to him now: What interest has the distinguished Senator from Ohio in these companies or their welfare or their standing, and what interest has he in the subject matter by which he finds it agreeable to advocate in behalf of these brigands and their brigandage against his own Government and against his own country?

Mr. FESS. I will answer that question now.

Mr. LEWIS. I should like to have the Senator do so; it would relieve his conscience and that of some of his friends.

Mr. FESS. No; it will not relieve my conscience, because my conscience, not like that of the Senator, is wholly guiltless.

Mr. President, I have no interest in any company, and I must confess I know no officer of any company as an officer. I have seen Paul Henderson; I have seen his name; I do not know with which company he is associated. I know Mr. MacCracken, but the only thing I know about him is the foolish mistake he made, which I regretted. However, I know him only as the representative of air-mail companies, but I do not know what companies they are. I do not know the personnel of these companies. I am reading the transcript in order to familiarize myself with the details as to these companies.

Mr. LEWIS. Then I ask the Senator, will he say to the Senate now that he approves of the conduct of these companies as shown by the evidence and the disclosures that have been brought out in the examination?

Mr. FESS. There has not been anything shown by evidence that cannot be refuted, but the refutation has not been permitted.

Mr. LEWIS. Does the Senator approve of what has transpired in connection with these companies as has been shown by the evidence?

Mr. FESS. I do not approve or disapprove until I have both sides furnished me.

Mr. LEWIS. If the Senator has no opinion either way, why does he advocate one side?

Mr. FESS. I am not advocating one side. I am against the advocacy by the Senator of one side; and I am trying to get a hearing for the other side.

Mr. CLARK and Mr. LEWIS addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Ohio yield further; and if so, to whom?

Mr. FESS. I will not yield for a moment. I hope that the way will open so that the distinguished Senator from North Carolina [Mr. BAILEY]—and I mention him because he is Chairman of the Committee on Claims—I hope the way will open for that committee, under the direction of that lawyer, to make an investigation of these contracts and hear the side of the contractors as well as the side which has been promoted by the committee. If that can be done, I will be thoroughly satisfied.

Mr. CLARK. Mr. President——

Mr. FESS. I yield to my friend.

Mr. CLARK. The Senator just a moment ago made a remark which certainly constitutes a very serious reflection on the special committee investigating air-mail contracts, if it be true.

Mr. FESS. What was that remark?

Mr. CLARK. The Senator from Ohio said that an opportunity for the refutation of these charges had been refused.

Mr. FESS. No.

Mr. CLARK. If the Senator knows anything——

Mr. FESS. I have not said it was refused.

Mr. CLARK. I think I am quoting the Senator verbatim. If the Senator knows anybody who has tried to testify before that committee in connection with any of the air-mail companies who has been refused an opportunity to testify, I should like to have him name him.

Mr. FESS. Mr. President——

Mr. CLARK. If the Senator will permit me just a moment longer, it is exactly the same proposition that the Senator from Ohio attempted to get away with here about 3 or 4 weeks ago, when he came in and said that Postmaster General Brown had been refused an opportunity to testify. The Senator——

Mr. FESS. Mr. President, I do not yield further.

Mr. CLARK. The Senator came in and made the remark——

Mr. FESS. I do not yield any further.

Mr. CLARK. Very well. I will speak in my own time when the Senator concludes.

Mr. FESS. The Senator from Ohio did not say that Mr. Brown——

Mr. CLARK. The Senator did say it.

The PRESIDING OFFICER. The Senator from Ohio has the floor.

Mr. FESS. The Senator from Ohio did not say that Mr. Brown had been refused a hearing.

Mr. CLARK. The Senator from Ohio stated—and he was going into it in more detail thereafter—that the committee had been unfair——

Mr. FESS. Yes.

Mr. CLARK. Because Mr. Brown had not been given an opportunity to testify.

Mr. FESS. Precisely; I said that.

Mr. CLARK. And the Senator offered Mr. Brown as a witness; but it was only after 2 weeks, by repeated jabbing on this floor, that the Senator finally got desperate and actually produced Mr. Brown.

Mr. FESS. The Senator from Missouri is entirely in error when he says that I said that Mr. Brown had been refused a hearing; I said nothing of the kind; I said that the committee had not proceeded fairly toward Mr. Brown by not calling him here when they were making charges; that he was the one man who had all the facts and could give them the facts if they would only give him a chance. It was on that occasion that the chairman of the committee said, "We will be very glad to hear Mr. Brown any time he signifies a desire to come, provided he waives immunity." He did not use that expression, but that is what he meant. Then I said, "We will see whether or not we cannot get him here at once." That was on Friday, and Mr. Brown was here on Monday.

Mr. CLARK. But, Mr. President, if the Senator will yield, the first complaint of the Senator from Ohio as to the appearance of Mr. Brown was made about 2 weeks before the incident of which he now speaks, and after there had been repeated references in this Chamber to the fact that Mr. Brown had not appeared. The CONGRESSIONAL RECORD will bear me out in that statement.

Mr. FESS. That is all right. Mr. Brown had not appeared, but the Senator said that I said the committee had refused to hear Mr. Brown.

Mr. CLARK. That was the plain inference of the Senator's remark.

Mr. FESS. Oh, no; it was not. For me to say that the committee had refused to hear Mr. Brown, when I do not think that the committee had ever said anything about it, would be totally unfair and untrue.

Mr. CLARK. The Senator may, if he wants to do that, stand on the statement which, as I recall exactly, was that Mr. Brown had not been given an opportunity to testify——

Mr. FESS. That is it; I said that.

Mr. CLARK. To which I rejoined that naturally the committee did not want to grant Mr. Brown immunity; and when the Senator from Alabama was asked the direct question as to whether Mr. Brown ever had had an opportunity to testify and been refused, he made the explicit statement that Mr. Brown had never offered to testify and, therefore, had never been refused an opportunity to testify. Then the Senator from Ohio came back and said he had not intended to draw that inference, which is obviously the only inference which could be drawn from his remarks.

Mr. FESS. I think the Senator from Missouri is now stating the situation as it is; but he made the statement that I said that the committee had refused to hear Mr. Brown, and now he says that what I said was an inference that the committee had refused to hear him. I want to say to my friend that I never meant that as an inference. I knew that the committee had never invited Mr. Brown. That is one thing that I disliked. I wanted them to invite him, because I knew Mr. Brown would give the information they needed; and I complained when it was whispered that he was not going to be subpenaed on the ground that he would not waive immunity. There never was a more insulting reference—it was not meant to be—that Mr. Brown would not come down here unless he was subpenaed. Mr. Brown has nothing to conceal. Everything that Mr. Brown did——

Mr. CLARK. If Mr. Brown has nothing to conceal, why did he burn the records?

Mr. FESS. Mr. President, he burnt no records; that is another innuendo; that is another rumor.

Mr. CLARK. I will say to the Senator that that is not intended as an innuendo, either.

Mr. FESS. What is not so intended?

Mr. CLARK. My remark that if Mr. Brown had nothing to conceal, he would not have burned the records.

Mr. FESS. Mr. Brown burned no records, and the Senator cannot prove that he burned any records. Mr. Brown stated that he did not burn any records. Why does the Senator stand here and say that he burned records?

Mr. CLARK. Mr. Brown's own employee stated that he burned records under Mr. Brown's direction.

Mr. FESS. After he said that he stated that they made him say that, that he did not mean to say that.

Mr. BLACK. Who said that?

Mr. FESS. The same man, Mr. Maher.

Mr. BLACK. To whom did he say that?

Mr. FESS. He said that to Mr. Brown.

Mr. BLACK. The Senator says that because Mr. Brown makes a statement——

Mr. FESS. And Mr. Brown testified to it on the witness stand.

Mr. BLACK. If Mr. Brown stated that under oath, that might have convinced the Senator. Mr. Maher says under oath that that is false.

Mr. FESS. Maher says that is false?

Mr. BLACK. Yes. I have his affidavit, if the Senator wants to see it.

Mr. FESS. A man who is in the employ of the Democratic National Committee probably would say that.

Mr. BLACK. That is the way the Senator feels because of his intense partisanship, but the Senator has made a statement on the floor that as a fact Mr. Maher has stated that he swore that he was directed to burn those papers because he was made to do it. That is not true; and, in addition to that, Mr. Brown does not deny, and did not deny on the stand, that he gave the instructions to destroy certain papers. The issue was whether he gave instructions to destroy personal papers or official papers. Mr. Brown did not deny—and the Senator knows that he did not deny, because the Senator was there—that he gave instructions to destroy those particular papers, which he said were personal. The issue was between Mr. Brown and Mr. Maher as to whether or not they were personal or official.

Mr. FESS. Mr. President, I am not going into any of these details which are not covered by the testimony.

Mr. BLACK. The Senator has been doing it.

Mr. FESS. The testimony is here, and the Senate is going to have an opportunity to hear all the testimony that was given by Mr. Brown. He gave it before the committee, and the Senate is going to hear it read from my place here before we get through with it. Mr. Brown said nothing of the sort that the Senator from Alabama states he said.

He said that he asked Mr. Macpherson, his personal secretary, to go over his personal file and to take out the papers that were purely personal, and he asked to have them placed in a box. Mr. Brown never saw that box and Mr. Macpherson had charge of it. As to what was to be done with the papers, Mr. Brown does not state that he ordered them destroyed, and especially there was not any statement that they were to be burned. Mr. Brown's testimony is of record and it will be read here when the time comes to read it.

I did not intend to get into anything of that sort. There will be plenty of time for us to do that later on. What I wanted to do at this time was to call attention to the useless sacrifice of American Army pilots in flying the mail, and when I did that the Senator from Illinois took offense and stated that I had not any purpose except to reflect upon the administration. My purpose is to call the attention of the American people to a condition which ought to be discontinued. That is as far as I had intended to go in this matter, and I should think that the Senator from Illinois would be willing to join me in the request that until we have equipped planes and pilots trained to fly the radio beam, and under the two-way radio system, we ought to take the Army out of the air-mail business.

Mr. McCARRAN. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. THOMAS of Utah in the chair). Does the Senator from Ohio yield to the Senator from Nevada?

Mr. FESS. I yield.

Mr. McCARRAN. Will the Senator subscribe to the principle that a fraudulent contract should never be tolerated by the American Government?

Mr. FESS. What is the question?

Mr. McCARRAN. Will the Senator from Ohio subscribe to this principle, that a fraudulent contract should never be subscribed to by the American people after the fraud is discovered?

Mr. FESS. After the fraud is proved, no.

Mr. McCARRAN. After it is discovered?

Mr. FESS. After the fraud is proved. When the Senator says "after the fraud is discovered", he means to infer that after the discovery of the fraud, there is to be no chance to have it disproved as alleged. If the Senator would say, "Does the Senator from Ohio subscribe to the principle that a fraudlent contract should not be tolerated by the Government", I would say, "Yes; absolutely", but before the contract is canceled I would want to have the fraud established, and it cannot be established when only one side is heard.

Mr. McCARRAN. Mr. President, when the fraud is admitted by those who entered into it, would the Senator then consider that it was established by prima facie evidence?

Mr. FESS. No; I would want to know what the purpose was on the part of those who made the admission. That is very obvious here. Some people would be very glad to be favorably considered in the new administration, in the awarding of new contracts, and very likely it would be easy for them to assume that some interpretation in a matter admitting of difference of opinion might give them a chance if they joined the administration's forces. When a man admits there is fraud, I want to know just what the admission is, and what is back of the admission.

Mr. President, I have said about all I wanted to say at this time about the air mail.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. FESS. I yield.

Mr. CLARK. The Senator accused me a moment ago of misquoting him when I said that the Senator had stated that the committee had declined to permit Mr. Brown to testify. I would like to call the Senator's attention to page 2107 of the RECORD, near the top of the first column. The Senator is quoted in the RECORD in this way, following a remark by the Senator from Tennessee [Mr. McKELLAR]:

> Mr. President, it is that sort of thing that I resent. Everything is innuendo; everything is rumor.

Mr. FESS. I said that.

Mr. CLARK. The Senator continued:

> It is unfortunate that this body will permit a committee to operate like a grand jury in investigating a matter of great interest and decline to call the one person who has information.

Mr. FESS. Yes. I can see that when I say the Senate committee "decline to call", that might be interpreted as indicating that I meant they declined to give an opportunity to testify on a request to call. I did not say any request was denied.

Mr. CLARK. Mr. President, I thought, after this colloquy on the preceding occasion, the matter had been cleared up. I understood then that the Senator was drawing a distinction between the committee failing to call Mr. Brown and the committee giving him an opportunity to appear. The committee offered Mr. Brown an opportunity to appear, and he did appear. The Senator comes back this afternoon, however, and repeats the statement, or gives the same impression from his remarks, that the committee has refused to allow the air-mail operators to come in and make a defense against fraud charges, when the fact is that the committee has never refused anybody who tendered his testimony an opportunity to appear and testify.

Mr. FESS. No, Mr. President; that is a misconstruction again. What I say is that the mail contracts were canceled without calling these people in.

Mr. CLARK. The Senator did not say without calling them. He said a while ago that the contracts had been canceled——

Mr. FESS. Yes.

Mr. CLARK. Without these people being given an opportunity to come in and prove their case.

Mr. FESS. Precisely.

Mr. CLARK. If they are willing to waive immunity, they can come in and testify any time they want to. I am speaking on behalf of the committee without any authority to do so, but I am sure the Senator from Alabama will back me up in that statement.

Mr. FESS. Mr. President, that is a fine situation. The mail contracts are canceled, the deed is done, the death blow is struck. Now, if they want to waive immunity, let them come in. That is a nice statement. That is a fine justi-

fication of the conduct of the administration. Cancel the contracts, and after it is done then say, "If they want to come in, let them come in."

Mr. CLARK. If the Senator will yield there, it is perfectly obvious that the theory on which the Postmaster General acted was that when fraud was shown, when these men had stood by, with all the damaging testimony brought forward, and had not come forward and volunteered their testimony to the committee, the contracts should be canceled. Certainly the theory of the Senator from Ohio would go to the effect that the contracts should not have been canceled——

Mr. FESS. Certainly not.

Mr. CLARK. Until any party shown to be guilty of criminal fraud had been indicted——

Mr. FESS. Certainly, they should not.

Mr. CLARK. And all the processes of the criminal courts gone through, including an appeal to the highest court to which they had a right to appeal. Then 4 or 5 years from now, after the guilty parties might have been sent to the penitentiary, the Senator from Ohio will be glad to acknowledge the right of the Postmaster General to cancel the contracts.

Mr. FESS. Mr. President, I did not suppose the Senator from Missouri would upon his own responsibility defend the act of the administration in canceling these contracts, but I see he has done so. He is assuming that that is the only thing it could do. I desire to say to my good friend from Missouri that that is an act of this administration from which it will never recover, because it is un-American; it is indefensible; it is a treatment of men in regard to a contract that has never before been accorded to anyone.

The Senator says that frauds were committed, and therefore the authorities had to act instantly. It was not demonstrated that there were frauds. Certain acts were alleged as frauds, but not proved as frauds, and the case was prejudged even before anybody was called.

Mr. CLARK. Mr. President, I do not desire to anticipate the often-promised and long-deferred defense of the validity of these contracts on the part of the Senator from Ohio. I merely desire to say that when he, in his representative capacity, makes on the floor of the Senate a defense of the air-mail companies, which they themselves have been unwilling to make before the committee, we will discuss the matter.

Mr. FESS. I do not wish to anticipate, Mr. President, but I shall be very happy if the way shall be opened for an investigation under the leadership of such a man as the Senator from North Carolina [Mr. BAILEY], the Chairman of the Committee on Claims, of the claims of these people who have been injured by the Government. I am very anxious to have this entire matter gone into in an inquiry in which both sides will be heard when the question of the legality of contracts is under consideration.

Mr. BLACK. Mr. President——

The PRESIDING OFFICER (Mr. DUFFY in the chair). Does the Senator from Ohio yield to the Senator from Alabama?

Mr. FESS. I yield.

Mr. BLACK. The Senator has contended here today—and not only today, but at other times—that the companies have not been heard from.

Mr. FESS. They should have been heard from before the contracts were canceled.

Mr. BLACK. Very well. The Senator has been contending that the companies should have been heard from before their contracts were canceled. I have before me the evidence of the man who was president of the Aviation Corporation of America, and I have before me the evidence of his assistant, both of whom admitted under oath that they had been told by the Postmaster General that they must not bid on a certain contract; both of whom admitted under oath that they were in a meeting where they were not to bid on the contracts. Whom does the Senator wish us to call in addition to the president and his assistants?

Mr. FESS. I desire to have the Senator give a hearing to every man whose contract has been canceled.

Mr. BLACK. Their contract was canceled. Which other member of the Aviation Corporation of America does the Senator wish to have called?

Mr. FESS. I do not even know any of them. I do not know who they are.

Mr. BLACK. From the way the Senator talked, I thought he surely had a familiarity with them.

Mr. FESS. I stated that I did not know any of them.

Mr. BLACK. The Senator has been leaving the inference, here and in other places, that the committee has not heard from the officers of these companies. If the Senator has read the record, he knows that inference is incorrect.

Mr. FESS. The committee heard Mr. Hanshue.

Mr. BLACK. Yes; we did.

Mr. FESS. And the committee heard Colonel Henderson.

Mr. BLACK. Yes; we did. We heard both of them; and we heard Mr. Hanshue admit that he had to sign a contract with another company before he could get a Government contract. He had to take a subcontract with an understanding on his part that if he ever cut his rates below those of another company he would surrender his contract.

Mr. FESS. Mr. President——

Mr. BLACK. Let us get back to the Aviation Corporation.

Mr. FESS. Let me answer the question of the Senator.

Mr. BLACK. The question I asked was with reference to the Aviation Corporation.

Mr. FESS. One at a time. I have the floor.

Mr. BLACK. All right.

Mr. FESS. I will answer the question as to Mr. Hanshue.

The PRESIDING OFFICER. The Senator from Ohio has the floor.

Mr. FESS. Mr. Hanshue's company was flying a route from the Pacific coast to the central part of the United States. The Postmaster General told Mr. Hanshue that he could have a contract if he would extend that route from Kansas City on to New York. He did not want to do it. He was told that if he wanted a transcontinental contract, he could not have it in two parts; that he could not have the east end under one company and the west end under another company; that that would not be a transcontinental route, because when the mail started from New York to San Francisco it would go over the route of one company to Kansas City, and go over the route of another company from Kansas City to San Francisco. It was stated to him that if two companies should control the route, if a plane were late coming from New York, and a plane leaving on another company's line from Kansas City wanted to start with its passengers, it would go before the plane from New York had arrived, and the mail would be a day late.

Mr. CLARK. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Missouri?

Mr. FESS. I have not finished, Mr. President.

The Postmaster General said, "I cannot break a transcontinental route in the middle. It will have to be under one command; otherwise I cannot let the contract." Mr. Hanshue could have extended the route if he had wanted to and then could have bid; but he could not bid when he only owned half of the route. That ruling was made in the interest of the air mail of the country. It was made in the public interest.

Mr. President, that was justifiable; and while Mr. Hanshue did not like it and was told that he would have to merge in order to get the contract, yet it was in the interest of the people of the country in order that they might have an unbroken transcontinental route.

I will say to my friend, the chairman of the committee, that the position Mr. Hanshue took did not appeal to me at all. I thought Mr. Brown was right in regard to the matter, and I would have done the same thing he did.

Mr. BLACK. I do not doubt that.

Permit me to read what Mr. Shaeffer stated. I regret to hear the Senator say that he would have done what Mr.

Brown did; but if he desires to take that burden, all right. Let me read what Mr. Shaeffer said.

Mr. FESS. When I say that I would have done what Mr. Brown did, I desire to tell the Senate the problem that confronted Mr. Brown in building an air map. I state to the Senator that I would have done what Mr. Brown did, and I would not have done what was desired by the fellows who are complaining to the Senator from Alabama. I would take Mr. Brown's views of it rather than the view of somebody who was disqualified to perform the service and therefore was not given a contract. Of course, those fellows do not feel satisfied, and they come in and prejudice the committee against Mr. Brown when what he did was to build a map and an aviation industry that is the pride of the whole world, yet the Senator now is complaining of what Mr. Brown did.

Mr. BLACK. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Alabama?

Mr. FESS. I yield.

Mr. BLACK. The Senator, as I understand, is taking the position that the operators who secured certain contracts, and who have them now, have come before the committee and poisoned the committee against their own contracts. Let me now read what Mr. Shaeffer said.

Mr. FESS. I spoke only of two men.

Mr. BLACK. I wish to read this testimony. Here is the report that he made to his directors.

Mr. FESS. I have read it.

Mr. BLACK. Let us see if the Senator from Ohio approves that.

Before the competitive bid was received for the transcontinental route, Mr. Shaeffer reports to his directors that—

The Postmaster General having indicated that he could and would arrange so that an air-mail contract award would be properly made to the Central Transcontinental, providing the two companies organized for the operation of the service, T.A.T. got together with Western Air Express on a plan to form an operating company on the following basis.

The Senator will remember that Mr. Shaeffer is an officer of one of these companies, and he said the Postmaster General told him before he ever let out the contract to bids that it could and would be awarded to them. The Senator will also recall that the evidence shows that the Aviation Co. made the low bid, and that numerous people were employed to represent them here in Washington.

The Senator will also recall that people were employed to represent the United States Air Line between Denver and Kansas City, which withdrew from this contract and which got a subcontract. They arranged so that they could and did get the contract although they were the high bidder. That evidence came from the officers of the company. The Senator, of course, approves that. Mr. Brown approved it, so the Senator must approve it.

Mr. FESS. Mr. President, the Senator has been quoting from Mr. Sheaffer. Mr. Sheaffer testified one way and Mr. Coburn testified the opposite.

Mr. BLACK. They were two different companies.

Mr. FESS. At least they were not agreed.

Mr. BLACK. Mr. Sheaffer was with the Transcontinental. The Senator will recall the little line that ran from Denver to Kansas City. Mr. Sheaffer was connected with the company that got the award over the low bid of that company. Mr. Coburn, president of the Aviation Corporation, testified that they were present at the meeting and agreed not to bid. Am I to understand the Senator now to say that when we have the admission of the president of the company, that in violation of law they met and agreed with each other not to bid, we should not cancel that contract?

Mr. FESS. The Senator puts a question based upon certain allegations.

Mr. BLACK. Certain facts.

Mr. FESS. If those allegations were true I could definitely answer his question, but I do not want to have a hypothetical case stated and then be asked what I would do about it. What I want done and what I insist will be done is to let not only the Senate, but the people of the country know what was done, and if possible find out why all this fuss in trying to undo one of the most romantic structures that any country has ever seen.

Mr. BLACK. I quite agree with the Senator that there was a great deal of romance in it. [Laughter.] There was romance without any doubt that years hence will be looked upon as one of the sad parts of the romantic history of the country. Is the Senator willing to say now——

Mr. FESS. The Senator believes there is sadness in romance?

Mr. BLACK. I think there is pathos in the fact that in this country there still exists anyone who will ignore fraud and corruption. I think there is sadness and pathos in the fact that people will drag into the debate here the death of individuals when they happen to believe that it is to the interest of their party to try to cover up the record and conceal fraud and corruption and crime. Yes; I think there is sadness and pathos in that. Does the Senator think and is he willing——

Mr. FESS. Mr. President, I decline to yield further.

The VICE PRESIDENT. The Senator declines to yield further.

Mr. FESS. Mr. President, there is no more sadness and pathos in calling attention to unnecessary sacrifice caused by the effort on the part of the Government to do a thing in one way that ought to have been done otherwise than there is sadness and pathos in an effort to smear a prior administration by charges of the most flimsy character that have ever been made in public. All those charges will be shown to be flimsy and without a scintilla of fact behind them or upon which to base them, and that will be done before this debate shall have been concluded. No kind of ridicule or abuse on the part of anyone, because we call attention to these things, is going to be an answer. Such conduct is no argument and does not lead to any conclusion.

Mr. BLACK. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Alabama?

Mr. FESS. I yield.

Mr. BLACK. I agree with the Senator that he is going to debate this question at length.

Mr. FESS. He certainly is.

Mr. BLACK. He has done so in the past and will do so in the future.

Mr. FESS. It will take some time to read the testimony.

Mr. BLACK. I recall the Senator has debated some other questions at length. I recall that the Senator was ready even to ignore the plain facts of the record and to refer to certain men as being "as clean as a hound's tooth."

Mr. FESS. The Senator is putting that statement in my mouth.

Mr. BLACK. I understand the Senator did not use that expression, but the Senator's words in debate approved it from time to time.

Mr. FESS. The Senator from Alabama is referring to an address which I made on the floor of the Senate in which I said that the United States Senate was being used as a sluiceway through which the slime of dirty minds was being poured into the country. I said that. That statement caused four speeches to be made on the Democratic side of the Chamber. A famous Democratic Senator, the most beloved of all my acquaintances on the other side of the aisle, who had been the leader in the House of Representatives throughout the period when I was in that body, who was promoted to the United States Senate, and was made the leader of his party in the Senate, walked across the aisle of this Chamber one day, took my hand and said, "If I had said anything that would cause other Senators to occupy nearly all day in replying to me, I would assume I had said something worth while." That was my beloved friend Oscar W. Underwood, the predecessor of the Senator who is now on his feet.

Mr. BLACK. I notice the Senator said his statement was answered by four men. I think that was entirely too many.

Mr. FESS. I do, too.

Mr. BLACK. I think that was more than needed. However, that is beside the question.

The sad thing about this to me, as was true during exposures made on a previous occasion, is the fact that there can be found just a few men—thank goodness, only a few—who pass over every bit of evidence of crime that is revealed, men who, by means of raising other issues, attempt to conceal fraud that is developed. The saddest thing, in my judgment, is that the Senator will ignore the facts, because he has read the evidence and is bound to know that things were not right. He does not put the stamp of his disapproval upon a single thing that has been established. All he does is to come in here and talk with tears in his voice about anything in the world except the evidence of fraud and corruption.

I regret very much that when evidence of fraud and corruption comes up, there is not a united front on both sides, regardless of the party in which the fraud may be discovered. In my judgment it is a sad indication of the moral level of this country that Senators will stand on the other side of the aisle and defend the actions that have been exposed and never utter a single word of criticism of the horrible practices that have been revealed.

So far as I am concerned, I am not going to discuss this subject with the Senator any further. When he is ready to debate the issue on the facts, we can present the facts. I think they will convince everybody in the United States except the Senator from Ohio, and I can fully understand why they will not convince him.

Mr. FESS. Mr. President, no doubt the Senator feels pretty good over that statement. He seems to be entirely self-satisfied when he alludes to anybody with the statement that he is ready to condone all corruption, and then, because we will not allow him to convict individuals without their being heard, he charges those who will not stand for that sort of thing with condoning crime.

I want the Senator from Alabama to use the full power of the Government to bring out corruption and to punish crime; but he cannot justly charge men with being guilty without hearing the other side. We will not stand for that, and the country will not stand for it.

Mr. BLACK. I have said that we will not stand for it either.

I desire to ask the Senator a question.

I have stated to the Senator—and he knows it if he has seen the record—that we have had before the special committee the officers of these companies. Whom does the Senator want besides those officers? Will he give me a list of other individuals connected with those companies who know the facts?

Mr. FESS. I will. I want the committee to call Mr. Boeing.

Mr. BLACK. We have had him before us.

Mr. FESS. I want the committee to call him again. It was stated yesterday that I want Mr. Boeing here. I do not know him.

Mr. BLACK. Very well. Is there anyone else the Senator desires to have called here?

Mr. FESS. I will let the Senator know who they are. I want all of them—all that you have ruined. I want them to come here.

Mr. BLACK. All that we have ruined? Which ones are they? Give us their names.

Mr. FESS. All the contractors whose contracts were canceled without having had any hearing.

Mr. BLACK. Mr. President——

Mr. FESS. I do not yield any further.

Mr. BLACK. We have had before us officers of every one of the chief companies. The Senator knows that——

Mr. FESS. No.

Mr. BLACK. And he is leaving the impression that they have not testified, when that impression is not correct.

Mr. FESS. Mr. President, the Senator from Alabama would like to have the Senate believe that the contracts were not canceled without giving a full hearing to all the officers of the companies. Of course, he can not get away with anything of that sort.

Mr. BLACK. Mr. President——

Mr. FESS. Wait a minute. I do not yield.

Mr. President, my intensity of feeling grows first out of the fact that I do not want anything unfair done, especially with the approval of the United States Senate, of which I am a Member; and, as far as I can prevent any injustice, I am going to do it. That is one reason for my intensity of feeling.

Another reason is the inference that Mr. Brown had something to conceal and that he would not be subpenaed unless he would waive immunity. I resent that, and I feel pretty intensely with regard to that treatment of him.

The other matter is the tampering with mail and the attempt to tap wires and the efforts to install dictographs. Perhaps none of that is known to the committee, and I do not believe they do know it; but we have evidence of that sort of thing. I feel intensely on that subject and have called attention to it. This is the first time I have mentioned it in this body, but I have taken it up with officers of the Government.

Mr. BLACK. Mr. President——

Mr. FESS. Wait a minute.

Mr. BLACK. I desire to ask the Senator a question.

Mr. FESS. Wait a minute.

The VICE PRESIDENT. The Senator declines to yield.

Mr. BLACK. Then I will wait until the Senator concludes.

Mr. FESS. There is another reason for my intensity of feeling. My own name has been dragged into this investigation; and any man who has one iota of self-respect will resent a thing of that kind.

I have a son who is well known to the present Presiding Officer, the distinguished Vice President of the United States. He was made Parliamentarian of the House in 1918 without any recommendation from me, but I was asked whether or not I would let him perform the duties. He remained Parliamentarian until 1927. As a father, I was interested that he should make a success, and asked him to pursue the study of law while he was doing that work, which he did. After he had remained here for some years I concluded that he had gotten as far in Washington as he could, and was in a blind alley so, as a father, I advised him to leave the service of the Speaker of the House of Representatives and go out on his own; and in 1927 he resigned.

That was not due to a change of administration. There was no need of his resignation; but he resigned to enter upon the practice of the law, and he chose the city of Toledo in which to practice. While he was here his friends were legion, including such men as the present Vice President of the Nation; Judge Finis Garrett, the Democratic leader of the House; and others high in position and in business.

The firm of which my son became a member was asked by Col. Paul Henderson to represent him in the matters arising in Ohio, because the air route of Colonel Henderson's company crossed Ohio. My son made two or three trips here during the pendency of the legislation on air matters and on some other matters. He has been greatly distressed over the fact that his name has been brought into this investigation. I have this letter from him:

[Doyle & Lewis Law Offices, Nicholas Building. Howard Lewis, Frank S. Lewis, Robert Newbegin, Milo J. Warner, Charles T. Lewis, Jr., D. L. Sears, Lehr Fess, George J. Gould, William C. Moore, Ernest C. Schatz, and Harold A. James]

TOLEDO, OHIO, *March 5, 1934.*

Hon. S. D. FESS,
United States Senate, Washington, D.C.

DEAR FATHER: Were it not for the endeavor to poison the public and indirectly injure you, the Hanshue testimony would be amusing. The Watres Act was passed April 29, 1930, as I recall. I resigned as United States attorney August 1, 1930, and a few weeks later I was asked by some Pittsburgh people to represent them before the Post Office Department in connection with their proposed bid on a coast-to-coast mail contract. I spent a day in Pittsburgh, went with them to Washington, and attended the opening of the bids. Walter Brown was not in town that day, as I recall. When I discovered that the Pittsburgh group was not qualified to bid, and strongly suspicioned they did not have the finances to suc-

cessfully operate even though they should be awarded the contract, I immediately withdrew and returned home. This was about the middle of August 1930. Neither United Aircraft nor N.A.T., as I recall, bid or were interested in these particular contracts. Sometime after the bid of the Pittsburgh Co. had been rejected and the contract awarded to T.A.T. and Western Air, was approved by the Comptroller General, our firm was employed during the latter part of October 1930 by N.A.T. at a modest retainer and the usual per diem for court work and out-of-town business.

The retainer was terminated by mutual consent in November 1931 because of the decrease of the work and the necessity of the company to reduce expense.

I want the Senator from Alabama to note this:

The work in Washington consisted in attending the conference of operators referred to in my statement which was in February 1931 which was called for the purpose of reducing rates.

I want it especially to be recalled that the meeting of which the chairman of the committee has been complaining was May 19, 1930. That meeting was not attended by the writer of this letter. He was here at a meeting of the operators with the Postmaster General in February 1931 which was called for the purpose of reducing rates.

The letter continues:

The Postmaster General at that time had expanded the service to such an extent that it was necessary for all operators to take a cut in order to avoid a deficit in the appropriation. I have gone over my diaries most carefully and cannot find that I attended any conference at the Post Office Department in May 1930, nor do I have any recollection of having attended such a conference. MacCracken's letter must have referred to the February 1931 meeting.

Of course, there was nothing reprehensible about representing N.A.T. even at the conference in May 1930. By reason of my position in the House and familiarity with departmental procedure, at least, I was supposed to have had more than average qualifications to represent clients in Washington even if I did not actually have such qualifications.

You will recall that after I got my law degree I seriously considered remaining in Washington to practice, decided against it, resigned my position as Parliamentarian, moved to Toledo, and started all over again in a new field. At one time I was offered a retainer of $20,000 a year to represent a railroad organization in Washington, which I declined, not because I did not need the money but because I had made up my mind to make my way here.

I know that to be true, because he talked with me about it at the time—

I have enjoyed handling the few cases which took me to Washington, because it afforded the opportunity to renew acquaintances. As you know, on no occasion have I represented any interest before the Senate except the one occasion when you introduced a bill for the allowance of a claim of the Willys-Overland Co., which you would have done on the request of any constituent. This bill was not even considered by the committee to which it was referred, and the claim was later allowed by the Comptroller General.

I may be so steeped in the alleged immoralities of the "premisdeal" era that my conscience is hardened, but I sincerely fail to see anything wrong in my accepting proper employment in Washington. The matter is not of sufficient importance to warrant my asking for a hearing, but, of course, if the committee should request me to appear I will respond notwithstanding my personal conviction that nothing is sought or intended by the investigators except the opportunity to muckrake in the interest of destroying the confidence of the people in the sound principles of government upon which our past progress has been made. The whole outfit are playing a farce that will end in the real American tragedy.

The letter is signed by my son, whose name was brought into the hearings, and whose name was printed in the headlines of the leading newspapers, "Fess' Son Named in the Air Investigation." Any reasonable interpretation of that would be that my son was involved in these investigations because he was named in the testimony.

I feel hurt over that sort of thing. I have talked with the chairman of the committee about the matter, and he is very fine in his attitude. Evidently my son's name was not brought out by him. The name was used by Mr. MacCracken in the testimony and then later by Colonel Henderson. Naturally, as every father here who has any pride in the success of his children knows, that thing hurts.

When Mr. Brown was on the stand, and Senator McCARRAN asked him whom he met in my office, Mr. Brown named my son, and quite naturally the committee jumped to the conclusion that it was this son, when it was not at all. It was my second son, who is the assistant sales manager of the Firestone Co., who was on his way from here to Atlanta and stopped over in Washington to spend the week end with his father. He was in my office at the time, and naturally the committee thought that was the same boy. It was not. I do not like to have my name dragged into this controversy and then have it charged that it is a family affair and that I am condoning corruption. I will go as far as any man here to punish anyone guilty of corruption, but I want it done in the American way, with both sides heard.

Mr. BLACK. Mr. President, I desire to ask the Senator a question.

Mr. FESS. I yield.

Mr. BLACK. The Senator made a statement with reference to dictographs, or wire tapping, or something of that kind, and said, "We have knowledge of it." The statement was, "We have knowledge", not that the committee but that the Senator had knowledge. The statement was, "We have knowledge" that there has been some wire tapping, or use of dictographs, or something of that kind.

I desire to state to the Senator that I know nothing about that, and I think that if he has any evidence of any such thing it should be stated here in the Senate so that it may be investigated. It should be investigated.

Mr. FESS. Mr. President, I made that statement to indicate why I felt so deeply about the matter. I exculpated the committee at the time.

Mr. BLACK. I understand.

Mr. FESS. Because I do not think the Committee would permit such things. But even today, only today, I called Mr. Brown to read to him a portion of the testimony given yesterday by Colonel Henderson in regard to the Boeing contract, which, if it is as was stated, I do not approve. While I was talking, there was interference upon the wire. I complained of it and had a report from the party in charge of telephones here to the effect that the interference was not at this end.

Three letters were tampered with, one of them a letter I wrote, and the postmaster was notified of it.

Of course the Senator from Alabama would not permit that sort of thing if he knew it. It seems, however, to be going on. I shall be very glad to give the Senator such information as I have and trace it down, if possible.

Mr. BLACK. I desire to state to the Senator that, so far as I am concerned, I have frequently had experience with interference over the telephone. I have, however, never attributed it to the fact that anyone was interfering, but rather have attributed it to inefficient service. So far as I am concerned, I desire to have the Senator understand that the special committee has not engaged in anything of the kind either directly or indirectly, nor has it learned of any such thing being done; and I personally should thoroughly disapprove of it.

Mr. FESS. I believe the Senator's statement.

Let me make a further statement, Mr. President. I think the committee headed by the Senator from Alabama, has made one of the most exhaustive investigations that ever took place in the country. I have observed the assistants from the various departments. Each one of them comes to the committee room with a bundle of documents under his arm, and the chairman seems to be thoroughly familiar with all that is going on. In other words, so far as putting out feelers and gathering in evidence is concerned, I do not know anyone who could do a more thorough job than the Senator from Alabama has done. I say this in order to assure the country that if there is anything wrong, nothing has been left undone to find it out. In all of the Senator's investigations, however, I do not think he will find that Mr. Brown has been involved in any corrupt practice. If so, I shall withdraw my defense of him.

EXECUTIVE MESSAGES REFERRED

The VICE PRESIDENT, as in executive session, laid before the Senate several messages from the President of the United States submitting nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

INCLUSION OF CATTLE AS A BASIC INDUSTRY

The Senate resumed the consideration of the bill (H.R. 7478) to amend the Agricultural Adjustment Act so as to include cattle as a basic agricultural commodity, and for other purposes.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Wisconsin [Mr. LA FOLLETTE]. On that question the yeas and nays have been ordered.

Mr. McNARY obtained the floor.

Mr. CONNALLY. Mr. President, will the Senator from Oregon yield?

Mr. McNARY. I yield to the Senator from Texas.

Mr. CONNALLY. I ask unanimous consent that, beginning tomorrow at 12 o'clock, debate on the bill be limited, and that no Senator shall speak more than once nor more than 10 minutes on the bill or on any amendment thereto.

Mr. McNARY. I shall consent to that, Mr. President, provided the Senator extends the time to 15 minutes on the bill or on any amendment.

Mr. CONNALLY. The proposal I submitted would permit 10 minutes of debate on the bill and 10 minutes on each amendment.

Mr. McNARY. I appeal to the Senator from Texas to extend the time.

Mr. CONNALLY. I modify the request accordingly, Mr. President.

The VICE PRESIDENT. The Senator from Texas asks unanimous consent that, beginning at 12 o'clock tomorrow, no Senator shall be permitted to speak more than once or longer than 15 minutes on any amendment, or on the bill itself. Is there objection? The Chair hears none, and it is so ordered.

RECESS

Mr. CONNALLY. I move that the Senate take a recess until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 6 o'clock and 15 minutes p.m.) the Senate, under the order previously entered, took a recess until tomorrow, Saturday, March 10, 1934, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 9 (legislative day of Feb. 28), 1934

UNITED STATES ATTORNEY

Frank J. McDonnell, of Pennsylvania, to be United States attorney, middle district of Pennsylvania, to succeed Andrew B. Dunsmore, whose term expired February 6, 1934.

PROMOTIONS IN THE REGULAR ARMY

TO BE COLONELS

Lt. Col. Gilbert Henry Stewart, Ordnance Department, from March 1, 1934.

Lt. Col. John Epps Munroe, Ordnance Department, from March 1, 1934.

Lt. Col. John Cargill Pegram, Cavalry, from March 1, 1934.

Gardner T. Hockensmith to be postmaster at Albany, Oreg., in place of R. N. Torbet, removed.

John W. Sadler to be postmaster at Aurora, Oreg., in place of Diana Snyder. Incumbent's commission expired January 31, 1932.

Tracy Savery to be postmaster at Dallas, Oreg., in place of C. G. Coad, deceased.

Carl H. Massie to be postmaster at Grants Pass, Oreg., in place of J. C. Martin. Incumbent's commission expired December 13, 1932.

Glen C. Smith to be postmaster at Independence, Oreg., in place of G. G. Godfrey. Incumbent's commission expired December 13, 1932.

Clarence C. Miller to be postmaster at Jefferson, Oreg., in place of H. E. Jones, removed.

Winifred G. Wisecarver to be postmaster at McMinnville, Oreg., in place of T. J. Warren, resigned.

Bernhard L. Hagemann to be postmaster at Portland, Oreg., in place of J. M. Jones, transferred.

Anthony E. Gerimonte to be postmaster at Westfir, Oreg., in place of E. M. Stewart. Incumbent's commission expired December 8, 1932.

PENNSYLVANIA

George E. Diehl to be postmaster at Chambersburg, Pa., in place of C. M. Fleming. Incumbent's commission expired January 31, 1934.

Flora E. Falter to be postmaster at Glassmere, Pa., in place of L. S. Matiska, deceased.

James F. Gibbons to be postmaster at Pittston, Pa., in place of G. J. Miller. Incumbent's commission expired March 12, 1932.

Howard O. Boyer to be postmaster at Rural Valley, Pa., in place of H. O. Boyer. Incumbent's commission expired March 8, 1934.

Swiler M. Zeigler to be postmaster at Wellsville, Pa., in place of M. M. Wells. Incumbent's commission expired January 8, 1934.

Chester L. Boal to be postmaster at West Middlesex, Pa., in place of E. J. Dunlap. Incumbent's commission expired October 31, 1933.

PUERTO RICO

Teodoro M. Lopez to be postmaster at Vega Baja, P.R., in place of T. M. Lopez. Incumbent's commission expired December 8, 1932.

RHODE ISLAND

Edward F. Carroll to be postmaster at Providence, R.I., in place of W. A. Kilton. Incumbent's commission expired December 18, 1929.

Fred Beauchaine to be postmaster at Warren, R.I., in place of Elmer Lother. Incumbent's commission expired January 16, 1933.

Winfred C. Kingsley to be postmaster at Wickford, R.I., in place of L. J. Ward, removed.

SOUTH CAROLINA

Robert Redus Martin to be postmaster at Belton, S.C., in place of R. B. Poore. Incumbent's commission expired January 29, 1933.

Ray E. Young to be postmaster at Due West, S.C., in place of L. D. Hagan. Incumbent's commission expired January 8, 1933.

Mary Ellen Seibert to be postmaster at Edgewold, S.C. Office became Presidential July 1, 1932.

Pretto H. White to be postmaster at Ehrhardt, S.C., in place of G. G. Hiers. Incumbent's commission expired January 19, 1933.

John Albert Howell to be postmaster at St. George, S.C., in place of W. B. Tarkington, removed.

Errett Zimmerman to be postmaster at Trenton, S.C., in place of E. M. Watson. Incumbent's commission expired February 28, 1933.

Loring Terry to be postmaster at Yemassee, S.C., in place of Loring Terry. Incumbent's commission expired March 8, 1934.

SOUTH DAKOTA

George L. Kemper to be postmaster at Aberdeen, S.Dak., in place of B. A. Williams, removed.

Harold L. Fetherhuff to be postmaster at Herreid, S.Dak., in place of Louis Damberger. Incumbent's commission expired February 5, 1933.

Joseph A. Crowley to be postmaster at Sioux Falls, S.Dak., in place of J. C. Seals. Incumbent's commission expired December 16, 1933.

Kathryn H. Speirs to be postmaster at Ree Heights, S.Dak., in place of H. H. Gardner. Incumbent's commission expired May 10, 1932.

Helen L. Kieffer to be postmaster at White Lake, S.Dak., in place of R. B. Flahart. Incumbent's commission expired May 26, 1932.

TENNESSEE

Kleber B. Dunklin to be postmaster at Gallatin, Tenn., in place of B. P. Allison. Incumbent's commission expired February 14, 1927.

Bernard R. Duncan to be postmaster at Linden, Tenn., in place of Eva Shelton. Incumbent's commission expired January 4, 1932.

TEXAS

Martin N. Guest to be postmaster at Aspermont, Tex., in place of W. T. Robbins. Incumbent's commission expired September 18, 1933.

Albert A. Allison to be postmaster at Corsicana, Tex., in place of Pierce Mayer, deceased.

Carl W. Amberg to be postmaster at Lagrange, Tex., in place of E. A. Giese. Incumbent's commission expired December 8, 1932.

William H. Lyle to be postmaster at Sudan, Tex., in place of L. E. Slate. Incumbent's commission expired January 16, 1933.

Margaret E. Lasseter to be postmaster at Westbrook, Tex., in place of M. E. Lasseter. Incumbent's commission expired December 16, 1933.

VERMONT

Ward L. Lyons to be postmaster at Bennington, Vt., in place of F. E. Howe, removed.

Irving E. Bronson to be postmaster at Swanton, Vt., in place of C. E. Hall, deceased.

VIRGINIA

Otho W. Miller to be postmaster at Bridgewater, Va., in place of C. T. Riddel. Incumbent's commission expired September 30, 1933.

Clarence M. Sale to be postmaster at Falls Church, Va., in place of Byron Austin. Incumbent's commission expired December 20, 1932.

VIRGIN ISLANDS

Bartholin R. Larsen to be postmaster at Christiansted, V.I., in place of B. R. Larsen. Incumbent's commission expired March 8, 1934.

WASHINGTON

Curtis M. Wormell to be postmaster at Asotin, Wash., in place of O. A. Kramer, resigned.

Roy E. Carey to be postmaster at Hartline, Wash., in place of R. E. Carey. Incumbent's commission expired January 28, 1934.

Bertha W. Welsh to be postmaster at Prescott, Wash., in place of B. H. Welsh. Incumbent's commission expired February 6, 1934.

Wilson Howe to be postmaster at Tenino, Wash., in place of Wilson Howe. Incumbent's commission expires March 18, 1934.

Louis O. Cochrane to be postmaster at Yelm, Wash., in place of D. R. Hughes. Incumbent's commission expired December 18, 1933.

WEST VIRGINIA

Torrence Cook to be postmaster at Amherstdale, W.Va., in place of C. L. Baker, removed.

Mark V. Brown to be postmaster at Bridgeport, W.Va., in place of R. S. Hornor. Incumbent's commission expired May 4, 1932.

William O. Umstead, Jr., to be postmaster at Grantsville, W.Va., in place of W. J. Ayers, removed.

Stella G. James to be postmaster at Institute, W.Va., in place of R. H. Brown, resigned.

John W. Fisher to be postmaster at Moorefield, W.Va., in place of J. R. Wratchford. Incumbent's commission expired March 2, 1933.

Frederick W. Horchler to be postmaster at Newberg, W.Va., in place of Joe Van Zandt. Incumbent's commission expired January 9, 1932.

Charles Sanders to be postmaster at Sharples, W.Va., in place of R. C. Morton, resigned.

William H. Johnson to be postmaster at War, W.Va., in place of H. E. Ewing. Incumbent's commission expired December 13, 1932.

WISCONSIN

Clinton B. Immell to be postmaster at Blair, Wis., in place of E. T. Mattison. Incumbent's commission expired February 28, 1933.

James R. Alexander to be postmaster at Hayward, Wis., in place of H. B. Dehler, transferred.

Frank N. Scherer to be postmaster at Kohler, Wis., in place of A. L. Treick. Incumbent's commission expired January 22, 1934.

Thomas F. McDonald to be postmaster at Marshfield, Wis., in place of F. B. Rhyner, transferred.

Cora J. Sorenson to be postmaster at Mount Horeb, Wis., in place of J. A. Dysland. Incumbent's commission expired February 25, 1933.

Thomas M. Crawford to be postmaster at Readstown, Wis., in place of M. V. Frazier. Incumbent's commission expired June 19, 1933.

Ida Melchert to be postmaster at Saxon, Wis., in place of Mayme Auger. Incumbent's commission expired January 29, 1933.

William J. Corry to be postmaster at South Milwaukee, Wis., in place of Leo Joerg. Incumbent's commission expired January 21, 1933.

Miles Colligan to be postmaster at Wautoma, Wis., in place of C. W. Eagan. Incumbent's commission expired December 18, 1933.

WYOMING

Elizabeth W. Kieffer to be postmaster at Fort Warren, Wyo., in place of E. W. Kieffer. Incumbent's commission expired February 14, 1934.

WITHDRAWAL

Executive nomination withdrawn from the Senate March 9 (legislative day of Feb. 28), 1934

POSTMASTER

Edward E. Cossette to be postmaster at Gonic, in the State of New Hampshire.

HOUSE OF REPRESENTATIVES

FRIDAY, MARCH 9, 1934

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, DD., offered the following prayer:

"God with us." Grant, O Lord, that everyone in Thy presence may have some token of Thy thought of him and feel the divine blessing. O may it be the inspiration of nobility, carrying us upward and onward to an immortal destiny. Heavenly Father, thrill the imagination and inspire the enthusiasm of men who are disinterested in those institutions which make safe their property and secure the peace of their firesides. Almighty God, fire them with the fervor of patriotism, with the sense of loyalty, and with the power of great moral qualities. Put Thy hand upon them, their ability and their time, and say to them: "The earth is the Lord's, the fullness thereof, the world and they that dwell therein." Give liberty to all who are in bondage and to all who are chattels; and may all lives be made sweeter, happier, and more fruitful. Through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

SOUTHERN CALIFORNIA LACKS ADEQUATE NATIONAL DEFENSE

Mr. COLDEN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of Southern California Lacks Adequate National Defense.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. COLDEN. Mr. Speaker, one of the deepest impressions of my early life was that great oration by Charles Sumner entitled "The True Grandeur of Nations." It is truly one of the masterpieces of American oratory in behalf of peace and it should be read in the schoolhouses of every nation on the globe. Unfortunately its sound logic, its valuable admonitions, have been lost in the havoc and horror of modern wars and warfare. I, too, have admired the humanitarian efforts of other statesmen including the eloquent William J. Bryan and the illustrious Woodrow Wilson, who sought in vain to inaugurate a millenium of peace.

Notwithstanding the efforts of eminent statesmen who have repeatedly in various lands raised their voices against war and have sung in eloquent phrases of the blessings of world peace, unfortunately that happy hour has not yet arrived. With the shadows and horrors of the most disastrous of all wars—the World War—still hovering near us, and its lists of valiant dead and its destruction of homes and families and the dearest things of life still ringing in our ears, the world seems to have learned nothing from its direst catastrophe, and we continue to hear the tramping of armies, the building of navies; we hear the boasting of militarism, the pomp of armed power and the call and preparation of national greed, the clatter of fear, and the greed of conquest.

With Europe preparing for a future contest, with Asia bewildered and fearful and trembling at the ruthless invasion and pagan disregard of the rights of her neighbors by a militaristic empire, it would be suicide for this Nation of ours to disregard the evidences of danger on both our shores. America desires to remain at peace. American people are reluctant to engage in war. Our citizens would be happy to disarm and to live with other nations as a good neighbor if that were possible. We, as well as other nations, could profitably devote a few centuries in solving domestic problems in order that every citizen might enjoy a full and abundant life, the idealistic goal of the new deal.

Only as recently as February 14, 1934, Brig. Gen. Seth E. Howard, of San Francisco, made the following significant statement:

> Perhaps it might be well to mention that war, during the short existence of this country, has been a subject of great importance. It seems somewhat startling to find in the records of the War Department that during the period from 1775, when the Revolution had its inception, until the close of the World War in 1921, a period of 146 years, we were officially in a state of war 111 years and 10 months. Therefore from the beginning of the American Revolution to the close of the World War there were less than 35 years of peace.

Let us cherish the principles of peace, let us prevail with all our might and influence to lead the world to the paths of peace, but in these hazardous days, when any moment some unimportant but unfortunate incident may loosen the dogs of war, let us be prepared. An efficient army and navy is an insurance policy against our country becoming involved in war. Why did Germany flaunt our rights, sink our ships, and destroy our citizens in the late war? Because Germany thought she could win the war before America could prepare to protect her rights. Our unpreparedness for war invited the attack upon our ships, our citizens, and our rights that later involved us in that war. If at that period the United States had had an efficient navy and an army that had commanded the respect of Germany, we would not have been dragged into a sanguinary struggle that cost the lives of the flower of our youth, drained our country of its wealth, and placed a heavy burden on our people that will irk our citizenship for generations.

To strengthen our ideals and hopes for universal peace, I cheerfully support the appropriations for both the Army and the Navy that have been considered by this House of Representatives. I rejoice that we are to build a navy second to none in the world. A navy that will command the respect of the nations on both the Atlantic and the Pacific shores. It is a warning to the jingo generals and to drunken militaristic leaders of two hemispheres who are continually pointing out our weakness and unpreparedness in order to stir their people to further military conquests. My personal observations of these nations, dominated by ruthless imperialism at home and abroad, is that they are at heart an industrious and peaceful people and that the present spirit of conquest and militarism is not an inherent one, but has been aroused in them temporarily by jingos and ambitious militarists. To permit our Army to deteriorate and our Navy to decline in the face of the present dominant influences in these militaristic nations is but to invite the same arrogant attitude from which we suffered from Germany and that eventually embroiled us in a disastrous foreign war. Efficient armies and navies are inexpensive insurance as against unpreparedness and the tremendous costs of war.

I wish to remind my colleagues that the Army and Navy are far more than instruments of war, but have performed great service in our domestic disasters. In the recent earthquake disaster in southern California both the Army and the Navy and also the veterans of the late war lent first aid and restored and maintained order and provided food and shelter. In the great floods of the Mississippi, the Army has stood guard and aided the homeless and the hungry. And in other emergencies the Navy has performed a noble part. The Army is credited with that great achievement, the Panama Canal, and has contributed a major part in the development of our rivers and harbors. It is the Army that has directed the C.C.C., one of the vital agencies of the new deal, to rehabilitate the young manhood of America. Yes, the Army and the Navy are renowned for victories in peace as well as in war.

Speaking of unpreparedness, it is with pain and reluctance that I call your respectful attention to the military situation on the Pacific coast. Particularly do I wish to emphasize the perilous condition that exists in southern California, the greatest center of population, industry, and commerce on the Pacific coast. When the Pacific Fleet is anchored at our door, we can safely rest in peace and security. We know that every man that treads the decks of our Navy is a man of courage and ready to do his duty. But, unfortunately for us, there are long periods when the Navy blue is absent, gone to other shores and perchance through the Canal to other seas beyond the beck in an hour of danger.

But the Army? Southern California has but two posts, Fort MacArthur, at Los Angeles Harbor, and another post at San Diego, with but a few more than 400 men at each. The man power, the equipment, are inadequate. The antiaircraft is scarcely worth mentioning. We have dozens of posts scattered over this land of ours that are retained at points having no value whatever in the plan of national defense and serve no nobler purpose than as monuments of Indian wars fought a century ago. They no longer play a part in our national defense. Why should not these men of the Army be transferred to the Pacific coast, where they are needed at the time we are endangered by the warlike gestures of a country that should be our eternal friend?

The city of Los Angeles is supplied by water with an aqueduct approximately 250 miles in length. Along this artificial stream of mountain water are numerous reservoirs stored with the supplies of water needed to quench the thirst of a million and a quarter of human beings. Also, in southern California there are numerous other reservoirs supplying other important cities and districts with water. An invading enemy with a single bomber airplane could lay waste our reservoirs, destroy our aqueduct, sweep our homes and our farms to destruction, deprive our people of domestic

supply of water and bring them to immediate suffering, deprive them of sanitation, and thereby invite disease and contagion.

Even a greater danger lurks at our door in the event of foreign invasion. Southern California has immense stores of petroleum and gasoline, and much of it in reservoirs for which no protection has been provided. Imagine great streams of burning oil flowing in torrents down our streets and into our harbors. Such is the terrible possibility during a foreign invasion. The destruction of our oil reservoirs coupled with that of our water storage presents a picture of destruction such as the world has never witnessed in its most dreadful wars.

There is another factor that cannot be overlooked in considering the need of defense of the Pacific coast, and that is an alien population of oriental ancestry. No doubt that the loyalty of many is beyond question. But it would require a very wide charity to assert that all of them have surrendered their allegiance to their homeland. A very few in alliance with our country's enemies in time of war could bring inexpressible disaster upon southern California in a very brief period that would not and could not be restored in a decade. This factor is but another urge for the necessity of more adequate defense of the Pacific coast and particularly southern California.

Let me remind the Members of this House and those directing the administration's policy of national defense that our posts in southern California, their man power, their equipment in every respect, should be multiplied many times. Give us the security of an efficient army placed at the strategic points on our shores. Our National Guard in California is far beneath the proper proportion that is due the State. Everywhere on the Pacific coast is the need of a more militant line of defense.

Because of its intimate relationship to the Panama Canal and Latin America, and because it is the practice and maneuvering grounds of the Pacific Fleet due to the natural conditions that make it the most desirable for such purposes on the Pacific coast, adequate shore facilities for the Navy, including repair equipment, should be located at Los Angeles Harbor. Because of the increasing growth of population, of industry, and commerce on our Pacific shores, there should be established balanced naval facilities such as enjoyed by the Navy on the Atlantic coast. But a brief span ago there was no apparent need for the Navy on the Pacific coast. But the situation has changed. Not only the population and the industry and the commerce but the policies of the Orient, the growth of military ambition, the frenzy of conquest that has possessed a formerly peaceful people demand that the Pacific coast be prepared and protected against those emergencies that may arise destructive of our liberties, our possessions, and even our lives.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent for the immediate consideration of a resolution that I send to the desk.

The SPEAKER. The Chair cannot recognize the lady for that purpose at present.

Mr. HOWARD. Mr. Speaker, I ask unanimous consent to address the House for 15 minutes.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to proceed for 5 minutes. Another air-mail pilot has been killed while flying the mail.

Mr. BYRNS. Mr. Speaker, I do not think we ought to bring that subject up at the present time.

Mr. GRAY. Mr. Speaker, I ask unanimous consent that immediately after the reading of the Journal tomorrow I be permitted to address the House for 15 minutes on the proper place of the N.R.A. in the recovery program.

Mrs. ROGERS of Massachusetts. I object.

Mr. GRAY. Will the lady from Massachusetts withhold her objection?

Mrs. ROGERS of Massachusetts. I will withhold it; certainly.

Mr. GRAY. This does not interfere with what the lady is attempting to do; I am with you on any other proposition.

Mr. SNELL. Mr. Speaker, let the request be put.

The SPEAKER. The gentleman from Indiana asks unanimous consent to address the House tomorrow immediately after the reading of the Journal for 15 minutes. Is there objection?

Mrs. ROGERS of Massachusetts. I object.

Mr. HOWARD. Mr. Speaker, I renew my request that I may be permitted to now address the House for 15 minutes.

The SPEAKER. The gentleman from Nebraska asks unanimous consent to address the House for 15 minutes. Is there objection?

Mrs. ROGERS of Massachusetts. I object.

The SPEAKER. The lady from Massachusetts asks unanimous consent to address the House for 5 minutes. Is there objection?

Mr. O'CONNELL. I object.

NOTICE OF ADDRESS ON THE N.R.A.

Mr. GRAY. Mr. Speaker, then I will renew my request tomorrow, Saturday morning, and will speak immediately after the reading of the Journal on the proper place of the N.R.A. as a relief measure in the recovery program.

ENROLLED BILLS SIGNED

Mr. PARSONS, from the Committee on Enrolled Bills, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 5632. An act to supplement and support the Migratory Bird Conservation Act by providing funds for the acquisition of areas for use as migratory-bird sanctuaries, refuges, and breeding grounds, for developing and administering such areas, for the protection of certain migratory birds, for the enforcement of the Migratory Bird Treaty Act and regulations thereunder, and for other purposes; and

H.R. 7295. An act making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1935, and for other purposes.

ADJOURNMENT

Mr. BYRNS. Mr. Speaker, the gentleman from Texas [Mr. JONES], Chairman of the Committee on Agriculture, is ill and unable to be here. It had been expected that we would take up today the cotton production bill of the gentleman from Alabama [Mr. BANKHEAD], but on account of the absence of the chairman of the committee who reported the bill that will be impossible. I move, therefore, that the House do now adjourn.

Mr. SNELL. Mr. Speaker, before that motion is put, is it the intention to meet tomorrow?

Mr. BYRNS. Yes. The gentleman from Alabama [Mr. BANKHEAD] assures me that the bill will be taken up tomorrow.

The SPEAKER. The question is on the motion of the gentleman from Tennessee that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 13 minutes p.m.) the House adjourned until tomorrow, Saturday, March 10, 1934, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

375. A communication from the President of the United States, transmitting a supplemental estimate of appropriation pertaining to the legislative establishment, United States Senate, for the fiscal year 1934, in the sum of $120,000 (H.Doc. No. 278); to the Committee on Appropriations and ordered to be printed.

376. A letter from the Chairman of the Joint Committee on Internal Revenue Taxation, transmitting a report covering refunds and credits of internal-revenue taxes for the calendar year 1932 (H.Doc. No. 279); to the Committee on Ways and Means and ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. CANNON of Missouri: A bill (H.R. 8560) to amend the Packers and Stockyards Act; to the Committee on Agriculture.

By Mr. LLOYD: A bill (H.R. 8561) vesting jurisdiction in the United States courts in certain causes against the United States and providing procedure therefor, and for other purposes; to the Committee on the Judiciary.

By Mr. GRANFIELD: A bill (H.R. 8562) to provide for a preliminary examination of the Connecticut River, with a view to the control of its floods and prevention of erosion of its banks in the State of Massachusetts; to the Committee on Flood Control.

Also, a bill (H.R. 8563) providing for control of the floods and for prevention of the erosion of the banks of the Connecticut River in Massachusetts; to the Committee on Flood Control.

By Mrs. ROGERS of Massachusetts: Concurrent resolution (H.Con.Res. 34) to discontinue the carrying of mail by the Army Air Corps; to the Committee on Military Affairs.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Senate of the State of New Jersey, memorializing the Congress to abolish the Federal gasoline sales tax; to the Committee on Ways and Means.

Also, memorial of the Legislature of the State of Illinois, memorializing Congress to enact legislation to make possible loans to schools now in distress; to the Committee on Banking and Currency.

Also, memorial of the Legislature of the Commonwealth of Virginia, memorializing Congress to establish a national park, including Old Appomattox Court House in its boundaries; to the Committee on the Public Lands.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. GRAY: A bill (H.R. 8564) granting a pension to Zack Pool; to the Committee on Invalid Pensions.

By Mr. LARRABEE: A bill (H.R. 8565) for the relief of Harrison Simpson; to the Committee on Claims.

By Mr. STRONG of Pennsylvania: A bill (H.R. 8566) for the relief of Mary Brown; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

2868. By Mr. AYRES of Kansas: Petition of citizens of Wichita, Kans., opposing the passage of Senate bill 2000 and corresponding House measures; to the Committee on Interstate and Foreign Commerce.

2869. By Mr. DONDERO: Senate Concurrent Resolution 3, of the Michigan State Legislature in special session of 1934, petitioning the Honorable Franklin D. Roosevelt, President of the United States of America, not to limit whatsoever the acreage for sugar-beet production, and that there be no limit placed on the amount of beet sugar produced in the State of Michigan, so that the Michigan sugar-beet factories may reopen; and further that if there is to be a reduction in the amount of sugar available in the United States that this reduction be accomplished through reduction of imports; to the Committee on Agriculture.

2870. By Mr. KENNEY: Resolution of the mayor and Council of the Borough of Fairview, Bergen County, State of New Jersey, endorsing House bill 3082 providing for loans by the Reconstruction Finance Corporation to municipalities; to the Committee on Banking and Currency.

2871. Also, petition of the Phil Sheridan Council, No. 2229, Knights of Columbus, Ridgefield Park, N.J., protesting against birth-control legislation; to the Committee on the Judiciary.

2872. By Mr. LAMBERTSON: Petition of the teachers of the Horton (Kans.) public schools, urging support for any legislation favorable to public schools, particularly Senate bill 2402 and House bill 7479; to the Committee on Education.

2873. By Mr. RUDD: Petition of the National Woman's Party, New York City, favoring the passage of House bill 3673; to the Committee on Immigration and Naturalization.

2874. By Mr. TREADWAY: Resolutions adopted by the House of Representatives of the General Court of Massachusetts, urging the Navy Department to enshrine the U.S.S. *Constitution* as a national museum in Boston; to the Committee on Naval Affairs.

2875. By the SPEAKER: Petition of Felix F. Von Wilmowsky; to the Committee on Patents.

SENATE

SATURDAY, MARCH 10, 1934

(Legislative day of Wednesday, Feb. 28, 1934)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

THE JOURNAL

On motion of Mr. MCKELLAR, and by unanimous consent, the reading of the Journal for the calendar days Thursday, March 8, and Friday, March 9, was dispensed with, and the Journal was approved.

CALL OF THE ROLL

Mr. ASHURST. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Adams	Cutting	King	Reynolds
Ashurst	Dickinson	La Follette	Russell
Austin	Dieterich	Lewis	Schall
Bachman	Dill	Logan	Sheppard
Bailey	Duffy	Lonergan	Shipstead
Bankhead	Erickson	Long	Steiwer
Barkley	Fess	McAdoo	Stephens
Black	Fletcher	McCarran	Thomas, Okla.
Borah	Frazier	McGill	Thomas, Utah
Bulkley	George	McKellar	Thompson
Bulow	Gibson	McNary	Townsend
Byrd	Glass	Metcalf	Trammell
Byrnes	Goldsborough	Murphy	Tydings
Capper	Gore	Neely	Vandenberg
Caraway	Hale	Norris	Van Nuys
Carey	Harrison	Nye	Wagner
Clark	Hatch	O'Mahoney	Walcott
Connally	Hayden	Overton	Walsh
Coolidge	Hebert	Patterson	Wheeler
Copeland	Johnson	Pittman	White
Costigan	Kean	Pope	
Couzens	Keyes	Reed	

Mr. HEBERT. I desire to announce that the Senator from New Jersey [Mr. BARBOUR], the Senator from Pennsylvania [Mr. DAVIS], the Senator from West Virginia [Mr. HATFIELD], the Senator from South Dakota [Mr. NORBECK], the Senator from Indiana [Mr. ROBINSON], and the Senator from Delaware [Mr. HASTINGS] are necessarily absent.

Mr. LEWIS. I desire to announce that the Senator from Arkansas [Mr. ROBINSON], the Senator from New Hampshire [Mr. BROWN], and the Senator from South Carolina [Mr. SMITH] are necessarily detained from the Senate.

I regret to announce that the Senator from Washington [Mr. BONE] is detained from the Senate on account of a severe cold. I wish this announcement to stand for the day.

The VICE PRESIDENT. Eighty-six Senators have answered to their names. A quorum is present.

DECEMBER 1933 REPORT OF RECONSTRUCTION FINANCE CORPORATION

The VICE PRESIDENT laid before the Senate a letter from the Chairman of the Reconstruction Finance Corporation submitting, pursuant to law, the report of the activities and expenditures of the Corporation for December 1933, together with a statement of loans authorized during that month, showing the name, amount, and rate of interest in each case, which, with the accompanying papers, was referred to the Committee on Banking and Currency.

REGULATION OF TRANSPORTATION AGENCIES (S.DOC. NO. 152)

The VICE PRESIDENT laid before the Senate a letter from the chairman of the Interstate Commerce Commission,

transmitting, pursuant to law, further recommendations and a report thereon from the Federal Coordinator of Transportation, and stating, in part, "The Coordinator's present recommendations fall into three general classes: (1) A bill for the regulation of motor carriers; (2) a bill for the regulation of water carriers; and (3) bills proposing miscellaneous additional amendments to the Interstate Commerce Act", which, with the accompanying report and appendixes, was referred to the Committee on Interstate Commerce.

Mr. DILL subsequently said: Mr. President, before I came into the Chamber the Vice President laid before the Senate a communication from William E. Lee, Chairman of the Interstate Commerce Commission, transmitting a report of the Coordinator of Railroads, Mr. Eastman. A previous report, which goes with this, has been made a Senate document. I think it desirable that this later report be made available in the same form, and I ask unanimous consent that the report be printed as a Senate document.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate the following joint resolution of the Legislature of the State of Illinois, which was referred to the Committee on Banking and Currency:

STATE OF ILLINOIS,
OFFICE OF THE SECRETARY OF STATE.

To all to whom these presents shall come, greeting:

I, Edward J. Hughes, Secretary of State of the State of Illinois, do hereby certify that the following and hereto attached is a true photostatic copy of Senate Joint Resolution No. 4, the original of which is now on file and a matter of record in this office.

In testimony whereof, I hereto set my hand and cause to be affixed the great seal of the State of Illinois. Done at the city of Springfield this 7th day of March, A.D. 1934.

[SEAL] EDWARD J. HUGHES,
Secretary of State.

Senate Joint Resolution 4 (by Mr. Benson)

Whereas the fifty-eighth general assembly is now convened in extraordinary session, having before it for consideration the matter of enacting legislation to meet the present emergency now existing in many school districts of this State; and

Whereas it is questionable whether any legislation can be enacted to bring immediate relief to school districts now on the verge of closing their schools due to lack of funds; and

Whereas the present emergency in many of these school districts has resulted from property owners being unable to pay taxes due on their property, tax collections in some districts having fallen during the past several years to as low as 60 percent of a normal tax collection; and

Whereas the Federal Government has made available to other governmental agencies, and individuals, moneys to meet their emergencies, and many school districts are now in need of funds which might be borrowed from the Federal Government, security for such loans to be given by such districts by assigning delinquent taxes to be paid to the Federal Government when collected; and

Whereas, unless such action is taken by the Federal Government, many schools will be forced to close, thereby depriving children in many communities of Illinois from educational advantages: Now, therefore, be it

Resolved by the Senate of the Fifty-eighth General Assembly of the State of Illinois (the house of representatives concurring herein), That the President and the Congress of the United States be urged to enact the necessary legislation to make possible loans to school districts now in distress; and be it further

Resolved, That a copy of this preamble and resolution be immediately forwarded to the President of the United States, the President of the Senate and the Speaker of the House of Representatives of the United States, and to each Congressman and Senator from Illinois.

Adopted by the senate, February 28, 1934.

Concurred in by the house, March 1, 1934.

THOMAS F. DONOVAN,
President of the Senate.
A. E. EDEN,
Secretary of the Senate.
ARTHUR ROE,
Speaker of the House of Representatives.
CHAS. P. CASEY,
Clerk of the House of Representatives.

The VICE PRESIDENT also laid before the Senate the following joint resolution of the Legislature of the State of Illinois, which was referred to the Committee on Naval Affairs:

STATE OF ILLINOIS,
OFFICE OF THE SECRETARY OF STATE.

To all to whom these presents shall come, greeting:

I, Edward J. Hughes, secretary of state of the State of Illinois, do hereby certify that the following and hereto attached is a true photostatic copy of House Joint Resolution No. 4, the original of which is now on file and a matter of record in this office.

In testimony whereof, I hereto set my hand and cause to be affixed the great seal of the State of Illinois.

Done at the city of Springfield this 7th day of March, A.D. 1934.

[SEAL] EDWARD J. HUGHES,
Secretary of State.

House Joint Resolution 4

Whereas the House of Representatives of the United States has passed an appropriation bill providing $365,697 for the reopening of the Great Lakes Naval Training Station, located near Waukegan, Ill.; and

Whereas the Senate Appropriations Committee of the Senate of the United States, which committee includes but two members from the ninth naval district, has stricken this appropriation from the bill and has included therein an appropriation providing a substantial sum for a naval training station at Newport, R.I.; and

Whereas said Great Lakes Naval Training Station, located in the heart of the great Midwest, one of the older naval bases, which for 22 years furnished 40 percent of the personnel of the United States Navy and which is the headquarters for the ninth naval district in which is located 42 percent of the Naval Reserves, should be reopened rather than establish another naval training station on the eastern coast, which has many other naval activities in addition to naval training stations; and

Whereas the Midwest has but one naval operation, and due to the unrest throughout the world, rumors of war, and the announcement of plans for a larger and more adequate Navy, there is need for a naval training station in the Midwest to be used for the training of the men of the Midwest in naval defense and good citizenship: Now, therefore, be it

Resolved by the House of Representatives of the Fifty-eighth General Assembly of the State of Illinois, at the third special session thereof (the senate concurring herein), That in view of the foregoing, the General Assembly of the State of Illinois petitions the President of the United States and the House of Representatives and Senate of the United States to enact such measures and provide such appropriations as will permit the reopening at an early date, of the Great Lakes Naval Training Station near Waukegan, Ill.; and be it further

Resolved, That a copy of this preamble and resolution be forwarded immediately to the President of the United States, the Secretary of the Navy, the President of the Senate, and the Speaker of the House of Representatives of the United States, and to each Senator and Congressman from the State of Illinois.

Adopted by the house February 21, 1934.

ARTHUR ROE,
Speaker of the House of Representatives.
CHAS. P. CASEY,
Clerk of the House of Representatives.

Concurred in by the senate February 28, 1934.

THOMAS F. DONOVAN,
President of the Senate.
A. E. EDEN,
Secretary of the Senate.

The VICE PRESIDENT also laid before the Senate a letter from Hon. PEDRO GUEVARA, Resident Commissioner from the Philippines, transmitting copy of a radiogram received by him from coconut planters of Santa Cruz, Laguna, P.I., protesting against adoption of the oil excise tax, which, with the accompanying paper, was referred to the Committee on Finance.

He also laid before the Senate a memorial of the Davenport (Iowa) Missionary Alliance, remonstrating, in the interest of peace, against the adoption of an enlarged military and naval program, which was referred to the Committee on Military Affairs.

Mr. TYDINGS presented resolutions adopted by Gerechtigkeits Lodge, No. 25, Independent Order B'rith Abraham, of Newark, N.J., and Oakland Auxiliary, No. 72, B'nai B'rith, of Oakland, Calif., favoring the passage of Senate Resolution 154 (submitted by Mr. TYDINGS), opposing alleged discriminations against Jews in Germany, which were referred to the Committee on Foreign Relations.

Mr. CAPPER presented petitions, numerously signed, of sundry citizens of Kansas City, Kans., praying for the passage of legislation providing old-age pensions, which were referred to the Committee on Education and Labor.

He also presented memorials, numerously signed, of sundry citizens of Arkansas City, Abilene, El Dorado, Emporia, Fort Scott, Hill City, Hutchinson, Independence, Lawrence, Lodge, Lyons, Medicine Lodge, Ness City, Newton, Oberlin,

Olathe, Ransom, Sabetha, Salina, Wichita, and Winfield, all in the State of Kansas, remonstrating against the passage of the so-called "Tugwell bill", to prevent the manufacture, shipment, or sale of adulterated or misbranded foods and drugs and to prevent the false advertisement of such commodities, which were referred to the Committee on Commerce.

Mr. WALSH presented a petition of sundry citizens of Attleboro, Mass., praying for the passage of House bill 7019, providing old-age pensions, which was referred to the Committee on Education and Labor.

He also presented the petition of the Missionary Society of the R.P. Church, of Cambridge, Mass., favoring the passage of the so-called "Patman bill", being House bill 6097, for the Federal supervision of motion pictures in the interest of higher moral standards for films entering interstate and foreign commerce, which was referred to the Committee on Interstate Commerce.

PUBLIC WORKS PROGRAM

Mr. WALSH. Mr. President, I present and ask to have printed in the RECORD and appropriately referred a letter from the secretary of the Central Labor Union of Boston, Mass., together with a resolution.

There being no objection, the letter and resolution were referred to the Committee on Banking and Currency and ordered to be printed in the RECORD, as follows:

CENTRAL LABOR UNION,
Boston, Mass., March 6, 1934.

Hon. DAVID I. WALSH,
Senator, Senate Office Building, Washington, D.C.

DEAR SIR: Enclosed you will find a copy of a resolution which was adopted at the meeting of the Boston Central Labor Union held on Friday, March 2, 1934.

We sincerely hope that you will carefully consider the request contained in this resolution, and that you will do your utmost to develop the changes so earnestly sought for by our organization.

Yours very truly,

WM. F. DWYER, *Secretary.*

"Whereas the National Recovery Act, title II, Public Works and construction projects, provides for the expenditure of $3,300,000,000 with a view to increasing employment quickly and to expedite the construction of Public Works and other semipublic projects, all of which was for the purpose of relieving unemployment in heavy construction industries; and to effectuate the purposes of title II of the act the President created the Federal Emergency Administration of Public Works, better known as 'P.W.A.'; and

"Whereas the construction program failed to materialize because of divers and various reasons, large sums of moneys were diverted from the purposes for which these moneys were originally intended, and appropriations were made for the setting up of Civilian Conservation Corps camps, transients' camps, and the Civil Works Administration; and

"Whereas the C.W.A. owed its existence to the failure of the P.W.A. to function and was created as an emergency measure for the purpose of providing employment pending the approval of application for funds which the various political subdivisions of the United States and other agencies were to use in a vast construction program; and

"Whereas the C.W.A. program has failed materially in its purpose and has brought about political logrolling, a spoils system of job patronage, and has in many communities resulted in lowering the wage scales and working conditions of union labor, and thrown out of employment self-sustaining workers who prior to the inception of the C.W.A. were making every effort to support themselves and their families without resorting to municipal welfare relief: Therefore be it

"*Resolved*, That the Boston Central Labor Union be recorded as favoring a speedy termination of the C.W.A. and in its place the original P.W.A. program be immediately started, and that we ask the President of the United States, the Senators and Congressmen from the Commonwealth of Massachusetts to bend every effort to the end that the procrastination and delay attendant upon the P.W.A. program be ended and that pressure and activity be instituted to make possible an effective Public Works construction program for the benefit of the thousands of idle building-trades workers, who are suffering and are in need of such a program."

Approved by Central Labor Union of Boston and vicinity.

APPROPRIATIONS FOR ENTOMOLOGICAL WORK

Mr. WALSH. Mr. President, I present and ask to have printed in the RECORD and to lie on the table a letter received by me from members of the entomological staff of the Massachusetts State College at Amherst, Mass., protesting any reduction in appropriations for Federal entomological work.

There being no objection, the letter was ordered to lie on the table and to be printed in the RECORD, as follows:

THE COMMONWEALTH OF MASSACHUSETTS,
DEPARTMENT OF EDUCATION, MASSACHUSETTS STATE COLLEGE,
AMHERST, *March 7, 1934.*

The Honorable DAVID I. WALSH,
United States Senator from Massachusetts,
United States Senate, Washington, D.C.

DEAR SIR: We, the undersigned, members of the entomological staff at the Massachusetts State College, Amherst, have heard recently of the proposed cut in appropriations for Federal entomological work, and desire to enter our very strong protest in the matter.

While deploring the cut in all the various branches of the Bureau of Entomology to which it is made to apply at this writing, we are especially concerned over the total elimination of the research work on the European corn borer, and it is mainly on this phase of the subject that we will devote our case.

The European corn borer is one of the major pests of the country, first detected in Massachusetts in 1917 by a student at this college, Mr. Stuart C. Vinal, who worked so hard and faithfully on the problem that his health became undermined and he died during the outbreak of influenza, September 26, 1918. A strong and capable central organization has been built up at Arlington, with outlying branches in Ohio and Michigan, established during the past several years as the pest spread westward and neared the great central corn-growing areas of the country. The importance of the work of these laboratories on methods of cultural control and the importation of natural enemies from various foreign countries constituting the original home of the pest, are of vital importance to this State, particularly because all Federal clean-up work has already been abandoned, and any experimental work to improve control methods will be of increasing value. We believe that a very serious mistake would be made if the laboratories covering this project should be abandoned and the efficiently trained staff discharged, particularly at a time when such serious unemployment exists, especially of skilled scientific men. The present is a period of superabundance of agricultural products in our land, and to persons of short vision it might seem that such a condition might long endure. However, remembering the period of the World War and the attendant demand for foods of many descriptions, we cannot but believe that the time will come again when we may have a shortage of foods and that the need will then arise for the services of these men who have devoted the major part of their lives to a study of the European corn borer and methods for its control.

We in Massachusetts have been provided with an unusually severe object lesson concerning the price one must pay for failure to maintain work of this nature in the case of the gypsy moth. First detected near Boston in 1889, a determined fight during the succeeding decade, under the leadership of Prof. Charles H. Fernald, succeeded in reducing the species to a minimum of scattered individuals. It is believed that if the fight had been vigorously continued at this critical moment, the species might have been totally eliminated from within our borders, and so have been removed as one of our primary pests. Failure to support the work during the critical years of 1900–1904 allowed the species to gain such a foothold in the State that it became necessary for the Federal Government to intervene, with the subsequent expenditure of many millions of dollars. There is no argument on our part that the case of the European corn borer is comparable in that extermination of the species is possible, but we do believe that the methods involved in fighting the pest have saved, and will continue to save, the corn-growing farmers of the country sums vastly in excess of the cost to the Government of the project and its continuance.

We also urge that you support an adequate Federal appropriation for the control and extermination work on the gypsy moth in western New England, eastern New York, and Pennsylvania this appropriation to be included in the regular appropriation of the Department of Agriculture and not in temporary emergency projects of uncertain duration.

Such being our sincere belief, we humbly ask you to give this matter your very serious attention, and extend your invaluable aid to these highly important projects.

Respectfully,

RESIDENT STAFF OF ENTOMOLOGY,
Department of Entomology, Zoology, and Geology,
Massachusetts State College.
CHARLES P. ALEXANDER (*Teacher*),
Professor of Entomology.
ARTHUR I. BOURNE (*Research*),
Professor of Entomology.
G. CHESTER CRAMPTON (*Teacher*),
Professor of Insect Morphology.
HARVEY L. SWEETMAN (*Teacher*),
Assistant Professor of Entomology.
CLAUDE R. KELLOGG (*Teacher*),
Assistant Professor of Entomology.

REPORTS OF COMMITTEES

Mr. CAPPER, from the Committee on Claims, to which was referred the bill (S. 2620) for the relief of N. W. Carrington and J. E. Mitchell, reported it with an amendment and submitted a report (No. 460) thereon.

Mr. STEPHENS, from the Committee on Claims, to which was referred the joint resolution (S.J.Res. 31) consenting

that certain States may sue the United States and providing for trial on the merits in any suit brought hereunder by a State to recover direct taxes alleged to have been illegally collected by the United States during the fiscal years ending June 30, 1866, 1867, and 1868, and vesting the right in each State to sue in its own name, reported it without amendment and submitted a report (No. 461) thereon.

Mr. RUSSELL, from the Committee on Appropriations, to which was referred the bill (H.R. 8134) making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1935, and for other purposes, reported it with amendments and submitted a report (No. 462) thereon.

Mr. HATCH, from the Committee on Indian Affairs, to which was referred the bill (S. 2876) to provide for the transfer of national-forest lands to the Zuni Reservation, N.Mex., exchanges, and consolidation of holdings, reported it with an amendment and submitted a report (No. 463) thereon.

Mr. THOMAS of Oklahoma, from the Committee on Indian Affairs, to which was referred the bill (H.R. 5631) to authorize the Secretary of the Interior to place with the Oklahoma Historical Society, at Oklahoma City, Okla., as custodian for the United States, certain records of the Five Civilized Tribes, and of other Indian tribes in the State of Oklahoma, under rules and regulations to be prescribed by him, reported it without amendment and submitted a report (No. 464) thereon.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session,

Mr. McKELLAR, from the Committee on Post Offices and Post Roads, reported favorably the nominations of sundry postmasters, which were ordered to be placed on the calendar.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WHITE:

A bill (S. 3014) to authorize the transfer of the Green Lake Fish Cultural Station, in Hancock County, Maine, as an addition to the Acadia National Park; to the Committee on Public Lands and Surveys.

By Mr. CAPPER:

A bill (S. 3015) prohibiting the advertising of intoxicating liquors through the medium of radiobroadcast; to the Committee on Interstate Commerce.

By Mr. TYDINGS:

A bill (S. 3016) for the relief of the Dongji Investment Co., Ltd. (with accompanying papers); to the Committee on Claims.

By Mr. WALSH:

A bill (S. 3017) for the relief of Edwin C. Jenney, receiver of the First National Bank of Newton, Mass.; to the Committee on Claims.

By Mr. McNARY:

A bill (S. 3018) for the relief of the Columbia Boat & Barge System, Inc.; to the Committee on Claims.

By Mr. JOHNSON:

A bill (S. 3019) granting a pension to Josephine Johnson;

A bill (S. 3020) granting a pension to Samuel M. Mahurin; and

A bill (S. 3021) granting a pension to Mort Wallace Mays; to the Committee on Pensions.

By Mr. STEPHENS:

A bill (S. 3022) to amend an act entitled "An act to amend sections 3 and 4 of an act of Congress entitled 'An act for the protection and regulation of the fisheries of Alaska', approved June 26, 1906, as amended by the act of Congress approved June 6, 1924, and for other purposes"; to the Committee on Commerce.

By Mr. SHEPPARD:

A bill (S. 3023) to amend section 4878 of the United States Revised Statutes as amended relating to burials in national cemeteries; to the Committee on Military Affairs.

By Mr. WALSH:

A bill (S. 3024) to authorize the Secretary of the Treasury to purchase the building in Boston, Mass., under lease for garage purposes to the Post Office Department; to the Committee on Public Buildings and Grounds.

CHANGE OF REFERENCE

On motion of Mr. WHEELER, the Committee on Agriculture and Forestry was discharged from the further consideration of the bill (S. 2817) to amend the act relating to contracts and agreements under the Agricultural Adjustment Act, approved January 25, 1934, and it was referred to the Committee on Banking and Currency.

INCLUSION OF SUGAR BEETS AND SUGAR CANE AS BASIC COMMODITIES—AMENDMENT

Mr. POPE submitted an amendment intended to be proposed by him to the bill (S. 2732) to include sugar beets and sugar cane as basic agricultural commodities under the Agricultural Adjustment Act, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

THE COPPER CODE

Mr. ASHURST. Mr. President, on yesterday I addressed the Senate in opposition to the so-called "code of fair competition" for the copper industry. I stated then that the proposed code, as far as American labor is concerned and so far as the copper-mining industry in America is concerned, is only an ironic jest.

Mr. President, I have today addressed a letter to Hon. H. O. King, Deputy Administrator of the N.R.A., at the Commerce Building, Washington, D.C., pointing out the defects in this code. I do not believe that a public man does his full duty merely by objecting; he must do more than object; he must specify the defects and suggest remedies. In this letter I have attempted to do that.

I ask that the clerk may read the letter.

The VICE PRESIDENT. Without objection, the letter will be read.

The Chief Clerk read as follows:

MARCH 9, 1934.

Hon. H. O. KING,
Deputy Administrator, Commerce Building,
Washington, D.C.

DEAR MR. KING: I hereby register a protest against the proposed code of fair competition for the copper industry as revised for public hearing.

This code is lacking fundamental essentials, namely:

1. An adequate wage scale. The definitive code should embrace an American standard of living, minimum wage rate for each wage earner subdivision, both underground and on the surface.

2. A method of "freezing" the huge domestic copper surplus. The present colossal copper surplus will care for domestic market requirements for 18 months to 2 years hence. The dependent human element cannot wait another 2 years—this surplus must be eliminated—must not be permitted further to destroy the livelihood and equities of the copper miner.

3. An embargo against copper importations should be made effective until domestic consumption and production are equivalent. The domestic copper ingot should be able to meet foreign competition within the home market—this will necessitate at least a 10-cent ingot tariff rate.

4. In order to put the copper miner to work immediately the code should provide that current domestic copper consumption must come from current domestic production.

5. The allocation of production should be according to past productive State ratios.

The foregoing are the major factors that should be embraced in the new copper code.

In addition, careful scrutiny should be given to definitions, so that the words used may be free from doubt.

Very respectfully,

HENRY F. ASHURST,
United States Senator from Arizona.

EDUCATION, SCIENCE, AND THE NEW DEAL—ADDRESS BY THE ATTORNEY GENERAL

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Hon. Homer S. Cummings, Attorney General of the United States, delivered on February 26, 1934, at Rollins College, Winter Park, Fla. A perusal of this address of the Attorney General is well worth the time of any citizen.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members of the faculty, students, and friends, in educational methods and aims Rollins College has departed from trodden paths. In this complex world it has individualized education; it has substituted learning for instruction; it has adopted for its students the criterion of accomplishment rather than the old conventions of marks and credit-hours; and it has set as the goal of education complete living. All of this sounds to me like a new deal in education. I feel at home here. As one "new dealer" to another, I greet you.

Our country, almost from the beginning, has been committed to the idea of education. There was, however, at the outset a note of dissent. Governor Berkeley, of Virginia, responding to the question of English commissioners of foreign plantations as to what course was being taken in the colony for instruction of the people in the Christian faith, said: "The same that is taken in England, every man according to his ability instructing his children." But he added, "I thank God there are no free schools or printing presses, and I hope we shall not have them these 100 years, for learning has brought disobedience and sects into the world, and printing has divulged them, and libels against the best of governments. God keep us from both." This was an Old World idea. Wide-spread learning was feared. Ignorance upon the part of the subject was bliss for the monarch, and it was folly to make the masses wise.

In America the earliest impetus to education came from religion. Enacting, in 1647, what has been called "the mother of school laws", the General Court of Massachusetts said:

"It being one of the chief projects of that old deluder Satan to keep men from the knowledge of the Scriptures, as in former times by keeping them in an unknown tongue, so in these latter times by persuading from the use of tongues * * *.

"It is therefore resolved, That every township in this jurisdiction, after the Lord hath increased them to the number of 50 householders, shall then forthwith appoint one within their town to teach such children as shall resort to him, to write and read."

There was a hint of the secular and of the dissemination of learning in the next sentence:

"It is further ordered, that when any town shall increase to the number of 100 householders, they shall set up a grammar school, the master thereof being able to instruct youth, so far as they may be fitted, for the university."

In any event, from this time on, the American idea of free schools grew rapidly. Colony after Colony, State after State, and even the Federal Government itself, through congressional school land grants to the States, contributed to the spreading of education. The free school, with its democratized education for the masses, with its "educational ladder", upon the steps of which the student might systematically climb from one stage of instruction to another, became a fully and permanently developed system.

The predicate of this idea was that literacy is essential to democracy. Committed to democracy, we are hence committed to education. So long as government rests ultimately upon the consent of the governed, so long as we seek to maintain a government of, for, and by the people, an informed electorate is a first essential. Both the one and the many profit by a trained intelligence in the individual. Our trust is firmly based upon the enlightening influence of education, thereby insuring intelligent cooperation and wise leadership in the conduct and the development of our institutions.

I have mentioned that the first impetus to education in this country was religion; and the second was the ideal of literacy for democracy. There has been a third—science—an impulse drawn from within. For, as the common school developed, as the native intelligence of men and women was trained to the love of learning and the pursuit of truth, there developed, as of course, the scholar of book and tool, of library and laboratory. It is the nature of man to break down frontiers. As the scouts of our early days passed with the conquest of prairie and mountain there arose, to follow and carry on, the scouts of science, clearing the path for their fellows through the frontier of knowledge. Great institutions of higher learning developed, first in the classics, then in pure science, finally in applied science and the various arts. Physics, chemistry, biology, economics, sociology, and, indeed, all the physical and social sciences were developed and applied to the myriad uses of man. As the thirteenth century was essentially an age of religion, so our age is largely one of science—of scientific accomplishment and of scientific method, of collection and classification of data, of formation and testing of hypotheses, of reaching conclusions and building thereon, of checking one discovery against another so that, ultimately, isolated findings become a part of the pattern of all, and great gains of tested knowledge inspire further quest and lead to still greater accomplishments.

How far these schools and this science have carried us! In transportation, from the canoe and the ox cart to the ocean liner, the transcontinental train, the automobile, and the airplane. In communication, from slow-moving letters to the telephone, and the radio. In agriculture, from truck garden and small farm to acres by the million spilling crops toward all the seas. In manufacturing, from village shoemaker and smithy to the specialized factories of today, ravenous for the raw material of the whole earth. In medicine and surgery, from the kit of the country doctor to the great life-saving clinics and hospitals in every part of the land, ministering to health and prolonging the span of life. In sanitation, from successions of plagues, decimating the earth to relative freedom from contagious disease. In architecture, from hut to skyscraper. In business, from clumsy coins to bank credit, from the corner store to the corporate enterprise. Speed of travel, ease of communication, longevity, health, comfort, wealth, and beauty—these are the fruits of science!

And yet, a short 12 months ago our transportation facilities were largely idle; our abundant crops were rotting in the warehouses; our factories were closed or running upon pitifully short time; 13,000,000 people were idle and our elaborate and carefully constructed banking system entirely ceased to function. We were confronted with the puzzling paradox of starvation amidst plenty.

A learned jurist once said:

"The law, so far as it depends on learning, is indeed as it has been called, the government of the living by the dead. To a very considerable extent, no doubt, it is inevitable that the living should be so governed. The past gives us our vocabulary and fixes the limits of our imagination; we cannot get away from it. There is, too, a peculiar, logical pleasure in making manifest the continuity between what we are doing and what has been done before. But the present has a right to govern itself, so far as it can; and it ought always to be remembered that historic continuity with the past is not a duty, it is only a necessity.

"I hope that the time is coming when this thought will bear fruit. An ideal system of law should draw its postulates and its legislative justification from science. As it is now, we rely upon tradition, or vague sentiment, or the fact that we never thought of any other way of doing things, as our only warrant for rules which we enforce with as much confidence as if they embodied revealed wisdom * * *.

"The Italians have begun to work upon the notion that the foundations of the law ought to be scientific, and, if our civilization does not collapse, I feel pretty sure that the regiment or division that follows us will carry that flag. Our own word seems the last always; yet the change of emphasis from an argument in Plowden to one in the time of Lord Ellenborough, or even from that to one in our own day, is as marked as the difference between Cowley's poetry and Shelley's. Other changes as great will happen. And so the eternal procession moves on, we in the front for the moment; and, stretching away against the unattainable sky, the black spearheads of the army that has been passing in unbroken line already for near a thousand years."

These are the impressive words of Mr. Justice Holmes, speaking at a dinner of the Harvard Law School, nearly 40 years ago. And now we are "in the front for the moment."

Mr. Justice Holmes was entirely right. Literacy is essential to democracy, but not mere literacy. Education and science, if they are to be useful to government, must function within government as they have functioned outside of it. It is a sad commentary that we have used science least where we needed it most. To transportation, communciation, agriculture, industry, medicine, sanitation, architecture, finance, and business we have applied science and the fruits thereof, but not to government. There has been learning, but it has gone unused. Economists, sociologists, historians, students of politics there have been; and, like their brothers in the pursuit of truth, they have sought and they have found. In the books of the dead and the activities of the living they have traced the growth and science of government. In the great laboratory of life down the ages they have seen the trial and error of collective life. All this knowledge they have stored for the use of those of the "eternal procession" who are for the moment "in the front", and we have not used it.

The genius of the new deal lies in the application of science to government and contemplates the reapplication of the doctrines of cooperation. The Agricultural Adjustment Act is a planned attack upon unbalanced production, the National Recovery Act upon unbalance employment, and both upon our diminished purchasing power. These acts were carefully devised. Not only were individual enactments thought out in advance but their relationships to each other and to the whole result were recognized factors in the problem. The Agricultural Adjustment Act complements the National Recovery Act. The Public Works feature sustains both. Thus, production, consumption, and capital-goods industries are being aided simultaneously. The Civilian Conservation Corps, the Civil Works Administration, and various other modern measures are component parts of a seriously thought out program. The banking structure is undergoing a necessary rehabilitation. Price adjustments and dollar stabilization are sought by the scientific method of trial and error and not by arbitrary fiat. A cleansing of the public service and a campaign against crime have been undertaken as matters essential to a healthy national life.

In brief, the attack of the new deal is economic rather than political. The very terminology of the present measures is that of finance, accounting, budgeting, crop production, labor distribution, costs of living, costs of production, margins of profit, price levels, and the like. The measures thus operating seek to adjust the economic factors of our life so as to produce efficiency in that sense of the word which means the abolition of idleness and poverty in a land of plenty.

It will be said that the new deal is experimental and that not all of its measures will succeed. But this is no sufficient challenge. The method of the new deal is one of action, not of laissez-faire. It refuses to abandon in despair our economic life to the operations of chance. The new deal is education and science in action.

"And so the procession moves on, we in the front for the moment, and stretching away against the unattainable sky the

black spearheads of the army that has been passing in unbroken line for near a thousand years."

And in a moment, my student friends, it will be you who are "in the front." Let me exhort you to remember, as educated men and women, as scholars, as scientists, as citizens, that literacy must be for, not merely in, democracy. It must function for government, and it must function through you. Only thus shall we have, in the words of Rollins College, "complete living", and only thus, in the words of our great President, "a more abundant life for all."

PRATT AND WHITNEY—EDITORIAL FROM HARTFORD TIMES

Mr. LONERGAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Hartford Times of February 26, 1934, under the heading "Who Pratt and Whitney Were."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Hartford Times, Feb. 26, 1934]

WHO PRATT AND WHITNEY WERE

It would not be inappropriate if some Member of the Connecticut congressional delegation were to arise in his place and, using a term dependent upon the House of which he is a Member, should address the presiding officer and say, "Mr. President", or "Mr. Speaker", "some days ago before one of the committees of this body investigating matters having to do with aviation and aircraft, the question was asked: Who are Pratt and Whitney? I arise to make reply to that inquiry.

"Amos Whitney was born in Maine in 1832, of ancestors who came from England in 1635. The family takes its name from Whitne-On-The-Wye, a locality mentioned in the Doomsday book. A Whitney accompanied Richard, the Lionhearted, on one of his crusades to the Holy Land and was a victor in a single-handed combat against three Saracens.

"One of his ancestors helped protect the New England colonists from Indian attacks in King Philip's War in 1676 and a later one was an officer in the Revolution and a man of mechanical ability. This strain of talent ran through the family for several successive generations.

"Amos Whitney began at the age of 14 to learn the machinist's trade. Coming to Hartford he was employed in Col. Samuel Colt's pistol factory. There he formed the acquaintance of a young fellow worker named Francis A. Pratt who also possessed mechanical ability. They gave up employment at which they were receiving $8 a day each and went to work for $2 a day in an iron manufacturing establishment where they would have an opportunity to do contract work.

"In 1860 they went into business together and in a single rented room manufactured machinery and tools which displayed the ingenuity and inventiveness which has made New England industry famous.

"Before long they had moved to larger quarters, and at the close of the Franco-Prussian War they had orders from the Imperial German Government for armory equipment. The firm continued to grow and at one time it was active in producing Hotchkiss guns for the Navy. Later the company equipped and outfitted an arsenal for the Spanish Government.

"The company attained a world-wide reputation for the construction of precision machinery, small tools, etc. Both the original partners had gone before the outbreak of the World War, and the company had become a corporation and a part of a larger enterprise. It contributed its resources to the manufacture which the war made necessary. At a cost of scores of thousands of dollars it undertook to provide American manufacturers with precision gages which would make it possible to coordinate for war purposes the output of industrial establishments scattered all over the country.

"One of its instruments was so delicate that an operator's breath or contact with his fingers for 3 or 4 seconds would make a difference in the reading of the gage. It employed the light wave in order to establish a standard of length not susceptible to temperature changes. By this it was enabled to determine errors as minute as one thirty-thousandths of the thickness of the average human hair, or 0.0000001.

"In view of its history it is not surprising that when some ambitious young men with an idea for a new airplane motor were endeavoring to provide for its manufacture, the Pratt & Whitney Co. should have been willing to accept an interest in their venture as payment for placing its manufacturing resources at their disposal.

"The launching of the Pratt & Whitney Aircraft Co. which, although it is an independent concern, bears names honored in American industry, is a fitting later chapter to the story which began with the careers of two young machinists who possessed not only inventive genius, but courage and above all, character."

Neither House of the Congress of the United States may ever have the opportunity of hearing such a speech, but many matters will be brought before its attention of less merit than such an answer as is suggested by the query of the gentleman who felt a curiosity as to the identity of Pratt and Whitney of Hartford.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS AND JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries, who also announced that the President had approved and signed the following joint resolution and acts:

On March 5, 1934:

S.J.Res. 80. Joint resolution authorizing the President to invite the States of the Union and foreign countries to participate in the International Petroleum Exposition at Tulsa, Okla., to be held May 12 to May 19, 1934, inclusive.

On March 6, 1934:

S. 2766. An act to extend the period during which direct obligations of the United States may be used as collateral security for Federal Reserve notes.

On March 8, 1934:

S. 1759. An act to revive and reenact the act entitled "An act granting the consent of Congress to the Mill Four Drainage District in Lincoln County, Oreg., to construct, maintain, and operate dams and dikes to prevent the flow of waters of Yaquina Bay and River into Nutes Slough, Boones Slough, and sloughs connected therewith", approved June 17, 1930; and

S. 2461. An act to amend an act entitled "An act to give the Supreme Court of the United States authority to prescribe rules of practice and procedure with respect to proceedings in criminal cases after verdict."

On March 9, 1934:

S. 750. An act for the relief of the Lebanon Equity Exchange, of Lebanon, Nebr.; and

S. 751. An act authorizing the Secretary of the Treasury of the United States to refund to the Farmers' Grain Co., of Omaha, Nebr., income taxes illegally paid to the United States Treasurer.

GREAT LAKES-ST. LAWRENCE WATERWAY TREATY

Mr. VANDENBERG. Mr. President, on March 8, in the course of the afternoon's debate on the St. Lawrence Seaway Treaty the following colloquy occurred—I quote from page 3983 of the RECORD:

Mr. DIETERICH. Does the Senator know who is supplying the funds for the Tidewater Association to scatter propaganda, or did he ever become acquainted with the Tidewater Association?

Mr. WHEELER. I did not know there was a Tidewater Association.

Mr. DIETERICH. Does not the Senator know it to be a fact that the Canadian Power Trust is supplying those funds in order to put through the provisions of a treaty that gives to Canada, as the Senator from Louisiana [Mr. LONG] said, about 75 percent of the power developed in the St. Lawrence waterway and at Niagara Falls?

Mr. President, I do not care to deal with the latter section of that quotation, because it has already been completely refuted. It is an idle vagary. I do want to deal for just a moment——

Mr. LONG. Mr. President——

Mr. VANDENBERG. I decline to yield until I shall have completed my statement.

The VICE PRESIDENT. The Senator from Michigan declines to yield.

Mr. VANDENBERG. When I have completed my statement I shall be very glad to yield.

As I started to say, I want to deal with the statement of the junior Senator from Illinois that it is a fact that the Canadian Power Trust is supplying the funds of the Great Lakes-St. Lawrence Tidewater Association and thus, by inference, financing the battle which has been waged for this tremendous enterprise. This is a very excellent and typical sample of the type of misunderstanding, if not sinister misrepresentation, which this great seaway cause has suffered throughout these debates.

In the further course of debate last Thursday I undertook to state that the funds of the Tidewater Association, which is and has been the chief sponsor of this treaty, had come exclusively from State appropriations. My statement was challenged. On page 3984 of the RECORD, I promised the Senate that I would subsequently provide a complete balance sheet demonstrating precisely where its funds have originated. That is what I now propose to do. I am dealing in facts, Mr. President, that can be justified from the record. I am not dealing in alleged facts which are asserted without proof and for mere prejudicial purposes. Anathema is

not argument, and groundless conversation is not entitled to be persuasive.

Mr. President, the Great Lakes-St. Lawrence Tidewater Association is described in its own incorporation papers as follows:

An organization of States associated under legislative authority and supported solely—

I repeat the words:

supported solely by appropriations of their legislatures, with the single purpose of opening an ocean route to the ports of the Great Lakes for the uninterrupted movement of commerce.

What is the membership of the Great Lakes-St. Lawrence Tidewater Association? In the first place, it is an association of 23 States, 18 of which belong to the association by specific legislative acts and 5 by executive orders. What are those States? They are California, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Montana, Nebraska, North Dakota, Ohio, Oregon, South Carolina, South Dakota, Utah, Washington, West Virginia, Wisconsin, and Wyoming.

All these States have spoken through State legislative action except Kentucky, Oregon, Utah, West Virginia, and Missouri, which spoke through executive orders of their governors.

These official corporate entities and these alone represent the membership of the Great Lakes-St. Lawrence Tidewater Association.

Mr. DIETERICH rose.

Mr. VANDENBERG. I will not yield until I shall have concluded my statement.

Mr. President, the tidewater association has depended exclusively for its finances upon State legislative contributions from those States which are members of the association and in immediate contact with the Great Lakes area.

I hold in my hand an authenticated statement from the books of the Great Lakes-St. Lawrence Tidewater Association. Much has been said here about a $500,000 lobby fund which has been prejudicially used in respect to this great enterprise, which obviously is close to the hearts and purses of the people in at least 23 States. That $500,000 to which reference has been made represents approximately the total income of the Great Lakes-St. Lawrence Tidewater Association for 15 years, from the time of its organization, covering all the tremendous research expenditures which were made in the inception of this great adventure. Every penny of that money in the course of 15 years has come from one source, and that is the State treasuries of a few of the States which are members of the association, with one single exception, and the exception is quite significant. The only exception to the statement which I have made is the contribution of $12,500 in 1919 which was made by the Chicago Association of Commerce at a moment when the Illinois Legislature was temporarily declining to cooperate.

Mr. CLARK. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Missouri?

Mr. VANDENBERG. I will yield when I shall have completed my statement.

The VICE PRESIDENT. The Senator from Michigan declines to yield.

Mr. VANDENBERG. Mr. President, where have these funds originated? They have originated as follows in the course of 15 years:

The Legislature of Minnesota has appropriated the total of $117,562.85.

The Legislature of Wisconsin has appropriated a total of $74,950.36.

The Legislature of Illinois has appropriated $91,950.49.

The Legislature of Michigan has appropriated $96,422.89.

The Legislature of Iowa has appropriated $47,476.72.

The Legislature of South Dakota has appropriated $4,878.53.

The Legislature of Indiana has appropriated $28,388.38.

The Legislature of Ohio has appropriated $89,117.93.

The Legislature of Nebraska has appropriated $2,499.98.

The Legislature of North Dakota has appropriated $3,437.16.

It is the money of our mass citizenship, and none other, which has financed the splendid work of this fraternity of States in behalf of this prospectus to permit the mid-continent to reach the sea.

Every penny of these funds has been disbursed upon vouchers originating in each local State council which speaks for the State in respect to its membership in this association. The central office of the Great Lakes-St. Lawrence Tidewater Association has not one penny of revenue except as it comes by action of State councils in the various States appropriating to the central office the relative share which each State bears in the approved central expenditures.

I submit, Mr. President, that a disclosure of these figures demonstrates that there is utterly no warrant whatsoever for the sinister efforts to pretend that the Canadian Power Trust in some sort of subtle way is responsible for the Tidewater Association's activities in behalf of the pending treaty. I submit, on the contrary, that the figures demonstrate beyond peradventure that there never was a movement that came to focus the attention of the United States Senate which had a more definite demonstration of solid interest of the Commonwealths and the citizenship of the sectors which are involved.

Mr. President, if anyone can find any other cause which for 15 years has so challenged the interest of the legislatures of the States in the great area to be affected by this project, if anyone can find any other adventure that was ever undertaken which has had such a continued and demonstrated support as is indicated by these figures, then I miss my guess.

Mr. DIETERICH. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Illinois?

Mr. VANDENBERG. I will yield in just a moment.

I ask to have inserted in the RECORD the complete letter carrying all of the information to which I have referred.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The letter is as follows:

WASHINGTON, D.C., *March 10, 1934.*

This is to certify that the Great Lakes-St. Lawrence Tidewater Association was formed March 1919 for the single purpose stated in article 2 of the articles of association, reading as follows:

"The general purpose of this association shall be to bring the Atlantic to the heart of the continent through connecting the head of the Great Lakes with tidewater via the St. Lawrence River, and for such purpose to cooperate with the Dominion of Canada * * *."

Its membership is composed exclusively of State units, associated by acts of the legislatures, which provide for cooperation with other States having like purpose, and functioning through commissions created by legislative act, or through the Governor and his especially appointed representatives.

This association has no individual, corporate, or organization members, such as chambers of commerce, etc.

The work of the association has been financed wholly and exclusively from legislative appropriations of the various States of the United States, except as to $12,500 contributed by the Chicago Association of Commerce for use during the biennium 1919–21.

Its council of States is composed of the Governor of each State and the members of the State commissions or vice presidents appointed by Governors, in States where no legislative commission has been set up.

Its executive committee (elected by the council of States) directs the activities, fixes the budget of expenditures, and approves the personnel of the executive offices.

All appropriations by the various States are made for the use of the State commissions, where such State commissions exist, or are under the control of the Governors where no commission has been set up by the legislature, and for the sole purpose hereinbefore stated (article 2).

The money appropriated by the legislatures remains in the treasuries of the States until there is submitted from these executive offices proper bills, vouchers, and subvouchers. These are first passed to the chairman of the commission of the State to which the bills are assigned (where such commission is set up by legislative act), or otherwise to the Governor for approval. They then pass through the ordinary channels for payment of bills by States.

All of which is in the statement of A. O. Moreaux, chairman of the St. Lawrence Tidewater Commission of Minnesota, and also chairman of the executive committee of the Great Lakes-St. Lawrence Tidewater Association, printed in the hearings before a subcommittee of the Committee on Foreign Relations of the United States Senate, Seventy-second Congress, second session, on S.Res.

278, beginning bottom of page 651 and ending with fourth paragraph on page 654.

The amounts of properly vouchered accounts accepted and paid by the several State commissions or the Governor of States where commissions do not exist during the 15 years which this association has carried on its work follow:

Minnesota, $117,562.85; Wisconsin, $74,950.36; Illinois, $91,950.49 (Illinois appropriated no money in 1919 when Minnesota, Wisconsin, and Michigan each appropriated; the Chicago Association of Commerce raised $12,500 that year for the work of the association); Michigan, $96,422.89; Iowa, $47,476.72; South Dakota, $4,878.53; Indiana, $28,388.38; Ohio, $89,117.93; Nebraska, $2,499.98; North Dakota, $3,437.16.

CHARLES E. CRAIG,
Executive Director,
Great Lakes-St. Lawrence Tidewater Association.

Subscribed and sworn to before me this 10th day of March 1934.
[SEAL] NELL V. PRICE, *Notary Public.*

Mr. VANDENBERG. I will yield now to any Senator who desires to say anything.

Mr. DIETERICH. Mr. President, will the Senator from Michigan yield to me?

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Illinois?

Mr. VANDENBERG. I am glad to yield to the Senator.

Mr. DIETERICH. The answer to the Senator's argument is that while Illinois did appropriate through its legislature various amounts of money for this incorporated Tidewater Association, it did not appropriate that money for the purpose of advancing this particular treaty. It appropriated that money because of the interest of the State in the St. Lawrence waterway project. The Illinois Legislature has refused to make any appropriation since this treaty came into existence and has memorialized Congress not to approve the treaty in its present form. That is also true of the Chicago Chamber of Commerce. That memorial is on record here.

The Illinois Legislature and the State of Illinois are not against the St. Lawrence waterway project as a project. They are against the idea of trying to rewrite the boundary-water treaty of 1907 in this treaty and giving Canada further power rights.

Mr. VANDENBERG. The Senator begs the question. I have no intent or purpose to argue what may be the present attitude of the State of Illinois. I challenged the statement submitted by the Senator from Illinois on the floor of the Senate which he stated to be a fact, to wit, that the Canadian Power Trust was responsible for the funds which have been used by the Great Lakes-St. Lawrence Tidewater Association. I submit to the Senator from Illinois that, with his fine candor and integrity, he ought to admit that he said something that is not so.

Mr. DIETERICH. With that same candor, I am glad to state that I admit that I did not know where the funds came from. I did not know this enormous amount had been collected from the various States. I knew that the Canadian power interests must necessarily be concerned in the pending treaty, and, of course, we have no means of knowing what their interest is because they are across the border.

Mr. VANDENBERG. I am glad to have the Senator's confession of a lack of knowledge regarding the statement which he made and his willingness to concede that he was mistaken.

Mr. LONG. Mr. President——

Mr. VANDENBERG. Just a moment.

The Senator can draw such inferences as he pleases respecting the assertion that the Canadian Power Trust has a fiscal interest in the ratification of this treaty. It would be just as fair to assume that the Power Trust on this side of the river has a similar interest in the defeat of the treaty. I decline, however, to enter that field of imputation; and I have repeatedly said that I am ready to take everybody's motives at face value so long as we can stick to facts in our discussion of this issue and until there are proofs to the contrary.

I do want to say one thing, however, in respect to the comment made by the Senator from Illinois that it is not the present treaty which wins the approval of these various State units up and down the midcontinent.

I shall submit to the Senate upon next Monday a petition signed by 28 Governors or immediate ex-Governors of the United States asking not for a St. Lawrence Treaty but for this treaty and this project as it now impends.

Mr. LONG. Mr. President——

Mr. VANDENBERG. I yield to the Senator from Louisiana.

Mr. LONG. I should like to have the floor in my own right.

Mr. VANDENBERG. The Senator now has it, so far as I am concerned.

Mr. LONG. Mr. President, we have not undertaken to inject the power issue into the discussion of this treaty. My friend, the Senator from Wisconsin [Mr. LA FOLLETTE], and several of our other friends have undertaken to convince the Senate that the power interests were very much concerned in defeating the St. Lawrence Treaty, which necessitated in turn our showing up the fact that the Canadian power interests were more interested in the treaty being ratified than the American power interests could be interested in its being defeated.

I have never made the statement as a fact, nor has the Senator from Illinois [Mr. DIETERICH] made the statement as a fact, that the $500,000 that has been appropriated by the Tidewater Association came through the Power Trust; but we did intimate that this concern was interested in it, and that there was half a million dollars spent; and, putting two and two together, the logical deduction that one might draw would be that certainly this Canadian power company getting these rights would not have been filching the pockets of the people, sandbagging them to put up something for the Canadian power interest.

It is a whole lot worse as it is, that these States have been misled into putting up $500,000 to buy the rights for the Canadian power interest, and to take Lake Michigan away from the United States, and to kill the Mississippi Valley waterway, than if they had let the power company put it up. I have less respect for that association in view of its diverting those funds from the State treasuries than if the matter had been financed by these interests.

I desire to say further that I certainly hope the Senator from Michigan does not mean to say that they have let this power interest go scot-free, and not put up its part of this money. I certainly hope they have at least kicked in to the extent that these advantages are inuring to them. It is not half fair to go to the State of Illinois, that has spent all the money it has in trying to develop the Mississippi waterway, and to the States down the Mississippi Valley that have tried to do the same thing; it is not exactly fair to go over to the coast of California, where they have spent millions and hundreds of millions of dollars to develop a trade there, and have them putting up money to take away their own commerce from them, and to have the money contributed by those States used for no other purpose on earth than to cut their own throats.

That is the proposition. I am willing to make the statement that the Canadian power interests have not been silent. I could not prove to save my life that they have spent a dollar, because they are not subject to any investigation by Congress at all; but, in view of the fact that my friend from Illinois showed that we furnished about two thirds of the water at Niagara Falls and got less than a third of the power back, who is going to believe that the Canadian power interests are not financially concerned and are not moving in every direction they can for such rights as they are going to get out of this treaty? It is only natural. I do not understand the Senator to say that the statement directly charges the Power Trust of Canada with this. If it does, it is done by deduction, as I have stated.

Mr. VANDENBERG. Mr. President, will the Senator yield?

Mr. LONG. Yes, sir.

Mr. VANDENBERG. The statement I have challenged made the specific and unqualified declaration that the Tidewater Association was financed by the Canadian Power Trust.

Mr. LONG. Who said that?

Mr. VANDENBERG. The Senator from Illinois [Mr. DIETERICH]; and he has since stated that he was in error. That is all I have to argue on the subject at the present time. The other misstatements of the Senator from Louisiana can be cared for later.

Mr. LONG. It has now been conclusively demonstrated that this is a valuable thing that is given to the Canadian power interests. I take it that nobody is going to controvert figures of that kind, where we are giving them the American water rights, and giving them for the purpose of building up Canadian power with American money.

There is one thing that may be charged against us. It may be charged that we have done something with American money that might have helped the American power interest. I have not tried to do it, unless it has been to help out 120,000,000 American people. We never have proposed, however, to take a billion dollars of American money and spend it for Canadian labor, to give away American waterpower and American rights to help the Canadian power interest. That is one thing we have never done. We have at least kept it in America. That is as far as we can be charged with ever having done anything.

So let us eliminate this power consideration from this discussion. Let us call the matter off. Let us just admit on this side, whether it is a fact or not, that it would help the American interest, including the American power interest—and I take it that it would; I think it will help everybody in America—for this treaty to be beaten. I think it will help every capitalist in America. I think it will help every farmer in America—that is, it will not hurt him—for this treaty to be beaten. Let us just eliminate the power consideration from this treaty altogether. I take it that the Senator from Michigan is not controverting it. I take it that the other gentlemen who are leading the fight for the ratification of this treaty are not undertaking to dispute that it is of tremendous benefit to the Canadian power interest. With that fact admitted, let us eliminate the power consideration, and then decide on the issues:

First, do we want to spend a billion dollars, or $500,000,000, or whatever the cost is, of American money to build up a Canadian port?

Second, do we want to give away Lake Michigan's sovereignty into a dual sovereignty with Great Britain as well as the United States?

Third, do we wish to destroy the Mississippi waterway?

Fourth, in days of unemployment in America, and with a need of funds in America to relieve unemployment, do we want to go to Canada and start spending our money there in order to help Canada with its unemployment program?

So, Mr. President, the matter boils itself down, eliminating the power issue, to the one thing: Will we spend a billion dollars to build up a port in Canada, to give away waterways in America, and will we kill our own Mississippi Valley project with American money for the benefit of the Canadian system?

Mr. PITTMAN. Mr. President, I do not intend to deal for one moment with the uncertainty in the mind of the Senator from Louisiana with regard to power, or the expenditures under this treaty; but there is one thing I do intend to deal with in just a few minutes. I am doing it because the Senator from Louisiana was not here yesterday.

I know the main issue in his mind is whether or not the ratification of this treaty will injure the Mississippi River project. There is no question about that. His whole argument from beginning to end has shown that to be so.

I stated the other day that I was going to prove by the best evidence that could possibly be obtained that the development of the Great Lakes-St. Lawrence seaway in no way whatever affects the Mississippi River project or can in any way affect the Mississippi River project; and I now intend to read the best evidence on the subject. It is not my opinion. It is not the opinion of any Senator here. It is not the opinion of the Mississippi River Valley Association.

Mr. DIETERICH. Mr. President——

Mr. PITTMAN. Just a minute, please. It is not the opinion of the Senator from Illinois. It is not the opinion of the attorneys of the sanitary district of Illinois. It is not the opinion of the attorneys for the railroad association. It is not the opinion of the Power Trust, which has its association. They all have great experts, and Senators may quote their testimony in contradiction of what I am going to read.

Mr. DIETERICH. Mr. President, will the Senator yield?

Mr. PITTMAN. I do not yield now.

The VICE PRESIDENT. The Senator declines to yield.

Mr. PITTMAN. What I am going to quote now is from the highest authority in the United States—not from any authorities that are paid to have opinions; not from those that have motives of selfishness and greed but from the highest authority in the United States. I am going to read direct, positive statements from the Board of Army Engineers of the United States, who for 30 or 40 years, to my personal knowledge have been working for the improvement of the Mississippi River and its tributaries; who have been seeking flood control on the Mississippi River since I was a boy; whose integrity, whose ability, whose disinterestedness as far as they are personally concerned has never been questioned; a Board that was authorized by Congress in 1930 to investigate and report on this very subject, and they have reported. They reported on December 6 of this year.

Mr. LONG rose.

Mr. PITTMAN. Just a second, please. I should like to finish my statement before we branch off on power.

Mr. LONG. I will not branch off on power.

Mr. PITTMAN. Please do not. Let us stick to this one question.

The VICE PRESIDENT. The Senator from Nevada has announced that he does not care to yield.

Mr. PITTMAN. This is a Board that was authorized by an act of Congress to make a special survey and to report to Congress the minimum amount of water that was required to be diverted, if any should be required, from Lake Michigan through the Chicago Drainage Canal to the Illinois River, and to report back; and it has done so.

Here is the statement of the chief of that Board, Major General Markham, which is based on the report which is here. This is in answer to direct questions I asked him. I wanted direct answers.

Mr. LONG. Mr. President, will the Senator allow me to ask him a question right in point?

Mr. PITTMAN. Yes.

Mr. LONG. The Senator knows, I suppose, that Gen. Lytle Brown had one opinion about the Mississippi Valley waterway, which the other President adopted and Congress adopted, and that General Jadwin, before him, had the same Army Engineer Board render an exactly opposite decision on the Mississippi Valley waterway. I am sure the Senator is familiar with that.

Mr. PITTMAN. Is this a question, or a speech?

Mr. LONG. The Senator is saying that it is such a consistent authority. General Jadwin reported one thing on the Mississippi Valley waterway, and had the same corps of engineers there who worked up his data, and General Brown has now reported the opposite, and the Senator cannot consistently say that that is an unquestioned authority.

Mr. PITTMAN. Very well. Then I will not quote from General Jadwin and I will not quote from General Brown.

Mr. DIETERICH. Mr. President, will the Senator yield?

Mr. PITTMAN. Just a moment. I will not yield.

The VICE PRESIDENT. The Senator has declined to yield.

Mr. PITTMAN. I will not quote from either one of those authorities, as the Senator is suspicious of both of them.

Mr. LONG. Or any one of them.

Mr. PITTMAN. The time when General Jadwin made a report was before the survey under the act of Congress of 1930. The same applies to General Brown. But I will read from a letter dated January 31, 1934, addressed to me from Major General Markham. He states:

In accordance with your request, I take pleasure in advising you on the asserted need for a diversion of water from Lake Michigan to provide for the present and future improvement of the Mississippi River for navigation.

The whole letter is in the RECORD; it was read yesterday; but here is his direct answer; here is something I want Senators to listen to:

It has never been the view of this Department that the diversion of water from the Great Lakes into the Chicago Drainage Canal is an essential factor in the present and future development of the interior waterways system formed by the Mississippi River and its tributaries.

There is nothing equivocal about that. Let me read just one more sentence from that letter:

Our inland waterway system is not dependent on the Great Lakes for its water supply. The flow of our great interior rivers, with such conservation as may be necessary, is ample to provide for their maximum development for navigation.

That is pretty plain. Let me read another sentence from the letter:

Looking into the future, the demand must be foreseen for deeper and more commodious channels in our interior waterways, but these channels can be provided without the diversion of water from the Great Lakes.

It seems to me that is an emphatic statement. The present program is for a 9-foot channel, and that is taken care of, as is shown on the map hanging on the wall [indicating] by the dams which are being constructed.

Mr. DIETERICH. Mr. President——

Mr. PITTMAN. I do not yield. But he says that looking to the future, when we may want a deeper channel, still within the system itself they have all the facilities for all the water they want.

Let me read this:

This minimum flow is not adequate to provide a reliable channel of the full 9-foot depth. Under the Public Works program, however, construction has been begun on a great storage reservoir at Fort Peck, at the headwaters of the Missouri, which through the conservation of flood waters will add at least 20,000 cubic feet per second to the low-water flow of the mouth of the Missouri. It is at once apparent that this measure of water conservation will add three times as much water to the low flow of the Mississippi as is involved in the decreed reduction of the Chicago diversion.

Is that plain? But that is not all. So that we may not be mistaken, listen to this:

The Fort Peck dam is, however, but a beginning in the possibilities in the conservation of the water resources of the Mississippi.

"But the beginning."

The available water supply with proper conservation is ample for any future needs of navigation without drawing upon the Great Lakes.

Is that an emphatic statement? He goes on to say:

This Department has committed itself fully and whole-heartedly to the improvement of our great interior waterways system, and it would be its duty to present fully to Congress the need for augmenting the water supply of the Mississippi River by diversion from the Great Lakes if this supply were necessary to the present and future development of the Mississippi River system. It does not regard a diversion greater than that provided in the Supreme Court decree as necessary for that purpose and is cognizant of the injury to navigation and related interests on the Great Lakes that would result from any excessive diversion of water through the Chicago Drainage Canal.

Sincerely yours,

E. M. MARKHAM,
Major General, Chief of Engineers.

Now I yield to the Senator from Illinois.

Mr. DIETERICH. Mr. President, I will now ask the Senator whether or not House Document 184, containing the report of the engineers, is in print, and ready to be distributed to the Members of the Senate?

Mr. PITTMAN. I understand it is.

Mr. DIETERICH. The Senator says he understands it is?

Mr. PITTMAN. Yes.

Mr. DIETERICH. Yesterday the Senator said it was available, and he exhibited a committee hearing report.

Mr. PITTMAN. These reports are not committee hearing reports.

Mr. DIETERICH. But they are not House Document 184. That is the report.

Mr. PITTMAN. This is the report sent by the President of the United States.

Mr. DIETERICH. But I am talking about House Document No. 184, which is the report on the Illinois Waterway submitted pursuant to the River and Harbor Act of 1930. Is that report available?

Mr. PITTMAN. I assume it is.

Mr. DIETERICH. I want to inform the Senator that it is not, and what he is reading is from the Chief of Engineers.

Mr. PITTMAN. Undoubtedly.

Mr. DIETERICH. Who was the author of the report which is in process of being printed but is not available to the Members of the Senate.

Mr. PITTMAN. The Senator is correct; this is a letter from Major General Markham, who has approved the report of the Board of Engineers and certifies that this is the substance of the report.

Mr. DIETERICH. Mr. President, I do not want to interrupt the Senator longer, because he does not seem to wish to be interrupted; but the report, House Document No. 184, would tell the entire story, and they have had over a month to get it to the Members of the Senate, but it is not here. Now the Senator is reading what the author of the report says on the side, without any chance on the part of Senators to check his statement with the report he made.

Mr. LONG. Mr. President, while the Senator is on his feet, fearing he might leave, I want to know whether he will let me ask him a question.

Mr. PITTMAN. Just a moment. I want to call attention to this matter, so that we will not be confused.

Mr. LONG. Very well.

Mr. PITTMAN. On yesterday I placed in the RECORD a letter from General Markham, which will be found on page 4056 of the CONGRESSIONAL RECORD of March 9. It is dated "War Department, Office of the Chief of Engineers, Washington, D.C., December 6, 1933. To the Secretary of War":

1. I submit for transmission to Congress——

The VICE PRESIDENT. According to the agreement under which the Senate is now operating, the time of the Senator from Nevada has expired.

Mr. PITTMAN subsequently said: Mr. President, I desire to offer and to have printed in the CONGRESSIONAL RECORD a document. In order that I may identify it, I call attention to the fact that in the colloquy a few hours ago between the junior Senator from Illinois [Mr. DIETERICH] and myself he made constant inquiry as to House Document No. 184, Seventy-third Congress, second session, to know where that document could be obtained. I wish to say, as I have said before, that I had printed in the RECORD of yesterday a part of that document. The part of the document that I had printed in the RECORD yesterday was the report made by Major General Markham in compliance with the act of Congress of July 3, 1930.

That report refers to certain attached documents. The attached documents were not in my possession or they would have been printed at the same time, as I then said; but I assured the Senator from Illinois that I would have them here this afternoon.

Permit me to state why they were not printed. The full report, with the attached documents, was forwarded by the Secretary of War to the Speaker of the House of Representatives on December 7, 1933. The full document was not forwarded to the Senate, but only that portion of it which was the main report by Major General Markham. I have in my hand now a draft of the document, which has not yet been printed, but is being printed by order of the Speaker of the House of Representatives. General Markham has been going over this printed proof for the purpose of making corrections of typographical errors, and probably most of them, if not all of them, have been made.

I will state also that the Senate document referred to in the act of Congress of 1930 upon which the act was based can be found, of course, in our own document room, Document 126, Seventy-first Congress, second session.

I ask unanimous consent that the entire report made in compliance with the act of July 3, 1930, be published in the CONGRESSIONAL RECORD at this point for the information of the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered. The report is as follows:

[H.Doc. 184, 73d Cong., 2d sess.]

ILLINOIS RIVER, ILL.

LETTER FROM THE SECRETARY OF WAR TRANSMITTING A LETTER FROM THE CHIEF OF ENGINEERS, UNITED STATES ARMY, DATED DECEMBER 6, 1933, SUBMITTING A REPORT, TOGETHER WITH ACCOMPANYING PAPERS AND ILLUSTRATIONS, ON A SURVEY OF ILLINOIS RIVER, ILL., AUTHORIZED BY THE RIVER AND HARBOR ACT APPROVED JULY 3, 1930

WAR DEPARTMENT,
Washington, December 7, 1933.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

DEAR MR. SPEAKER: I am transmitting herewith a report dated December 6, 1933, from the Chief of Engineers, United States Army, on survey of Illinois River, Ill., authorized by the River and Harbor Act approved July 3, 1930, together with accompanying papers and illustrations.

Sincerely yours,

GEO. H. DERN, *Secretary of War.*

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, December 6, 1933.

Subject: Report on survey of Illinois River, Ill.
To: The Secretary of War.

1. I submit for transmission to Congress my report, with accompanying papers and illustrations, on survey of Illinois River, Ill., called for by the following item in the River and Harbor Act approved July 3, 1930:

"Illinois River, Ill., in accordance with the report of the Chief of Engineers, submitted in Senate Document No. 126, Seventy-first Congress, second session, and subject to the conditions set forth in his report in said document, but the said project shall be so constructed as to require the smallest flow of water with which said project can be practically accomplished, in the development of a commercially useful waterway: *Provided*, That there is hereby authorized to be appropriated for this project a sum not to exceed $7,500,000: *Provided further*, That the water authorized at Lockport, Ill., by the decree of the Supreme Court of the United States, rendered April 21, 1930, and reported in volume 281, United States Reports, in Cases Nos. 7, 11, and 12, original—October term, 1929—of Wisconsin and others against Illinois and others, and Michigan against Illinois and others, and New York against Illinois and others, according to the opinion of the Court in the cases reported as Wisconsin against Illinois, in volume 281, United States, page 179, is hereby authorized to be used for the navigation of said waterway: *Provided further*, That as soon as practicable after the Illinois waterway shall have been completed in accordance with this act, the Secretary of War shall cause a study of the amount of water that will be required as an annual average flow to meet the needs of a commercially useful waterway as defined in said Senate document, and shall, on or before January 31, 1938, report to the Congress the results of such study with his recommendations as to the minimum amount of such flow that will be required annually to meet the needs of such waterway and that will not substantially injure the existing navigation on the Great Lakes to the end that Congress may take such action as it may deem advisable."

2. The Illinois River is formed by the confluence of the Kankakee and Des Plaines Rivers in the northeastern part of Illinois, flows southwest 273 miles, and enters the Mississippi River at Grafton, 23 miles above the mouth of the Missouri River and 38 miles above Eads Bridge at St. Louis. The project authorized by Congress for the improvement of the river includes a navigable connection with Lake Michigan at Chicago via the Des Plaines River, the Chicago Drainage Canal, and the Chicago River. The Chicago Drainage Canal was constructed by the sanitary district of Chicago between 1892 and 1900, and provides a channel with a minimum width of 160 feet and minimum depth of 24 feet, extending from the deep-draft channel provided by the Federal project for the improvement of the Chicago River across a low divide to Lockport on the Des Plaines River. The total length of the channel from Lake Michigan to Lockport, afforded by the Chicago River and Drainage Canal, is 36.2 miles. From Lockport a 9-foot channel is provided through the Des Plaines and Illinois Rivers to Starved Rock, near Utica, a distance of 60 miles, by the construction of a lock connecting the drainage canal with the Des Plaines River and 4 locks and dams in the Des Plaines and Illinois Rivers. The locks have chambers 110 feet wide and 600 feet long. This improvement was undertaken by the State of Illinois, under the name of the "Illinois waterway", and completed by the Federal Government. From Starved Rock to the mouth, a distance of 231 miles, the Illinois has been improved under the existing project to provide a channel 9 feet deep and 200 feet wide. In this section of the river 2 locks and dams were constructed more than 40 years ago, at Kampsville and La Grange, 31.5 and 77.5 miles, respectively, above the mouth. The locks are 73 feet in width and 300 feet in length and are inadequate in size and in approaches for the convenient and expeditious passage of modern barge tows. The pools of these dams do not afford a complete slack-water improvement, but because of the exceptionally moderate slope of the river, and the present augmentation of the flow by diversion from Lake Michigan, a through channel of the prescribed dimensions has been secured by dredging. The acts of authorization limited expenditures to $3,500,000 on that part of the waterway below Utica and to $7,500,000 on the portion above Utica. These sums have been adequate to provide a waterway of the dimensions contemplated in the authorization. In summary, the waterway from Lake Michigan to the mouth of the Illinois River is made up of a deep but narrow open channel from Lake Michigan 36.2 miles to Lockport; a completely slack-watered improvement, with locks of ample dimensions, thence 60 miles to Starved Rock, and an open channel, interrupted by two dams with inadequate locks, thence 231 miles to the mouth of the river. The channel has a width of 160 feet from Lake Michigan to Joliet, a few miles below Lockport, and a width of 200 feet thence to the mouth. It was opened to navigation March 1, 1933. Its use has been hampered by inadequate clearances at bridges, particularly in the section from Utica to Lockport. Action to require the owners of these bridges to alter them so as to provide reasonably free, easy, and unobstructed navigation has been taken as prescribed by law, and the alterations are being proceeded with.

3. The project adopted by Congress for the improvement of the Mississippi River below the mouth of the Illinois River provides for a channel 9 feet deep with a width of 200 feet from the Illinois to the northern boundary of St. Louis, and a width of 300 feet below that point, to be obtained by open-channel improvement. Above the mouth of the Illinois the project for improvement of the Mississippi provides for a 9-foot channel of width adequate for modern barge service, through the construction of locks and dams. Experience during the exceptional low water of the past few years having shown the impracticability of maintaining a 9-foot channel above the mouth of the Missouri with open-channel works, the Chief of Engineers, in a report printed in House Document No. 137, Seventy-second Congress, first session, recommended the improvement of the Mississippi from the mouth of the Missouri to Minneapolis to provide a channel 9 feet deep and of adequate width. The construction of the locks at the dams contemplated in this recommended project has been included in the Public Works program under the National Recovery Act. With funds provided under this program it is proposed to construct the lock for a dam in the Mississippi River at Alton, 15 miles below the mouth of the Illinois, which, when the dam is completed, will provide a reliable 9-foot depth in the Mississippi to and beyond the Illinois. The pool of this dam will extend about 80 miles up the Illinois River. With the completion of this dam the remaining major navigation problem in the connection between the Illinois and Mississippi River system is at the rock shoal known as the Chain of Rocks in the upper part of St. Louis. At extreme low water the currents through this reach are excessive and navigation difficult. The Department has, however, under construction a storage dam at Fort Peck at the headwaters of the Missouri which is designed to afford an adequate low water flow through and out of that river.

4. The Chicago Drainage Canal was constructed for the purpose of diverting the sewage of Chicago from the lake frontage of the city to safeguard the city water supply. On a complaint of various States bordering on the Great Lakes that the diversion of water lowered the levels of the Great Lakes to the serious injury of the companion States and their citizens, a decree was entered by the Supreme Court of the United States on April 21, 1930, enjoining the State of Illinois and the sanitary district of Chicago from diverting water in excess of an annual average of 6,500 cubic feet per second on and after July 1, 1930; 5,000 cubic feet per second after December 31, 1935; and 1,500 cubic feet per second after December 31, 1938; these amounts to be in addition to domestic pumpage. The limitation on diversion was based on the construction by the Chicago Sanitary District of sewage treatment plants to purify the sewage of the city. The River and Harbor Act of July 3, 1930, specifically authorizes the water within the limitation of the decree for the use of navigation on the Illinois waterway. Article VIII of the Great Lakes-St. Lawrence Deep Waterway Treaty, now pending before the Senate of the United States, provides that the diversion of the water from the Great Lakes system through the Chicago Drainage Canal shall be reduced by December 31, 1938, to the quantity permitted as of that date by this decree of the Supreme Court of the United States.

5. The district engineer reports that the domestic pumpage during the summer season, when low water may be expected in the rivers, will be about 1,700 cubic feet per second, bringing the total annual supply from the drainage canal into the Illinois River to an annual average of 3,200 cubic feet per second. This supply will not, however, be uniform, as the normal flow must be held down to permit an excess diversion during local storms so that sewage-contaminated water will not be carried into the lake. He finds that the reliable flow with an annual average diversion of 1,500 cubic feet per second from the lake will be about 2,400 cubic feet per second. This supply is ample to meet all requirements of lockage in the completely slack-watered section of the waterway extending from Lake Michigan to Starved Rock. It is not sufficient to maintain the present channel in the section of the river below Starved Rock. By completing the slack watering of the portion of the river below that point through the construction of a new lock and dam near La Grange and another near Peoria, and dredging

the heads of the pools, at a total estimated cost of $9,121,000, the present channel dimensions can be maintained after the diversion has been reduced to 1,500 cubic feet per second. The dams would be modern structures of the movable type so that flood heights would not be increased, and with locks 110 feet wide and 600 feet long.

6. The district engineer is of the opinion, however, that the channel of 200-foot width provided in the existing project does not form a commercially useful waterway for modern barge traffic of the character that may be expected to develop on the Illinois River, and that to afford a commercially useful waterway it should have a width of 300 feet, increased at the bends. The cost of the widening of the channel to 300 feet increases the cost from $9,121,000 to $15,530,000. This is $5,200,000 in excess of the cost of providing a channel 300 feet in width, widened at the bends, if the present diversion is continued. The district engineer recommends that the existing project for the Illinois River be modified to provide a channel at least 9 feet deep and 300 feet wide from Lockport to Grafton by canalization and dredging, at an estimated cost of $15,530,000, with $350,000 for operation and care of locks and dams and $150,000 annually for channel maintenance.

7. The completion of the dam at Alton is also essential to provide a 9-foot depth in the Illinois River between the proposed new dam at La Grange and the mouth of the river, with a diversion of 1,500 cubic feet per second. The estimated cost of this lock and dam is $8,011,000, of which $3,540,000 has already been allotted for the construction of the locks, leaving $4,471,000 to be subsequently provided for the construction of the dam. The district engineer recommends that the existing project for the improvement of the Mississippi River be modified to provide for the construction of this lock and dam.

8. The estimated commerce on the Illinois River, after improvement to afford a minimum channel width of 300 feet with adequate locks throughout, is estimated at 8,330,000 tons, and the annual transportation economies from its use will amount to over $5,000,000. The expenditures necessary to afford a fully useful waterway are therefore wholly justified.

9. While the district engineer finds that an annual diversion of 1,500 cubic feet per second, increased by domestic pumpage, is ample to provide an adequate flow to meet all requirements of lockage, seepage, leakage, and evaporation on the waterway, he concludes that the determination whether this flow will provide a flow suitable from a sanitary standpoint for a commercially useful waterway can be made only by experience after the sewage-treatment plants at Chicago are completed. He points out that the weight of expert testimony is to the effect that the effluent from the sewage-treatment plants will be inoffensive, but that the program is on such an unprecedented scale that such predictions must contain an element of uncertainty; and that no reliable process of calculation can predict the effect of raw sewage in storm-water run-off and of accumulated sludge deposits.

10. The division engineer concurs in general with the conclusions of the district engineer. He believes that in order to afford an assured channel in the Chain of Rocks section of the Mississippi River at St. Louis, its positive improvement should be provided by the construction of a lock and dam at an estimated cost of $12,000,000. He recommends that the Chief of Engineers be granted authority to direct such additional temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation.

11. These reports have been referred, in accordance with law, to the Board of Engineers for Rivers and Harbors. Attention is invited to its report herewith concurring in general with the views and recommendations of the reporting officers.

12. The Board reports that the minimum average annual diversion of water from Lake Michigan that will be required to meet the direct needs of navigation for a commercially useful waterway in the Illinois River and that will not substantially injure the existing navigation on the Great Lakes is 1,500 cubic feet per second, as prescribed by the Supreme Court decree, but that the indirect needs of such a waterway in the matter of securing satisfactory sanitary conditions for those aboard vessels or employed at terminals cannot be determined until the waterway has been fully completed and the diversion limited to 1,500 cubic feet per second for a sufficient period of time to observe the conditions that may then exist. The Board further reports that it is desirable to modify the existing project for the Illinois River so as to provide for a channel at least 9 feet deep and 300 feet wide below Lockport, to be secured by dredging and the construction of locks and dams at Peoria, La Grange, and Alton on the Mississippi River and the removal of the existing structures at La Grange and Kampsville, all as generally shown on the maps and plans herewith and at an estimated cost for the work in the Illinois River proper of $15,530,000, with $350,000 annually for operation and care of locks and dams and $150,000 annually for channel maintenance; and $8,011,000 for a lock and dam in the Mississippi River near Alton, with $60,000 annually for maintenance and operation, one half of the original cost and annual maintenance to be charged to the improvement of the Illinois River and one half to the improvement of the Mississippi River from the mouth of the Illinois to Minneapolis. Should the project be thus modified, the Board recommends that the exact location and details of design of all structures be left to the decision of the Chief of Engineers at the time of construction and that allotments be made in such manner as to permit completion by December 31, 1938; and that the Chief of Engineers be granted authority to direct such additional temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation.

13. After due consideration of these reports, I concur in general in the views and recommendations of the Board. The report conclusively shows that aside from sanitary requirements, the minimum annual average flow from Lake Michigan required to meet the needs of a commercially useful waterway in the Illinois River, is a direct diversion of 1,500 cubic feet per second in addition to domestic pumpage by the city of Chicago. It does not appear possible to arrive at a conclusive determination whether this flow will afford suitable sanitary conditions on the waterway after the sewage purification plants at Chicago have been completed and placed in operation. This flow will not substantially injure the existing navigation on the Great Lakes. In order, however, to maintain the channel dimensions provided in the present project in the Illinois River with the flow above specified, it will be necessary to construct two locks and dams in the Illinois River at La Grange and Peoria, respectively, and dredge the heads of the pools created by these dams at an estimated cost of $9,121,000, and to complete the lock and dam in the Mississippi River at Alton at an estimated cost, in addition to the funds already provided, of $4,471,000. To afford an adequate commercially useful waterway it is necessary, whatever the diversion, to widen the existing channels to 300 feet, increased at the bends, at an additional cost of $6,409,000, bringing the total for the Illinois River to $15,530,000. This expenditure is amply justified by the benefits to commerce and navigation resulting from the provision of an adequate waterway from the Great Lakes and the enormous industrial center at Chicago to the widespread system of inland waterways being provided on the Mississippi River and its tributaries.

14. The construction of a lock and dam at Alton is essential to afford a 9-foot channel of adequate width for modern barge service in the Mississippi River to St. Paul and Minneapolis, as well as to the improvement of the Illinois. No good purpose is seen in charging any portion of the cost of this improvement to the Illinois River. Since the construction of the Fort Peck Dam at the headwaters of the Missouri River is expected to greatly ameliorate low-water conditions on the Missouri River and in the Mississippi River below the mouth of the Missouri, no modification of the project for the improvement of the Mississippi below the mouth of the Missouri to improve present low-water conditions should be undertaken at this time. Having in view the international as well as the national interest in the diversion of water from Lake Michigan, I do not consider it appropriate that the Chief of Engineers should be afforded discretionary power to increase the diversion. The present discharge of untreated sewage produces as bad sanitary conditions in the Chicago Drainage Canal and in the portion of the Illinois waterway immediately below Lockport as those which may be expected with the reduced diversion after the sewage treatment has been completed in accordance with the intent of the decree of the Supreme Court. The situation is one which unquestionably demands a remedy, but the remedy should, in my opinion, be afforded first by the purification of the sewage, and second, if that prove inadequate, by a moderate and reasonable draft of water from Lake Michigan. Until the need is established for a greater diversion than that now provided by law, I see no reason for a modification of the present legislation.

15. I therefore recommend that no change be made for the time being in the water authorized to be used for the navigation of the Illinois River under the provisions of the River and Harbor Act approved July 3, 1930, that the slack-watering of the river be completed by the construction of modern locks and dams at La Grange and Peoria, and that to provide a fully useful commercial waterway the project for the improvement be modified to provide for a channel at least 9 feet deep and 300 feet wide below Lockport; all as generally shown on the maps and plans herewith and at an estimated cost of $15,530,000, with $350,000 annually for the operation and care of locks and dams and $150,000 annually for channel maintenance; the exact location and details of design of all structures to be left to the discretion of the Chief of Engineers. I point out the importance of the prompt provision of funds so as to complete the construction of the locks and dams at La Grange and Peoria by December 31, 1938.

E. M. MARKHAM,
Major General, Chief of Engineers.

REPORT OF THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS

SYLLABUS

"The Board reports that the minimum average annual diversion of water from Lake Michigan that will be required to meet the direct needs of navigation for a commercially useful waterway in the Illinois River, and that will not substantially injure the existing navigation on the Great Lakes, is 1,500 cubic feet per second as prescribed by the Supreme Court decree, but that the indirect needs of such a waterway in the matter of securing satisfactory sanitary conditions for those aboard vessels or employed at terminals cannot be determined until the waterway has been fully completed and the diversion limited to 1,500 cubic feet per second

for a sufficient period of time to observe the conditions that may then exist.

"The Board further reports that, in its opinion, it is desirable, in order to secure a commercially useful waterway with such reduced diversion, to modify the existing project for the Illinois River so as to provide for a channel at least 9 feet deep and 300 feet wide below Lockport, to be secured by dredging and the construction of locks and dams at Peoria, La Grange, and Alton (Mississippi River) and the removal of the existing structures at La Grange and Kampsville, all at an estimated cost for the work in the Illinois River proper of $15,530,000, with $350,000 annually for operation and care of locks and dams and $150,000 annually for channel maintenance, and $8,011,000 for a lock and dam in the Mississippi River near Alton, with $60,000 annually for maintenance and operation, one half of the original cost and annual maintenance to be charged to the improvement of the Illinois River and one half to the improvement of the Mississippi River from the mouth of the Illinois to Minneapolis. Should the project be thus modified, the Board recommends that the exact location and details of design of all structures be left to the decision of the Chief of Engineers at the time of construction and that allotments be made in such manner as to permit completion by December 31, 1938; and that the Chief of Engineers be granted authority to direct such additional temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation."

[Second endorsement]

BOARD OF ENGINEERS FOR RIVERS AND HARBORS,
Washington, D.C., November 13, 1933.

To the CHIEF OF ENGINEERS, UNITED STATES ARMY:

1. The following is in review of reports on the Illinois River, Ill., called for by the following item in the River and Harbor Act approved July 3, 1930:

"Illinois River, Ill., in accordance with the report of the Chief of Engineers, submitted in Senate Document Numbered 126, Seventy-first Congress, second session, and subject to the conditions set forth in his report in said document, but the said project shall be so constructed as to require the smallest flow of water with which said project can be practically accomplished, in the development of a commercially useful waterway: *Provided*, That there is hereby authorized to be appropriated for this project a sum not to exceed $7,500,000: *Provided further*, That the water authorized at Lockport, Ill., by the decree of the Supreme Court of the United States, rendered April 21, 1930, and reported in volume 281, United States Reports, in cases nos. 7, 11, and 12, original—October term, 1929, of Wisconsin and others against Illinois and others, and Michigan against Illinois and others, and New York against Illinois and others, according to the opinion of the Court in the cases reported as Wisconsin against Illinois, in volume 281, United States, page 179, is hereby authorized to be used for the navigation of said waterway: *Provided further*, That as soon as practicable after the Illinois waterway shall have been completed in accordance with this act, the Secretary of War shall cause a study of the amount of water that will be required as an annual average flow to meet the needs of a commercially useful waterway as defined in said Senate document, and shall, on or before January 31, 1938, report to the Congress the results of such study with his recommendations as to the minimum amount of such flow that will be required annually to meet the needs of such waterway and that will not substantially injure the existing navigation on the Great Lakes to the end that Congress may take such action as it may deem advisable."

2. The Supreme Court decree referred to enjoined the State of Illinois and the sanitary district of Chicago from diverting lake water through the Chicago Drainage Canal and its auxiliary channels "unless good cause be shown to the contrary" in excess of the following average annual amounts: After July 31, 1930, 6,500 cubic feet per second; after December 31, 1935, 5,000 cubic feet per second; after December 31, 1938, 1,500 cubic feet per second. These amounts are to include the run-off of the Chicago and Calumet area but are to be exclusive of water pumped by the city of Chicago for domestic water-supply purposes.

3. The existing project, as modified by the 1930 act, provides for a channel with least dimensions of 9 feet in depth and 200 feet wide from the mouth of the Illinois River to Utica and thence a navigable channel with a minimum depth of 9 feet to the heads of the Federal projects on the Chicago and Calumet Rivers. It includes locks and dams at Kampsville and La Grange with usable lock dimensions 73 by 300 feet, and at Starved Rock, Marseilles, Dresden, Brandon Road, and Lockports with locks 110 by 600 feet. The portion of the project below Utica is completed except for dredging to increase channel widths at the bends and other restricted points. Between Utica and Lockport additional dredging, modification of two bridges, and minor work on locks and dams are required to complete the project. Total expenditures to June 30, 1933, on the existing projects were approximately $9,200,000, of which $200,000 was for maintenance. The estimated cost of annual maintenance is $373,000.

4. The existing project for the Mississippi River between the Illinois River and Minneapolis includes a lock and dam below the mouth of the Illinois River. The location has been fixed at Alton and allotment made for construction of two parallel locks (110 by 600 feet and 110 by 360 feet).

5. The project for the Mississippi River between the Ohio and Illinois Rivers provides for a channel 9 feet deep and 300 feet wide to the north boundary of St. Louis, and thence to the mouth of the Illinois (27 miles) 200 feet wide, with additional width in the bends, to be secured by contraction works and dredging.

6. The reports of the district and division engineers herewith contain detailed information as to the studies of the amount of water required for navigation, and recommendation thereon as specifically called for by Congress. They also contain detailed discussions, plans, estimates of cost, and recommendation for additional improvements necessary to provide for a commercially useful waterway with the smallest practicable flow. The reports cover only the sections below Lockport, that above having been covered in another report called for by the same act.

REPORT OF THE DISTRICT ENGINEER

7. The section of the waterway from Lockport to Starved Rock was not opened to navigation until March 1, 1933, and due to the obstructive bridges thereon and above Lockport to Chicago, and the restricted dimensions of the Calumet-Sag waterway, only small towboats and barges can be used to and from the Chicago area. Below Starved Rock in the calendar year 1932 the commerce is reported as 188,150 tons, with 85,500 passengers.

8. The district engineer presents an estimate of prospective tonnage on the waterway if further improved amounting to 8,330,000 tons, with annual savings of $5,260,600. The largest items are 2,000,000 tons of southern Illinois coal to Chicago, 1,000,000 tons of central Illinois coal via Pekin or Havana to Chicago, 500,000 tons of northern Illinois coal to Chicago, 1,400,000 tons of sand and gravel Joliet to Chicago, 600,000 tons general cargo to and from Chicago, 500,000 tons iron and steel Chicago to southern points, 350,000 tons of grain from local points north of Peoria to Chicago and from Peoria and local ports to southern ports, and 325,000 tons of cement from La Salle both north and south.

9. The district engineer is of the opinion that the present authorized projects are inadequate for the development of economical barge transportation on account of inadequate bridge clearances, channel widths, and size of locks. He believes that a commercially useful waterway connecting the Great Lakes with the Mississippi River should have channel dimensions commensurate with those on the Ohio, the middle Mississippi, and the lower Mississippi Rivers, and locks of the same size as on those rivers and in the section of the Illinois River from Lockport to Starved Rock. He believes the channel must be at least 300 feet wide, with additional width at the bends, and have a depth of 9 feet available 100 percent of the time, with additional depth where special conditions justify.

10. He studied various plans to provide for such a waterway with different amounts of diversion from Lake Michigan, viz, 1,500, 2,500, 3,500, 5,000, 7,000, and 9,000 cubic feet per second. For the minimum diversion of 1,500 cubic feet per second he finds no changes necessary in the locks and dams in the Lockport-Starved Rock section, but proposes channel widening in all pools and some deepening in the Brandon Road pool. In this pool he proposes to deepen one half of the channel to 14 feet so as to permit lake tugs to use the waterway from Chicago to Joliet, and also to reduce existing objectionable current velocities. From Starved Rock to Grafton the two existing locks and dams would be replaced by two new structures with locks 110 by 600 feet, one at La Grange and one below Peoria, together with dredging and widening of the bends. In the Mississippi River he proposes a dam at Alton, 15 miles below the mouth of the Illinois, with two locks, one 110 by 600 feet and one 110 by 360 feet, the pool from which will extend to the La Grange Dam. Below Alton, for the time being, he proposes that the improvement by contraction works and dredging be continued. All dams will be of the movable type to prevent aggravation of flood conditions. A navigable pass adjacent to the lock is provided at the La Grange and Peoria Dams which will furnish open-river navigation about 30 percent of the season. The estimates include flowage easements and are based on a required depth of 10 feet with 1½-foot allowable overdepth.

11. The estimated cost is as follows:

Illinois waterway, Lockport to Starved Rock	$3,526,000
Illinois River, Starved Rock to Grafton	12,004,000
Mississippi River, Grafton to Alton	8,011,000
Total	23,541,000

12. He states that one half of the cost of the Alton Lock and Dam should be charged to the improvement of the Mississippi River from the Illinois to Minneapolis. No part of the cost between Lockport and Starved Rock is chargeable to reduced diversion. From Starved Rock to Grafton, with the present diversion of 6,500 cubic feet per second, the desired channel dimensions could be secured by dredging alone at an estimated cost of $6,800,000. The difference between this amount and the $12,000,000 required for the proposed project with locks and dams, viz, $5,200,000, is chargeable to reduced diversion.

13. In considering the need for the proposed improvement the district engineer points out that the existing Kampsville and La Grange Locks are restrictive as to size as compared with other locks on the waterway; that the existing Kampsville Dam is in poor condition, insecure, and expensive to maintain; that failure of this dam, which would be eliminated by the proposed improvements, would put the Lakes-to-Gulf waterway out of operation; that the construction of the Alton Lock and Dam will eliminate large annual dredging and maintenance costs and result in adequate channels not obtainable by other methods; that the

Alton pool will extend a sufficient distance up the Mississippi River to eliminate the lower lock and dam authorized in the project for canalization of that stream between the mouth of Missouri River and Minneapolis, Minn.; that stage variations in Alton Harbor will be reduced from 36 to 23 feet, making savings in terminal costs possible; and that winter exposure and freezing of the water supply intakes at Alton will be prevented.

14. Discussing the diversions prescribed by the Supreme Court decree, the district engineer accepts the finding of the special master on which the decree was based to the effect that the diversion of 1,500 cubic feet per second would lower the levels of Lakes Michigan and Huron approximately 1 inch at mean lake levels, and that this cannot be claimed to produce such a substantial injury to lake navigation "as to preclude attention to the serious consequences which may result from a failure to maintain suitable conditions in the interest of navigation."

15. He, therefore, directed his studies to the determination, first, whether this amount of diversion will be sufficient for lockage, seepage, leakage, and evaporation of the existing waterway when used to its maximum capacity; and second, whether living conditions for those aboard ships and at work at terminals on shore will be healthful and decent.

16. The total flow, which is regulated at Lockport, consists of (1) drainage from the Chicago River and branches; (2) drainage from the portion of the Calumet district west of Gary; (3) domestic and industrial pumpage or water supply for the Chicago area (estimated at an average annual amount of 1,700 cubic feet per second for some years to come); and (4) the diversion from Lake Michigan. In order to prevent reversal of flow of the Chicago and Calumet Rivers into Lake Michigan in time of heavy run-off, it will be necessary to divert less than the authorized average amount during a large part of the year. With diversion limited to 1,500 cubic feet per second, the variation in the total flow at Lockport is estimated as ranging from a minimum of 2,400 to 2,450 cubic feet per second for approximately 64 percent of the time to a maximum of 17,000 cubic feet per second for a few hours at a time.

17. For the section from Lockport to Starved Rock, the pools have been dredged to provide full depth without slope between locks. The minimum flow required is therefore that needed for lockage, seepage, leakage, and evaporation. The district engineer estimates that upon the basis of the use of a lock full of water every 30 minutes the required flow is not in excess of 2,000 cubic feet per second as compared to the anticipated minimum flow of 2,400 cubic feet per second.

18. Since the present project plane for the river below Starved Rock is based upon a diversion of 4,500 cubic feet per second, additional work would be necessary to give the authorized dimensions with a diversion of only 1,500 cubic feet per second. The plans for improvement now proposed are based on the 1,500 cubic feet per second diversion, but the cost is greater than for larger diversions.

19. As to the adverse effect upon the development of commerce if the diversion is insufficient to prevent insanitary and offensive living conditions for those aboard vessels or employed at terminals, the district engineer is of the opinion that the question as to whether a diversion of 1,500 cubic feet per second is sufficient to maintain decent and healthful conditions in the waterway can only be determined by observing conditions after completion of the sewage-treatment program by the city of Chicago. He believes that a reasonable period of observation and study after this completion and the full reduction of diversion to 1,500 cubic feet per second would be necessary to permit a positive determination as to whether any increase is necessary; and if so, what amount.

20. He recommends that the existing project for the Illinois River be modified to provide for a channel at least 9 feet deep and 300 feet wide from Lockport to Grafton by canalization and dredging, at an estimated cost of $15,530,000, with $350,000 annually for operation and care of locks and dams and $150,000 annually for channel maintenance; that the existing project for the Mississippi River from Grafton to St. Louis be modified to provide for the same channel dimensions, to be secured by the construction of a lock and dam at Alton, at an estimated cost of $8,011,000, with $60,000 annually for maintenance and operation, and for the time being by continuation of the present methods of open-channel improvement between St. Louis and the Alton Dam; and that funds be allotted in amounts sufficient to permit the completion of the entire project by the time the diversion is reduced to 1,500 cubic feet per second, viz, January 1, 1939.

VIEWS AND RECOMMENDATIONS OF THE DIVISION ENGINEER

21. The division engineer is in general accord with the views of the district engineer. He states that under the limitations as to flow from Lake Michigan complete canalization of the Illinois River is essential to secure a commercially successful waterway. With reference to the sanitary conditions as affected by the diversion ordered, he is of the opinion that it is desirable and necessary that the Chief of Engineers be authorized by law to direct such additional temporary diversions, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels, and as may not be inimical to lake navigation. He thinks that the completion of the sewage-disposal works is of such urgency that the Federal Government might well cooperate with local interests to the extent of making grants and/or loans under the provisions of the National Industrial Recovery Act. He does not believe that a 9-foot channel can be maintained in the Mississippi River between Alton and the city of St. Louis by open-channel methods, and believes that the river should be canalized.

22. He recommends:

(a) That the existing project for the Illinois River be modified to provide for a channel at least 9 feet deep and 300 feet wide between the Lockport Lock and Grafton to be secured by canalization and dredging; that the work involved in the plan of improvement as presented by the district engineer at an estimated cost of $15,530,000, with $350,000 annually for operation and care of locks and dams and $150,000 annually for channel maintenance, be authorized; and that the existing Kampsville and La Grange Dams be removed in accordance with the recommendation of the district engineer;

(b) That the existing projects for the Mississippi River from Grafton to Cairo be modified to provide for a channel at least 9 feet deep and 300 feet wide between Grafton and St. Louis to be secured by canalization at an estimated cost of $8,011,000 for the construction of a dam and locks at Alton, Ill., with $60,000 annually for operation and maintenance (which structures will eliminate Lock and Dam No. 26 provided for under the existing project from Minneapolis to the mouth of the Illinois River and also eliminate the Kampsville Lock and Dam on Illinois River); $12,000,000 for the construction of a dam and locks at St. Louis, Mo., with $60,000 annually for operation and maintenance; and $60,000 annually for channel maintenance;

(c) That the exact location of the structures proposed herein for the above-mentioned projects and all matters of design pertinent thereto be left to decision by the Chief of Engineers at the time of construction;

(d) That the work proposed be prosecuted with vigor to the end that it all may be accomplished by December 31, 1938;

(e) That an initial allotment of $10,000,000, including $3,540,000 previously allotted for the proposed Alton Lock and Dam, be made and that the remaining required funds be subsequently allotted as deemed advisable by the Chief of Engineers; and

(f) That the Chief of Engineers be granted authority to direct such additional temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation.

VIEWS AND RECOMMENDATIONS OF THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS

23. Except as indicated below, the Board of Engineers for Rivers and Harbors concurs in the views and recommendations of the reporting officers.

24. The item of law under which this report is made adopted the project for improvement as recommended in Senate Document No. 126, Seventy-first Congress, second session; directed that it should be constructed so "as to require the smallest flow of water with which said project can be practically accomplished, in the development of a commercially useful waterway"; authorized the use for navigation of the water diverted as prescribed in the decree of the Supreme Court of the United States of April 21, 1930; and directed that after the completion of the Illinois Waterway (the section from Utica to Lockport), a study be made of the amount of water that will be required as an annual average flow to meet the needs of such a waterway, and that report be made of the result of such study, with recommendation as to the minimum amount of flow required to meet those needs and which will not substantially injure the existing navigation on the Great Lakes.

25. The study has been made as directed and indicates that the minimum average annual diversion of 1,500 cubic feet per second as prescribed by the Supreme Court decree will be adequate to meet the direct needs of navigation for a commercially useful waterway, but that the indirect needs of such a waterway in the matter of securing satisfactory sanitary conditions for those aboard vessels or employed at terminals cannot be determined until after the waterway has been fully completed and the diversion limited to 1,500 cubic feet per second, for a sufficient period of time to observe the conditions as may then exist.

26. The Board does not construe the law to authorize specifically recommendations for further improvement, but is of the opinion that Congress should be advised as to the additional work and estimated cost thereof that appears desirable to provide a commercially useful waterway after the diversion shall have been limited to the minimum of 1,500 cubic feet per second.

27. The existing project plane for the portion of the river below Starved Rock (Utica) is based upon a diversion of 4,500 second-feet and, obviously, additional work would be required to give the project depth of 9 feet with a diversion of only 1,500 feet per second. The dimensions of the existing locks are smaller than those in the section above and those provided for by existing projects in connecting waterways. The reporting officers are of the opinion that to provide a commercially useful waterway not only should new locks of larger dimensions be constructed but that the channel widths throughout the waterway should be increased to 300 feet with suitable widening at bends. Both of these officers propose a new lock and dam at Alton on the Mississippi River, the pool from which would extend up the Illinois to the lower lock thereon at La Grange. The division engineer also recommends a new lock and dam on the Mississippi River at St. Louis.

28. The Board, however, is not fully convinced that the 300-foot width of channel proposed is essential for the development of a substantial amount of commerce on this waterway, nor that,

should such width be provided, a commerce of the volume and with the annual savings as estimated by the district engineer would actually be developed. It notes that the bulk of this commerce is destined to or originates in the Chicago area, and that until improved channel dimensions above Lockport commensurate with those proposed below, together with adequate terminal and transfer facilities, shall have been provided, transportation in this section will be greatly handicapped. Report upon the improvement of this section has recently been submitted by a special board. That board presented a project providing for the improvement of the Calumet-Sag route as the main channel, at an estimated cost of $21,500,000 for navigation improvements, and the use of the Chicago River as a secondary route, together with extensive bridge changes and terminal and transfer developments to be made at the expense of local interests. It stated, however, that at the time of the submission of its report local organizations had failed to indicate agreement on any plan for this undertaking and that there does not exist anybody ready to guarantee cooperation in any joint undertaking. Therefore, "until local interests can agree on a plan which will, in the opinion of the Secretary of War, insure adequate navigation facilities and an equitable distribution of the costs involved, the Board recommends unfavorably as to undertaking the improvement in its entirety. The initiative toward its consummation in entirety should come from Chicago." It did, however, recommend certain improvements of the Calumet-Sag Channel and the Calumet River as an initial step in the proposed development. The Board of Engineers for Rivers and Harbors in a report of even date concurred generally in the views and recommendations of the special board.

29. It is clear, however, that the existing locks at Kampsville and La Grange are not adapted to modern barge navigation, and that a channel with a width of only 200 feet will, to some extent at least, restrict such navigation. The Illinois River improvement is a part of the long-discussed Lakes-to-the-Gulf waterway and an integral part of the Ohio, Mississippi, Missouri River waterway system. As such, it is desirable that its dimensions should be commensurate with those authorized on other portions of the system. The Board therefore concurs with the reporting officers in the improvement proposed for the Illinois River, including the lock and dam at Alton, which will be an integral part of this improvement, as well as of that for the upper Mississippi improvement. An allotment for the construction of a lock at that point has already been made by the Public Works Administration.

30. The improvement of the Mississippi River below Alton is a part of another project, and the Board does not believe that consideration of the construction of a dam and locks at St. Louis is appropriate in the present report.

31. The Board concurs in the views of the reporting officers that allotments for the work, if authorized, should be made so that it may be completed by December 31, 1938, and as to the authority to be given the Chief of Engineers as to details of plans and location of structures and additional temporary diversions.

32. The Board therefore reports that the minimum average annual diversion of water from Lake Michigan that will be required to meet the direct needs of navigation for a commercially useful waterway in the Illinois River, and that will not substantially injure the existing navigation on the Great Lakes, is 1,500 cubic feet per second, as prescribed by the Supreme Court decree, but that the indirect needs of such a waterway in the matter of securing satisfactory sanitary conditions for those aboard vessels or employed at terminals cannot be determined until the waterway has been fully completed and the diversion limited to 1,500 cubic feet per second for a sufficient period of time to observe the conditions that may then exist.

33. The Board further reports that, in its opinion, it is desirable, in order to secure a commercially useful waterway with such reduced diversion, to modify the existing project for the Illinois River so as to provide for a channel at least 9 feet deep and 300 feet wide below Lockport, to be secured by dredging and the construction of locks and dams at Peoria, La Grange, and Alton (Mississippi River) and the removal of the existing structures at La Grange and Kampsville, all as generally shown on the maps and plans herewith, and at an estimated cost for the work in the Illinois River proper of $15,530,000 with $350,000 annually for operation and care of locks and dams and $150,000 annually for channel maintenance, and $8,011,000 for a lock and dam in the Mississippi River near Alton, with $60,000 annually for maintenance and operation, one half of the original cost and annual maintenance to be charged to the improvement of the Illinois River and one half to the improvement of the Mississippi River from the mouth of the Illinois to Minneapolis. Should the project be thus modified, the Board recommends that the exact location and details of design of all structures be left to the decision of the Chief of Engineers at the time of construction and that allotments be made in such manner as to permit completion by December 31, 1938; and that the Chief of Engineers be granted authority to direct such additional temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation.

W. J. BARDEN,
Colonel, Corps of Engineers,
Senior Member.

REPORT OF THE DIVISION ENGINEER

SYLLABUS

"The section of the Lakes-to-Gulf waterway lying between Lockport Lock, near the lower end of the Chicago Sanitary and Ship Canal, and St. Louis, Mo., should provide a minimum channel depth of 9 feet for a least width of 300 feet. Necessary lock structures should have usable dimensions 110 by 600 feet. The provision of such facilities, after lake diversion has been reduced to an annual average of 1,500 cubic feet per second on January 1, 1939, in accordance with a Supreme Court decree, can best be accomplished by construction of locks and dams on the Illinois River near La Grange landing and Peoria to supplement the five existing locks on the Illinois waterway and on the Mississippi River near Alton, Ill., and at St. Louis, resulting in complete canalization above the lower proposed lock. The cost of such improvements, including flowage damages and dredging, is estimated at $15,530,000 for construction work on Illinois River and $20,011,000 on the Mississippi River section. The authorized diversion of 1,500 cubic feet per second plus Chicago pumpage and tributary inflow will be adequate for the normal operation of the existing and proposed locks. It appears that such diversion will not appreciably affect lake navigation. There are strong indications that it will be insufficient to maintain decent and healthful living conditions for vessel and terminal employees. However, an accurate determination of conditions in this respect must await observation after sewage-treatment plants are in operation and diversion reduced. It is recommended that the existing projects for the Illinois and Mississippi Rivers be modified to provide for the above facilities at a total estimated cost of $35,541,000, the detailed plans and methods by which they are to be accomplished to be left to the discretion of the Chief of Engineers; and that the Chief of Engineers be authorized by law to direct such temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels."

WAR DEPARTMENT,
OFFICE OF THE DIVISION ENGINEER,
UPPER MISSISSIPPI VALLEY DIVISION,
St. Louis, Mo., October 19, 1933.

Subject: Report on survey of waterway from Lake Michigan, at Chicago, to the Mississippi River at St. Louis.

To: The Chief of Engineers, United States Army.

1. Authority: This report on survey of waterway from Lake Michigan at Chicago, Ill., to Mississippi River at St. Louis, Mo., is submitted in compliance with the River and Harbor Act of July 3, 1930, viz:

"Be it enacted * * * that the following works of improvement are hereby adopted and authorized * * *.

"Illinois River, Ill., in accordance with the report of the Chief of Engineers, submitted in Senate Document No. 126, Seventy-first Congress, second session, * * * but the said project shall be so constructed as to require the smallest flow of water with which said project can be practically accomplished, in the development of a commercially useful waterway: * * * *Provided further*, That as soon as practicable after the Illinois waterway shall have been completed in accordance with this act, the Secretary of War shall cause a study of the amount of water that will be required as an annual average flow to meet the needs of a commercially useful waterway as defined in said Senate document and shall, on or before January 31, 1938, report to the Congress the results of such study with his recommendations as to the minimum amount of such flow that will be required annually to meet the needs of such waterway and that will not substantially injure the existing navigation on the Great Lakes to the end that Congress may take such action as it may deem advisable."

2. This report covers the section of the Lakes-to-Gulf waterway lying between Lockport, Ill., and St. Louis, Mo. A plan for improvement of this section which would provide a commercially useful waterway with the smallest practicable flow of water is presented. The probable water requirements of the proposed improvements are discussed in accordance with the above authority. The connecting channels between Lake Michigan and the existing lock at Lockport, the easterly and lakeward end of the so-called "Illinois waterway", are nearly level surfaces when the flow at Lockport is small with the result that the minimum diversion water supply requirements of an adequate project at and below Lockport will be ample to permit the provision of adequate channel dimensions above that point. Only a general discussion of the latter section is included in the report.

3. Description: Map (not printed) showing the watershed of the Illinois River, its tributaries, and connecting waterways including the Mississippi River between Grafton and St. Louis, accompanies the district engineer's report. The Illinois waterway system extends from Lake Michigan at Chicago to the lock above Lockport either via the Chicago River, its branches and the Chicago Sanitary and Ship Canal, a distance of 36.2 miles, or via Calumet River, Little Calumet River, Calumet Sag Channel, and the Chicago Sanitary and Ship Canal, a distance of 42.8 miles. The principal route, that via the Chicago River and the Chicago Sanitary and Ship Canal, is a practicable commercial route at this time for craft requiring not more than 14 feet vertical clearance at high lake level. At lowest water levels this route has a controlling depth of about 16.5 feet and a minimum width of about 160 feet. The Calumet River route is not now commercially practicable though used to a limited extent.

4. The so-called "Illinois waterway" extends from the head of the Lockport Lock to the foot of Starved Rock Lock on the Illinois River, a distance of 60 miles, of which 18 lie in or adjacent to the Des Plaines River, and 42 miles in or adjacent to the Illinois River. The Illinois waterway has been completely canalized by locks and dams at five locations to provide a minimum depth of 9 feet and a minimum width of 200 feet, except for a short distance between Lockport and Joliet where the present width is 160 feet. The locks have clear dimensions of 110 by 600 feet. Of these locks, that at Lockport has the maximum lift, 43 feet. The aggregate lift is 140.5 feet.

5. The Illinois River is formed by the confluence of the Kankakee and Des Plaines Rivers about midway between Chicago and La Salle, Ill. It flows in a general southwesterly direction a distance of 273 miles, of which 231 miles are below the Starved Rock Lock, to the Mississippi River at Grafton, Ill. The total drainage area is about 29,000 square miles, of which about 770 square miles have been diverted from the Chicago and Calumet Rivers watershed. The width of the Illinois River varies in general from about 400 to 1,400 feet, and the fall below Starved Rock averages about 0.16 feet per mile. The extreme low-water discharge at the mouth of the stream, exclusive of any diversion from Lake Michigan, is about 1,000 cubic feet per second. The diversion and pumpage from Lake Michigan, which augments the natural flow, was increased from 2,990 cubic feet per second in 1900 to 10,000 cubic feet per second in 1928, and decreased to 8,100 cubic feet per second in 1932.

6. The river below Starved Rock is at present partially canalized by La Grange Lock and Dam at mile 77.6 above the mouth, and Kampsville Lock and Dam at mile 31.5. These locks have usable dimensions of 73 by 300 feet. The lifts are 4.7 feet and 6.2 feet, respectively. With a diversion of 6,500 cubic feet per second as authorized until December 31, 1935, the controlling depth in this section of the waterway is normally 9 feet for a least width of 200 feet.

7. From the mouth of the Illinois River the Mississippi River flows in an easterly and southerly direction 23 miles to the mouth of the Missouri River, thence southerly to the Gulf of Mexico. Eads Bridge at St. Louis is located about 15 miles below the mouth of the Missouri. The width of the stream between Grafton, the mouth of the Illinois, and St. Louis varies from 1,500 to 5,000 feet. Above the mouth of the Missouri the wider portions have been contracted by dikes or wing dams to a width of about 1,400 feet, and between there and St. Louis to a width of about 2,200 feet at mean stage. The fall of the stream between Grafton and the mouth of the Missouri averages about 0.4 foot per mile at mean stage, and the low-water depth on shoals about 5 or 6 feet. The average fall of the section from the mouth of the Missouri to about 12 miles below is approximately 1 foot per mile, and the low-water depth generally about 8 feet. The remaining section to Eads Bridge has a slope of about 0.3 foot per mile and a controlling depth at low water of about 8 feet. During the navigation season the extreme low-water flows of record above and below the mouth of the Missouri River, exclusive of any diversion from Lake Michigan, are about 20,000 and about 42,000 cubic feet per second, respectively.

8. Existing project: The existing project for the Illinois River was authorized by the River and Harbor Acts of January 21, 1927, and July 3, 1930. It provides for a channel with least dimensions of 9 feet in depth and 200 feet in width from the mouth of the Illinois River to the lock at Lockport, and a navigable channel with a minimum depth of 9 feet from Lockport Lock to the heads of the Federal projects on the Chicago and Calumet Rivers. With the present amount of diversion the project dimensions have been practically obtained except for a short distance between Joliet and Lockport, where the present width is but 160 feet.

9. The existing projects for the Mississippi River below Grafton as adopted by the River and Harbor Acts of January 21, 1927, and July 3, 1930, provide for obtaining and maintaining a minimum channel depth of not less than 9 feet and a minimum width of not less than 300 feet at low water, with additional width in bends from the mouth of the Ohio River to the northern boundary of the city of St. Louis, thence 200 feet wide, with additional widths in bends, to the mouth of the Illinois River, all to be obtained by regulating works and dredging. Under present conditions of stream regulation and diversion it is impracticable to obtain project depths above St. Louis by the specified methods of improvement.

10. Other improvements: Principal improvements made by local interests, which benefit commerce on the waterway being reported upon, include: The Chicago River and its branches deepened by the city of Chicago; Calumet River above Turning Basin No. 5 and Little Calumet River dredged to a depth of 13 feet for a width of 90 feet for sanitary and flood-prevention purposes; Calumet Sag Channel, constructed by the Sanitary District of Chicago at a cost of about $14,175,000; the Chicago Sanitary and Ship Canal, constructed by the Sanitary District of Chicago between 1892 and 1900 at a cost of $59,566,000; the Illinois waterway, Lockport to Starved Rock, previously described, which was partially improved by the State of Illinois at a cost of approximately $20,000,000 and later taken over by the United States; and the Illinois River below Starved Rock, also partially improved by the State and further improved by the United States. The city of St. Louis has aided in improvement of the Mississippi River and St. Louis Harbor by cash contribution and construction work previous to 1867 and again in connection with bank protection work provided for in the project of 1872.

11. Terminal and transfer facilities: The report of the district engineer indicates that although existing terminal facilities are somewhat inadequate along certain sections of the waterway to meet the probable needs of future traffic, further improvements of this character are in prospect at several locations. It appears that adequate facilities can and will be provided at local expense as need therefor arises.

12. Bridges: The Chicago River system and the Sanitary Canal are crossed by a total of 53 bridges. Horizontal clearances vary between about 72 and 219 feet. Minimum vertical clearances of the bridges between Lake Michigan and the head of the Sanitary Canal are 120 feet in the raised position and about 16 feet above low-water datum, Lake Michigan, when closed. Bridges over the Sanitary Canal were built as movable structures, but with the exception of two at Lockport have not been equipped with operating machinery. Under present conditions their controlling vertical clearance is about 16.5 feet above ordinary low water.

13. The Illinois waterway and River below Lockport Lock is crossed by a total of 43 bridges. All obstructive bridges between Lockport and Starved Rock will probably be removed or remodeled before March 1934 so as to provide a minimum horizontal clearance of 120 feet and minimum vertical clearance of 47 feet above normal pool. The minimum horizontal and vertical clearances of the bridges below Starved Rock are 118 feet and about 60 feet above ordinary low water, respectively. Mississippi River between Grafton and St. Louis is crossed by six bridges, including Eads Bridge. The minimum horizontal clearance of these is 200 feet and minimum vertical clearance above mean low water 86 feet.

14. Tributary area: The character of the area tributary to the Illinois waterway, its agricultural production, the extensive industrial development and commercial importance of its cities, which include Chicago and St. Louis, are too well known to require detailed description. The area is served by an extensive network of improved highways, and connections are available with all the important railroad systems of the Middle West.

15. Commerce: The Illinois waterway (Lockport to Starved Rock) was opened to limited navigation on March 1, 1933, previous to which it was not commercially navigable. The obstructive character of the bridges now being altered seriously hinders the present use of this section of the stream. The development of commerce on the Lakes-to-Gulf waterway as a whole is further handicapped by inadequate channel depths on the section of the Mississippi River between the mouth of Illinois River and St. Louis. Traffic on the lower Illinois River in 1932, exclusive of ferry traffic, consisted of transportation of 188,150 tons of commerce and 85,500 passengers. Freight movements on the Mississippi River between Grafton and Cairo, Ill., for the years 1927 to 1931, exclusive of ferry traffic and local movements of dredged sand, varied from 891,800 to 1,430,000 tons annually, and the number of passengers carried from 1,363,000 to 1,876,000 annually.

16. The district engineer estimates the average annual commerce which might move on the waterway after the improvements discussed in this report have been completed at 8,330,000 tons and the corresponding annual savings in freight rates at $5,260,000.

17. Vessel traffic: Due to the presence of obstructive bridges and the inadequacy of existing channel and lock dimensions, navigation on the Illinois waterway has been limited to vessels and tows of small size. More adequate bridge clearances are in the process of being provided. The normal replacement of obsolete structures by bridges of greater clearance will also aid in this respect. With adequate bridge clearances, lock dimensions on the river sections to correspond with those on the Illinois waterway, and a channel 300 feet in width of 9-foot minimum depth, the movement of 8,000- to 10,000-ton tows would be possible. The economy of large tows on long-trip movements, such as contemplated on the Lakes-to-Gulf waterway, is apparent.

18. Improvement desired: For many years local interests have advocated and undertaken or cooperated in work leading toward the construction of a waterway from the Great Lakes at Chicago to the Gulf of Mexico via the Illinois and Mississippi Rivers. At various times Congress has enacted legislation pertaining to the provision of such a transportation route. The River and Harbor Act of July 3, 1930, directs the improvement of the route so as to provide a commercially useful waterway. The district engineer finds that this waterway to be commercially useful should have a channel at least 300 feet in width with additional widening at bends, a minimum depth of at least 9 feet at all times, and locks, where required, having usable dimensions equal to those on the Illinois waterway and connecting channels, that is, 110 by 600 feet. The arguments advanced for the provision of such facilities have been largely in connection with possible savings in transportation costs and the need of such savings to offset the competitive advantages of other areas as a result of their being served by water transportation.

19. Plan of improvement: It is proposed that a project be adopted which will allow the entire waterway between Lockport Lock and St. Louis to be improved to provide a minimum navigable depth of 9 feet for a least width of 300 feet with suitable widening at bends. The plan recommended by the district engineer contemplates no alterations or additions to the canalization structures in the section from Lockport to Starved Rock. The existing locks and dams at Kampsville and La Grange would be abandoned, the dams removed, and new movable dams and single

locks, with usable dimensions 110 by 600 feet and lifts of 9.4 feet and 10 feet, constructed near La Grange and Peoria, respectively. The district engineer also proposes the construction of a dam, low-water head 20 feet, with one lock of the above size and a second lock 110 by 360 feet on the Mississippi River near Alton, Ill. These structures would completely canalize the waterway between the proposed Alton Lock and Dam and Chicago. He suggests that below Alton the present authorized methods of contraction works and dredging be resorted to until such time as a more satisfactory plan may be developed for the improvement of this section.

20. Under the plan presented, dredging would be undertaken in connection with the proposed structures so as to at once provide the specified channel dimensions except for a short stretch above the Marseilles Lock where the minimum width would be 200 feet and a section of the Brandon Road Pool where the minimum width would be 225 feet. Between miles 288.4 and 289.8 in the Brandon Road Pool it is proposed to deepen half of the proposed 300-foot channel to 14 feet. The controlling depth between Brandon Road Lock and Lake Michigan would then be 14 feet, sufficient to accommodate lake tugs. The additional depth would also be beneficial in reducing the existing objectionable current velocities in the upper end of the Brandon Road Pool. The district engineer estimates the total cost of the above plan at $23,541,000, of which $15,530,000 is for improvement of the Illinois River and Waterway, and $8,011,000 for the Mississippi River. The annual cost of operation and maintenance of the Illinois River and Waterway improvement is estimated at $500,000, and of the Mississippi River improvement at $60,000.

21. Water power: It does not appear that water power may be economically developed in connection with any of the proposed navigation locks and dams, due either to low flows, low heads, loss of head when dams are lowered, or loss of head due to high tail water. The State of Illinois has applied to the Federal Power Commission for license for power plants at Brandon Road, Dresden Island, and Starved Rock. The construction of the improvements considered in this report would not affect the operation of these plants nor of the existing plants at Lockport and Marseilles except as they may lead to increased commerce requiring a larger portion of the available flow for lockage purposes. There are no other existing or proposed water-power developments on the waterway under consideration.

22. Other special subjects: The district engineer reports that apparently no problems of land reclamation or flood control may be coordinated with the proposed navigation improvements so as to reduce their cost to the United States.

23. Views and recommendations of the district engineer: The district engineer finds that, neglecting sanitary considerations, if sufficient water is provided for lockage purposes at Lockport and the waterway is improved in accordance with the plan presented, the flow at Lockport plus that from intervening drainage areas will be ample to meet the needs of navigation on the remainder of the waterway with the possible exception of a section below the proposed Alton lock and dam. Based on the use of a lock full of water every 30 minutes at both the large lock and the adjacent small lock, 22 by 130 feet, with an allowance of 125 cubic feet per second for leakage, the district engineer finds that the maximum requirements at Lockport would be about 2,000 cubic feet per second.

24. The flow at Lockport is made up of industrial and domestic pumpage and diversion, the latter consisting of diverted drainage from the Chicago and Calumet River systems and water from Lake Michigan. The district engineer reports that the average annual pumpage for some years to come will be about 1,700 cubic feet per second. The total diversion is limited by a Supreme Court decree of April 21, 1930, "unless good cause be shown to the contrary", to 6,500 cubic feet per second until December 31, 1935; to 5,000 cubic feet from that date to December 31, 1938; and to 1,500 cubic feet per second after the latter date. The necessity of preventing reversals of flow of the Chicago and Calumet River systems during periods of heavy run-off in the interests of sanitary lake conditions will require considerable variation in flow at Lockport throughout the year. The district engineer finds that with an average annual diversion of 1,500 cubic feet per second the total flow at Lockport will range from 2,400 to 17,000 cubic feet per second, being between 2,400 and 2,450 cubic feet per second for approximately 64 percent of the time as compared with the maximum lockage and leakage requirements of 2,000 cubic feet per second as previously stated.

25. The findings of Special Master Charles E. Hughes, upon which the Supreme Court decree was based:

"(a) That a diversion of 1,500 cubic feet per second would lower mean lake levels about 1 inch, and

"(b) That it could hardly be maintained that an annual average diversion not exceeding 1,500 cubic feet per second would produce such a substantial injury to lake navigation, when the fluctuations of lake levels due to other causes than diversions are considered, as to preclude attention to the serious consequences which may result from a failure to maintain suitable conditions in the interests of navigation—"

are accepted by the district engineer.

26. The district engineer points out that the development of commerce on the waterway under consideration may be retarded if diversion is insufficient to prevent insanitary and offensive living conditions for those aboard vessels or employed at terminals. The needs of navigation on the Illinois waterway with respect to these matters has received considerable study by eminent engineers. Based on the testimony of these engineers, the special master concluded that provision should be made for an examination of conditions after the Chicago sewage-treatment plants have been completed and put in operation and the diversion has been reduced to the average of 1,500 cubic feet per second. The district engineer concurs. In his opinion the question of whether a diversion of 1,500 cubic feet per second is sufficient to maintain decent and healthful conditions in the waterway can only be determined by observing conditions after completion of the sewage-treatment program by the city of Chicago.

27. In considering the need for the proposed improvement, the district engineer points out that the existing Kampsville and La Grange Locks are restrictive as to size as compared with other locks on the waterway; that the existing Kampsville Dam is in poor condition, insecure and expensive to maintain; that failure of this dam, which would be eliminated by the proposed improvements, would put the Lakes-to-Gulf waterway out of operation; that the construction of the Alton Lock and Dam will eliminate large annual dredging and maintenance costs and result in adequate channels not obtainable by other methods; that the Alton pool will extend a sufficient distance up the Mississippi River to eliminate the lower lock and dam authorized in the project for canalization of that stream between the mouth of Missouri River and Minneapolis, Minn.; that stage variations in Alton Harbor will be reduced from 36 to 23 feet, making savings in terminal costs possible; and that winter exposure and freezing of the water-supply intakes at Alton will be prevented.

28. The district engineer concludes:

"(a) A commercially useful waterway connecting the Great Lakes with the Mississippi River system * * *, below Lockport, * * * should have minimum channel dimensions of 300 feet in width and 9 feet in depth 100 percent of the time, with locks 110 feet wide and 600 feet long in the clear.

"(b) Dams should be of movable type so that flood conditions * * * may not be aggravated.

"(c) The lock and dam near Peoria is the only structure of the recommended project that may be dispensed with even if the diversion should be increased to as much as 5,000 cubic feet per second.

"(d) A diversion of 1,500 cubic feet per second will lower the levels of Lakes Michigan and Huron about 1 inch. This will not substantially injure the existing navigation on the Great Lakes.

"(e) The difference between the cost of a commercially useful waterway with the present diversion (6,500 cubic feet per second) as compared with the diversion prescribed by the Supreme Court (1,500 cubic feet per second) is $5,200,000. The annual difference in operation and care is estimated at $100,000.

"(f) The diversion * * * prescribed by the Supreme Court, plus the pumpage, is sufficient for the operation of the locks and dams now in use between Lockport and Starved Rock, as well as for those proposed in this report."

He further concludes that only after plants for sewage treatment are in operation and diversion reduced to 1,500 cubic feet per second can it be determined with reasonable certainty whether any additional diversion is necessary to provide decent and healthful living conditions; that the proposed improvements for navigation must be completed before January 1, 1939; that the construction of a lock and dam at Alton is a vital necessity; and that its construction will afford material benefits by eliminating obsolete structures and reducing by $250,000 the annual cost of maintenance of the present unsatisfactory channels and structures in the Alton pool. The district engineer is of the opinion that no further local cooperation in the improvement should be required.

29. The district engineer recommends:

"That the existing project for the Illinois River be modified to provide for a channel at least 9 feet deep and 300 feet wide between Lockport and Grafton, to be secured by canalization and dredging, at an estimated cost of $15,530,000, with $350,000 annually for operation and care of locks and dams and $150,000 annually for channel maintenance; that the Kampsville Dam be removed after the Alton Dam and the channel dredging below La Grange Landing have been completed; and that the dam at La Grange be removed after the new dam near that site has been completed.

"That the existing project for the Mississippi River from Grafton to St. Louis be modified to provide for a channel at least 9 feet deep and 300 feet wide, to be secured by the construction of a lock and dam near Alton, Ill., at an estimated cost of $8,011,000, with $60,000 annually for maintenance and operation, and by a continuation for the time being of the present methods of open-channel improvement between St. Louis and the Alton Dam.

"That the initial allotment be sufficient to cover the cost of constructing the four new locks (including twin locks at Alton), namely, $6,800,000. The additional funds necessary to complete the project should be provided in two allotments approximately equal, available 1 year and 2 years, respectively, after the initial allotment, in order that the entire project may be completed by the time the diversion is reduced to 1,500 cubic feet per second, on January 1, 1939."

30. Views of the division engineer: In general, I am in complete agreement with the district engineer. Under the limitation as to flow from Lake Michigan, complete canalization of the Illinois River is essential if we are to have a commercially successful waterway and the plans proposed by him are sound.

31. In his report and the appendices he presents valuable data and a discussion on the sanitary conditions of the waterway from which the following is quoted:

"Effect of diversion upon navigation conditions on the Illinois River and waterway: The determination by the Supreme Court of the amount of water to be diverted at Lockport was based upon the requirements of navigation in the port of Chicago and connecting channels. There is no difference between the requirements of navigation on the Illinois River and waterway and those of navigation in the port of Chicago. Conditions of health, safety, and efficiency should be satisfactory for all. A reasonable standard of healthful and decent living conditions for those aboard ships and working at terminals on shore must be maintained. Injury to navigation may occur if putrefaction in the water results in nauseous or disgusting conditions. Such a condition may be caused by putrefaction of the effluent from the sewage-treatment plants, putrefaction of raw sewage contained in storm-water run-off, and putrefaction from accumulated sludge deposits. The weight of expert testimony is to the effect that the effluent from the proposed activated sludge treatment plants will be inoffensive, but the sanitary district program of treatment is upon such an unprecedented scale that such predictions must contain some element of uncertainty. No reliable process of calculation can predict the effect of raw sewage in storm-water run-off and of accumulated sludge deposits. After intensive and prolonged study, based upon the testimony of a number of eminent sanitary engineers, Special Master Hughes reached the conclusion that these matters were indeterminate, and that 'provision should be made for further examination, after the sewage treatment plants have been completed, and the effect of the effluent therefrom with the storm-water flow on the navigable channels has been observed, to the end that the question of any further or other relief may have appropriate consideration in the light of actual conditions.' No one can predict with certainty the effect in 1939 of the reduction of diversion upon navigation below Lockport at any time prior to the reduction of diversion upon navigation below Lockport at any time prior to the completion of the sewage-treatment program. Sound procedure would be to carry out the full program of treatment-plant construction, reduce diversion as required by the Supreme Court decree, and observe its effect. A period of not more than 2 years of observation and study, after the completion of the treatment plants of the Sanitary District of Chicago, and the full reduction of diversion to 1,500 cubic feet per second, should furnish conclusive data which will permit of positive determination whether any increase in diversion is necessary, and if so, by what amount.

"With all the above I agree, but in my opinion it is desirable and necessary that the Chief of Engineers be authorized by law to direct such additional temporary diversions, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation."

32. The completion of the sewage-disposal works is of such urgency that I believe the Federal Government may well cooperate with local interests in that undertaking to the extent of such grants and/or loans as may properly be made under the provisions of the National Industrial Recovery Act.

33. As to improvement of the section of the Mississippi River between the dam and locks at Alton and the city of St. Louis, I go further than Colonel Sultan. Both he and Major Snow, district engineer at St. Louis, believe that in view of the possibility of obtaining dependable navigation through that section by open-channel methods at a lesser cost than by canalization, the open-river method of regularization should be continued until such time as it may be more definitely proved unsatisfactory or a more satisfactory plan evolved. The district engineer, St. Louis, states that his opinion as expressed above is due to uncertainty as to the future status of the low-water plane downstream of the Chain of Rocks section and in St. Louis Harbor. In case the low-water plane remains as is, he believes there is a good possibility of obtaining a practicable 9-foot channel over the troublesome reach by open-river methods and without rock dredging. He points out, however, that should the low-water plane become lower, rock dredging would be necessary and the cost of this, added to the cost of necessary regulation works, would in all probability equal or exceed the cost of canalization.

34. A satisfactory 9-foot channel has not been provided in this section by open-channel methods to date. I do not believe that it can be provided by such methods. The uncertainties involved are objectionable in view of the Lakes-to-Gulf waterway as a whole being no more dependable than its least reliable section. I favor a positive plan of improvement. In my opinion this section should be canalized. The district engineer, St. Louis, estimates the cost of its canalization, with provision of locks similar to those proposed for the Alton site, at about $12,000,000, including corrective work to avoid large direct and consequential damages.

35. Recommendation. I recommend: (a) That the existing project for the Illinois River be modified to provide for a channel at least 9 feet deep and 300 feet wide between the Lockport Lock and Grafton to be secured by canalization and dredging; that the work involved in the plan of improvement as presented by the district engineer at an estimated cost of $15,530,000 with $350,000 annually for operation and care of locks and dams and $150,000 annually for channel maintenance be authorized; and that the existing Kampsville and La Grange Dams be removed in accordance with the recommendation of the district engineer.

(b) That the existing projects for the Mississippi River from Grafton to Cairo be modified to provide for a channel at least 9 feet deep and 300 feet wide between Grafton and St. Louis to be secured by canalization at an estimated cost of $8,011,000 for the construction of a dam and locks at Alton, Ill., with $60,000 annually for operation and maintenance (which structures will eliminate Lock and Dam No. 26 provided for under the existing project from Minneapolis to the mouth of the Illinois River and also eliminate the Kampsville Lock and Dam on Illinois River); $12,000,000 for the construction of a dam and locks at St. Louis, Mo., with $60,000 annually for operation and maintenance; and $60,000 annually for channel maintenance.

(c) That the exact location of the structures proposed herein for the above-mentioned projects and all matters of design pertinent thereto be left to decision by the Chief of Engineers at the time of construction.

(d) That the work proposed be prosecuted with vigor to the end that it all may be accomplished by December 31, 1938.

(e) That an initial allotment of $10,000,000, including $3,540,000 previously allotted for the proposed Alton Lock and Dam, be made and that the remaining required funds be subsequently allotted as deemed advisable by the Chief of Engineers; and

(f) That the Chief of Engineers be granted authority to direct such additional temporary diversions of lake water, not to be considered in the determination of the annual average, as may be necessary to flush pools and/or to maintain pool levels and as may not be inimical to lake navigation.

GEO. R. SPALDING,
Colonel, Corps of Engineers,
Division Engineer.

REPORT OF THE DISTRICT ENGINEER

SYLLABUS

"A commercially useful waterway connecting the Great Lakes with the Mississippi River system should have minimum channel dimensions of 9 feet in depth and 300 feet in width below Lockport, with locks 110 feet wide and 600 feet long in the clear, and movable dams. With a diversion of 1,500 cubic feet per second, locks and dams are necessary in the Mississippi River near Alton, Ill., and in the Illinois River near La Grange and Peoria. The cost of these improvements, including flowage easements and dredging, is estimated at $15,530,000 for the Illinois and $8,011,000 for the Mississippi River. With a diversion as great as 5,000 cubic feet per second the only dam that can be omitted is the one near Peoria. The diversion authorized by the Supreme Court, plus the pumpage, is sufficient for the operation of the locks now in use above Starved Rock, as well as for those proposed in this report. This diversion will lower the level of Lakes Michigan and Huron about 1 inch, and will not substantially injure the existing navigation on the Great Lakes. Whether a diversion of 1,500 cubic feet per second is sufficient to maintain decent and healthful conditions in the waterway must be determined by observing conditions after the completion of the sewage-treatment program."

WAR DEPARTMENT,
UNITED STATES ENGINEER OFFICE,
FIRST CHICAGO DISTRICT,
Chicago, Ill., September 26, 1933.

Subject: Report on survey of waterway from Lake Michigan, at Chicago, to the Mississippi River at St. Louis.

To: The division engineer, Upper Mississippi Valley division, St. Louis, Mo.

1. Authority: The authority for this report is contained in the River and Harbor Act approved July 3, 1930 (Public, No. 520, 71st Cong., H.R. 11781). The paragraphs relating to this report are as follows:

"An act authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes

"*Be it enacted, etc.*, That the following works of improvement are hereby adopted and authorized, to be prosecuted under the direction of the Secretary of War and supervision of the Chief of Engineers, in accordance with the plans recommended in the reports hereinafter designated.

* * * * * * *

"Illinois River, Ill., in accordance with the report of the Chief of Engineers, submitted in Senate Document No. 126, Seventy-first Congress, second session, and subject to the conditions set forth in his report in said document, but the said project shall be so constructed as to require the smallest flow of water with which said project can be practically accomplished in the development of a commercially useful waterway: *Provided*, That there is hereby authorized to be appropriated for this project a sum not to exceed $7,500,000: *Provided further*, That the water authorized at Lockport, Ill., by the decree of the Supreme Court of the United States, rendered April 21, 1930, and reported in volume 281, United States Reports, in cases nos. 7, 11, and 12, original, October term, 1929, of Wisconsin and others against Illinois, and others, and Michigan against Illinois and others, and New York against Illinois and others, according to the opinion of the court in the cases reported as Wisconsin against Illinois, in volume 281, United States, page 179, is hereby authorized to be used for the navigation of said waterway: *Provided further*, That as soon as practicable after the Illinois waterway shall have been completed in accordance with this act, the Secretary of War shall cause a study of the amount of water that will be required as an annual average flow to meet

the needs of a commercially useful waterway as defined in said Senate document, and shall, on or before January 31, 1938, report to the Congress the results of such study with his recommendations as to the minimum amount of such flow that will be required annually to meet the needs of such waterway and that will not substantially injure the existing navigation on the Great Lakes to the end that Congress may take such action as it may deem advisable."

2. Scope: This report covers in detail the existing waterway from Lockport to the Mississippi River at St. Louis. More specifically, it discusses betterments in navigation facilities necessary in the interests of navigation or justified in the interests of economy by reason of the resulting reduction in maintenance costs. It also discusses additional works made necessary by the decree of the Supreme Court reducing the diversion of lake water.

3. A special board of engineers, appointed in conformity with the River and Harbor Act approved July 3, 1930, has recently submitted a report upon the section of the Lakes-to-Gulf waterway between Lake Michigan and Lockport. The board recommended certain improvements in this section. No description or discussion of the section is included in this report, except such general statements as are necessary to clarify the discussion of the portion of the waterway below Lockport.

DESCRIPTION OF WATERWAY

4. Watershed: A map (sheet 1; not printed) showing the watershed of the Illinois River, its tributaries, and connecting waterways, including the Mississippi River between Grafton and St. Louis, accompanies this report. The watershed of the Illinois River has a natural drainage area of about 28,200 square miles, approximately 1,000 square miles of which lie in Wisconsin and approximately 3,200 square miles in Indiana. About 40 percent of the State of Illinois is drained by the Illinois River. The Sanitary District of Chicago, by reversing the flow of the Chicago and Calumet Rivers, has added to the Illinois River watershed 301 square miles from the Chicago River watershed and approximately 470 square miles from the Calumet River watershed, making a new total of 28,971 square miles. The eastern portion of the Little Calumet River watershed, amounting to 335 square miles, was diverted into Lake Michigan through Burns Ditch in 1926, and is not included in the preceding total.

5. Tributary streams: For general information concerning the tributaries of the Illinois River, attention is invited to paragraph 10 of House Document No. 182 (72d Cong., 1st sess.). More complete data concerning the three principal tributaries are contained in the following House documents:

Kankakee River, No. 784 (71st Cong., 3d sess.); Fox River, No. 410 (71st Cong., 2d sess.); Sangamon River, No. 186 (72d Cong., 1st sess.).

6. Location of the waterway: Two maps, marked "Sheet No. 2" and "Sheet No. 3", which accompany this report, show the location of the waterway and adjacent features in greater detail than is possible on the watershed map. The present waterway from Lake Michigan to the Mississippi River follows the historic route first traversed by Louis Joliet and Father Marquette in 1673, and by other explorers, trappers, and traders until 1848, when the opening of the Illinois and Michigan Canal furnished an easier and more commodious route from the Chicago River to the Illinois River. The present waterway from Chicago to St. Louis may be described as consisting of the following sections:

(a) The first section has two alternate routes, one from Lake Michigan via the Chicago River, south branch and west fork of the Chicago River to the head of the Chicago Sanitary and Ship Canal at South Damen Avenue (formerly Robey Street), a distance of 6.2 miles; thence, via the Chicago Sanitary and Ship Canal, an artificial canal connecting the Chicago River and the Des Plaines River, having a length of 30 miles to the Lockport Lock and powerhouse; the second, known as the "Calumet-Sag route", from Lake Michigan via the Calumet River and Little Calumet River to the head of the Calumet-Sag Channel at Riverdale, a distance of 14.2 miles; thence, via the Calumet-Sag Channel to its junction with the main Sanitary Canal, a distance of 16.2 miles; thence along the main canal to the Lockport Lock, a distance of 12.4 miles, or a total distance by this route of 42.8 miles, as compared with 36.2 miles by the Chicago River route.

(b) The so-called "Illinois waterway", extending from the head of the Lockport Lock, on the Des Plaines River, to the foot of the Starved Rock Lock on the Illinois River, a distance of 60 miles, of which 18 miles lie in or adjacent to the Des Plaines River and 42 miles in or adjacent to the Illinois River.

(c) The alluvial section of the Illinois River, extending from Starved Rock to the Mississippi River at Grafton, a distance of 231 miles.

(d) The Mississippi River from Grafton to the Eads Bridge at St. Louis, a midstream distance of 38 miles.

7. Connecting channels between Lake Michigan and Illinois Waterway: The main branch of the Chicago River, extending from Lake Michigan to the junction of the north and south branches, a distance of 1.6 miles, has a project depth of 21 feet and an average width of about 250 feet. The south branch and west fork of the Chicago River, for a distance of 4.6 miles to the head of the Sanitary Canal, are about 200 feet wide and 21 feet deep. The Chicago Sanitary and Ship Canal has a navigable depth of 24 feet, except on several bars between Summit and Willow Springs, where the controlling depth is 21 feet. The earth section of the canal is 7.8 miles long, has a bottom width of 162 feet and a width at the water surface of about 234 feet. The earth-and-rock section is 5.3 miles long, has a bottom width of 202 feet, and a width at the water surface of about 300 feet. The rock section is 14.95 miles long, and has a bottom width of 160 feet, with vertical sides. The extension from the Bear Trap Dam to the present powerhouse below Lockport, a distance of 2 miles, has a minimum width of 160 feet and a minimum depth of 24 feet.

8. The Calumet River has a project depth of 21 feet from Lake Michigan to the entrance to Lake Calumet, a distance of about 6 miles. The river is 200 to 300 feet wide where docked and 300 to 400 feet wide where not docked. From Lake Calumet to the head of the Sag Canal, a distance of 8.1 miles, the Calumet and Little Calumet Rivers have an average width of about 200 feet and a depth of approximately 13 feet for a bottom width of 90 feet. The Calumet-Sag Canal, 16.2 miles long, 60 feet wide in the rock and 20 feet deep, connects the Little Calumet River with the main canal.

9. The Illinois Waterway: The Illinois Waterway (Lockport to Starved Rock) is located in the rocky portion of the Des Plaines and upper Illinois Rivers, which have been improved by canalization to furnish a channel having a minimum depth of 9 feet and a minimum width of 200 feet, except for a short distance between Lockport and Joliet, where the width at present is 160 feet. The locks are 110 feet wide and 600 feet long in the clear. The dams are modern structures of concrete and steel. Each dam includes a series of Tainter gates, each 50 feet long at Brandon Road, and 60 feet long at each of the other three dams. Each of the dams, except at Marseilles, also includes a series of head gates, which may be incorporated in any power houses built in the future. The location and maximum lift of each lock, and the length of each pool, are shown in the following table:

Structure	Miles from Lake Michigan	Miles from Grafton	Maximum lift in feet with flat pools
Lockport Lock	36.1	291.1	[1] 43.0
Brandon Road Lock and Dam	41.2	286.0	34.0
Dresden Island Lock and Dam	55.7	271.5	21.75
Marseilles Lock (at Bells Island)	82.6	244.6	24.25
Starved Rock Lock and Dam	96.2	231.0	17.5
Total			140.5

[1] With high lake level; 583 above mean sea level.

10. The width of the Brandon Road Pool varies from 160 feet for a short distance at the upper end of the pool to 1,400 feet, a short distance above the Brandon Road Dam. Through the city of Joliet the waterway is about 300 feet wide. Most of this pool is enclosed between heavy retaining walls backed by an earth-and-rock fill. The width of the Dresden Island Pool varies from 450 feet at the mouth of Jackson Creek to 2,700 feet at the mouth of the Du Page River. The width of the Marseilles Pool varies from 450 feet above Grist Island to 1,050 feet immediately above the Marseilles Dam. The width of the Marseilles Canal is 200 feet at the bottom. The width of the Starved Rock Pool varies from 600 feet, above the mouth of the Fox River, to 4,000 feet about 2 miles above the Starved Rock Dam.

11. The Illinois River: The Illinois River, the largest of the tributaries of the upper Mississippi River, is formed by the confluence of the Kankakee and the Des Plaines Rivers, about midway between Chicago and La Salle. The Illinois River flows in a westerly, southwesterly, and southerly direction, a distance of 273 miles, and empties into the Mississippi River at Grafton, Ill., about 38 miles above the Eads Bridge at St. Louis. The width of the Illinois River varies from 400 feet above La Salle to 1,400 feet near the mouth, except in Peoria Lake, which is about 1 mile wide. The natural fall in the Illinois River in the 49 miles from its origin (junction of Kankakee and Des Plaines Rivers) to the head of the alluvial valley at La Salle was about 53 feet. From La Salle to Peoria, a distance of 61.5 miles, the fall was only 4 feet, and from Peoria to the mouth of the Illinois River, a distance of 162.6 miles, the low-water fall was 28 feet. This latter section contains two locks and dams, which are described in the next paragraph. Under present conditions the fall is distributed as follows:

"Lake Michigan to Starved Rock, 140.5 (with high lake level; 583 above mean sea level) feet in 96.2 miles; Starved Rock to Peoria, 6 feet in 68.4 miles; Peoria to Grafton (405 mean sea level), 31.5 feet in 162.6 miles; total, 178 feet in 327.2 miles."

12. Locks and dams at La Grange and Kampsville: These locks are part of the 7-foot project adopted by Congress in 1880. They are 350 feet long between hollow quoins and 73 feet wide. The available length for a tow occupying the full width of the lock is 300 feet. The La Grange Lock is located 77.6 miles above the mouth of the river and was completed in 1889. The dam at La Grange was completed in the following year. The Kampsville Lock is located 31.5 miles above the mouth of the river and was completed in 1893. The dam at Kampsville was completed during the following year. New steel lock gates were installed at both of these locks in the fall of 1931. Timber guide walls at the upper and lower end of each lock, and a cable haulage system at each lock to facilitate the passage of tows, were installed during the same year. Equipment for operating these locks by electrical

power was installed in 1933. In 1905 the dam at Kampsville was lowered 2 feet by the Sanitary District of Chicago, as authorized by the Congress. In 1931 the United States raised the greater portion of the dam in order to provide a 9-foot depth over the upper miter sill. The 270-foot section, which was not raised, constitutes a navigable pass, which is used to some extent when the fall at the dam is less than 1 foot. The maintenance of the dam under ice and flood conditions has been expensive.

13. Mississippi River between Grafton and St. Louis: The Mississippi River from the mouth of the Illinois to the mouth of the Missouri, a distance of about 23 miles, has the characteristics of the upper Mississippi River. The water in this portion of the river is usually clear, and the banks are fairly stable. Between the mouth of the Missouri and Eads Bridge at St. Louis, a distance of about 15 miles, the river partakes of the characteristics of the Missouri River, carrying at times a very heavy load of silt. The width of the river from Grafton to St. Louis varies from 1,500 to 5,000 feet. Between Grafton and the mouth of the Missouri the wider portions have been contracted by dikes, or wing dams, to a width of about 1,400 feet, and from the mouth of the Missouri to St. Louis to a width of about 2,200 feet at mean stage. From Grafton to the mouth of the Missouri the fall in the river is about 0.4 foot per mile at mean stage, and the low-water depth on the shoals about 5 to 6 feet. Through the Chain of Rocks Reach, below the mouth of the Missouri, the average fall is about 1 foot per mile, and the depth at low water generally about 8 feet. Between the Chain of Rocks and the Eads Bridge the slope is about 0.3 foot per mile, while the depth at low water varies from 8 to 25 feet.

14. Low-water discharge: The extreme low-water discharge of the Illinois River, in its natural state, exclusive of any diversion from Lake Michigan, is about 500 cubic feet per second at La Salle, and about 1,000 cubic feet per second at its mouth. These figures are based upon measurements taken by War Department engineers in 1867. When the Illinois and Michigan Canal was opened in 1848 this extreme low-water flow was increased about 100 cubic feet per second, and later about 200 cubic feet per second, by the diversion of water from the Chicago and Calumet Rivers through the Illinois and Michigan Canal. In 1860 the capacity of the pumping plant at the head of the canal was increased to 400 cubic feet per second. From 1871, when the lowering of the summit level of the canal was completed, resulting in a gravity flow through the canal, to 1884, when new pumps were completed having a capacity of 1,000 cubic feet per second, the diversion was about 400 cubic feet per second. Since the opening of the Sanitary District Canal in January 1900 the average annual discharge from the canal into the Des Plaines River at Lockport (diversion plus pumpage) has increased from 2,990 cubic feet per second in 1900 to 10,000 cubic feet per second in 1928, and then decreased to 8,100 cubic feet per second in 1932. The decrease is in conformity with the Supreme Court decree of April 21, 1930, and the present War Department permit.

15. Exclusive of any diversion from Lake Michigan, the extreme low-water flow of the Mississippi River between Grafton and the mouth of the Missouri River during the navigation season is about 20,000 cubic feet per second (0.4 foot, Grafton gage), and between the mouth of the Missouri River and St. Louis, about 42,000 cubic feet per second (approximately minus 1.7 feet, St. Louis gage). Including various diversions from Lake Michigan, the discharge of the Mississippi River at Grafton for mean low water (2 feet on gage) is 34,000 cubic feet per second; at mean stage (8.5 feet on gage) 100,000 cubic feet per second. At St. Louis the discharge at present low-water plane (minus 2 feet on gage) is about 38,000 cubic feet per second; at mean stage (12.1 feet on gage) about 185,000 cubic feet per second. There are being forwarded with this report pertinent discharge curves, stage-duration and flow-duration curves for Peoria, Beardstown, and Alton for natural flow and for conditions prescribed by the Supreme Court after January 1, 1939.

16. Flood discharge: The greatest flood on record from Starved Rock to Grafton is that of 1844. Above Starved Rock no record of this flood has been found. In matters pertaining to the section above Starved Rock, therefore, the flood of 1892 has been taken as the greatest flood on record during the navigation season. The volume of this flood as measured at Morris was 73,700 cubic feet per second. Above Starved Rock the floods of 1883 and 1916 were higher in some places than that of 1892, but these unusual heights were due to ice gorges. Below Starved Rock the flood flow of 1904 more nearly approached that of 1844 than any other on record. The maximum discharge in 1904 at five characteristic points was found to be as follows:

Locality	Miles from Grafton	Gage height	Elevation above mean sea level	Discharge in cubic feet per second	Drainage area, square miles	Flow in second-feet per square mile
Ottawa	240.0	19.2	466.9	85,000	10,220	8.31
Peoria	162.6	23.0	451.4	90,000	13,479	6.67
Havana	119.9	19.9	444.2	100,000	17,454	5.73
Beardstown	88.8	20.0	439.9	115,000	23,444	4.90
Pearl	43.2	19.4	431.7	117,000	26,182	4.47

Comparing flood heights, slopes, etc., the flood of 1844 seems to have been about 10 percent greater than that of 1904.

17. The range between natural low water and the high water of 1844 along the alluvial portion of the river was about 22 feet, except toward the mouth, where the backwater effect of the Mississippi River increased this to 31 feet. The construction of the existing levee system between Peoria and the mouth has increased this difference very materially. At Beardstown, where this effect reaches a maximum, the high-water plane has been raised about 6 feet.

18. Comparison of floods at Beardstown: The following table gives a rough comparison of the most outstanding Illinois River floods on record.

Year	Elevation, mean sea level, 1929 adjustment	Discharge
		Cubic feet per second
1844	442.4	126,000
1892	438.3	100,000
1904	439.9	115,000
1922	444.9	100,000
1926	446.2	108,000
1927	445.1	98,000
1933	445.5	101,000

19. The drainage area of the Mississippi River at Grafton, Ill., immediately below the junction of the Illinois and Mississippi Rivers, is about 170,000 square miles. At that point the maximum observed discharge, including about 35,000 cubic feet per second from the Illinois River, is 365,500 cubic feet per second, measured in 1903. Bankful flow (about 15.6 feet, Grafton gage) is estimated at 209,000 cubic feet per second, and maximum probable flow at 460,000 cubic feet per second. At St. Louis the watershed area is enlarged to about 700,000 square miles. There the maximum observed discharge (33.2 feet, St. Louis gage) is 896,000 cubic feet per second, measured in 1881. A volume of 1,146,000 cubic feet per second was observed in 1892, but is not considered reliable. Since the establishment of the gage in 1861, higher stages have been recorded in 10 different years, but the above is the maximum flow measured. Probable maximum flow is estimated at 1,300,000 cubic feet per second. The drainage area of the Missouri River is about 529,000 square miles. A flow of 601,000 cubic feet per second was observed May 19, 1892. Maximum probable flow is estimated at 840,000 cubic feet per second.

20. Tributary area: The area immediately tributary to this waterway includes the rich agricultural region of central Illinois and eastern Missouri, the immense industrial and commercial areas in and around Chicago and St. Louis, and also the industrial and commercial areas at Joliet, Morris, Marseilles, Ottawa, La Salle, Peru, Henry, Peoria, East Peoria, Havana, Beardstown, Grafton, Alton, East St. Louis, and other river towns. The indirect tributary area, through its connection with the whole Mississippi River system, includes most of the Mississippi Valley and, in a modified degree, the area tributary to the Great Lakes. At Chicago, Peru, Peoria, Havana, St. Louis, East St. Louis, and other places rail connections are available with all the major railroad systems of the Central States.

BRIDGES

21. Chicago River: There are 31 bridges spanning this section of the waterway, all of the movable type, having horizontal clearances varying from 75 to 219 feet. The minimum vertical clearance in raised position is 120 feet. Masted vessels can move from Lake Michigan to the head of the Sanitary Canal at Damen Avenue. The controlling vertical clearance under these bridges when closed is about 16 feet above low-water datum, Lake Michigan.

22. Chicago Sanitary Canal: Between the head of the canal and Romeo the canal is crossed by 20 bridges, built as movable structures, in which the necessary operating machinery has not yet been installed. These bridges have a horizontal clearance of from 72 to 160 feet and a controlling vertical clearance, in their fixed position, of about 16½ feet above ordinary low water, or about 13½ feet above high water. The two highway swing bridges at Lockport have been in operating condition for many years.

23. Illinois waterway, Lockport to Starved Rock: Along this section of the waterway there are 16 established bridge sites—11 highway and 5 railway. Apparently all obstructive bridges between Lockport and Starved Rock will be removed or remodeled before March 1934. The controlling horizontal clearance will then be 120 feet at the Elgin, Joliet & Eastern Railway bridge near Divine. The controlling vertical clearance will be 35 feet above high water and 47 feet above normal pool level.

24. Illinois River below Starved Rock: Along this section of the waterway there are 14 highway bridges, 12 railway bridges, and 1 combination highway and railway bridge. The existing bridges provide horizontal clearances of 118 to 360 feet and a minimum vertical clearance of 44 feet above extreme high water, or about 60 feet above ordinary low water.

25. Mississippi River, Grafton to St. Louis: Along this section of the waterway there are 2 highway bridges, 2 railway bridges, and 2 combination bridges carrying both highway and railway

traffic. The existing bridges provide horizontal clearances of 200 to 680 feet and a minimum vertical clearance of 44.6 feet above extreme high water, or 86 feet above mean low water.

26. Bridge table: Appendix A, page 4226, contains a table giving the location, owner, purpose, type, horizontal and vertical clearances of all bridges existing or authorized across the waterway from Lake Michigan to St. Louis.

27. Prior reports: For a complete list of previous reports on the Illinois and Des Plaines Rivers, attention is invited to paragraph 11 of House Document No. 182, Seventy-second Congress, first session.

28. The following table contains a list of the most recent and pertinent reports relating to the waterway between Chicago and St. Louis:

Locality	Date of report by Chief of Engineers	Type	Subject matter	Recommendation of Chief of Engineers	Where published
Calumet and Little Calumet Rivers, Lake Calumet and Sag Channel.	June 15, 1933[1]	Survey	Connecting channels, Illinois waterway to Lake Michigan and terminal harbors therefor.	Not acted upon.	Unpublished.
Illinois waterway	Apr. 3, 1930	Review	9-foot channel, Utica to Lake Michigan	Favorable	S. Doc. 126 (71st Cong. 2d sess.).
Mississippi and Illinois Rivers	May 11, 1928	do	9-foot channel, St. Louis to Utica	do.[2]	H. Doc. 12 (70th Cong., 1st sess.).
Mississippi River	Feb. 13, 1930	Partial survey.	9-foot channel, mouth of Missouri to Minneapolis.	do	H. Doc. 290 (71st Cong., 2d sess.).
Do	Dec. 9, 1931	Survey	do	do	H. Doc. 137 (72d Cong., 1st sess.).

[1] Date of report by special board.

[2] Favorable as to Mississippi River. Illinois River 9-foot project previously authorized.

EXISTING PROJECTS

29. History of improvement of Illinois River prior to the existing project: The first step toward the improvement of the Illinois River was taken under the act of Congress approved August 30, 1852, appropriating $30,000 for the improvement of the river. An appropriation of $84,150, in 1869, and subsequent allotments were expended in dredging channels 4 feet deep and 110 feet wide through the worst bars, and in building wing dams. The act of March 3, 1873, appropriated $100,000, of which $80,000 was to be applied to the excavation and foundation for the Copperas Creek Lock. The improvement of the river thus far had been carried on conjointly by the Federal Government and the State of Illinois according to a system adopted in 1869, the State of Illinois undertaking the building of locks and dams and the United States the channel dredging. Cooperating with the General Government, the State of Illinois built two locks and dams, located at Henry and Copperas Creek, at a cost of $747,747, which gave a depth of 7 feet for a distance of 86.2 miles below La Salle, the lower terminus of the Illinois and Michigan Canal. The amount of money expended by the United States to June 30, 1880, on the original project was $550,450.

30. The act of June 14, 1880, provided that $100,000 be expended on locks and dams in the lower Illinois River, thereby inaugurating the Federal project for completing the slack-water system by which a depth of 7 feet was to be obtained from La Salle to the mouth of the river. Subsequent to the completion of the locks and dams at La Grange and Kampsville, supplemental dredging was carried on between the Copperas Creek Lock and the mouth of the river. The act of 1907 authorized the necessary dredging between Copperas Creek and La Salle. On June 30, 1928, the 7-foot project was 95 percent completed. The total cost to the United States to that time for work below La Salle was $2,329,393, of which $1,898,095 was for new work and $431,298 for maintenance. Including expenditures under the original project (dredging and wing dams), the total amount expended by the United States was about $2,880,000.

31. In 1908 the people of the State of Illinois, by popular vote, adopted an amendment to the constitution of the State providing for a bond issue of $20,000,000, to be used in the construction of a waterway from the water-power plant of the Sanitary District of Chicago at Lockport to a point on the Illinois River "at or near Utica." There followed a long controversy between the "little-waterway" advocates and those who favored a modern waterway with large locks. Plans for a waterway 8 feet deep, with locks 110 feet wide and 600 feet long in the clear, were approved by the Assistant Secretary of War on March 6, 1920. Construction work was carried on continuously from 1920 to 1929, inclusive. Faced by the necessity for conserving approximately $3,000,000 of the $20,000,000 bond issue for the reconstruction of bridges, the State found it necessary to stop all construction work in January 1930. At that time approximately 62 percent of the navigation features were completed.

32. Present project, Chicago to Starved Rock: The act of Congress approved July 3, 1930, adopted and authorized the improvement of this section of the waterway, in accordance with the report of the Chief of Engineers, submitted in Senate Document No. 126 (71st Cong., 2d sess.), in which he recommended:

"That the existing project for the improvement of the Illinois River be extended to provide for a navigable depth of not less than 9 feet from the head of the present Federal project on the Illinois River to the heads of the Federal projects on the Chicago and Calumet Rivers, the portion between Utica, Ill., and the forebay of the power house of the Sanitary District of Chicago near Lockport, Ill., to be secured by means of dams, locks, lateral canals, and dredging, in general accordance with the present plans of the State of Illinois for the construction of the so-called "Illinois waterway", at an estimated cost to the United States of $7,500,000, with $223,000 annually for maintenance and operation, and the portions north and east from the forebay of said power house to be secured by utilization of the existing system of improved waterways constructed by the Sanitary District of Chicago in which depths now exist considerably in excess of 9 feet."

33. Funds were made available for this section by the act of December 20, 1930. Contracts for the completion of the masonry and steel of the locks and dams at Brandon Road and Dresden Island were awarded in February 1931. Construction work was commenced early in the spring. Later contracts were awarded for the construction of the Marseilles Dam, for the electrical equipment, control houses, and machinery shelters at all of the locks, for extensive earth and rock dredging in all of the pools, for raising roads and dikes, for additional drainage facilities in certain areas, and for other miscellaneous items, including clearing all lands that were subject to overflow. Meanwhile work progressed steadily on the acquisition of about 100 additional flowage easements. The pools were then raised, and the waterway opened to navigation on March 1, 1933, although the full width of channel was not completed until that summer.

34. Present project, Starved Rock to Grafton: The act of Congress approved January 21, 1927, provides for a channel with least dimensions of 9 feet in depth and 200 feet in width. The State of Illinois was required to transfer to the United States, without cost, all rights and titles in the two State-owned locks and dams on the Illinois River, and local interests were to furnish the United States, without cost, all necessary areas for the economical disposal of material dredged in creating and maintaining the channel. In accordance with this act, title to the locks, dams, and lock grounds at Henry and Copperas Creek was transferred by the State of Illinois to the United States on March 28, 1928, and the dams at both points removed during the same year. The total cost of the new dredging under the 9-foot propect, including contracts now in force (totals estimated), is $2,700,000, including $310,000 for rock in the mile below the Starved Rock Lock.

35. Previous projects, Grafton to St. Louis: The original project for the improvement of this portion of the Mississippi River was recommended by a board of engineers in a report dated April 13, 1872, and approved by the Chief of Engineers. For that part of the river between the Illinois and Missouri Rivers the first appropriation was made in the River and Harbor Act of June 10, 1872. Channel depths of 8 feet between the mouth of the Ohio River and St. Louis, and of 6 feet thence to the mouth of the Illinois River were first recommended in a report by the district engineer dated January 20, 1875, on Transportation Routes to the Seaboard. The improvement works, begun in 1872 and continued for a number of years, consisted of low, solid dikes and dams of brush and stone to confine the low-water flow of the river to a single channel, and revetments of brush mattress and stone paving to preserve the banks from erosion. The project of 1881, the basis for the existing project below the mouth of the Missouri, provided for reclaiming land and building up new banks, thus reducing the river to an approximately uniform width of 2,500 feet. It was proposed by this means to secure a minimum depth of 8 feet. The depth at that time was liable to become as little as 4 feet in some places and less than 8 feet wherever the width was greater than 2,500 feet. The alluvial banks were to be protected from erosion. The River and Harbor Act of March 2, 1907, adopted a project for the Mississippi above the mouth of the Missouri, which provided for a 6-foot channel, to be obtained by contraction works consisting of wing and spur dams for narrowing the main channel of the river, closing dams for side chutes, and by dredging.

36. Present project, Grafton to St. Louis: The existing project in the Mississippi, from the mouth of the Ohio River to the northern boundary of the city of St. Louis, adopted by the act of January 21, 1927, provides for obtaining and maintaining a minimum channel depth of not less than 9 feet, and a minimum width at low water of not less than 300 feet, with additional widths in the bends. The existing project above the northern boundary of the city of St. Louis, adopted by the act of July 3, 1930, provides for obtaining and maintaining a minimum depth of 9 feet and a minimum width of 200 feet, with additional widths

in the bends. Both acts provide for improving the river by regulating works and dredging. Under the present plan of improvement, the low-water width of the river at the contraction works is about 1,400 feet from Grafton to the mouth of the Missouri, and about 2,200 feet from the mouth of the Missouri to St. Louis.

37. Dredging was introduced as a part of the project by the River and Harbor Acts of 1896, 1907, and 1922, the latter providing for dredging channels to landing places on the main river, and, above the mouth of the Missouri River, to landing places on subsidiary sloughs. For improving the river from Grafton to the mouth of the Missouri, there has been expended by the United States up to June 30, 1933, $1,524,780 for new work and $871,652 for maintenance. From the mouth of the Missouri to the Eads Bridge there has been expended by the United States up to June 30, 1933, $779,357 for new work and $108,746 for maintenance. Adding these figures gives $2,304,137 for new work and $980,398 for maintenance for the reach from Grafton to the Eads Bridge in St. Louis.

38. Local cooperation: In conformity with the provisions of the act of January 21, 1927, the landowners along the river between Starved Rock and Grafton furnished spoil areas upon which the United States deposited materials taken from the river in the dredging required to provide a 9-foot channel. In accordance with the provisions of this same act, the State of Illinois transferred to the United States all rights and titles to the two State-owned locks and dams on the Illinois River at Henry and Copperas Creek. On the Mississippi River between Grafton and St. Louis no local cooperation has ever been required by law.

39. Other improvements: Local cooperation in the construction, improvement, and maintenance of a waterway between Chicago and St. Louis has been of a varied and unusual character. Between 1836 and 1848 the State of Illinois, assisted by land grants from the United States, constructed the Illinois and Michigan Canal, furnishing a waterway having a minimum width of 60 feet and a depth of 6 feet from Chicago to La Salle, a distance of 100 miles. In 1871, the city of Chicago completed the cutting down of the summit level so as to provide a gravity flow from Lake Michigan across the divide. Since 1903, due to the opening of the Chicago Sanitary and Ship Canal, the section from Chicago to Joliet has not been operated for navigation. Between 1846 and 1896 the city of Chicago deepened the Chicago River and its branches from a depth of 2 feet or less to a depth of 14 feet.

40. Between 1892 and 1900 the Sanitary District of Chicago constructed the main sanitary canal, having a minimum width of 160 feet and a minimum depth of 24 feet. Subsequent to 1900 the sanitary district extended the canal from Lockport to Joliet, widened the South Branch to 200 feet, deepened it to 26 feet, and constructed the Calumet-Sag Channel connecting the main canal with the Little Calumet River.

41. The work of the State of Illinois on the Illinois waterway, Lockport to Starved Rock, has been described in paragraph 31. The work done by the State below La Salle has been described in paragraph 29.

42. In the Mississippi River at St. Louis, the city cooperated with the United States between 1836 and 1867 in the construction of various dikes for the improvement of the St. Louis Harbor. In connection with the Government project of 1872 the city revetted about 3,350 feet of river bank about Bissell Point. About 1915 the city revetted about 2 miles of the left bank above the new water intake at the Chain of Rocks. Other work has been done which may have contributed to the improvement of the navigation of the river.

TERMINAL AND TRANSFER FACILITIES

43. Chicago and Calumet Harbors and Rivers: The terminal facilities of Chicago and Calumet Harbors and Rivers, and of the Sanitary Canal, are discussed in detail in the report of the Calumet-Sag board referred to in paragraph 3.

44. Illinois Waterway: Facilities for loading grain are available at Ottawa, and are now being installed at Morris and Marseilles. Additional terminal facilities are proposed at Joliet and Ottawa.

45. Illinois River: Grain elevators are located on the Illinois River at Hennepin, Henry, Lacon, Chillicothe, Spring Bay, Peoria, Pekin, opposite Kingston Mines, Bells Landing, mile 135, mile 133, Havana, West Mantanzas, Holmes Landing, Beardstown, mouth of Crane Creek, Meredosia, Naples, Montezuma, and Kampsville. A grain-loading facility has just been opened at Peru. Similar installations are proposed at other points.

46. Immediately below the Peru highway bridge the Marquette Cement Co. has installed an air compressor and pipe system for loading barges with cement by the pneumatic process. At Peoria is located a new $400,000 modern river-rail municipal public terminal opened on June 15, 1931. It consists of 2 units, 1 for package freight and 1 for bulk freight. It is served by the equivalent of a belt-line railroad.

47. At Havana there has just been completed by the Cimco Development Corporation, at a cost of $30,000, a modern coal-handling terminal for transferring coal from standard-gage bottom-dump coal cars to barges. The capacity of the plant is 600 tons per hour. The Cimco Development Corporation is a subsidiary of the Chicago, Illinois Midland Railroad Co., which is controlled by the public-utility companies which supply electric current and gas to Chicago and the northern portion of Illinois and Indiana.

48. Mississippi River between Grafton and St. Louis: At Alton, Ill., there are two docks equipped for handling sand, gravel, stone, etc., each equipped with a stationary derrick. The Illinois Terminal Railroad has a river-and-rail terminal, including a warehouse equipped with an electric loader-unloader and a stationary steam derrick for handling packages and bulk commodities. The Eagle Packet Co. has a wharf boat for transfer and storage at Alton.

49. St. Louis, Mo., has extensive terminal facilities, including grain elevators, sand-handling plants, cement-storage space, docks for handling logs, North Market Street municipal docks with warehouses and cranes, coal- and ore-handling plants, a paved levee for packets and excursion boats, and a Federal Barge Lines terminal. Extensive terminals are also available at East St. Louis, Ill. For additional information in reference to the terminal facilities at St. Louis and East St. Louis attention is invited to the report by the Board of Engineers for Rivers and Harbors entitled "Transportation in the Mississippi and Ohio Valleys, Transportation Series No. 2, 1929."

50. Improvement desired: The people of the State of Illinois showed their desire for a modern waterway in a very practical manner when they voted to bond themselves for $20,000,000 in order that a 60-mile link in such a waterway might be constructed. For 40 years or more the newspapers of the Mississippi Valley have been urging the construction of a commodious waterway between Lake Michigan and the Mississippi River to take the place of the out-of-date Illinois and Michigan Canal. The business men of the Mississippi Valley in convention assembled year after year have passed resolutions requesting Congress to speed the day when a commodious waterway would be available between the Great Lakes and the Gulf of Mexico. The general character of these articles, editorials, and resolutions is well known. The demand for such a waterway has been intensified by the realization that the Panama Canal furnished cheap water transportation between the Atlantic seaboard and the Pacific coast to the disadvantage of the producers and manufacturers of the Mississippi Valley.

Congress recognized this demand in the act approved July 3, 1930, by taking over the completion of the Illinois waterway and calling upon the Secretary of War to submit a report stating the requirements of a commercially useful waterway. A commercially useful waterway connecting the Great Lakes with the Mississippi River should certainly have a channel as wide and as deep as the channels now available in the Ohio, the middle Mississippi, and the lower Mississippi Rivers. This means a channel at least 300 feet wide, with additional width in the bends; a minimum depth of 9 feet available 100 percent of the time, with additional depth wherever special conditions justify it; and locks equal in size to those which have been built by the Federal Government on the Ohio River and the upper Mississippi River, and by the State of Illinois and the Federal Government on the upper Illinois and Des Plaines Rivers.

COMMERCE

51. Chicago and Calumet Harbors and Rivers: The commerce of Chicago and Calumet Harbors and Rivers and of the Sanitary Canal is discussed in detail in the report of the Calumet-Sag board, referred to in paragraph 3.

52. Illinois Waterway, Lockport to Starved Rock: This section of the waterway was not commercially navigable until it was opened to limited navigation on March 1, 1933. During the spring and summer months there has been a small amount of commerce, but the use of the waterway is badly handicapped by obstructive bridges, most of which are now being remodeled or rebuilt. The first through tow from New Orleans arrived in Chicago on June 22, 1933, at which time the waterway was formally dedicated by suitable ceremonies.

53. Illinois River, Starved Rock to Grafton: During the calendar year 1932 the Federal Barge Lines carried 60,470 tons, and other lines 127,680 tons, a total of 188,150 tons. The number of passengers carried amounted to 85,500, exclusive of ferry traffic.

54. Mississippi River, Grafton to Cairo: During the calendar years 1927 to 1931, inclusive, the amount of freight carried varied from 891,800 to 1,430,000 tons per year, valued at $45,258,000 to $63,660,000. These totals do not include ferry traffic or sand dredged from the river bed and barged a short distance to the shore. About one third of this commerce was upbound and two thirds downbound. The number of passengers carried varied from 1,363,000 to 1,876,000 per annum.

55. Prospective commerce: An estimate has been made in appendix B, page 4229, of the traffic which will move on the waterway. The total tonnage may be summarized as follows:

Commodity	Origin and destination	Tonnage	Savings
Cement	La Salle to Chicago	200,000	$160,000
Do	La Salle to Milwaukee	50,000	45,000
Do	La Salle to St. Louis and points south	75,000	112,500
Sand and gravel	Joliet to Chicago	1,400,000	420,000
Do	Joliet to Peoria	100,000	40,000
Oil and gas	Southern points to Chicago	100,000	100,000
Paper, etc	Chicago to southern ports	250,000	200,000
Canned goods	Pacific ports to Chicago	70,000	182,000
Do	Chicago to southern ports	30,000	78,000
Sugar	New Orleans to Chicago	100,000	217,000
Cotton, linters, and meal	South to Chicago	100,000	238,000
Clay and clay products	St. Louis, Ottawa, and northern Illinois to Chicago	135,000	68,800
Salt	Louisiana to Chicago; and Michigan to Louisiana	130,000	130,000
Coal	Northern Illinois to Chicago	500,000	235,000
Do	Central Illinois via Pekin or Havana to Chicago	1,000,000	150,000
Do	Northern Illinois to La Salle	250,000	92,500
Do	Southern Illinois to Chicago	2,000,000	400,000

Commodity	Origin and destination	Tonnage	Savings
Grain	Local ports north of Peoria to Chicago	100,000	$100,000
Do	Peoria and local ports to southern ports.	250,000	250,000
Iron and steel	Chicago to southern points	500,000	615,000
Lumber	Southern ports to Chicago	230,000	300,000
Silica sand	Ottawa to southern points	30,000	30,000
Do	Ottawa to Chicago and lake ports	100,000	50,000
General cargo	To and from Chicago	600,000	816,000
Do	To and from Peoria	30,000	40,800
Total		8,330,000	5,260,600

VESSEL TRAFFIC

56. Illinois waterway, Lockport to Starved Rock: This section of the waterway was not opened to navigation until March 1, 1933, and, due to the many obstructive bridges still in place between Chicago and Starved Rock, the pioneers in through navigation could use only small towboats and small barges. The controlling horizontal bridge clearance throughout this season has been 40 feet. On account of the high stages which prevailed during April and May, the controlling vertical clearance at the Seneca Highway Bridge, during a portion of these months, was as little as 12 feet. Under the conditions which prevailed in 1933, the following vessels navigated the Illinois Waterway: One self-propelled barge, 240 feet long, drawing 7 feet; 3 towboats, 100 to 110 feet long, with a maximum draft of 7 feet; 15 towboats, less than 100 feet long, with a maximum draft of 5 feet; 1 Government towboat, 122 feet long, drawing 4 feet; 2 Government submarine chasers, 106 feet long, drawing 6 feet; 20 barges, 100 to 200 feet long, with a maximum draft of 6 feet; 8 barges, less than 100 feet long, with a maximum draft of 3.5 feet; and numerous launches and motor boats.

57. Illinois River below Starved Rock: The conditions described in the preceding paragraph which prevented through navigation for large towboats and barges during 1933 affected through navigation below Starved Rock in the same manner. Despite these conditions, the following vessels navigated this section of the waterway: 1 self-propelled barge, 240 feet long, drawing 7 feet; 5 towboats, 100 to 160 feet long, with a maximum draft of 6 feet; 4 towboats, less than 100 feet long, with a maximum draft of 4 feet; 1 packet boat, 210 feet long, drawing 6.5 feet; 1 excursion boat, 158 feet long, drawing 3.5 feet; 1 Government towboat, 141 feet long, drawing 4 feet; 1 Government submarine chaser, 106 feet long, drawing 6 feet; 20 barges, 230 feet long, with a maximum draft of 6 feet; 32 barges, 100 to 200 feet long, with a maximum draft of 6 feet; 4 barges, less than 100 feet long, with maximum draft of 3 feet; and numerous launches and motor boats.

58. Mississippi River, Grafton to St. Louis: As has been stated in the two preceding paragraphs, obstructive bridges above Starved Rock have prevented large towboats from engaging in through navigation between Chicago and St. Louis. However, the following vessels have navigated the Mississippi River between St. Louis and Grafton: 6 towboats, 150 to 195 feet long, with a maximum draft of 8 feet; 11 towboats, 100 to 150 feet long, with a maximum draft of 6.8 feet; 6 towboats, less than 100 feet long, with a maximum draft of 5 feet; 3 packetboats, 170 to 210 feet long with a maximum draft of 6.5 feet; 7 excursion boats, 157 to 285 feet long, with a maximum draft of 7.3 feet; 1 Government snagboat, 187 feet long, drawing 8 feet; 7 Government towboats, 118 to 158 feet long, drawing a maximum of 6.4 feet; and numerous pleasure boats less than 65 feet long. The towboats listed above, when navigating, have an average tow of 2 to 6 barges. These barges range from 125 to 300 feet in length, and have a draft, when loaded, of 4 to 6 feet.

DIFFICULTIES ATTENDING NAVIGATION

59. Illinois Waterway, Lockport to Starved Rock: Across the Illinois Waterway there are a number of obstructive bridges which are now being reconstructed; at only one bridge, the highway bridge at Morris, has work not yet been started. In all four pools of the waterway the 200-foot channel is obstructive to the navigation of large tows, and these cuts should be widened to 300 feet, as stated more in detail elsewhere in this report. In the Brandon Road Pool, 1.4 miles of channel should be deepened from 10 feet to 14 feet in order to reduce the velocities of flow during flood stages, and to permit lake harbor tugs to serve industries in Joliet.

60. Illinois River below Starved Rock: There are 17 bridges, having horizontal clearances of 118 to 150 feet, which are somewhat obstructive to large tows, and should be replaced by longer spans when the present bridges are replaced. The 200-foot channel which constitutes a large part of this section of the waterway is obstructive to large tows, and should be widened to 300 feet, as stated in greater detail elsewhere in this report.

61. The existing locks at Kampsville and La Grange, with a usable width of 73 feet and a usable length of 300 feet, are obstructive to large tows. Tows made up to pass through locks on the upper river must be broken up, both in length and width, to pass through these old locks. The dams in their present condition constitute a hazard to navigation. A portion of the Kampsville Dam failed during the past spring. About $30,000 was expended on this dam in making temporary repairs, and about $30,000 more must be expended to complete the temporary restoration. The failure of either of these dams during the low-water season would put the waterway out of commission.

62. Mississippi River, Grafton to St. Louis: Between the mouth of the Illinois River and Alton, the existing contraction works do not provide a 9-foot channel without a large amount of dredging during every low-water season. It is impossible to do the necessary dredging promptly enough to maintain a 9-foot channel. During the low water of 1930, 1931, 1932, and 1933, the depth at a number of shoals in this reach was 5 feet. Canalization is necessary irrespective of diversion. It is proposed to correct this condition by the construction of a movable dam with locks at Alton.

SURVEY

63. Lockport to mouth of Illinois River: The information upon which this report and these estimates are based includes numerous surveys made in recent years incident to dredging for a channel having minimum dimensions of 9 feet in depth and 200 feet in width, as authorized in the existing projects; aerial photographs of the waterway and bottom lands from Lockport to St. Louis to show the present condition of lands which might be overflowed; and borings at possible dam sites.

64. Mississippi River, Grafton to St. Louis: The surveys of this portion of the waterway were made under the direction of the special board of engineers appointed by the division engineer on July 27, 1931, to consider and report upon this section of the waterway. These surveys extended from Grafton to Jefferson Barracks, about 10 miles below the Eads Bridge, including surveys for lateral canals, of lands which would be flooded under various dam projects, the location of the sewer outlets in St. Louis and Alton, and an investigation of foundation conditions at several dam sites. The surveys, records, and studies of the board have been used in the preparation of this report.

PLAN OF IMPROVEMENT

65. Lake Michigan to Lockport: The present main outlet of the Lakes-to-Gulf waterway into Lake Michigan is via the Chicago Sanitary Canal and the Chicago River, with a secondary connection via the Calumet-Sag Canal, the Little Calumet River, and the Calumet River. A complete discussion of these outlets is contained in the report of the Calumet-Sag board, referred to in paragraph 3.

ILLINOIS WATERWAY, LOCKPORT TO STARVED ROCK

66. Locks and dams: No alterations or additions to the 5 locks and 4 dams in this section are proposed.

67. Channel widths and depths: In general, a minimum width of 200 feet, with some widening at bends, has been provided under the existing project in the Dresden Island, Marseilles, and Starved Rock Pools. It is expected that future commerce on the waterway will move in tows 600 feet in length. The full economies in water transportation will not be realized unless large tows of this length are used. For safe movement of such tows, a channel 300 feet wide is necessary.

68. No special problems occur in connection with the widening of the Starved Rock and Dresden Island Pools, or in the Marseilles Pool, except through the 2½-mile canal just above the lock. Here it is proposed to widen the canal to 300 feet for a length of 4,900 feet immediately above the lock; then to reduce the width gradually for a distance of 3,500 feet upstream, leaving the remaining 3,600 feet, where the natural surface is higher, in its present condition.

69. The Brandon Road Pool presents a more complicated situation. Between the Brandon Road Dam and Ruby Street, in Joliet, the river is confined between concrete retaining walls. These walls are necessary for the protection of the city of Joliet, as the water in the pool is above the level of the adjacent streets. From Ruby Street to the junction of the Des Plaines River with the Sanitary Canal, the width of the channel varies from 160 to 350 feet. The banks are of rock, and widening is impossible without either moving back the tracks of the main line of the Santa Fe Railway, which closely parallel the river on the east bank, or removing the old dike between the shallow portion and deepened portion of the Des Plaines River and widening the channel toward the west bank. The combination that will secure the best channel obtainable, with commensurate costs, is to secure most of the widening by removing the old dike and dredging the right bank, with some dredging at the point on the east bank, 700 to 1,700 feet above the Ruby Street Bridge. From the junction of the Des Plaines River and the sanitary canal to the Lockport Lock, the channel is 160 feet in width, with rock banks. Here the widening must be accomplished on the west bank. These features are shown on the maps (sheets 4 and 5)[1] and cross sections (sheet 6)[1] of the Brandon Road Pool accompanying this report.

70. With the present flow at Lockport, 6,500 cubic feet per second, plus pumpage, the flow through the Brandon Road Pool is 7,750 cubic feet per second, or more, practically 100 percent of the time; 8,000 cubic feet per second, or more, 44 percent of the time; and 10,000 cubic feet per second, or more, 14 percent of the time. When the diversion is decreased to 1,500 cubic feet per second, the flow at Lockport will be 2,400 cubic feet per second, or more, practically 100 percent of the time; 8,000 cubic feet per second, or more, 8 percent of the time; and 10,000 cubic feet per second, or more, 5 percent of the time. Under existing channel conditions, the velocity at the critical section of the Brandon Road Pool alongside a tow is 3½ miles per hour with a flow of 10,000 cubic feet per second, and 2.8 miles per hour with a flow of 8,000 cubic feet per second. Flows in excess of 10,000 cubic feet per second are now rare and will continue to be so with a reduced diversion. The duration of such flows will be short.

[1] Not printed.

71. Channel conditions in the Brandon Road Pool should be improved to provide greater width for navigation, and at the same time provide larger channel cross-sections in order to reduce velocities even with reduced diversion. From the Lockport Lock to the south end of the existing Sanitary District Dike (1,750 feet above Ruby Street) the width of the present artificial channel is 160 feet. It is proposed to widen this channel at once to 225 feet from the Lockport Lock to the Elgin, Joliet & Eastern Railway bridge; then to increase the width gradually to 300 feet along the next 600 feet; then to widen the channel to 300 feet from this point to the south end of the dike. From the Lockport Lock to the north end of the dike the channel is already 18 to 19 feet deep, made so by the Sanitary District some years ago when the channel was dug. From this point to the Jackson Street Bridge (mile 289.8 to 288.4) it is proposed to deepen half of the proposed 300-foot channel to 10 feet, and the other half to 14 feet. In the bends the proposed widths would be slightly greater.

72. Between the 24-foot depth available in the Sanitary Canal and the 15-foot depth available in the Brandon Road Pool below Jackson Street, there exists only this 1.4 miles of channel where the limiting depth is about 9 feet. Should this reach be deepened as recommended, it will increase the controlling depth between Lake Michigan and the Brandon Road Lock to 14 feet, which would permit the existing Chicago Harbor tugs to tow barges from the Brandon Road Pool to Chicago, and vice versa, thus serving industries located in Joliet. As a result of the improvements above proposed, the velocities at the critical section of the Brandon Road Pool alongside a passing tow will not exceed 2 miles per hour for a flow of 10,000 cubic feet per second, or less, which will be the condition 95 percent of the time after the diversion is reduced to 1,500 cubic feet per second.

73. The channel widening above proposed throughout the Illinois waterway section and the channel deepening in the Brandon Road Pool are for the purpose of improving navigation conditions, and are independent of the amount of water diverted from Lake Michigan.

74. Although it is proposed at first to widen a portion of the channel in the Brandon Road Pool to only 225 feet and to widen only a portion of the Marseilles Canal, any new project should authorize the widening of the channel in all four pools to 300 feet, with additional widening in the bends, so that if and when the growth of commerce justifies it, these narrow sections may be widened to 300 feet.

75. Illinois River, Starved Rock to Grafton: It is proposed to improve the river by the construction of new locks 110 feet wide and 600 feet long in the clear, movable dams, and dredging, so as to provide a channel not less than 9 feet deep and 300 feet wide, with some additional widening in the bends, after the flow at Lockport is reduced to 1,500 cubic feet per second, plus the pumpage, in accordance with the Supreme Court decree of April 21, 1930. The pumpage for Chicago's water supply has been taken as 1,700 cubic feet per second, which it reaches now in dry, hot weather. For comparative purposes, consideration has been given to securing the required depth with diversions from Lake Michigan of 1,500, 2,500, 3,500, 5,000, 7,000, and 9,000 cubic feet per second, respectively, plus the pumpage for Chicago's water supply. Starting with a low-water surface of 419 feet above mean sea level at Grafton, which will be furnished by the proposed dam in the Mississippi River at Alton, it has been found that with diversions of 9,000 and 7,000, respectively, no locks or dams are required in the 231 miles between Grafton and Starved Rock. With a diversion of 5,000 cubic feet per second, a lock and dam are required only at a point near the present La Grange Lock and Dam. With diversions of 3,500, 2,500, and 1,500 cubic feet per second, respectively, this reach can be improved most economically by a lock and dam at La Grange as at present, and an additional lock and dam near Peoria, or by substituting, for the one lock and dam near Peoria, locks and dams located at or near Lancaster Landing and Hennepin. In each case, the first cost is less with 1 lock above La Grange than with 2 locks and dams, the difference being about $841,000 with a diversion of 3,500 cubic feet per second, about $568,000 with a diversion of 2,500 cubic feet per second, and about $331,000 with a diversion of 1,500 cubic feet per second. If the cost of operation and maintenance of the extra lock and dam is capitalized, and the advantage to commerce of having 1 less lock and dam to navigate is considered, the advantage is very decidedly in favor of the plan which includes only 1 lock and dam.

76. Profiles of the waterway for various diversions (sheets 7–10)[2] and drawings for the proposed locks and dams at La Grange Landing, mile 80.2 (sheets 19–24)[1] and mile 158 (sheets 14–18)[1] 4½ miles below Peoria, accompany this report. The profiles show by cross-hatching and figures the dredging necessary in connection with a diversion of 1,500 cubic feet per second. The drawings for the locks and dams show the location, borings, hydraulic data, general plans, and cross-sections for each of these locks and dams. A map (sheet 11)[1] showing the shore lines of the proposed pool between Grafton and Kampsville, and a map, in 2 sheets (sheets 12 and 13)[1], showing the proposed pool between Peoria and Starved Rock, also accompany this report. Between Kampsville and Peoria the water surface is not raised.

77. Mississippi River, Grafton to St. Louis: The improvement proposed between Grafton and the northern boundary of the city of St. Louis is a waterway which will have a minimum channel depth of 9 feet and a minimum channel width of 300 feet. Below the northern boundary of the city of St. Louis a 300-foot channel is already authorized.

78. It is proposed to improve this reach of the river by a lock and dam located at Alton, 15 miles below Grafton, which would furnish not only a 9-foot waterway in the Mississippi from Alton to Grafton, but for a considerable distance beyond in both the Mississippi and the Illinois. The head of the Alton Pool on the Mississippi River would be at the proposed dam (no. 25) at Cap au Gris, 33.5 miles above Alton, and on the Illinois River at La Grange Landing, 95 miles above Alton. A profile (sheet 7)[1] of the Mississippi River from Cap au Gris to St. Louis and drawings (sheets 3 and 25–29)[2] for the locks and dam showing the location, borings, hydraulic data, general plans, and cross-sections of the locks and dam accompany this report.

79. Between Alton and St. Louis it is proposed, for the time being, to continue the improvement under the present project by contraction works and dredging. In studying this reach of the river, consideration was given to the use of a lateral canal from a point at or below Alton to some point near the Merchants Bridge in St. Louis. Four different canal plans were considered. It was found that the cost of such a canal was excessive, due primarily to the necessity for carrying the canal across Wood River and the Cahokia Creek diversion channel. The discharge of each of these streams at times exceeds 25,000 cubic feet per second. Navigation in such a canal would not be so free and easy as in the open river.

80. Consideration was given also to the possibility of improving navigation conditions at the Chain of Rocks by constructing a dam at the water-intake towers of the city of St. Louis or at Bissell Point, about 7 miles above the Eads Bridge, or at Jefferson Barracks, about 10 miles below the Eads Bridge. The normal pool level, in any case, would be 399 or 400 feet above mean sea level. These projects would be very expensive. A dam at Jefferson Barracks would create a nearly constant pool level in the St. Louis Harbor, but would back the water up into the sewers of St. Louis and East St. Louis. To take care of this condition, it would be necessary to construct a very large and costly intercepting sewer along each side of the river. Because of the high cost of improving this section of the river under any of these plans, it is proposed to continue regularization until such time as it is proved unsatisfactory. The discharge contributed by the Missouri River facilitates regularization below the junction. As the construction of a lateral canal or a dam below Alton is not recommended at this time, plans and estimates of cost for such projects are not included in this report.

ESTIMATES OF COST (INCLUDING 12 PERCENT FOR CONTINGENCIES)

81. Widening of Illinois waterway, Lockport to Starved Rock (independent of diversion):

Brandon Road Pool	$1,636,000
Dresden Island Pool	566,000
Marseilles Pool	764,000
Starved Rock Pool	[4] 560,000
Total	3,526,000

82. Starved Rock to Grafton for various diversions:

Method	Diversion (cubic feet per second)	Cost
Locks and dams at La Grange and Peoria and dredging	1,500	$12,004,000
Do	2,500	11,436,000
Do	3,500	10,741,000
Do	5,000	9,196,000
Lock and dam at La Grange and dredging	5,000	9,617,000
Dredging alone	5,000	13,801,000
Do	7,000	5,923,000
Do	9,000	2,584,000

83. Mississippi River, Grafton to Alton (independent of diversion):

Alton dam with locks	$8,011,000

84. Summary of cost with diversion of 1,500 cubic feet per second, Lockport to Alton:

Illinois waterway, Lockport to Starved Rock	$3,526,000
Illinois River, Starved Rock to Grafton	12,004,000
Mississippi River, Grafton to Alton	8,011,000
Total	23,541,000

85. For details of estimates, see appendix C, page 4231.

86. Costs chargeable to Mississippi and Illinois Rivers: The entire cost of the proposed improvements above Grafton, viz, $15,530,000, is chargeable to the improvement of the Des Plaines and Illinois Rivers. The cost of the Alton Lock and Dam, including the cost of flowage on the Mississippi River, viz, $3,011,000, is chargeable, one half to the Mississippi River, and one half to the Illinois River. No change in the engineering methods of securing the channel in the Mississippi between Alton and St. Louis, or of its cost, is recommended in this report.

87. Costs chargeable to reduced diversion: The dredging in all the pools of the Illinois Waterway section, Lockport to Starved Rock, estimated to cost $3,526,000, is a betterment in the interests

[1] Not printed.
[2] Only sheets 8–10 printed in this document.
[2] Only sheet 3 printed.
[4] Includes widening of Marseilles Canal.

of navigation, is independent of diversion, and no part of the cost is chargeable to reduced diversion. The estimates given in paragraph 82 for the improvement of the section between Starved Rock and Grafton, with various diversions, show that with a diversion of 1,500 cubic feet per second, the proposed improvement of this section will cost $12,000,000, while, with the present diversion (6,500 cubic feet per second), a similar waterway can be provided without locks and dams at a cost of approximately $6,800,000. The difference between these two estimates, $5,200,000, is properly chargeable to reduced diversion. The annual cost of operation and care for the Peoria and La Grange Locks, namely, $100,000, would be chargeable to reduced diversion, because these locks are not necessary with a diversion of 6,500 cubic feet per second. The cost of improvement with 1,500 cubic feet per second diversion can be compared with other diversions by reference to the table in paragraph 82. No part of the cost of the Alton Locks and Dam, or the flowage in that pool, is chargeable to reduced diversion. Of the total cost of the proposed work between Lockport and Alton, $23,541,000, a total of only $5,200,000 is chargeable to reducing the diversion from 6,500 cubic feet per second as now allowed, to 1,500 cubic feet per second.

DISCUSSION

88. Introduction to discussion: The minimum diversion to be allowed after January 1, 1939, under the Supreme Court decree was based upon the recommendation of Special Master Charles E. Hughes. In preparing his two reports, the Special Master gave careful consideration to the evidence and arguments presented by all parties to the controversy. The Supreme Court, after considering the exceptions filed to both reports by the parties to the suit, and listening to the arguments of opposing counsel, handed down the decree quoted in the following paragraph. The district engineer accepts the findings of the Special Master that a diversion of 1,500 cubic feet per second would lower the levels of Lakes Michigan and Huron approximately 1 inch at mean lake levels, and that it can hardly be maintained that a diversion not exceeding an annual average of 1,500 cubic feet per second would produce such a substantial injury to like navigation when the fluctuations of lake levels due to other causes than diversions are considered. It is necessary, therefore, to determine, first, whether this amount of diversion is sufficient for lockages, seepage, leakage, and evaporation of the existing waterway when used to its maximum capacity; second, whether living conditions for those aboard ships and at work at terminals on shore will be healthful and decent.

89. The Supreme Court decree: The flow at Lockport from the sanitary canal exerts a controlling influence upon the character of the improvement which should be effected in the Illinois River below Utica. The pertinent paragraphs of the Supreme Court decree of April 21, 1930, limiting the flows at Lockport, are as follows:

"It is now here ordered, adjudged, and decreed as follows:

"1. On and after July 1, 1930, the defendants, the State of Illinois, and the sanitary district of Chicago, their employees and agents, and all persons assuming to act under the authority of either of them, be, and they hereby are, enjoined from diverting any of the waters of the Great Lakes-St. Lawrence system or watershed through the Chicago Drainage Canal and its auxiliary channels or otherwise in excess of an annual average of 6,500 cubic feet per second in addition to domestic pumpage.

"2. That on and after December 31, 1935, unless good cause be shown to the contrary, the defendants, the State of Illinois, and the Sanitary District of Chicago, their employees and agents, and all persons assuming to act under the authority of either of them, be, and they hereby are, enjoined from diverting any of the waters of the Great Lakes-St. Lawrence system or watershed through the Chicago Drainage Canal and its auxiliary channels or otherwise in excess of an annual average of 5,000 cubic feet per second in addition to domestic pumpage.

"3. That on and after December 31, 1938, unless good cause be shown to the contrary, the defendants, the State of Illinois, and the sanitary district of Chicago, their employees and agents, and all persons assuming to act under the authority of either of them, be, and they hereby are, enjoined from diverting any of the waters of the Great Lakes-St. Lawrence system or watershed through the Chicago Drainage Canal and its auxiliary channels or otherwise in excess of the annual average of 1,500 cubic feet per second in addition to domestic pumpage.

"4. That the provisions of this decree as to the diverting of the waters of the Great Lakes-St. Lawrence system or watershed relate to the flow diverted by the defendants exclusive of the water drawn by the city of Chicago for domestic water-supply purposes and entering the Chicago River and its branches or the Calumet River or the Chicago Drainage Canal as sewage. The amount so diverted is to be determined by deducting from the total flow at Lockport the amount of water pumped by the city of Chicago into its water mains and as so computed will include the run-off of the Chicago and Calumet drainage area."

* * * * * * *

90. Domestic pumpage: The water supply of the entire Chicago area, with the exception of a few suburbs lying west of Chicago, is derived from Lake Michigan and is discharged as sewage through the Chicago Sanitary and Ship Canal. The amount of water pumped from the lake varies from day to day and from season to season. The pumpage during the year 1932 varied from an average of 1,575 cubic feet per second in April to an average of 1,775 cubic feet per second in August. For some years to come, the annual average will be about 1,700 cubic feet per second.

91. Flow controlled at Lockport: The run-off from the 770 square miles of the Chicago and Calumet areas, including domestic and industrial pumpage, is controlled at Lockport and limited in amount by the capacity of the main drainage canal below the Sag Junction. Whenever a rainfall of any importance commences in the Chicago area, the Sanitary District increases the flow at Lockport, thereby increasing the slope in the canal, with a view to caring for the excess run-off which is likely to occur. When it becomes physically impossible to increase this slope rapidly enough to care for the increased run-off, the direction of flow in the Chicago River, Calumet River, or both, is reversed, and some of the run-off is discharged into Lake Michigan.

92. Maximum flow at Lockport: To prevent as far as possible the flow of polluted water into Lake Michigan, the initial discharge through the canal, with Lake Michigan 2 feet above low-water datum, occasionally approximates 17,000 cubic feet per second, diminishing automatically, as the water surface drops, to about 12,000 cubic feet per second, in about 4 hours. The duration of these increased flows is usually longer than the period of maximum precipitation, and by reason of the 36-mile reach between Lake Michigan and Lockport through which the normal slope must be increased, discharges at Lockport cannot be adjusted closely to the exact requirements needed to prevent reversal of the normal flow from the lake. Furthermore, the maximum capacity of the canal at Lockport is not always available to prevent reversals of flow in the Chicago and Calumet Rivers. The flood waters of the Des Plaines River overflow into the sanitary canal through the Willow Springs Spillway. The maximum overflow at the spillway occasionally reaches 5,000 cubic feet per second, but for most storms is less than 2,000. The maximum discharge occurs, however, when wide-spread rainfall makes the full capacity of the canal most necessary.

93. Method of controlling flow at Lockport: The discharge at Lockport is normally controlled by the flow through the power plant, combined with one 48-foot and one 12-foot sector gate. In emergencies the discharge of the canal may be increased at the old controlling works, about 2 miles above the present power house.

94. Probable variations in flow at Lockport after December 31, 1938: In order that a reserve or credit may be built up for use at times of heavy run-off in Chicago, it will be necessary to divert less than the average flow during a large part of the year. Studies made by the Chicago Sanitary District engineers indicate that after the diversion is reduced to 1,500 cubic feet per second on December 31, 1938, the total flow at Lockport will be distributed approximately as shown by the following table:

Estimated total flow at Lockport after Dec. 31, 1938

Time (days per year)	Pumpage	Diversion (cubic feet per second)	Total flow at Lockport (cubic feet per second)	Percentage of time
234	1,700	700- 750	2,400- 2,450	64
18	1,700	750- 850	2,450- 2,550	5
15	1,700	850- 1,000	2,550- 2,700	4
17	1,700	1,000- 1,300	2,700- 3,000	5
14	1,700	1,300- 1,700	3,000- 3,400	4
10	1,700	1,700- 2,200	3,400- 3,900	3
11	1,700	2,200- 2,900	3,900- 4,600	3
10	1,700	2,900- 3,900	4,600- 5,600	3
12	1,700	3,900- 5,500	5,600- 7,200	3
12	1,700	5,500- 8,400	7,200-10,100	3
8	1,700	8,400-11,300	10,100-13,000	2
3	1,700	11,300-13,300	13,000-15,000	¾
1	1,700	13,300-15,300	15,000-17,000	¼
Average	1,700	1,500	[1] 3,200	[1] 100

[1] Total.

95. The flow through the Sag Channel is so regulated that about 20 percent of the total flow passes through it.

96. The total flow from the canal at Lockport consists of (1) the drainage from the Chicago River and its branches; (2) drainage from that portion of the Calumet district lying west of Gary; (3) the domestic and industrial pumpage or water supply for the Chicago area; and (4) the diversion from Lake Michigan through the North Shore Channel, the Chicago River, the Calumet River, and the Indiana Harbor Canal. The least variable component is the domestic and industrial pumpage. As has been shown, the flow at Lockport is of variable quantity which may range from a minimum in dry weather of about 2,400 cubic feet per second, to a maximum of 17,000 cubic feet per second, decreasing automatically to 12,000 cubic feet per second, in about 4 hours. The minimum flow of 2,400 cubic feet per second, it appears, may occur 8 months during the year, in order to build up a reserve or credit which may be drawn upon during periods of heavy run-off.

97. Flow required for operation of waterway, Lockport to Starved Rock: the 4 pools comprising the Illinois Watershed have all been dredged to a depth of 10 feet, with 1 foot additional paid for if removed by the contractor. In order that the full project depth may be available at all times, even in periods of unusually low water, the normal pool levels, or project planes, from which these

depths have been measured, have all been taken as flat pools. In other words, no part of the project depth is dependent upon a computed slope based upon a certain flow of water. It follows, therefore, that the minimum flow required for maintaining full project depth in the waterway is not a certain flow which will maintain a certain slope, but the flow required for lockages, plus the amount lost in seepage through the sides and bottom of the waterway, plus the leakage through the locks and dams, plus the amount lost in evaporation.

98. As all of the locks are uniform in length and width, the flow required for lockages is determined by the amount necessary to operate the lock having the greatest lift. The lock of greatest lift is at Lockport, where the lift at times of high level in Lake Michigan may be 43 feet. The area of this lock chamber is 74,725 square feet and the volume of water required for a lockage is 3,214,250 cubic feet. If a lock full of water is required every 30 minutes, which is considered the maximum requirement, the flow needed for lockages would amount to 1,786 cubic feet per second. The adjacent small lock, which is used for small boats, has a width of 22 feet and a usable length of 130 feet. Assuming a lock full of water is used every 30 minutes, the maximum requirement for this lock is 70 cubic feet per second. The amount of water lost in seepage and evaporation in the sanitary canal need not be estimated, because the flow of water is measured at the lower end of the canal. The leakages at Lockport through the large and small locks, the two sector gates, the old controlling works, and the power-house gates average about 125 cubic feet per second. The total maximum requirement at Lockport is, therefore, about 1,980 cubic feet per second. The minimum flow available under the Supreme Court decree, as modified to protect the water supply of Chicago—namely, about 2,400 cubic feet per second for about 234 days during the year—is therefore sufficient for lockages and leakages at Lockport.

99. The discharge into the Brandon Road Pool from the Des Plaines River during long dry periods is negligible. The minimum flow entering the Brandon Road Pool will therefore amount to 2,400 cubic feet per second. As this pool is above much of the surrounding ground the seepage may be considerable, but this is indeterminate. Evaporation at the rate of one fourth inch per day over the area of this pool, which is 279 acres, is the equivalent of a flow of 3 cubic feet per second. For present purposes, the seepage and evaporation may be assumed to equal 125 cubic feet per second. The flow required to operate the Illinois and Michigan Canal, which now leaves this pool by the new junction lock, located just west of the large lock, has usually been taken as 275 cubic feet per second. Deducting these estimated losses for seepage, evaporation, and feeding of the Illinois and Michigan Canal from the 2,400 cubic feet per second, which entered the pool, leaves approximately 2,000 cubic feet per second for lockages and leakages at Brandon Road.

100. At Brandon Road the maximum lift is 34 feet, the area of the lock chamber 75,700 square feet, and the volume of water required for a lockage 2,573,800 cubic feet. The equivalent flow, assuming a lock full of water every 30 minutes, is 1,430 cubic feet per second, which is less than the residual flow available for that purpose.

101. Similar computations for the remaining pools and locks indicate that the flow available under the Supreme Court decree, plus the natural flow, is more than sufficient for lockages, leakages, and evaporation.

102. Flow required for operation of waterway, Starved Rock to Grafton: If the procedure followed in estimating the minimum flow required for lockages, leakages, and evaporation along the Illinois waterway be applied to the waterway below Starved Rock, the results obtained would be similar; that is, the flow authorized by the Supreme Court decree, plus the natural flow, would be found sufficient for lockages, leakages, and evaporation. Discharge curves,[1] flow-duration curves,[1] and stage-duration curves[1] for the Illinois River at Peoria, Pekin, Beardstown, and La Grange accompany this report. Separate flow-duration curves[1] are shown for the natural flow, for the authorized diversion and pumpage after January 1, 1939, and for the combined flows.

103. Effect of diversion upon navigation conditions on the Illinois River and waterway: The determination by the Supreme Court of the amount of water to be diverted at Lockport was based upon the requirements of navigation in the port of Chicago and connecting channels. There is no difference between the requirements of navigation on the Illinois Rierv and waterway and those of navigation in the port of Chicago. Conditions of health, safety, and efficiency should be satisfactory for all. A reasonable standard of healthful and decent living conditions for those aboard ships and working at terminals on shore must be maintained. Injury to navigation may occur if putrefaction in the water results in nauseous or disgusting conditions. Such a condition may be caused by putrefaction of the effluent from the sewage treatment plants, putrefaction of raw sewage contained in storm-water run-off, and putrefaction from accumulated sludge deposits. The weight of expert testimony is to the effect that the effluent from the proposed activated sludge treatment plants will be inoffensive, but the sanitary district program of treatment is upon such an unprecedented scale that such predictions must contain some element of uncertainty. No reliable process of calculation can predict the effect of raw sewage in storm-water run-off and of accumulated sludge deposits. After intensive and prolonged study, based upon the testimony of a number of eminent sanitary engineers, Special Master Hughes reached the conclusion that these matters were indeterminate, and that—

"Provision should be made for further examination, after the sewage-treatment plants have been completed, and the effect of the effluent therefrom with the storm-water flow on the navigable channels has been observed, to the end that the question of any further or other relief may have appropriate consideration in the light of actual conditions."

No one can predict with certainty the effect in 1939 of the reduction of diversion upon navigation below Lockport at any time prior to the completion of the sewage-treatment program. Sound procedure would be to carry out the full program of treatment-plant construction, reduce diversion as required by the Supreme Court decree, and observe its effect. A period of not more than 2 years of observation and study after the completion of the treatment plants of the sanitary district of Chicago, and the full reduction of diversion to 1,500 cubic feet per second, should furnish conclusive data which will permit of positive determination whether any increase in diversion is necessary, and if so, by what amount. For further details, see appendix D, page 4134.

104. Basis for existing project: The present improvement of the section, Starved Rock to Grafton, provides a 9-foot channel with no overdepth, with a diversion of 4,500 cubic feet per second, and the retention of the present locks and dams at Kampsville and La Grange. It was designed to care for navigation while the State was completing its project above Starved Rock (which would have been an 8-foot waterway if the United States had not changed the dredging plans), and while the Federal Government was developing a 9-foot channel in the Mississippi River between Grafton and St. Louis.

105. Width and depth of channel upon which new estimates are based: Tows made up to utilize the full width of the new locks above Starved Rock cannot pass in a 200-foot channel. The experience already gained on this waterway shows that it is difficult and hazardous for two small tows to pass each other in a rock cut 200 feet wide when the edges of the cut are submerged. It is proposed, therefore, to widen all dredged cuts between Lockport and Alton to 300 feet, with the exception of the two short reaches referred to in paragraphs 68 and 71. In order to facilitate towing by furnishing a reasonable clearance between the bottom of the barges and the bottom of the channel, thereby eliminating laboring as much as possible, and at the same time providing a reasonable allowance for silting, prior to maintenance dredging, all estimates are based upon a required depth of 10 feet. In accordance with common practice, the estimate includes payment for a maximum of 1.5 feet additional depth (wherever that much is removed by the contractor) in order to allow for the difficulty of securing a precise depth in underwater operations.

106. Size of tows: At the present time, there is no great volume movement of a single commodity, such as coal, upon the Illinois River. Movements of this kind in large tows are necessary to secure the greatest economy. There are, however, many possibilities that such movements will develop, but only after navigation conditions on the stream are such as to permit economical movement of cargoes. The difficulties attending the movement of larger and more economical tows are caused by the narrowness of the dredged channel and many narrow bridge openings. The passage of time and normal replacement of obsolete bridges will do much to remedy the problem of narrow bridge openings. With a 300-foot channel and fully adequate bridge clearances, tows up to lock size which carry 8,000 to 10,000 tons should be possible. The economy of the larger tows in the movement of lower-grade bulk commodities is apparent. The current of the Illinois River is so slight as to render upstream towing very little more expensive than downstream towing.

107. Size of locks: In order to provide a waterway with ample traffic capacity and to avoid the delay now being experienced by navigators at the Kampsville and La Grange Locks on account of the necessity for separating the barges in a tow, and making several lockages instead of one to pass an ordinary tow, new locks must be provided of the same size and character as those now in use on the Ohio River, upper Mississippi River, and the Illinois waterway above Starved Rock, viz, 110 feet wide and 600 feet long in the clear, with ample approach or guide walls at each end. At the Peoria and La Grange Locks, the river walls are designed so that they may be readily adapted to a second lock. At Alton, the construction of twin locks is proposed at once.

108. Type of dams: The dams for which estimates are submitted are all of the movable type so that flood conditions will not be aggravated. On the Illinois River it is proposed to have a navigable pass alongside each lock, so that at higher stages vessels of all types may navigate the pass and avoid the delay involved in making lockages. A study of the hydraulic data indicates that this should be possible about 30 percent of the navigation season. At Alton the proposed lift and the character of the nearby bridges make Chanoine wickets impracticable. The dam, as estimated for, includes a 900-foot section of Tainter gates. The general plan of the locks and dams upon which estimates are based is shown on the plans[1] accompanying this report. The exact location of locks and dams and all matters of design should be left to decision by the Chief of Engineers at the time of construction.

[1] Not printed.

[1] Not printed.

109. Proposed pool between Grafton and La Grange: In the estimates of cost it has been assumed that the dam to be built in the Mississippi River at or near Alton will furnish a pool elevation at Grafton of 419 feet above mean sea level. This will eliminate the necessity for building a new lock and dam to replace the existing lock and dam at Kampsville, 31.5 miles above Grafton. The estimates for this section include the cost of flowage easements for all lands in the Illinois River Valley which will be damaged by the Alton Pool. Above the present Kampsville Dam the new pool level created by the Alton Dam will be about 1 foot lower than the present water surface above the Kampsville Dam, so that no flowage easements are required between Kampsville and La Grange.

110. Proposed lock and dam at La Grange Landing: The first lock and dam in the Illinois River should be located a short distance above the present La Grange Lock and Dam. The topography, hydrography, and borings at this site are all favorable, and the proposed distance above the present La Grange Lock and Dam will furnish navigators ample space during the construction period in which to bring down-bound tows from the left bank (around the cofferdam) to the old lock on the right bank. The site map, borings, hydraulic data, and general plans (sheets 19–24 [1]) accompany this report. A lock and dam at this site are included in the estimates for a waterway with diversions of 1,500, 2,500, 3,500, and 5,000 cubic feet per second. With a diversion of 5,000 cubic feet per second, the river can be improved without a lock and dam at this site, but the cost will be considerably greater. With diversions of 7,000 and 9,000 cubic feet per second, it is possible to have open-river navigation, with no locks and dams between Grafton and Starved Rock.

111. Alternate profiles between La Grange Landing and Starved Rock: Estimates for the improvement of the river between La Grange Landing and Starved Rock with diversions of 1,500, 2,500, and 3,500 cubic feet per second, have been made upon two different plans:

(a) By dividing this 151-mile reach into three pools, with dams located at Lancaster Landing (mile 144), and Hennepin (mile 207.4).

(b) By dividing this reach into two pools, with a single dam at mile 158, just below Peoria.

Under the latter plan, which is the one recommended, the 231 miles between Grafton and Starved Rock will be divided into three pools, 80, 78, and 73 miles long, respectively.

112. Under the recommended plan, the normal elevation of the La Grange Landing pool at the dam is 429 feet above mean sea level, which is 10 feet above the proposed normal pool level at Grafton.

113. The normal elevation of the Peoria pool at the dam is 440 feet above mean sea level, which is 11 feet above the proposed normal pool level at La Grange Landing. With a diversion of 1,500 cubic feet per second, the lift of the Peoria Lock will be 10 feet. At Peoria, the normal pool level will be about 3 feet above the present project plane. It corresponds to a stage at which the river stands a good portion of each year and will not interfere with Peoria's sewer system. There are practically no living trees below this pool level.

114. The profiles (sheets 8–10) for a diversion of 5,000 cubic feet per second, with no dam, 1 dam, and 2 dams, and the profiles (sheets 8–10) for open-river improvement with diversions of 7,000 and 9,000 cubic feet per second are shown clearly on the accompanying drawings. The profiles show, also, by hatching and figures, the excavation necessary with a diversion of 1,500 cubic feet per second.

115. Mississippi River between Grafton and St. Louis: The data contained in previous reports, augmented by the experience of the last few years with open-river regulating works in the Mississippi above the mouth of the Missouri, prove conclusively that this method of improvement will not insure a dependable channel. Consequently improvement by canalization has been considered with the condition that the pool below the mouth of the Illinois shall have an elevation 419 feet above mean sea level.

116. Studies were made to develop a plan of improvement which would provide a dependable 9-foot channel without excessive velocities at a reasonable cost from St. Louis upstream to the proposed site of Dam No. 25 on the Mississippi River and to La Grange on the Illinois River. A reasonable cost required that excessive flowage damages should be avoided in adopting pool elevations and that flood heights should not be raised.

117. It became necessary in the study of a dam located below the confluence of the Illinois and Mississippi Rivers to investigate the question as to whether the manipulation of the discharge gates for the purpose of keeping the proper pool elevation in either river would affect the other river injuriously. The critical condition occurs for a few days in the average year with a minimum flow from the Illinois and a discharge in the Mississippi River at Alton varying from 100,000 to 197,000 cubic feet per second. The latter discharge provides a dependable 9-foot channel depth with open river. At discharges less than 197,000 cubic feet per second, a dam at Alton must maintain a pool level at Grafton of 419 to insure a 9-foot channel depth in the Illinois River to La Grange. It has been ascertained from backwater computations that such level can be maintained by the dam for discharges less than 197,000 cubic feet per second, without causing additional flowage damage since the backwater slopes meet the open-river slopes at or below elevation 422, to which flowage easements are proposed.

118. The following table contains data showing the hydraulic characteristics of the proposed dam above the Alton Railroad bridge:

Open-river stage (elevation mean sea level)	Discharge (cubic feet per second)	Effective open-river area (square feet)	Open-river velocity (feet per second)	Swell head (feet)	Effective area through dam (square feet)	Velocity through dam (feet per second)	Remarks
432.5 feet	459,000	106,150	4.28	0.90	51,580	8.72	1844 high water.
421 feet	299,000	76,350	3.92	.81	36,400	8.21	27 feet above Tainter sill.
411 feet	171,000	45,800	3.45	.66	23,130	7.39	17 feet above Tainter sill.

119. The dam in the vicinity of Alton is needed even with the existing discharge in the Illinois River, because of the unsatisfactory conditions above Alton that have persisted under the methods of improvement employed in the past. The feasibility of slack-water improvement between the proposed Alton Dam and St. Louis is not so apparent, considering the costs and physical difficulties. Under existing conditions it may be possible to maintain a satisfactory channel by dredging and with the regulating works now in place and proposed. Because of the high cost of securing a channel by slack-water methods, it is recommended that the open-river method of regularization be continued until such time as it be proved unsatisfactory, or a more satisfactory plan evolved.

120. Résumé of advantages of Alton Dam: The proposed dam above the railroad bridge at Alton will give a pool elevation at Grafton of 419 feet, mean sea level, will insure a 9-foot channel in the Mississippi River from Alton to Cap au Gris, and, supplemented by dredging in the Illinois River from its mouth to the proposed dam at La Grange Landing, a distance of 80.2 miles, it will benefit navigation and reduce future maintenance costs.

121. At present that part of the Mississippi River between Grafton and Alton is the "bottle neck" in the Lakes-to-Gulf waterway. At low water the available depth is 5 feet. At such times barges operating between St. Louis and Chicago can be loaded to a maximum of 4 feet (in a 9-foot waterway). The only practical means of obtaining the additional required depth is by a dam.

122. Between Alton and Cap au Gris extensive dredging has been required in every low-water season to secure the former project depth of 6 feet. To secure even this depth during the lowest stages has been impracticable. The cost of this dredging would be eliminated by the construction of the proposed dam. The following table gives the annual cost of maintenance dredging for the years 1930, 1931, and 1932 on the Mississippi River from the proposed site of the Alton Dam to Cap au Gris:

Locality	1930	1931	1932
Alton to Grafton (not including Alton Slough)	$46,766	$105,380	$115,681
Grafton to Cap au Gris Dam site	24,047	27,643	36,511
Total	70,813	133,023	152,192

123. The proposed Alton Dam will also render unnecessary the future maintenance of some 93 dikes and several miles of revetment in the Mississippi between Alton and Cap au Gris. The average cost of such work has been $132,000 per annum.

124. The construction of the proposed dam at Alton will eliminate the necessity for rebuilding the old lock and dam at Kampsville on the Illinois River. A section of the Kampsville Dam failed this spring, requiring extensive emergency repairs, costing to date approximately $30,000. Additional repairs, costing perhaps $30,000, must be made when the water falls low enough to permit the driving of sheet piles. Trouble with this dam may be expected annually in the future.

125. Failure of a section of the Kampsville Dam during the low-water season would drop the pool and put the Lakes-to-Gulf waterway out of commission.

126. The elimination of the present Kampsville Lock from the Lakes-to-Gulf waterway is highly desirable. Tows made up for the new locks on the upper Illinois River must be broken up, both in length and width, in order to pass through the present small Kampsville Lock.

127. If the proposed Alton Dam is not built, a large amount of additional dredging must be done in widening the channel to 300 feet along the 31 miles between Kampsville and the mouth of the Illinois River; also, in redredging the entire 31 miles to secure additional depth after the diversion from Lake Michigan is reduced to 1,500 cubic feet per second.

128. The proposed dam at Alton is necessary for the improvement of the Mississippi River whether the diversion from Lake Michigan remains as at present or is fixed at 1,500 cubic feet per second.

129. Stage oscillation in Alton Harbor (above dam) will be reduced from 36 to 23 feet, thus effecting a large saving in the cost of river terminals.

[1] Not printed.

130. By submerging the city water-supply intakes at least 15 feet the exposure and freezing of these intakes in winter will be obviated. The intakes have frozen in the past and the city of Alton was faced with a shortage of water and a great potential fire hazard.

WATER POWER

131. At Lockport: Proceeding downstream from Chicago the first installation is found at Lockport. Here the sanitary district utilizes the flow from Lake Michigan for the generating of power as it discharges from the sanitary canal into the Des Plaines River. The head varies from 30 to 45 feet, according to the relative stages above and below the power house. The average working head is 35 to 37 feet. When the plant was installed in 1907, it was capable of producing 32,000 horsepower, or 24,000 kilowatts, with a flow of 10,000 cubic feet per second. Due to decreased efficiency of the plant and reduced flow, the average output at present is much less. The current generated is used for pumping sewage, operating sewage-treatment plants, and lighting city streets and parks.

132. At Marseilles: At Marseilles there has been a water-power dam across the Illinois River for nearly 70 years. The present Marseilles Land & Water Power Co. was chartered by the State legislature on March 9, 1867. The power is used in various industries, and also for lighting purposes. The output amounts to a total of about 8,000 horsepower, or 6,000 kilowatts.

133. State project: The State of Illinois contemplates the construction of water-power plants at Brandon Road, Dresden Island, and Starved Rock. A license covering these three installations is now under consideration by the Federal Power Commission. The division of water at Marseilles between the existing plants and the proposed State plants is a matter of controversy which must be settled later. If authorized by license, the State proposes to install plants having the following capacities:

	Horsepower
At Brandon Road	29,250
At Dresden Island	20,000
At Starved Rock	15,200
Total	64,450

134. Starved Rock to Grafton: There are no water-power plants in this 231-mile reach, and none are proposed. Hydroelectric plants could not be profitably operated in connection with the proposed navigation dams at Peoria and La Grange Landing on account of the comparatively low heads available, and the fact that the proposed dams are not of the fixed type. For 2½ or 3 months in the year, the dams would be lowered and no power could be generated. For an additional period, the head available would be greatly reduced by backwater. The generation of power would, therefore, be irregular and uncertain as to time and amount, and probably not of sufficient value to justify the cost of the installation.

135. Grafton to St. Louis: There are no water-power plants in this 38-mile reach, and none are proposed. At the proposed Alton Dam, the low-water head will be 20 feet, as compared with 9.4 feet at La Grange Landing and 10 feet at Peoria. The percentage of loss in head due to high stages below the dam will, therefore, be much less serious at Alton than at the other two dams, but the generation of power at this site will not be economically feasible.

136. Other special subjects: There are no problems involving land reclamation or flood control which can be coordinated with the proposed navigation improvements in such way as to reduce their cost to the United States. The proposed pools must be kept full for the benefit of navigation and would have no value as reservoirs for the alleviation of floods. Irrigation is not needed in the territory adjacent to this waterway. No other prospective improvement is known to this office which could be coordinated with the improvement of this waterway.

CONCLUSIONS

137. A commercially useful waterway connecting the Great Lakes with the Mississippi River system should be commodious and efficient. Below Lockport, it should have minimum channel dimensions of 300 feet in width and 9 feet in depth 100 percent of the time, with locks 110 feet wide and 600 feet long in the clear.

138. Dams should be of the movable type so that flood conditions on the Illinois and Mississippi Rivers may not be aggrevated.

139. The lock and dam near Peoria is the only structure of the recommended project that may be dispensed with even if the diversion should be increased to as much as 5,000 cubic feet per second.

140. A diversion of 1,500 cubic feet per second will lower the level of Lakes Michigan and Huron about 1 inch. This will not substantially injure the existing navigation on the Great Lakes.

141. The difference between the cost of a commercially useful waterway with the present diversion (6,500 cubic feet per second) as compared with the diversion prescribed by the Supreme Court (1,500 cubic feet per second) is $5,200,000. The annual difference in operation and care is estimated as $100,000.

142. The diversion from Lake Michigan prescribed by the Supreme Court, plus the pumpage, is sufficient for the operation of the locks and dams now in use between Lockport and Starved Rock, as well as for those proposed in this report.

143. The program of construction of plants for complete sewage treatment should be carried out, diversion should be reduced as required by the Supreme Court decree, and navigation conditions along the waterway and river should be observed for a short period subsequent to January 1, 1939. Then, and then only, can it be determined with reasonable certainty whether any additional diversion is necessary in order to provide decent and healthful living conditions for boat crews and river terminal operators. The improvements for navigation herein proposed must be completed before January 1, 1939.

144. The construction of a lock and dam at Alton is a vital necessity to the project for the improvement of the upper Mississippi and the Lakes-to-Gulf waterway. Without it, neither of these adopted projects can be assured of a 9-foot connection with the lower Mississippi and Ohio Rivers. It will afford other material benefits by eliminating obsolete structures and reducing by $250,000 the annual cost of maintenance of the present unsatisfactory channels and structures in the Alton Pool.

145. On account of the work which has been done heretofore by the sanitary district of Chicago and the State of Illinois, no local cooperation should be required.

RECOMMENDATIONS

146. That the existing project for the Illinois River be modified to provide for a channel at least 9 feet deep and 300 feet wide between Lockport and Grafton, to be secured by canalization and dredging, at an estimated cost of $15,530,000, with $350,000 annually for operation and care of locks and dams and $150,000 annually for channel maintenance; that the Kampsville Dam be removed after the Alton Dam and the channel dredging below La Grange Landing have been completed; and that the dam at La Grange be removed after the new dam near that site has been completed.

147. That the existing project for the Mississippi River from Grafton to St. Louis be modified to provide for a channel at least 9 feet deep and 300 feet wide, to be secured by the construction of a lock and dam near Alton, Ill., at an estimated cost of $8,011,000, with $60,000 annually for maintenance and operation, and by a continuation for the time being of the present methods of open-channel improvement between St. Louis and the Alton Dam.

148. That the initial allotment be sufficient to cover the cost of constructing the four new locks (including twin locks at Alton), namely, $6,800,000. The additional funds necessary to complete the project should be provided in two allotments approximately equal, available 1 year and 2 years, respectively, after the initial allotment, in order that the entire project may be completed by the time the diversion is reduced to 1,500 cubic feet per second, on January 1, 1939.

DAN I. SULTAN,
Lieutenant Colonel, Corps of Engineers, District Engineer.

APPENDIX A
Bridge table

Miles above Grafton	Location	Owner	Purpose	Type	Clear width normal to channel	Clear height for 80-foot width		Maximum above mean low water	Remarks

326.1	State Street, Chicago	do	do	do	120	14.4	11.1	16.6	

[1] Mean low water as used in connection with the bridges between Lake Michigan and Lockport is the former low-water datum for Lake Michigan, 579.6 feet above mean sea level, and not the recently established low-water datum, which is 578.5 feet above mean sea level.

[2] High-water clearances refer to a level pool 3.3 feet above mean low water. This condition is created only infrequently, and for short periods, in order to release some ship which has been stranded or caught crosswise of the channel at some bridge above Lockport.

APPENDIX B

1. Estimate of tonnage potential to the Illinois River and waterway: A number of estimates have been prepared of tonnage which would move by water as a result of proposed improvements on the Illinois River and waterway. House Document No. 4, Sixty-ninth Congress, first session, 1926, contained an estimate based upon an assumption of completion of the present Illinois River and waterway project. In 1933 an estimate was submitted of commerce to, from, or through Chicago arising from an improved Calumet-Sag connection. This estimate was based upon a report prepared by the United States Department of Commerce and was carefully compiled. Neither of these estimates is directly applicable to this case, as the basic assumptions are somewhat different. Nevertheless, the material contained in them contains sufficient data so that with its help a fairly reliable estimate may be submitted of commerce which might move after the improvements discussed in the basic report have been completed.

2. The information on which savings in freight rates are computed was secured in 1930 and 1931. Since that time there have been reductions of railroad freight rates on some commodities which were moving or were likely to move by water to meet water and canal competition. These rate changes are occuring frequently, and the estimate could not be brought up to date without considerable research and the expenditure of more money than is now justified.

3. Prospective commerce between Chicago and St. Louis: This estimate is based upon the assumption that the waterway from Lockport to St. Louis will be improved in the manner proposed in this report, and that operating machinery will be installed in the bridges over the main Sanitary Canal. Failure to install the machinery in the sanitary canal bridges would affect the movement of paper, canned goods, sugar, and general cargo; would exclude cotton, linters, and cottonseed meal, and increase the cost of the movement of every commodity.

4. Cement: Approximately 75,000 tons of cement per year have moved from La Salle to St. Louis and points south. There is included also in the summary an estimate of 200,000 tons between La Salle and Chicago, and 50,000 tons between La Salle and Milwaukee. The rail rate on cement from La Salle to Chicago is $1.60 per ton, plus 10 percent emergency; from La Salle to Milwaukee, $2.40 per ton, plus 20 cents emergency. The savings on cement to Chicago are based upon a cost as follows:

Switching to waterside	$0.24
Loading	.25
Water haul, 109 miles, at 3 mills per ton-mile	.32
Total	.81
Savings	.79

Or, say, $0.80 per ton.

Cement from La Salle to Milwaukee would probably be shipped in a self-propelled barge. The water rate would be:

Switching and loading, as above	$0.49
194 miles, at 5 mills per ton-mile	.97
Total	1.46
Savings (ignoring surcharge)	.94

The rate of 5 mills per ton-mile is assumed for a self-propelled barge capable of navigating on both lake and river. In the summary this saving has been listed at $0.90 per ton.

5. Sand and gravel: Most of the sand and gravel would probably be produced in the neighborhood of Joliet. In 1931 the movement from Joliet to Chicago amounted to 334,000 tons. The rail rates on gravel are:

	Per ton
From Joliet to Chicago, Santa Fe delivery	$0.55
From Joliet to Chicago, Illinois Central delivery	.85
From Joliet to Peoria	.88

The movement of sand and gravel could probably be increased if combined with return cargoes of steel to Joliet, and coal from Southern Illinois ports. A saving of $0.30 per ton is estimated for Chicago, and $0.40 for Peoria, which are conservative, considering performances already made.

6. Oil and gasoline: The Department of Commerce estimated over 200,000 tons of oil and gas as potential from Texas and Oklahoma to Chicago. This sum will be reduced if the Calumet-Sag is not developed, as facilities for handling this item ashore will not be entirely satisfactory. However, two large oil companies, the Texas Oil Co. and the Globe Oil Co., are already located on the Sanitary Canal, who might be prospective receivers of this commodity. The Department of Commerce estimate of savings of approximately $1 per ton is used, although possibly this might be increased. A movement of 100,000 tons per year has been assumed in the following summary.

7. Paper: A large amount of paper, paper stock, and paper products, manufactured or originating in Canada and elsewhere on the Great Lakes, is now shipped by rail to cities located on or near the Mississippi River. This item could be handled through facilities already existing on the Chicago River, although the movement would be considerably handicapped by low bridges, as this is a bulky commodity and requires high barges. The Department of Commerce estimate is taken both as to savings and tonnage. The savings are based upon the savings from a joint rail-and-water rate. However, as this movement might be entirely by water, a greater saving is possible.

8. Canned goods: Chicago is a primary market for consumption, as well as distribution of canned goods. It receives canned fruits and vegetables from Wisconsin and Michigan, and canned fruits from California. The Department of Commerce estimates this movement at approximately 170,000 tons. The savings per ton are large and are based upon joint rail-and-water rates. Terminal companies in Chicago are making plans to receive and ship large quantities of these goods, using through water transportation, or barge and truck, in which case the savings might be larger than those shown. The movement balances so as to give both upstream and downstream cargoes. It is believed that the estimate given here, 100,000 tons, with savings of $260,000, is conservative. This traffic could be handled in the Chicago River.

9. Sugar: On the Chicago River there are already large warehouses equipped for handling sugar. Chicago now consumes very large quantities of sugar from both New Orleans and New York. The Department of Commerce estimate includes an item of 110,000 tons of sugar for Chicago and for through shipments to other lake ports. The figure used here (100,000 tons) is derived from this estimate, as are the savings per ton. As these savings are based upon the 20-percent differential, and as possibly no rail haul would be involved, the actual savings might be larger.
